## Welcome to the Road Construction Emissions Model, Version 9.0.0

### User Instructions

This spreadsheet system contains the following individual worksheets:

- 1 This worksheet of User Instructions
- 2 Updates
- 3 Emission Estimates
- 4 Data Entry
- 5 Non-default Off-road Equipment
- 6 EMFAC2017
- 7 On-road Mitigation EF
- 8 OFFROAD Convert
- 9 Off-road Tier 4 EF
- 10 OFFROAD HP & LF
- 11 OFFROAD EF
- 12 x-ref

The Emission Estimates worksheet calculates a project's emissions in pounds per day (and tons) by project phase and tons over the entire construction period.

The worksheet can be used to estimate emissions for both vehicle exhaust and fugitive dust. The methodology used to estimate fugitive dust emissions is a simplified methodology involving estimates of the maximum area (acreage) of land disturbed daily. Detailed fugitive dust emission estimates associated with individual materials handling operations and/or activity/vehicle types cannot be conducted with this version of the model.

The Emission Estimates worksheet cannot be modified directly, it is a protected worksheet. It can only be modified indirectly by entering information for the project in selected areas of the Data Entry worksheet.

The last seven of these worksheets - EMFAC2017, On-road Mitigation EF, OFFROAD Convert, Off-road Tier 4 EF, OFFROAD HP & LP, OFFROAD EF and x-ref - cannot be modified by the user. They are protected worksheets.

Even though all or portions of several worksheets are protected, the individual formulas used in the calculations can be seen by the user.

The Data Entry worksheet includes several areas that can be modified by the user.

User instructions in the Data Entry worksheet are highlighted in red.

On the Data Entry worksheet, the user has two options for entering project data: required data and optional data. Required data is entered in the data input section (yellow cells). That required data is then used by the worksheet to calculate default values for the project.

The user can override the default values (blue cells) calculated for a project and is encouraged to do so if project specific information is available. Due to the difficulty in developing reliable default values for road construction projects, the user is encouraged to enter as much site specific information as is available for the project being analyzed.

The Data Entry Worksheet also includes a button that allows the user to clear previously entered data. This button is found just at the top of and to the right of the data entry portion of the worksheet.

When projects are discontinuous, the user must make adjustments to the spreadsheet manually, since the program cannot be setup to anticipate unexpected project delays.

#VALUE! <- This error message may occur during use of the spreadsheets. This occurs whenever the user enters a non numeric value, including a space character, into a cell that is used to calculate a numeric value. Consequently, to erase values entered into the spreadsheets, use the delete key instead of the space bar!

Note: Information in this worksheet is based on conversations with knowledgeable individuals at the Sacramento Metropolitan Air Quality Management District, the California Department of Transportation, the California Air Resources Board, the U.S. EPA, and private industry involved in road construction. Also, the 26th edition of Walker's Building Estimator's Reference Book (1999) was used in the development of this spreadsheet. This spreadsheet was prepared by Jones & Stokes, TIAX LLC and Ramboll Environ with the financial support and direction of the Sacramento Metropolitan Air Quality Management District.

## Road Construction Emissions Model, Version 9.0.0

### Updates Log

*Changes from previous version of Road Construction Emissions Model*

#### **(Version 8.1.0 to 9.0.0) (updated by SMAQMD 04/22/18 with assistance from Ramboll)**

- 1) Project length changed to include calendar years 2014 through 2040.
- 2) On-road vehicle emission factors have been updated to EMFAC2017 version 1.0.2.
- 3) Off-road emission rates updated to include calendar years 2014 through 2040.
- 4) Average Offroad HP by Equipment Type updated to be consistent with CalEEMod (version 2016.3.2)
- 5) Modified 'Data Entry' tab to calculate NOx start emissions from heavy duty trucks in "soil hauling", "asphalt hauling"

#### **(Version 7.1.5 to 8.1.0) (updated by SMAQMD 05/09/16 with assistance from Ramboll ENVIRON US Corporation)**

- 1) Project length changed to include calendar years 2014 through 2025.
- 2) Added a new project type: Type 4: Other Linear Project Type. Note that there are no default vehicle or equipment at
- 3) Emissions estimates were extended to include SOx, CH4, N2O and CO2e.
- 4) Updated off-road equipment emission factors and default average horsepower by equipment type to be consistent
- 5) On-road vehicle emission factors have been updated to EMFAC2014.
- 6) Revised pollutant order for consistency throughout the calculator.
- 7) Added flexibility for users to specify a non-default number of working days per month.
- 8) Modified soil hauling import and export quantity and haul truck capacity data requests to allow users to specify soil
- 9) Soil hauling emissions are now estimated separately for each construction phase.
- 10) Added a new feature to allow users to provide asphalt hauling quantities by phase in the "Data Entry" tab.
- 11) New component added where the user can specify construction start date and duration by phase.
- 12) The maximum daily emissions calculation was modified to sum emissions from overlapping construction phases.
- 13) Water truck activity can be specified and emissions estimated for the paving phase.
- 14) Mitigation options were added for on-road vehicles and off-road equipment. Emissions calculations include the eff
- 15) Model allows user to estimate emissions from non-default off-road equipment for all phases and for all project type equipment type for horsepower, number of equipment, load factor, hours of operation and emission factors in the "Nor
- 16) New table of total project emissions with units of tons/phase was added in the "Emission Estimates" tab.
- 17) Removed table of daily emissions in metric units from the "Emission Estimates" tab.
- 18) Removed unnecessary data from all tabs.

#### **(Version 7.1.4 to 7.1.5) (updated by SMAQMD 12/11/13 with assistance from ENVIRON Corporation)**

- 1) Grubbing and Land Clearing Phase calculation of active months in 2007, 2017, 2019 fixed.
- 2) Soil Hauling Emissions calculation to select override if it exists for round trips/day.
- 3) Worker Commute Emissions calculation of starting and hot soak emissions; drainage phase PM<sub>10</sub> emission rate.
- 4) Water Truck Emissions calculation to select number of months for Grubbing and Land Clearing Phase; maximum a

#### **(Version 6.3.2 to Version 7.1.0, 7.1.1, 7.1.2, 7.1.3 & 7.1.4) (updated by SMAQMD 8/2/13)**

- 1) EMFAC2011 emission factors added (previous EMFAC versions dropped).
- 2) OFFROAD2011 emission factors added (and fixed error).
- 3) OFFROAD2007 for categories not in OFFROAD2011 (and fixed error)
- 4) Project length changed to include calendar years 2009 through 2025.
- 5) Average Offroad HP by Equipment Type calculation updated and corrected
- 6) Load Factor Adjustment deactivated (default load factors already incorporated in ARB's calculation of emission fact
- 7) Crawler Tractor equipment added to model
- 8) Air Compressors ROG & Default Excavators calculation on Data Entry sheet corrected.
- 9) Default equipment list updated
- 10) Corrections to Worker Commute Emissions calculations

and "water truck" section

n)

activities available for the Project Type 4.

with CalEEMod (version 2013.2.2).

hauling activity by phase.

effects of mitigations if a mitigation option is selected by the user.  
es. Non-default off-road equipment specification must be included by  
"Non-default Off-road Equipment" tab.

increase/day after 2025.

PM10 and PM2.5 estimates assume 50% control of fugitive dust from watering and associated dust control measures if a minimum number of water trucks are specified.  
 Total PM10 emissions shown in column F are the sum of exhaust and fugitive dust emissions shown in columns G and H. Total PM2.5 emissions shown in Column I are the sum of exhaust and fugitive dust emissions shown in columns J and K.  
 CO2e emissions are estimated by multiplying mass emissions for each GHG by its global warming potential (GWP), 1, 25 and 298 for CO2, CH4 and N2O, respectively. Total CO2e is then estimated by summing CO2e estimates over all GHGs.

| Total Emission Estimates by Phase for -> SR-49 Improvements (Option A) |                  |                 |                  |                         |                           |                                 |                          |                            |                                  |                  |                  |                  |                  |                 |

PM10 and PM2.5 estimates assume 50% control of fugitive dust from watering and associated dust control measures if a minimum number of water trucks are specified.  
 Total PM10 emissions shown in column F are the sum of exhaust and fugitive dust emissions shown in columns G and H. Total PM2.5 emissions shown in Column I are the sum of exhaust and fugitive dust emissions shown in columns J and K.  
 CO2e emissions are estimated by multiplying mass emissions for each GHG by its global warming potential (GWP), 1, 25 and 298 for CO2, CH4 and N2O, respectively. Total CO2e is then estimated by summing CO2e estimates over all GHGs.  
 The CO2e emissions are reported as metric tons per phase.

**Road Construction Emissions Model  
Data Entry Worksheet**

Version 9.0.0

Note: Required data input sections have a yellow background.  
Optional data input sections have a blue background. Only areas with a yellow or blue background can be modified. Program defaults have a white background.  
The user is required to enter information in cells D10 through D24, E28 through G35, and D38 through D41 for all project types. Please use "Clear Data Input & User Overrides" button first before changing the Project Type or begin a new project.

To begin a new project, click this button to clear data previously entered. This button will only work if you opted not to disable macros when loading this spreadsheet.

Please note that the soil type instructions provided in cells E18 to E20 are specific to Sacramento County. Maps available from the California Geologic Survey (see weblink below) can be used to determine soil type outside Sacramento County.

**Input Type**

|  |                               |  |
|--|-------------------------------|--|
| Project Name   | SR-49 Improvements (Option A) |  |
| Construction Start Year  | 2022                          | Enter a Year between 2014 and 2040 (inclusive)   |
| Project Type   | 3                             | 1) New Road Construction : Project to build a roadway from bare ground, which generally requires more site preparation than widening an existing roadway<br>2) Road Widening : Project to add a new lane to an existing roadway<br>3) Bridge/Overpass Construction : Project to build an elevated roadway, which generally requires some different equipment than a new roadway, such as a crane<br>4) Other Linear Project Type: Non-roadway project such as a pipeline, transmission line, or levee construction |
| Project Construction Time  | 3.50                          | months   |
| Working Days per Month   | 22.00                         | days (assume 22 if unknown)  |
| Predominant Soil/Site Type: Enter 1, 2, or 3 (for project within "Sacramento County", follow soil type selection instructions in cells E18 to E20 otherwise see instructions provided in cells J18 to J22) | 2                             | 1) Sand Gravel : Use for quaternary deposits (Delta/West County)<br>2) Weathered Rock-Earth : Use for Laguna formation (Jackson Highway area) or the lone formation (Scott Road, Rancho Murieta)<br>3) Blasted Rock : Use for Salt Springs Slate or Copper Hill Volcanics (Folsom South of Highway 50, Rancho Murieta)   |
| Project Length   | 0.50                          | miles  |
| Total Project Area   | 2.20                          | acres  |
| Maximum Area Disturbed/Day   | 0.50                          | acres  |
| Water Trucks Used?   | 2                             | 1. Yes<br>2. No  |

**Material Hauling Quantity Input**

| Material Type | Phase                        | Haul Truck Capacity (yd <sup>3</sup> ) (assume 20 if unknown) | Import Volume (yd <sup>3</sup> /day) | Export Volume (yd <sup>3</sup> /day) |
|---------------|------------------------------|---|--------------------------------------|--------------------------------------|
| Soil          | Grubbing/Land Clearing       | 20.00   | 150.00                               | 150.00                               |
|               | Grading/Excavation           | 20.00   | 75.00                                | 75.00                                |
|               | Drainage/Utilities/Sub-Grade | 20.00   | 10.00                                | 10.00                                |

| Asphalt       | Grubbing/Land Clearing       | 20.00   | 0.00                                 | 0.00                                 |
|               | Grading/Excavation           | 20.00   | 0.00                                 | 0.00                                 |
|               | Drainage/Utilities/Sub-Grade | 20.00   | 0.00                                 | 0.00                                 |
|               | Paving                       | 20.00   | 100.00                               | 0.00                                 |

**Mitigation Options**

|   |               |   |
|---|---------------|---|
| On-road Fleet Emissions Mitigation      | No Mitigation | Select "2010 and Newer On-road Vehicles Fleet" option when the on-road heavy-duty truck fleet for the project will be limited to vehicles of model year 2010 or newer   |
| Off-road Equipment Emissions Mitigation | No Mitigation | Select "20% NOx and 45% Exhaust PM reduction" option if the project will be required to use a lower emitting off-road construction fleet. The SMAGMD Construction Mitigation Calculator can be used to confirm compliance with this mitigation measure ( <a href="http://www.airquality.org/Businesses/CEQA-Land-Use-Planning/Mitigation">http://www.airquality.org/Businesses/CEQA-Land-Use-Planning/Mitigation</a> ).<br>Select "Tier 4 Equipment" option if some or all off-road equipment used for the project meets CARB Tier 4 Standard |

The remaining sections of this sheet contain areas that can be modified by the user, although those modifications are optional.

Note: The program's estimates of construction period phase length can be overridden in cells D50 through D53, and F50 through F53.

| Construction Periods         | User Override of Construction Months | Program Calculated Months | User Override of Phase Starting Date | Program Default Phase Starting Date |
|------------------------------|--------------------------------------|---------------------------|--------------------------------------|-------------------------------------|

**Default Horsepower and Load Factor**

| <b>OFFROAD Equipment Type</b>      | <b>Horsepower</b> | <b>Load Factor</b> |
|------------------------------------|-------------------|--------------------|
| Aerial Lifts                       | 63                | 0.31               |
| Air Compressors                    | 78                | 0.48               |
| Bore/Drill Rigs                    | 221               | 0.5                |
| Cement and Mortar Mixers           | 9                 | 0.56               |
| Concrete/Industrial Saws           | 81                | 0.73               |
| Cranes                             | 231               | 0.29               |
| Crawler Tractors                   | 212               | 0.43               |
| Crushing/Proc. Equipment           | 85                | 0.78               |
| Excavators                         | 158               | 0.38               |
| Forklifts                          | 89                | 0.2                |
| Generator Sets                     | 84                | 0.74               |
| Graders                            | 187               | 0.41               |
| Off-Highway Tractors               | 124               | 0.44               |
| Off-Highway Trucks                 | 402               | 0.38               |
| Other Construction Equipment       | 172               | 0.42               |
| Other General Industrial Equipment | 88                | 0.34               |
| Other Material Handling Equipment  | 168               | 0.4                |
| Pavers                             | 130               | 0.42               |
| Paving Equipment                   | 132               | 0.36               |
| Plate Compactors                   | 8                 | 0.43               |
| Pressure Washers                   | 13                | 0.3                |
| Pumps                              | 84                | 0.74               |
| Rollers                            | 80                | 0.38               |
| Rough Terrain Forklifts            | 100               | 0.4                |
| Rubber Tired Dozers                | 247               | 0.4                |
| Rubber Tired Loaders               | 203               | 0.36               |
| Scrapers                           | 367               | 0.48               |
| Signal Boards                      | 6                 | 0.82               |
| Skid Steer Loaders                 | 65                | 0.37               |
| Surfacing Equipment                | 263               | 0.3                |
| Sweepers/Scrubbers                 | 64                | 0.46               |
| Tractors/Loaders/Backhoes          | 97                | 0.37               |
| Trenchers                          | 78                | 0.5                |
| Welders                            | 46                | 0.45               |
|                                    |                   |                    |

Default Horsepower and Load Factor from CalEEMod2016 Appendix D: Table 3.3

## Sacramento Valley Air Basin Fleet Average Emission Factors (Diesel)

## Dorado Oaks Subdivision - Construction data for CalEEMod

### Construction

Please enter data only in highlighted cells.

| Data available and confirmed in RFI   | Data Needed  | Used CalEEMod default |
|---------------------------------------|--------------|-----------------------|
| Proposed Land Uses                    | No. of Units | Built Area            |
| Single Family Residential             | 157          | 1307671               |
| Multi family Residential              | 225          | 791485                |
| Landscaping, Parks & Open Space Areas | 19           | 2991700               |
| On-site Roadway Improvements          |              |                       |

|                                   |                       |
|-----------------------------------|-----------------------|
| Site Area                         | 142.50 acres          |
| Area to be demolished             | 0 square feet         |
| Total Proposed building area      | 5,090,856 square feet |
| Volume of infill to be brought in | 7,900 cubic yards     |
| Volume of material to be exported | 0 cubic yards         |

### Construction schedule

|                            |           |
|----------------------------|-----------|
| Start date of construction | 5/15/2022 |
| First year of operation    | 2022      |

| Construction Phase    | Start Date | End Date   |
|-----------------------|------------|------------|
| Site Preparation      | 5/15/2022  | 6/30/2022  |
| Grading               | 6/16/2022  | 7/31/2022  |
| Building Construction | 10/15/2022 |            |
| Paving                | 9/15/2022  | 10/15/2022 |
| Architectural Coating |            |            |

### Construction schedule

|                            |           |

**1.3 User Entered Comments & Non-Default Data**

Project Characteristics - Adjusted based on [http://www.pgecorp.com/corp\\_responsibility/reports/2019/assets/PGE\\_Land Use - From Project Description](http://www.pgecorp.com/corp_responsibility/reports/2019/assets/PGE_Land Use - From Project Description)

Construction Phase - Applicant data. Demolition area associated with SR-49 improvement component

Off-road Equipment - Default used

Off-road Equipment - Default used

Off-road Equipment - Default equipment used

Off-road Equipment - Data from applicant

Off-road Equipment - Data from applicant

Off-road Equipment - Data from applicant

Trips and VMT - Building construction and architectural coating trips based on residential component only, default f data

Demolition -

Grading - Site area

Vehicle Trips - Adjusted based on project traffic study

Woodstoves - Default number of fireplaces assumed, all burning propane per applicant

Energy Use - Adjusted for 2019 Title 24 energy consumption rates and to account electricity replacing natural gas

Construction Off-road Equipment Mitigation -

Water And Wastewater - 20% reduction in indorr water use to account for CalGreen code requirement.

SOURCE: Office of Environmental Health Hazard Assessment, 2015. *Air Toxics Hot Spots Program Guidance*  
Daily breathing rate for residential receptor is based on the OEHHA 95th percentile moderate intensity breathing rate.  
Fraction of time at home is set to values per OEHHA Table 8.4 for residential since the nearest school has an air quality receptor.  
Inhalation cancer potency factor from OEHHA Table 7.1

**Prepared by:**  
**Gordon Mann, Consulting Arborist**

## **Arborist Disclosure Statement**

Arborists are tree specialists who use their education, knowledge, training and experience to examine trees, recommend measures to enhance the beauty and health of trees, and attempt to reduce the risk of living near trees. Clients may choose to accept or disregard the recommendations of the arborist, or to seek additional advice.

Arborists cannot detect every condition that could possibly lead to the structural failure of a tree. Trees are living organisms that fail in ways we do not fully understand. Conditions are often hidden within trees and below ground. Arborists cannot guarantee that a tree will be healthy or safe under all circumstances, or for a specified period of time. Likewise, remedial treatments, like any medicine, cannot be guaranteed.

Treatment, pruning and removal of trees may involve considerations beyond the scope of the arborist's services such as property boundaries, property ownership, site lines, disputes between neighbors, and other issues. Arborists cannot take such considerations into account unless complete and accurate information is disclosed to the arborist. An arborist should then be expected to reasonably rely upon the completeness and accuracy of the information provided.

Trees can be managed, but they cannot be controlled. To live near trees is to accept some degree of risk. The only way to eliminate all risk associated with trees is to eliminate all trees.

### **Assignment**

The subject Dorado Oaks site is an approximately 144 acre open site surrounded by single family homes on small and large parcels, and open space. The site has three main characteristics, the northwest portion that has been previously cleared, graded and not further developed, a dirt road network down the center that extends into some of the western areas, and oak woodlands and pine woodlands that have been un-maintained. The client contacted our office and requested we provide the information required to satisfy the County of El Dorado's Oak Woodland Resources, determining the oak woodland area, identifying all trees in the woodland area 24 inches in diameter and greater, all Heritage Trees 36 inches in diameter and greater, and any individual oak trees 6 inches and greater located outside of the woodland designation for tree removal and will need mitigation based on the County ORMP Oak Resources requirements and Ordinance No. 5061. This report is the result of onsite inspections performed on January 3, 14, 16, and 29, 2018, and February 1 and 3, 2018, and the use of aerial imagery.

This report is based on the proposal under the current County ORMP ordinance No. 5061 and mitigation requirements.

The site was visited and walked with Charles Hughes of Sycamore Environmental Consultants, Inc., the biologist that was determining the vegetation types, wetlands, and extent of the oak woodlands. We viewed and confirmed the vegetation types and extent of the oak woodlands.

### **Assignment limits**

All the trees were observed while standing on the ground. Data collected is limited to a visual ground inspection. The aerial image was provided by CTA Engineering and Surveying. Ground inspections and measurements were used to insure the accuracy of the inspection data. The survey data calculations were performed by CTA Engineering and Surveying, and assumed to be accurate.

### **Current Existing Tree Status (general)**

The site is general north-south orientation entering on Faith Lane from Pleasant Valley Road from the north, and bordered on the east by Fowler Lane, bordered on the west by Tullis Mine Road and Crystal Drive, Justine Avenue, Crown Point Drive, Griffith Drive, and Antares Road. The site is not rectangular and has several different peninsulas and areas that extend outside of a rectangular shape, and all areas were included in the site visit. The development is required to comply with the El Dorado County ORMP Oak Resources requirements and Ordinance No. 5061.

The site is a mix of vegetation types with Blue Oaks, *Quercus douglasii*, Interior Live Oak, *Quercus wislizenii*, Valley Oak, *Quercus lobata*, Black Oak, *Quercus kelloggii*, and Canyon Live Oak, *Quercus chrysolepis*. The different biological communities were found to be:

California Black Oak Woodland

Valley Oak - Interior Live Oak Woodland

Valley Oak Woodland

Ponderosa Pine – Interior Live Oak Woodland

Canyon Live Oak Woodland

There were a total of 484 trees found to be either individual Oak trees 6 inches in diameter or greater, or oak trees 24 inches in diameter and greater in the project area.

There were 456 trees found to be 24 inches diameter and greater on the Oak Woodland portion of the project area, with 249 trees found to be Heritage Trees, 36 inches in diameter and greater. Of the 249 Heritage Trees, 200 were found to be in Poor condition or worse and would not require mitigation. Of the 49 Heritage Trees that would require mitigation, 22 trees are shown to be impacted by the project for a total mitigation of 947 diameter inches.

There were 28 individual Oak trees found growing in the project area. Of those, 5 trees were found to be 24 inches and greater, and of those 5 trees, 4 were found to be Heritage Trees, 36 inches diameter or greater. Of those 4 Heritage Trees, 2 were found to be in poor condition or worse and would not require mitigation. None of the individual oak trees 24 inches in diameter or greater were shown to be impacted by the project. Nine (9) of the 28 individual oak trees were shown to be impacted by the project for a total of 82 diameter inches.

### **Technical Recommendations**

It is recommended that all tree care follow specifications written in accordance with ANSI A-300 standards. Pruning of the trees should be performed in the outer portion of the canopy to reduce leverage and end weights and allow the center of the canopies to grow and fill in with foliage. It is also recommended that when root pruning, the smallest size roots as possible be pruned, cuts be performed with handsaws, loppers, or chainsaws appropriate for the size of the root being cut. The roots should be exposed by excavating prior to cutting. Roots should be pruned prior to root removal

within the tree protection area to limit the damage and tearing of roots back towards the tree. Root pruning should be overseen by a qualified arborist.

Tree planting should follow the specifications included in Appendix A.

### **General Tree Care and Maintenance**

The appendix information is given so that an onsite landscape manager can properly take care of the retained trees, and newly planted trees. Established native oak trees do not like to have the base of the trunk or their roots and the surrounding soil disturbed or tampered with. Applying or having unintentional landscape water in the root zone can cause catastrophic and negative affects to most species of native oak trees. Newly planted oak trees do need their root balls watered until established and then may need supplemental watering during extended periods of dry or hot weather. It is, therefore, recommended that the landscape be designed using drought tolerant plants that will require little to no watering after establishment. Irrigation should be delivered using an on-surface drip type system that does not require trenching around the oak trees to install. The plants should be spaced at least 6 feet away from the trunk of native oak trees, and the drainage from irrigation should be managed so water does not flow to the trunks of the oak trees. Trees that are growing in high use areas should be inspected by a qualified arborist for tree risk on a routine basis, the frequency depending on site use and tree condition.

### **Observations**

The site was inspected on January 3, 14, 16, and 29, 2018, and February 1 and 3, 2018. All trees were inspected for diameter. On January 3, 2018, the site was walked with Chuck Hughes from Sycamore Environmental Consulting, Inc., and the oak woodland vegetation types and areas were confirmed. Most of the trees on the site have not received any maintenance. On January 14, 16, and 29 and February 1 and 3, 2018, the site was walked by Gordon Mann to inspect the oak trees on the whole site.

The proposed development area is 6,265,349.47square feet, or 143.83 acres. A portion of the site has been previously graded and compacted, and the trees present appear to be mostly re-growth, with a few small oak trees and pines. Other areas of the site are less disturbed or undisturbed and contain Oak Woodland in various forms as confirmed with Sycamore Environmental Consultants, Inc. The total Oak Woodland area was found to be 1,917,985.50 square feet, or 44.03 acres. The total Oak woodland proposed to be impacted is determined to be 1,235,943.53 square feet, or 28.37 acres. The total Oak Woodland canopy was found to be 30.61% of the property. The percent of the oak woodland proposed to be impacted is 64.44%.

In the oak woodland areas, the County requires the oak trees that are 24 inches and greater to be inventoried. The trees that were found to be 24 inches diameter or greater were measured with a diameter tape for accurate diameter measure, tagged, and rated for condition.

Outside of the oak woodland areas, all native oak trees 6 inches in diameter and greater are to inventoried. Those individual trees found to be 5 inches diameter or greater were measured with a diameter tape for accurate diameter measure, and any trees 6 inches in diameter or greater were tagged and rated for condition.

Each diameter tape measured tree was assessed for condition, the number of stems present, and notes explaining the tree characteristics affecting condition were recorded. The tree data is shown on the spreadsheet titled: Dorado Oaks Protected Tree Summary List, Oak Woodland Heritage Trees and Individual Oak Tree List. The spreadsheet is sorted by

There were a total of 484 trees found to be either individual Oak trees or oak trees 24 inches in diameter and greater in the project area.

There were 456 trees found to be 24 inches diameter and greater on the Oak Woodland portion of the proposed project, with 249 trees found to be Heritage Trees, 36 inches in diameter and greater. Of the 249 Heritage Trees, 200 were found to be in Poor condition or worse.

There were 28 individual Oak trees found growing in the non-oak woodland portions of the project area. Of those, 5 trees were found to be 24 inches and greater, and of those 5 trees, 4 were found to be Heritage Trees, 36 inches diameter or greater. Of those 4 Heritage Trees, 2 were found to be in poor condition or worse.

The tree condition rating is a combination of vigor, structure, trunk, branches, trunk flare, live tissue, and defects and decay or pests. It is described in % and range term. The rating scale is:

| <u>Range</u> | <u># Rating</u> | <u>Description</u>  |
|--------------|-----------------|---|
| Excellent    | 81-100          | Found to have none to few defects or decay, and high vigor          |
| Good         | 61-80           | Found to have few defects or decay, and above average vigor         |
| Fair         | 41-60           | Found to have mitigatable defects, limited decay, and average vigor |
| Poor         | 21-40           | Found to have significant defects, decay, and lower vigor           |
| Very poor    | 120             | Found to have significant defects, decay, and low declining vigor   |
| Dead         | 0               | Found to be dead  |

Plus and minus symbols are included in the rating range description on the spreadsheet to show the position of the % rating in the condition range.

The oak canopy area was calculated by CTA Engineering and Surveying using aerial imagery calculating the area of the site considered Oak Woodland. The field inspection confirmed the location of the canopy as shown on the aerial image. The trees included in the inventory were shown in their approximate location on a site plan.

Diameter at Breast Height (DBH) is the industry standard for measuring trunk diameter. For trees with straight trunks and normal taper, the measurement is taken at 4.5 feet above grade. When a swollen area, flare from branching, multiple stems, or other abnormal growth is present, the diameter at 4.5 feet would not be characteristic of the subject tree. Therefore, the measurement is taken at the most appropriate location for determining the reasonable trunk diameter, and the height of the measurement was taken is listed with the diameter measurement if not at 4.5 feet. The initial measurements were taken with a Biltmore Stick. For all trees found to be close to 24 inches diameter or greater, a second more accurate measurement was taken with a diameter tape. For individual oak trees found greater than 5 inches in diameter, a measurement was taken with a diameter tape to confirm the tree diameter and include all trees 6 inches diameter and greater.

The proposed development site is 6,265,349.47 square feet, or 143.83 acres. A portion of the site has been previously graded, and the remaining trees appear to be mostly re-growth, with a few small oak trees and pines. The total Oak Woodland was found to be 1,917,985.50 square feet, or 44.03 acres. The total Oak woodland proposed to be impacted is determined to be 1,235,943.53 square feet, or 28.37 acres. The total Oak Woodland canopy was found to be 30.61% of the property. The percent of the oak woodland proposed to be impacted is 64.44%. The canopy shown on the aerial image was confirmed during the field visits to be an accurate representation.

**Other testing or examination:**

No additional testing or examination was requested at the time of the inspection or found necessary.

**Discussion:**

The project site is approximately 144 acres and contains areas of oak woodland and individual oak trees. Portions of the site were previously cleared and graded, and no further development work was performed, and some trees have naturally re-grown. The site is bordered by a range of small single-family lots, larger single family lots with some open space, open space, and commercial property.

The oak trees on the property were inspected, and the site plan was reviewed to identify those trees that will be impacted by the development. The impacted oak trees that qualify as individual oak trees outside of an oak woodland, all oak woodland canopy area, and Heritage Trees located in the oak woodland and individual oak trees were evaluated for mitigation requirements. Individual Oak trees and Heritage Trees in poor or worse condition were not included in the mitigation calculations.

The El Dorado County Oak Resource Mitigation calculation is based on the area of oak woodland impacted, the percent of oak woodland being impacted, the individual oak trees growing outside of oak woodland being impacted, and Heritage Trees both in oak woodlands and individual trees being impacted. The Oak Woodland Mitigation Ratio is determined by the amount of existing Oak Woodland canopy being impacted. A total of 1,235,943.53 square feet, or 28.37 acres is being impacted, and equals 64.44% of the Oak Woodland being impacted. The mitigation ratio chart for El Dorado County ORMP is:

| Percent of Oak Woodland Impact | Oak Woodland Mitigation Ratio |
|--------------------------------|-------------------------------|
| 0-50%                          | 1:1                           |
| 50.1 – 75%                     | 1.5:1                         |
| 75.1-100%                      | 2:1                           |

The proposed oak woodland impact falls into the Oak Woodland Impact range of 50.1 - 75%. The proposed oak woodland impact requires a 1.5:1 mitigation ratio. The ratio times the proposed impacted acreage results in the total acres required for mitigation. 1.5 ratio X 28.37 impacted acres = 42.56 total acres required for Oak Mitigation.

The proposed 28.37 impacted acres of oak woodland will require mitigation at the cost of \$8,285.00 per acre at the 1.5 acre ratio rate, for a total acreage of 42.56 acres and a mitigation fee of \$352,609.60.

There is an impact to individual oak trees. Nine (9) individual oak trees are proposed to be impacted with a total of 88 diameter inches. Each diameter inch requires \$153 in mitigation fee, for a total mitigation fee of \$13,464.00.

There is an impact to Heritage trees. Twenty (20) Heritage Trees are proposed to be impacted with a total of 874 diameter inches. Each diameter inch requires \$459 in mitigation fee, for a total mitigation fee of \$401,166.00

The total mitigation fee for the proposed project will be \$767,239.60.

The oak woodland mitigation requirements for the project was calculated based on the following information:

**Total area of the project area: 6,265,349.47 square feet, or 143.83 acres**

**Total area of oak woodland: 1,917,985.50 square feet, or 44.03 acres**

**Total percent of existing oak woodland: 30.61%**

**Total area of total oak woodland to be removed: 1,235,943.53 square feet, or 28.37 acres**

**Total percent of oak woodland to be removed: 64.44%**

**Oak Woodland Mitigation Ratio: 1.5:1**

**Total area of Oak Woodland to be mitigated: 42.56 acres**

**Total number and diameter inches of individual oak trees to be removed: 9 trees, 88 diameter inches**

**Total number and diameter inches of Heritage Trees to be removed: 20 trees, 874 diameter inches**

**Total area of pre-mitigated oak canopy to be removed: 0 sq. ft.**

**Total area of oak canopy required to be mitigated: 1,235,943.53 square feet, or 28.37 acres**

**Total Oak Woodland Area Impacted Mitigation: 42.56 acres @ \$8,285 per acre = \$352,609.60**

**Individual Oak tree Impacted Mitigation: 9 trees, 88 inches, \$153 per inch: \$13,464**

**Heritage Tree Impacted Mitigation: 20 trees, 874 inches, \$459 per inch: \$401,166.00**

**Total Amount of Oak Resource Mitigation: \$767,239.60**

There is an existing oak corridor along most of the eastern side of the project property and adjacent properties, the south side of the project property, and the west side of the project property and adjacent properties up to the previously disturbed portion of the property. The proposed oak removal has minimal impact on these corridors, as the project was designed to retain an existing continuous edge canopy of oaks. The proposed roads and homes are located in the previously disturbed areas and the sparsest oak canopy area on the property and will have minimal impact on the remaining oak canopy on the site.

With the proposed mitigation, the proposed project is in compliance with the Ordinance 5061, Oak Resources Conservation. The project plans to pay the Oak Mitigation Fee for project approval.

The project is in compliance with General Plan Policy 7.4.5.2 by preserving native oaks wherever possible by avoiding large expanses of oak woodland, identifying how trees in the vicinity of the project or construction site will be protected and by following approved preservation methods specified in the mitigation measures.

It has been determined that the proposed project would result in less than significant impacts to oak woodland resources with incorporation of mitigation measures listed below.

For long term maintenance and the changes in site use, some pruning should be performed to larger trees along the property line borders, trees that overhang neighboring properties or areas of new roads or public space and will experience new increased uses. The pruning should be performed to remove large dead branches, shorten end weights, and reduce the risk of branch failure.

### **Conclusion:**

The proposed Dorado Oaks project will impact existing oak woodlands and individual oak trees. Per the El Dorado County Oak Resources Conservation Ordinance mitigation will be required for 3 impacts:

1. Oak woodland is proposed to be impacted. There are 28.37 acres of Oak Woodland proposed to be impacted, and this is 64.44% of the total oak woodland area. The mitigation ratio is 1.5 times the acreage impacted, equaling 42.56 acres of oak woodland mitigation required. The cost of the 42.56 acres at \$8,285 per acre amounts to \$352,609.60 in mitigation fees.
2. There are 9 individual oak trees proposed to be impacted with 88 total inches of diameter. The cost for mitigation is \$153 per inch. The cost of the 9 trees is \$13,454.00 in mitigation fees.
3. There are 20 Heritage Trees, trees with a single, or multiple combined, trunk diameter of 36 inches or greater, in fair and better condition, proposed to be impacted. The cost for mitigation is \$459 per inch. The cost of the 20 trees is \$401,166.00.

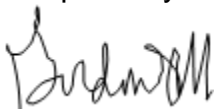

The total mitigation cost of proposed oak impacts is \$767,239.60. The project plans to pay the Oak Mitigation Fee for project approval.

The mitigation proposed will meet the required mitigation based on the El Dorado County ORMP Oak Resources requirements and Ordinance No. 5061.

Appendix A  
Tree Planting Specifications

Trees shall be free of major injury such as scrapes that remove greater than 20% of the bark circumference, a broken central leader, or constrictions from staking or support. The graft, if present, shall be consistent for the production of the cultivar or species. The trunk flare shall be at grade, not buried by soil, and adventitious roots shall not be growing from above the trunk flare.

The tree shall not be root bound in the container, and the trunk diameter relative to the container sizes, within the limits of American National Standards Institute (ANSI) Z-60 Nursery Standards.

Prior to acceptance, upon delivery, trees may be pulled from the container, so the rootball can be inspected for compliance with the specifications. An agreed upon maximum percent of trees may be checked for compliance. The nursery should provide post delivery care specifications to keep the trees in optimum condition until planting.

Tree Planting

**1.0 INSPECT THE TREE**

- 1.1 Carefully remove the soil at the top of the container to locate the trunk flare. Check for girdling roots and damage to the root system and lower trunk.
- 1.2 Until a relationship is established with the supplying nursery, randomly select an acceptable sample for the delivery. Inspect the root system by taking the rootball out of the container, and remove all the soil from the root system. Inspect the inner roots to verify that the roots were properly pruned when moved from the initial container to the next larger size. Keep the root system moist during the check. If the roots were properly pruned during container transfer, and the roots have been kept moist, the tree can be planted as a bare root tree.
- 1.3 If the trees are acceptable, each tree shall be removed from the container prior to digging the hole, and the depth of the rootball from the trunk flare to the bottom of the rootball shall be measured. This measurement, less 1" is the depth the pedestal in the center of the planting hole shall be excavated to.

**2.0 DIG THE HOLE**

- 2.1 Shave and discard grass and weeds from the planting site.
- 2.2 The hole should be a minimum 3 times the diameter of the container diameter.
  - 2.2.1 Square containers shall be dug with a circular hole 3 times the container measurement.
- 2.3 Dig the hole, leaving an undisturbed pedestal in the center that the root ball will be set on.
- 2.4 The pedestal shall be excavated to the depth measurement determined above

**3.0 ROOT BALL PREPARATION**

- 3.1 Loosen and straighten outside and bottom roots prior to placing the rootball on the pedestal. The trunk flare (the point where the trunk meets the roots) should be 1" above ground level.
- 3.2 Winding and girdling roots shall be pruned to either the point they are perpendicular to the root ball, or a point where they can be straightened and placed perpendicular to the rootball.
- 3.3 Keep the roots moist during this process so they do not dry out.

**4.0 BACKFILL**

- 4.1 Hold the tree so the trunk and central leader are in a straight upright position.
- 4.2 Backfill soil with the soil you removed around the base of the pedestal and rootball no higher than 2/3, so the tree stands in the upright position
- 4.3 Tamp the soil to remove air gaps, or fill with water and allow soil to settle and drain. Continue to fill the entire hole with existing soil in layers and tamping, up to finished grade. Backfill soil shall not be placed on top of the rootball.
- 4.4 Build a berm at the outside edge of the rootball. The berm shall be a minimum 3 inches high and wide.
- 4.5 Cover the remainder of the backfill soil outside the berm with a set level of mulch (2 to 4 inches deep).

## **5.0 STAKING**

- 5.1 Remove the nursery stake (the thin stake tied to the trunk) that is secured to the tree.
- 5.2 Install the appropriate number of stakes – for example, two stakes on the windward and leeward side of the tree, set at least 2 feet into the native soil outside the rootball.
  - 5.2.1 If the area is exceptionally windy, high traffic, or when specified, install 3 or 4 stakes spaced evenly around the circumference, outside the rootball.
- 5.3 One tie per stake shall be placed at the lowest point on the trunk where the tree crown stands upright. Ties shall be placed using a “figure 8” crossing pattern wrapped around the trunk and firmly tied or attached to the stake.
  - 5.3.1 Ties shall be loose enough so the tree crown moves up to 3 times the trunk diameter in the wind, and taut enough that the trunk does not rub the stakes during movement.
- 5.4 The stakes shall be cut off above the tie point so branches do not rub the stake above the tie point.
- 5.5 Check the stakes and ties periodically, removing them when the tree is able to stand on its own.
- 5.6 If a leader that should be vertical is drooping, the leader may be temporarily straightened using a bamboo or small diameter wood splint approximately 25% longer than the drooping section of stem, tied to the stem at the top and bottom of the splint to hold the stem vertical. The splint shall be removed prior to girdling or constricting the stem, and may be re-installed as necessary.

## **6.0 MULCH**

- 6.1 Apply a set depth (2 to 4 inches) of wood chips or other organic mulch over the planting hole excavated soil.
- 6.2 Mulch may be placed inside the berm and shall be kept at least 4” away from the trunk flare.
- 6.3 The soil area of the planting hole shall be kept clear of grass and landscape plantings.

## **7.0 WATER/IRRIGATION**

- 7.1 Apply water using a low pressure application, i.e.: trickle from a hose, soaker hose, or bubbler.
- 7.2 Use low water volume to apply the water. Add water long enough to saturate the rootball and planting area.
  - 7.2.1 Lawn sprinklers shall not be considered an acceptable method of applying irrigation to newly planted trees.
- 7.3 The initial watering frequency shall be checked by monitoring the soil moisture. Based on the temperature and humidity, learn how long the soil retains the moisture.
- 7.4 After the soil is below field capacity, and before it dries out, repeat the watering process, every so determined days.
  - 7.4.1 As the weather and seasons change, the irrigation frequency may change. This will be evaluated by checking soil moisture following water application.
    - 7.4.1.1 For example: you may learn irrigation should be applied twice a week during the fall, except in cool or rainy weather. Irrigation may need to be applied every two days during hot dry summer periods.
- 7.5 Irrigation shall be continued for the first three years after planting.
  - 7.5.1 Avoiding drying out the rootball and adjacent soil is critical for tree growth and establishment.

## **8.0 PROTECT THE TRUNK**

- 8.1 Avoid damage from mowers and string trimmers to the tender bark of the young tree.
- 8.2 Maintain a clear area free of vegetation around the trunk in the berm or basin area.
- 8.3 Keep the set depth of mulch (2 to 4 inches) coverage of the area around the tree.
- 8.4 Retain temporary low branches along the trunk to shade and feed the trunk.

## **9.0 PRUNING NEWLY PLANTED TREES**

- 9.1 Broken and dead branches shall be pruned.
- 9.2 A central leader shall be identified and retained if present. If co-dominant leaders are present, they shall be pruned to be shorter than the central leader by 20%.
- 9.3 All low temporary branches on the lower trunk shall be retained, and if needed shortened for clearance.

Detail for #1, #5 and #15 container planting stock

**10. FUTURE CARE**

10.1 During subsequent years, the berm should be enlarged or removed in order to provide water to the increasing root growth. The watering area should target new root growth and projected root growth.

10.2 Pruning should retain a dominant central leader; and retain low temporary branches until trunk bark hardens or remove before branch diameter becomes too large.

Appendix B

Nursery Stock and Tree Planting

Nursery Stock purchase

Trees purchased for the subject project shall be the Genus, species, and cultivar specified in the purchase documents. Trees shall be grown to be free of bound root systems caused by winding roots or kinked roots from a previous smaller container. As trees are moved to larger containers, circling roots shall be either pruned to a point where they can grow straight, straightened in the new container, or removed. Kinked roots shall be pruned to a point where they will grow straight outward or downward.

The trunk and branches shall be of a structure where a central leader is defined, or the central leader can be easily selected. The competing leaders have a smaller diameter, and can be pruned shorter.

## Appendix C

### Tree Protection

The edge of the tree canopy outside of the construction area shall be fenced off with construction fencing, either temporary orange fence or chain link fence. The fence shall be placed as far from the trees as possible, targeting outside the dripline. If the fence cannot be placed outside of the dripline, the project arborist shall determine if the distance is acceptable or some other soil protection is necessary. A certified arborist must approve the placement of the tree fence. The fence will be marked with weather appropriate signage clearly stating the area as "Protected! Do not enter! Tree preservation zone." Sign(s) will be placed on every face or direction of fence line.

When excavating or trenching adjacent to trees, roots 2 inches and greater encountered in the trench shall be cleanly severed at the trench side closest to the tree, and then excavated, so the roots are not torn back towards the tree. Cut exposed roots ends or exposed roots shall be covered with moist soil or moist burlap and kept moist until the soil is backfilled.

No storage of supplies or materials, parking, or other construction activity shall occur within the fenced area. If a construction activity is required within the construction area, specific specifications and mitigation shall be written to cover the work, and the fencing may be entered during the necessary construction activity, then the fencing shall be replaced after the activity is completed for the day.

The construction protection shall remain in place until the project is completed, including landscape activities. Landscape activities shall have specifications that protect the trees during the landscape activities.

Any bare soil around protected trees should be covered with a 4-inch layer of mulch consisting of ground-up tree parts.

If the protected trees appear to show signs of yellowing leaves, dead leaves, or other abnormal appearance, contact the project arborist for inspection and mitigation.

### Long Term Landscape Maintenance Plan and Specifications

#### General

This plan and specifications are intended to promote the optimum landscape growth and lifespan. Individual tree planting in specific sites in the parking lot are intended to provide a large shade canopy over time covering 50% or greater of the parking lot. The border and natural screening plantings are overplanted and intended to fill the space initially, and have the weaker trees removed over time, to create the space and site resources necessary for the remaining trees. Trees initially will be planted on approximate 10 foot centers, with the long term spacing to be approximately 20 foot centers. As trees are thinned, they may be transplanted or removed, as best suited to the remaining trees on the site.

These trees shall be pruned to establish a central leader, to provide the best structure by managing size relationships between parent and subordinate trunk and branches, and to encourage growth into a large shade canopy. These trees shall not be topped or rounded over. Trees may have competing leaders headed back to promote the strong central leader necessary to eliminate co-dominant stems and weak branching.

#### Design Intent

The trees planted around the perimeter and alongside the sidewalk or street are intended to replicate natural areas and to screen the project and adjacent properties. The native oaks shall be more tightly spaced at planting and thinned over time to promote the growth of the final or climax trees on the site. The thinning for spacing shall be performed as the trees get larger and their crowns begin to overlap. When the desired tree crowns are being impacted by an adjacent tree, the adjacent tree should either be pruned or removed, to provide the optimum screening while enhancing the desired tree growth. Pruning shall retain a dominant central leader and for decurrent tree structures, remove competing leaders, and maintain the appropriate size relationships between parent and subordinate trunk and branches.

### Pruning Small Trees

Branches are to be pruned by either reduction, thinning, or raising cuts to achieve the appropriate clearance over the area. The smallest diameter branches should be removed, working from the branch tips towards the center, removing none to minimal interior foliage inside the final outward branch cut. Trees shall be cleaned to remove dead branches, weakly attached branches, and branches where significant damage has occurred by rubbing, animals, insects, or critical disease. All pruning cuts shall be made in accordance with American National Standards Institute (ANSI) A300 Part 1 Pruning Standards and International Society of Arboriculture (ISA) Best Management Practices for Pruning.

On trees up to six inches in diameter, all dead branches greater than one-half inch diameter shall be removed. All weakly attached branches and potential co-dominant branches shall either be reduced by at least 20% or be removed, as most appropriate for the long term structure of the tree. The weakest or most damaged branch of a pair or group of rubbing branches shall be shortened to avoid rubbing, or removed. All temporary branches along the trunk should be retained and shortened to obtain necessary clearance. When either temporary branches exceed one-inch diameter, or the trunk forms mature bark, the temporary branches should be removed.

Stakes shall be installed as necessary to support a straight growing tree, and reduce crooked growth caused by high wind. The trunk shall be supported at the lowest point to keep the crown supported straight, and the portions of the stake above the tie point cut off to avoid rubbing branches. After the tree becomes firmly rooted, and the stake is no longer necessary to support the tree, the stakes shall be removed.

Depending on the location and site needs, clearance should be performed by pruning the smallest branches inward from the branch tips until the permanent branches are in place. Clearance minimums should be set, for example: 7.5' over sidewalks, 10 feet over parking spaces, and 14.5 feet over truck traffic streets. Clearance pruning shall be carefully performed until the permanent branches are identified. Up to 25% of the total foliage on any tree should be the maximum removed during any planned pruning cycle. Follow-up pruning for structure or clearance on young trees can be performed at any time if pruning small amounts of foliage (up to 10%) and retaining the central leader and branch size relationships.

### Pruning Large Trees

Branches are to be pruned by either reduction, thinning, or raising cuts to achieve the appropriate clearance over the area. The smallest diameter branches should be removed, working from the branch tips towards the center, removing none to minimal interior foliage inside the final outward branch cut. Trees shall be cleaned to remove dead branches, weakly attached branches, and branches where significant damage has occurred by rubbing, animals, insects, or critical disease. All pruning cuts shall be made in accordance with American National Standards Institute (ANSI) A300 Part 1 Pruning Standards and International Society of Arboriculture (ISA) Best Management Practices for Pruning.

On trees larger than six inches in diameter, all dead branches greater than one-inch diameter shall be removed. Long heavy branches that are either growing flat or bending down shall have approximately 15% of the end weight reduced, accomplished by a combination of pruning the downward growing branches, shortening long tips, and thinning endweights. If any structural issues are observed by the climber working in the tree, they shall notify the property manager immediately to discuss the tree's needs.

Depending on the location and site needs, clearance should be performed by pruning the smallest branches inward from the branch tips until the permanent branches are in place. Clearance minimums should be set, for example: 7.5' over sidewalks, 10 feet over parking spaces, and 14.5 feet over truck traffic streets. Clearance pruning shall be carefully performed until the permanent branches are identified. Up to 25% of the total foliage on any tree should be the maximum removed during any planned pruning cycle.

Any special site issues for utility clearance or conflicts with other objects shall be managed by early pruning to direct growth away from the target lines, overhead lights, flags, or buildings.

### Thinning of Dense Planting

Many landscape plantings and natural landscape areas are over-planted by installing a greater number of plants at closer spacing than optimum for the full-sized plants. Over time, plants will grow into each other, the crowns will conflict, and the spacing will need to be corrected. Correct spacing is obtained by removing the least desirable plants to meet the final spacing target, within reasonable tolerances.

Dorado Oaks, Diamond Springs, CA

Arborist Report for Oak Resources Management Plan

May 28, 2018

If conflicting plants are all healthy, it won't matter which plants are removed to achieve the spacing distances. Spaced thinning should be performed before the foliar crowns are intertwined or overlapping. The thinning may be performed over two or three cycles as the trees grow over time, depending on the density and desired final spacing.

The trees initially will be planted on approximate 10 foot centers, with the long term spacing to be approximately 20 foot centers. The healthiest and best specimens should be retained on site. As trees are thinned, they may be transplanted or removed, as best suits the remaining trees on the site.

## Appendix D

### Avoiding Tree Damage During Construction

Edited from the 's tree protection guidelines

As cities and suburbs expand, wooded lands are being developed into commercial and residential sites. Homes are constructed in the midst of trees to take advantage of the aesthetic and environmental value of the wooded lots. Wooded properties can be worth as much as 20 percent more than those without trees, and people value the opportunity to live among trees.

Unfortunately, the processes involved with construction can be deadly to nearby trees. Unless the damage is extreme, the trees may not die immediately but could decline over several years. With this delay in symptom development, you may not associate the loss of the tree with the construction.

It is possible to preserve trees on building sites if the right measures are taken. The most important step is to hire a professional arborist during the planning stage. An arborist can help you decide which trees can be saved and can work with the builder to protect the trees throughout each construction phase.

#### How Trees Are Damaged During Construction

**Physical Injury to Trunk and Crown.** Construction equipment can injure the aboveground portion of a tree by breaking branches, tearing the bark, and wounding the trunk. These injuries are permanent and, if extensive, can be fatal.

**Cutting of Roots.** The digging and trenching that are necessary to construct a house and install underground utilities will likely sever a portion of the roots of many trees in the area. It is easy to appreciate the potential for damage if you understand where roots grow. The roots of a tree are found mostly in the upper 6 to 24 inches of the soil. In a mature tree, the roots extend far from the trunk. In fact, roots typically are found growing a distance of one to three times the height of the tree. The amount of damage a tree can suffer from root loss depends, in part, on how close to the tree the cut is made. Severing one major root can cause the loss of 5 to 20 percent of the root system.

The roots of a tree extend far from the trunk and are found mostly in the upper 6 to 12 inches of soil.

Another problem that may result from root loss caused by digging and trenching is that the potential for the trees to fall over is increased. The roots play a critical role in anchoring a tree. If the major support roots are cut on one side of a tree, the tree may fall or blow over.

Less damage is done to tree roots if utilities are tunneled under a tree rather than across the roots.

**Soil Compaction.** An ideal soil for root growth and development is about 50 percent pore space. These pores—the spaces between soil particles—are filled with water and air. The heavy equipment used in construction compacts the soil and can dramatically reduce the amount of pore space. This compaction not only inhibits root growth and penetration but also decreases oxygen in the soil that is essential to the growth and function of the roots, and water infiltration.

**Smothering Roots by Adding Soil.** Most people are surprised to learn that 90 percent of the fine roots that absorb water and minerals are in the upper 6 to 12 inches of soil. Roots require space, air, and water. Roots grow best where these requirements are met, which is usually near the soil surface. Piling soil over the root system or increasing the grade smothers the roots. It takes only a few inches of added soil to kill a sensitive mature tree.

**Exposure to the Elements.** Trees in a forest grow as a community, protecting each other from the elements. The trees grow tall, with long, straight trunks and high canopies. Removing neighboring trees or opening the shared canopies of trees during construction exposes the remaining trees to sunlight and wind. The higher levels of sunlight may cause sunscald on the trunks and branches. Also, the remaining trees are more prone to breaking from wind or ice loading.

### Getting Advice

Hire a professional arborist in the early planning stage. Many of the trees on your property may be saved if the proper steps are taken. Allow the arborist to meet with you and your building contractor. Your arborist can assess the trees on your property, determine which are healthy and structurally sound, and suggest measures to preserve and protect them.

One of the first decisions is determining which trees are to be preserved and which should be removed. You must consider the species, size, maturity, location, and condition of each tree. The largest, most mature trees are not always the best choices to preserve. Younger, more vigorous trees usually can survive and adapt to the stresses of construction better. Try to maintain diversity of species and ages. Your arborist can advise you about which trees are more sensitive to compaction, grade changes, and root damage.

## Planning

Your arborist and builder should work together in planning the construction. The builder may need to be educated regarding the value of the trees on your property and the importance of saving them. Few builders are aware of the way trees' roots grow and what must be done to protect them.

Sometimes small changes in the placement or design of your house can make a great difference in whether a critical tree will survive. An alternative plan may be more friendly to the root system. For example, bridging over the roots may substitute for a conventional walkway. Because trenching near a tree for utility installation can be damaging, tunneling under the root system may be a good option.

## Erecting Barriers

Because our ability to repair construction damage to trees is limited, it is vital that trees be protected from injury. The single most important action you can take is to set up construction fences around all of the trees that are to remain. The fences should be placed as far out from the trunks of the trees as possible. As a general guideline, allow 1 foot of space from the trunk for each inch of trunk diameter. The intent is not merely to protect the aboveground portions of the trees but also the root systems. Remember that the root systems extend much farther than the drip lines of the trees.

Instruct construction personnel to keep the fenced area clear of building materials, waste, excess soil, and equipment. No digging, trenching, or other soil disturbance such as driving vehicles and equipment over the soil should be allowed in the fenced area.

Protective fences should be erected as far out from the trunks as possible in order to protect the root system prior to the commencement of any site work, including grading, demolition, and grubbing.

## Limiting Access

If at all possible, it is best to allow only one access route on and off the property. All contractors must be instructed where they are permitted to drive and park their vehicles. The construction access drive should be the route for utility wires; underground water, sewer, or storm drain lines; roadways; or the driveway.

**Protective fences should be erected as far out from the trunks as possible in order to protect the root systems.**

Specify storage areas for equipment, soil, and construction materials. Limit areas for burning (if permitted), cement wash-out pits, and construction work zones. These areas should be away from protected trees.

### Specifications

Specifications are to be put in writing. All of the measures intended to protect your trees must be written into the construction specifications. The written specifications should detail exactly what can and cannot be done to and around the trees. Each subcontractor must be made aware of the barriers, limitations, and specified work zones. It is a good idea to post signs as a reminder.

Fines and penalties for violations should be built into the specifications. Not too surprisingly, subcontractors are much more likely to adhere to the tree preservation clauses if their profit is at stake. The severity of the fines should be proportional to the potential damage to the trees and should increase for multiple infractions.

### Maintaining Good Communications

It is important to work together as a team. You may share clear objectives with your arborist and your builder, but one subcontractor can destroy your prudent efforts. Construction damage to trees is often irreversible.

Visit the site at least once a day if possible. Your vigilance will pay off as workers learn to take your wishes seriously. Take photos at every stage of construction. If any infraction of the specifications does occur, it will be important to prove liability.

### Final Stages

It is not unusual to go to great lengths to preserve trees during construction, only to have them injured during landscaping. Installing irrigation systems and roto-tilling planting beds are two ways the root systems of trees can be damaged. Remember also that small increases in grade (as little as 2 to 6 inches) that place additional soil over the roots can be devastating to your trees. ANSI A300

Standards Part 5 states that tree protection shall be in place for the landscape phase of the site development. Landscape tree protection may be different than other construction process tree protection, and a conference with the landscape contractor should be held prior to the commencement of the landscape work. Careful planning and communicating with landscape designers and contractors is just as important as avoiding tree damage during construction.

### Post-Construction Tree Maintenance

Your trees may require several years to adjust to the injury and environmental changes that occur during construction. The better construction impacts are avoided, the less construction stress the trees will experience. Stressed trees are more prone to health problems such as disease and insect infestations. Talk to your arborist about continued maintenance for your trees. Continue to monitor your trees, and have them periodically evaluated for declining health or safety hazards.

Despite the best intentions and most stringent tree preservation measures, your trees still might be injured from the construction process. Your arborist can suggest remedial treatments to help reduce stress and improve the growing conditions around your trees. In addition, the International Society of Arboriculture offers a companion to this brochure titled "Treatment of Trees Damaged by Construction".

Edited from the ISA's tree protection guidelines

## California Tree and Landscape Consulting, Inc.

### GORDON MANN

#### EDUCATION AND QUALIFICATIONS

- 1977 Bachelor of Science, Forestry, University of Illinois, Champaign.
- 1982 - 1985 Horticulture Courses, College of San Mateo, San Mateo.
- 1984 Certified as an Arborist, WE-0151A, by the International Society of Arboriculture (ISA).
- 2004 Certified as a Municipal Specialist, WE-0151AM, by the ISA.
- 2011 Registered Consulting Arborist, #480, by the American Society of Consulting Arborists (ASCA).
- 2003 Graduate of the ASCA Consulting Academy.
- 2006 Certified as an Urban Forester, #127, by the California Urban Forests Council (CaUFC).
- 2011 TRACE Tree Risk Assessment Certified, continued as an ISA Qualified Tree Risk Assessor (T.R.A.Q.).

#### PROFESSIONAL EXPERIENCE

- 2016 – Present CALIFORNIA TREE AND LANDSCAPE CONSULTING, INC (CalTLC). President and Consulting Arborist.  
Auburn. Mr. Mann provides consultation to private and public clients in health and structure analysis, inventories, management planning for the care of trees, tree appraisal, risk assessment and management, and urban forest management plans.
- 1986 - Present MANN MADE RESOURCES. Owner and Consulting Arborist. Auburn.  
Mr. Mann provides consultation in municipal tree and risk management, public administration, and developing and marketing tree conservation products.
- 2015 – 2017 CITY OF RANCHO CORDOVA, CA. Contract City Arborist.  
Mr. Mann serves as the City's first arborist, developing the tree planting and tree maintenance programs, performing tree inspections, updating ordinances, providing public education, and creating a management plan,
- 1984 – 2007 CITY OF REDWOOD CITY, CA. City Arborist, Arborist, and Public Works Superintendent.  
Mr. Mann developed the Tree Preservation and Sidewalk Repair Program, supervised and managed the tree maintenance program, performed inspections and administered the Tree Preservation Ordinance. Additionally, he oversaw the following Public Works programs: Streets, Sidewalk, Traffic Signals and Streetlights, Parking Meters, Signs and Markings, and Trees.
- 1982 – 1984 CITY OF SAN MATEO, CA. Tree Maintenance Supervisor.  
For the City of San Mateo, Mr. Mann provided supervision and management of the tree maintenance program, and inspection and administration of the Heritage Tree Ordinance.
- 1977 – 1982 VILLAGE OF BROOKFIELD, IL. Village Forester.  
Mr. Mann provided inspection of tree contractors, tree inspections, managed the response to Dutch Elm Disease. He developed an in-house urban forestry program with leadworker, supervision, and management duties to complement the contract program.
- 1979 - Present INTERNATIONAL SOCIETY OF ARBORICULTURE. Member.
  - Board of Directors (2015 - Present)

- True Professional of Arboriculture Award (2011); In recognition of material and substantial contribution to the progress of arboriculture and having given unselfishly to support arboriculture.

- 1982 - Present WESTERN CHAPTER ISA (WCISA). Member.
- Chairman of the Student Committee (2014 - 2017)
  - Member of the Certification Committee (2007 - Present)
  - Chairman of the Municipal Committee (2009 - 2014) • Award of Merit (2016) In recognition of outstanding meritorious service in advancing the principles, ideals and practices of arboriculture.
  - Annual Conference Chair (2012)
  - Certification Proctor (2010 – Present)
  - President (1992 - 1993)
  - Award of Achievement and President's Award (1990)
- 1985 - Present CALIFORNIA URBAN FORESTS COUNCIL (CaUFC). Member; Board Member (2010 - Present)
- 1985 - Present SOCIETY OF MUNICIPAL ARBORISTS (SMA). Member. e Legacy Project of the Year (2015) o In recognition of outstanding meritorious service in advancing the principles, ideals and practices of arboriculture.
- Board Member (2005 - 2007)
- 2001 - Present AMERICAN SOCIETY OF CONSULTING ARBORISTS. Member. e Board of Directors (2006 - 2013)
- President (2012)
- 2001 - Present CAL FIRE. Advisory Position.
- Chairman of the California Urban Forestry Advisory Committee (2014 - 2017)
- 2007 – Present STANDARDS AMERICAN NATIONAL STANDARDS INSTITUTE (ANSI): A300 TREE MAINTENANCE COMMITTEE. SMA Representative and Alternate.
- Alternative Representative for SMA (2004 - 2007; 2012 - Present)
  - Representative for SMA (2007 - 2012)
- 2007 - Present SACRAMENTO TREE FOUNDATION. Member and Employee.
- Co-chair/member of the Technical Advisory Committee (2012 - Present)
  - Urban Forest Services Director (2007 - 2009) e Facilitator of the Regional Ordinance Committee (2007 - 2009)

    - Chairperson for International (1991 - 1994)

#### PUBLICA TIONS AND LECTURES

Mr. Mann has authored numerous articles in newsletters and magazines such as Western Arborist, Arborist News, City Trees, Tree Care Industry Association, Utility Arborists Association, CityTrees, and Arborists Online, covering a range of topics on Urban Forestry, Tree Care, and Tree Management. He has developed and led the training for several programs with the California Arborist Association. Additionally, Mr. Mann regularly presents at numerous professional association meetings on urban tree management topics.

## **Assumptions and Limiting Conditions**

1. Consultant assumes that any legal description provided to Consultant is correct and that title to property is good and marketable. Consultant assumes no responsibility for legal matters. Consultant assumes all property appraised or evaluated is free and clear, and is under responsible ownership and competent management.
2. Consultant assumes that the property and its use do not violate applicable codes, ordinances, statutes or regulations.
3. Although Consultant has taken care to obtain all information from reliable sources and to verify the data insofar as possible, Consultant does not guarantee and is not responsible for the accuracy of information provided by others.
4. Client may not require Consultant to testify or attend court by reason of any report unless mutually satisfactory contractual arrangements are made, including payment of an additional fee for such Services as described in the Consulting Arborist Agreement.
5. Unless otherwise required by law, possession of this report does not imply right of publication or use for any purpose by any person other than the person to whom it is addressed, without the prior express written consent of the Consultant.
6. Unless otherwise required by law, no part of this report shall be conveyed by any person, including the Client, the public through advertising, public relations, news, sales or other media without the Consultant's prior express written consent.
7. This report and any values expressed herein represent the opinion of the Consultant, and the Consultant's fee is in no way contingent upon the reporting of a specific value, a stipulated result, the occurrence of a subsequent event or upon any finding to be reported.
8. Sketches, drawings and photographs in this report, being intended as visual aids, are not necessarily to scale and should not be construed as engineering or architectural reports or surveys. The reproduction of any information generated by architects, engineers or other consultants and any sketches, drawings or photographs is for the express purpose of coordination and ease of reference only. Inclusion of such information on any drawings or other documents does not constitute a representation by Consultant as to the sufficiency or accuracy of the information.
9. Unless otherwise agreed, (1) information contained in this report covers only the items examined and reflects the condition of those items at the time of inspection; and (2) the inspection is limited to visual examination of accessible items without dissection, excavation, probing or coring. Consultant makes no warranty or guarantee, express or implied that the problems or deficiencies of the plans or property in question may not arise in the future.
10. Loss or alteration of any part of this Agreement invalidates the entire report.

## **Certificate of Performance**

I, Gordon Mann, certify that:

I have personally inspected the trees and site referred to in this report, and have stated my findings accurately. The extent of the inspection is stated in the attached report under Assignment;

I have no current or prospective interest in the vegetation, or the property that is the subject of this report and have no personal interest or bias with respect to the parties involved;

The analysis, opinions and conclusions stated herein are my own and are based on current scientific procedures and facts;

My analysis, opinions, and conclusions were developed, and this report has been prepared according to commonly accepted arboricultural practices;

No one provided significant professional assistance to me, except as indicated within the report;

My compensation is not contingent upon the reporting of a predetermined conclusion that favors the cause of the client, or any other party, nor upon the results of the assignment, the attainment of stipulated results, or the occurrence of any subsequent events.

I further certify that I am a member in good standing of the International Society of Arboriculture (ISA) and an ISA Certified Arborist and Municipal Specialist. I am also a Registered Consulting Arborist member in good standing of the American Society of Consulting Arborists. I have been involved in the practice of arboriculture and the care and study of trees for over 39 years.

Signed:

Gordon Mann

**BIOLOGICAL RESOURCES ASSESSMENT  
FOR THE  
±139-ACRE STONEHENGE STUDY AREA**

**INTRODUCTION**

---

**Project Location**

North Fork Associates conducted a biological resources assessment for an approximate 139-acre Stonehenge study area in the community of Diamond Springs, El Dorado County, California. The study area is located just south of the intersection of California Highway 49/Pleasant Valley Road and Faith Lane. The location corresponds to portions of Sections 25, 30, 31, and 36, Township 10N, Range 10E and 11E on the Placerville 7.5 minute United States Geological Survey (USGS) quadrangle (Figure 1). Approximate coordinates of the center of the site are 38.68515° north and 120.81921° west.

**Setting**

The study area is situated in the lower Sierra Nevada foothills at elevations between 1670 and 1845 feet. The property is currently undeveloped except for a series of dirt roads and an El Dorado Irrigation District station structure. Most of the dirt roads bisect the middle of the study area in a north/south direction and are heavily used. Disturbed habitat is present in this area. Oak woodland occurs along the western and eastern boundaries of the study area. Adjacent land use includes residential and open land to the west, undeveloped land to the south, residential to the east, and some mixed residential and commercial use the north of the site (Figure 2).

**Proposed Project Description**

No plans for this site have been developed at this time.

**Objectives of Biological Resources Assessment**

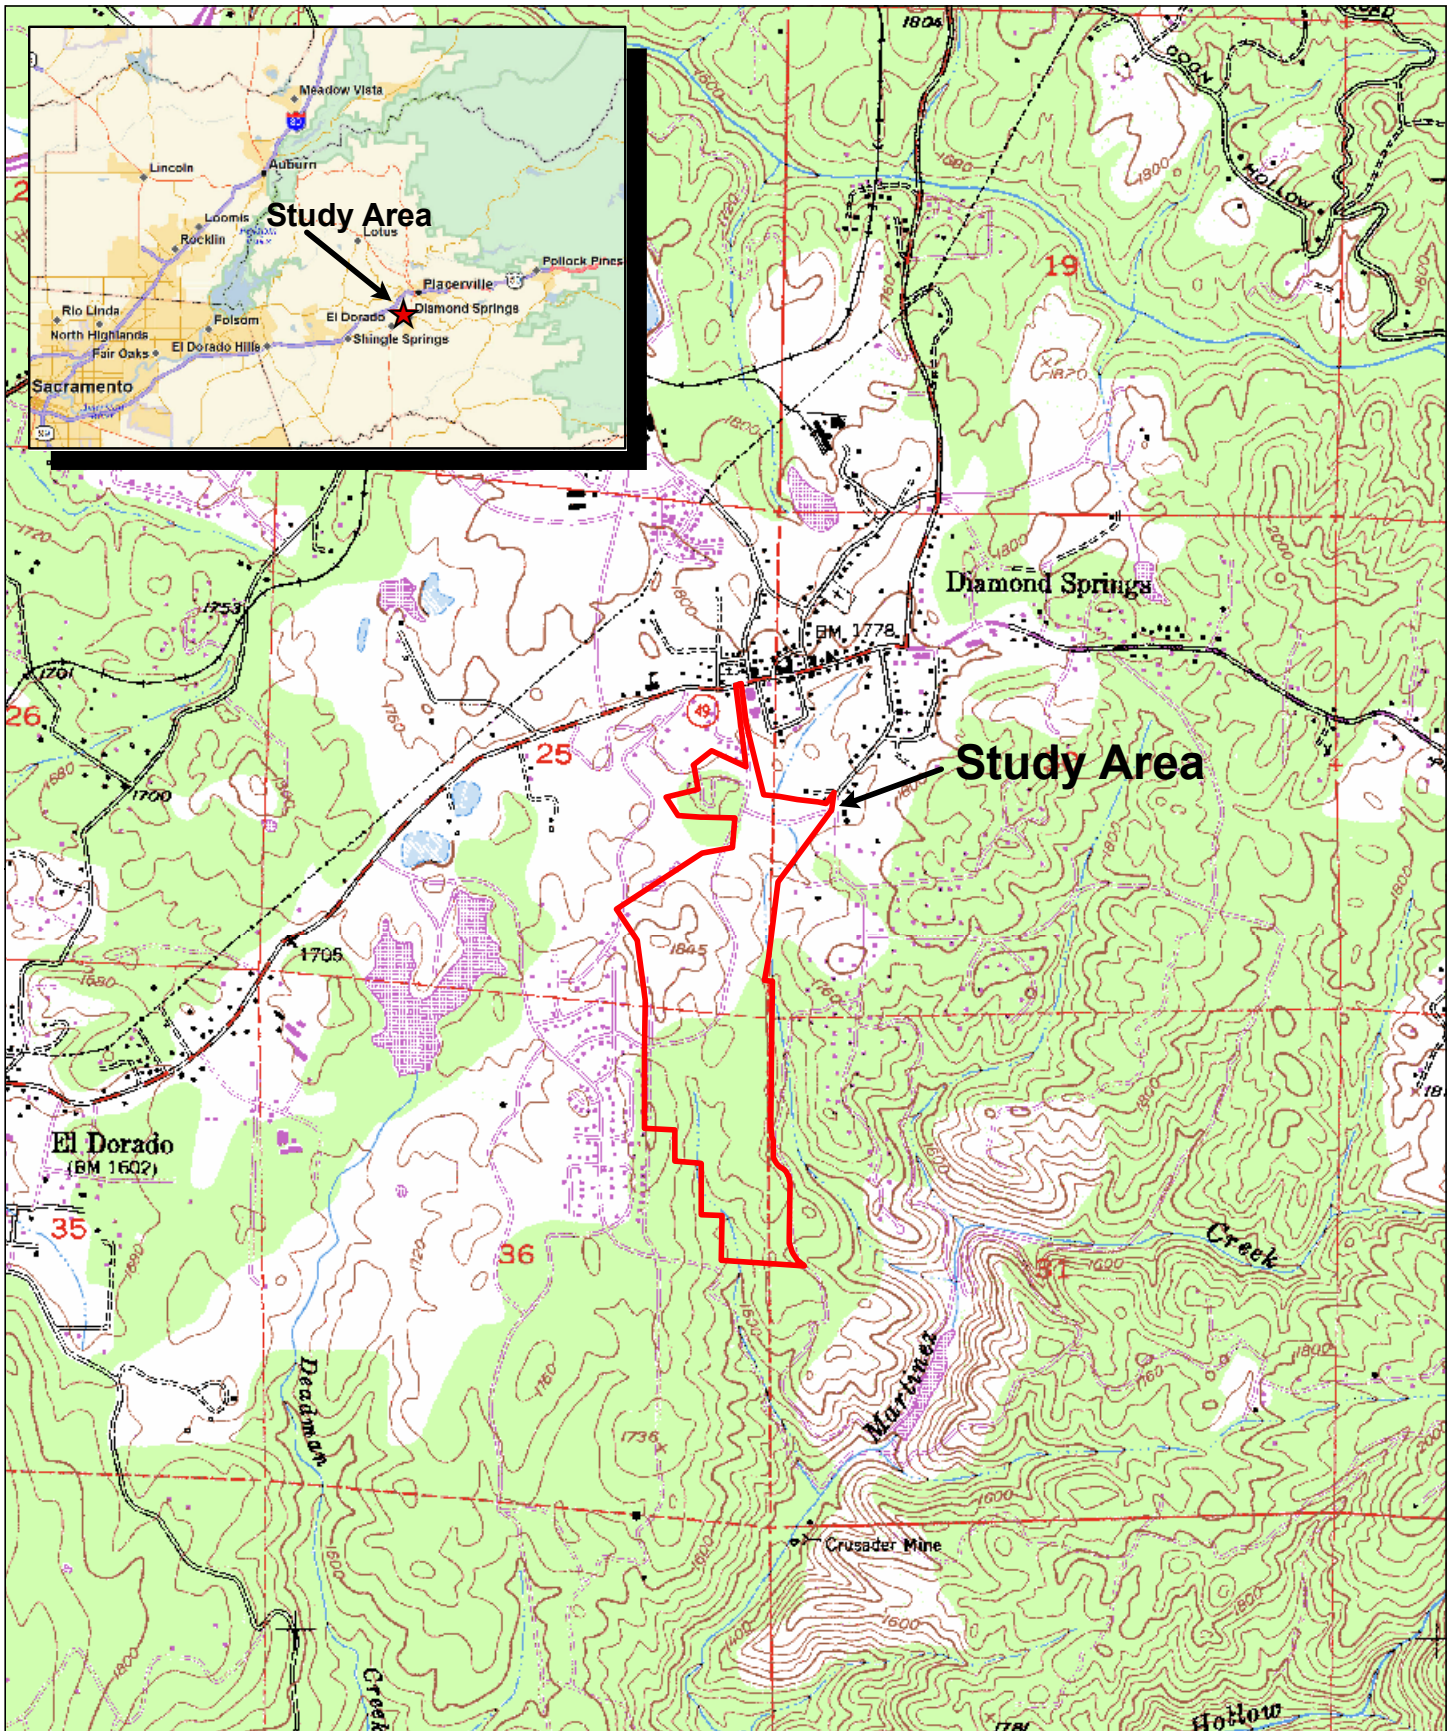

- Identify and describe the biological communities present in the study area.
- Record plant and animal species observed in the study area.
- Evaluate and identify sensitive resources and special-status plant and animal species that could be affected by project activities.
- Provide conclusions and recommendations.

**METHODS**

---

**Literature Review**

A variety of resources were used in this assessment. Aerial photographs and a topographic map of the study area were obtained from Cooper Thorne and Associates,

**Figure 2**

**AERIAL PHOTO**  
*Stonehenge Study Area*  
El Dorado County, CA

Inc. Geological information was taken from the Geologic Map of the Sacramento Quadrangle (California Department of Conservation 1987). Soil information was obtained from the *Soil Survey of El Dorado Area, California* (USDA, NRCS 1974).

Multiple publications were reviewed to provide information on life history, habitat requirements, distribution, and conservation status of regionally occurring animal species. They include published books, peer-reviewed articles, field guides, and the California Wildlife Habitats Relationships Program.

### **Special-Status Species Reports**

North Fork Associates queried the California Natural Diversity Data Base (CNDDDB) for location records for special-status species known to occur in the region surrounding the study area. Quadrangles included in the query were Placerville, Coloma, Garden Valley, Slate Mountain, Shingle Springs, Camino, Latrobe, Fiddletown, and Aukum quadrangles. North Fork Associates biologists also reviewed the special-status species lists for the Placerville USGS quadrangle and El Dorado County created by the U.S. Fish and Wildlife Service (USFWS). The California Native Plant Society (CNPS) Inventory was checked for special-status plants occurring in the area.

For the purposes of this report, special-status species are those that fall into one or more of the following categories, including those:

- listed as endangered or threatened under the federal Endangered Species Act (including candidates and species proposed for listing),
- listed as endangered or threatened under the California Endangered Species Act (including candidates and species proposed for listing),
- designated as rare, protected, or fully protected pursuant to California Fish and Game Code (CDFG),
- designated a Species of Concern by the CDFG,
- defined as rare or endangered under Section 15380 of the California Environmental Quality Act (CEQA), or
- occurring on List 1, 2, or 3 maintained by the California Native Plant Society.

### **Field Surveys**

The field assessment portion of the study was conducted in August 2006, January 2007, May and June 2008, and May 2009 by Pat Britton, Erin Gottschalk-Fisher, Barry Anderson, Gaylene Tupen, and Melissa Hostler. A wetland delineation was also conducted in conjunction with this study. Site surveys assessed habitat conditions and determined the potential for occurrence of special-status plant and wildlife species. Surveys were done floristically and in accordance with California Department of Fish and Game guidelines and each plant species observed was identified to the extent necessary for determining its rarity status. On all visits, surveys consisted of walking the site, recording notes of species observed or their respective sign (nests, burrows, tracks, scat), and assessing habitat conditions. Appendix A is a list of plants observed, and Appendix B is a list of wildlife observed onsite. Plant names are according to *The*

*Jepson Manual* (Hickman 1993), except for changes obtained from the Jepson Interchange, an online database maintained by the University of California and Jepson Herbaria. Standard manuals were used to identify wildlife species observed.

## **SURVEY AND LITERATURE SEARCH RESULTS**

---

### **Geology and Soils**

The geology map for the area shows that soils are derived from Mesozoic granitic: Granodiorite, Upper Jurassic Marine Sedimentary, and Metasedimentary rocks.

Five soil units have been mapped in the study area:

- Diamond Springs very fine sandy loam, 9 to 15 percent slopes
- Diamond Springs very rocky very fine sandy loam, 3 to 50 percent slopes
- Placer Diggings
- Mixed alluvial land
- Mariposa very rocky silt loam, 50 to 70 percent slopes

Diamond Springs soils are acidic Typic Haploxerults derived from igneous rock. The A horizon is relatively shallow, usually nine (9) inches or less, and is usually a loam or sandy loam. The B horizon, nine (9) to 29 inches, is a clay loam that tends to impede the percolation of water. A horizon hues are 10YR and 7.5YR, and chromas are between two (2) and five (5). The B horizon hues are similar, but patches of 5YR soils are also present. B horizon chromas are generally high, two (2) and above. Diamond Springs soils are well-drained and have moderate or moderately slow permeability.

Placer diggings consists of areas of stony, cobbly, and gravelly material, commonly in beds of creeks and other streams, or of areas that have been placer mined and contain enough fine sand or silt to support some grass for grazing. The material that makes up this land type is derived from a mixture of rocks and commonly is stratified or poorly sorted. In some areas where slopes are steep, the material consists of fines from stamp mills or tailings from placer mining. The depth of the soil material is variable, ranging from six (6) inches to more than five (5) feet. Natural drainage varies from place to place.

Mixed alluvial land consists of small areas of recent mixed alluvium adjacent to stream channels. This material is variable in color and is stratified gravelly sandy loam, gravelly loam, and gravelly clay loam that grades into sand and gravel as depth increases. Permeability is moderately rapid to slow. This land type is moderately well drained to somewhat poorly drained. Surface runoff is slow to medium, and the erosion hazard is moderate. The land is subject to frequent flooding in the winter. Mixed alluvial land is used for pasture and range.

Mariposa soils are moderately deep, well drained Typic Haploxerults formed in material weathered from tilted slates and schists. The A horizon is typically shallow at 8 inches or less. Runoff is slow to very rapid and permeability is moderate.

## Hydrology

The Stonehenge study area lies in the Upper Cosumnes (18040013) HUC unit (Cal Water, 1999) and ranges from a ridge in the western portion of the study area to a leveled section in the central portion of the study area to a generally sloped area in the eastern portion of the study area. The main hydrological features of the site are two unnamed streams (one ephemeral and one intermittent) that run along the eastern and southwestern portions of the study area. Both streams eventually empty into Martinez Creek. Martinez Creek is a tributary of the Cosumnes River, which ultimately reaches the San Joaquin River.

## Biological Communities

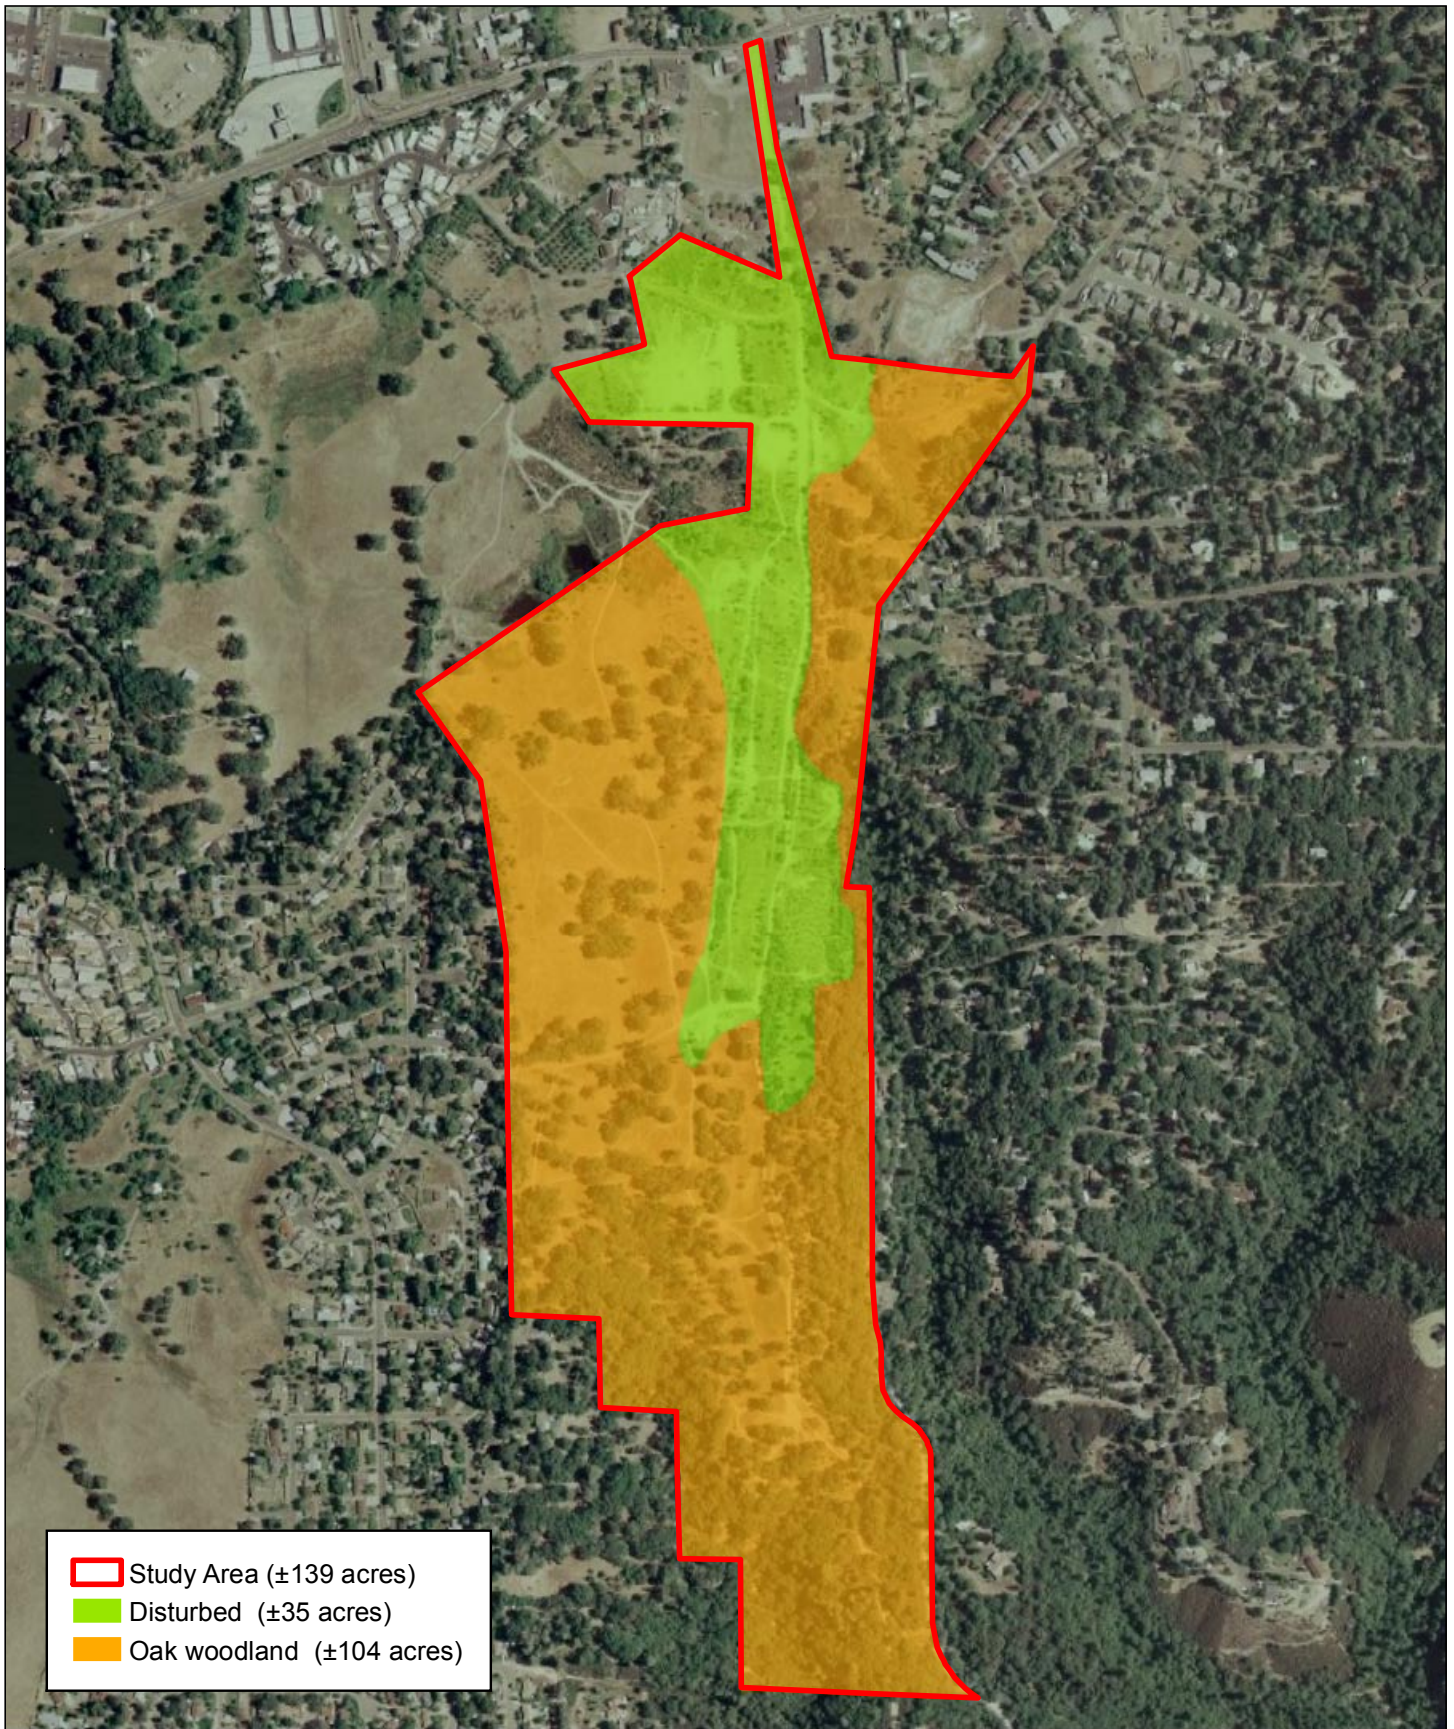

Two biological communities were identified within the study area: oak woodland and disturbed. Small amounts of wetland vegetation are embedded in these larger habitat types, associated with the onsite wetlands and streams. Table 1 presents estimated acreage of each habitat type. Figure 3 is a habitat map and Figure 4 shows photos of the site.

**Table 1.**  
**Biological Communities Present Within the Stonehenge Study Area**

| <b>Biological Community</b> | <b>Estimated Acreage</b> |
|-----------------------------|--------------------------|
| Oak woodland                | 104                      |
| Disturbed                   | 35                       |
| Total                       | 139                      |

### *Plants*

The oak woodland habitat of the study area consists of a variety of oak species, with interior live oak, black oak, and blue oak in the dryer areas and valley oak near the intermittent drainage. Two species of pines, ponderosa pine and foothill pine, are scattered through this habitat type as well. For the most part this habitat type lacks a shrub layer, but does have some scattered areas of varying densities of whiteleaf manzanita, coyote brush, buck brush, Himalayan blackberry and poison oak. In general, the understory is dominated by ruderal grass and forb species including yellow star-thistle, hedgehog dogtail grass, Klamathweed, Spanish-clover, soft chess, medusa-head grass, Italian thistle, vetch, and field hedge-parsley. In the southeastern portion of the study area, a dense chaparral understory is intermixed within the oak woodland habitat composed of smaller interior live oaks, large black oaks, and foothill pines. Chaparral species present in this area include whiteleaf manzanita, chamise, coyote brush, buck brush, and yerba santa. The oak woodland onsite can be classified as blue oak-foothill pine habitat as defined by the El Dorado County Vegetation Bioclassification.

- Study Area (±139 acres)
- Disturbed (±35 acres)
- Oak woodland (±104 acres)

NOTES:  
Aerial Photo Date: 2007 (ESRI)

Photo Date: August 10 & 30, 2007

## Figure 4

**SITE PHOTOS**  
*Stonehenge Site*  
El Dorado County, California

The disturbed habitat consists of areas with evidence of persistence disturbance. Scattered patches of short-stature ponderosa pines and whiteleaf and Nissenan manzanita shrubs are present throughout. A similar flora as the one found in the oak woodland habitat of ruderal grass and forb species is present in the disturbed habitat. Additionally, several areas within this habitat are unvegetated to sparsely vegetated. Portions of the disturbed habitat can be classified as whiteleaf manzanita chaparral under the El Dorado County Vegetation Bioclassification.

### *Wildlife*

The Stonehenge study area provides important habitat features for wildlife including: nesting sites, escape and thermal cover, and a variety of food sources. In addition, aquatic habitats of the study area, including ponds and intermittent drainages, provide both seasonal and year-round sources of water for wildlife of the area. Woodland communities, such as those located throughout the site, are important for animal cover and provide roosting and nesting opportunities for birds and shelter for mammals. Scattered taller trees of the site provide suitable nesting habitat for raptors such as great horned owl, red-tailed hawk, and red-shouldered hawk.

The following animals were observed in association with grassland and woodland habitats of the study area during the August 2006 and May 2008 field surveys: western scrub-jay, acorn woodpecker, California quail, northern flicker, mourning dove, lesser goldfinch, wren, dark-eyed junco, California towhee, northern mockingbird, house finch, western kingbird, western fence lizard, southern alligator lizard, black-tailed jackrabbit, Western gray squirrel, and California ground squirrel. Sign of mule deer, coyote, raccoon, and Botta's pocket gopher were observed in both woodland and grassland habitats of the site. In addition, turkey vultures were observed soaring over the study area throughout the field surveys. Birds observed within or near the two ponds located along the western study area boundary included: green heron, great egret, great blue heron, red-winged blackbird, killdeer, and mallard.

At the time of the August 25, 2006 field survey, numerous bullfrogs were observed in the two ponds located along the western study area boundary. Three pond turtles were also observed in the eastern-most pond during the field survey. A complete list of species observed during the August 2006 and May 2008 field surveys is provided in Appendix B.

### **Regulated Habitats**

The following habitats are considered regulated by Federal, State, or County laws and ordinances.

#### *Waters of the U.S.*

Waters of the United States in the Stonehenge study area consist of ephemeral streams, intermittent streams, ponds, fringe wetlands, seasonal wetlands, and wetland swales. A wetland delineation for approximately 115 acres of the overall site was conducted in August 2006, January 2007, and June 2008 by North Fork Associates and was verified by the U. S. Army Corps of Engineers (Corps) on August 18, 2008. The additional 24 acres

(to total 139 acres) was surveyed in May 2009 and will be submitted to the Corps for verification.

Per the El Dorado County Interim Interpretive Guidelines, Policy 7.3.3.4 requires a minimum setback of 100 feet from perennial streams, rivers, and lakes, and a 50-foot setback from intermittent streams and wetlands. The project site has water features as described in the El Dorado County Interim Interpretive Guidelines.

#### *Streams, Ponds, and Riparian Habitats*

Ponds, ephemeral streams, and one intermittent stream are present in the study area. Riparian habitat is not associated with any of the water features present onsite.

#### *Oak Woodland, Oaks and Other Trees*

The El Dorado General Plan conservation and open space element (Policy # 7.4.4.4) considers any native oak tree of 6 inches dbh (diameter at breast height) or an aggregate of 10 inches dbh to be a regulated tree. According to the El Dorado County General Plan for new development projects canopy retention values are based upon a baseline aerial photograph analysis of existing canopy and have predetermined retention values based upon existing canopy.

### **Special-Status Species**

Appendix C provides a list of potentially occurring special status plants known to occur in the region surrounding the study area, and Appendix D provides a similar list of special status wildlife. The U.S. Fish and Wildlife Service list for El Dorado County includes species from the Central Valley to the east side of the Sierra Nevada. Species requiring habitats not occurring in or around the study area and species occurring far outside the study area are not considered in Appendix C or Appendix D. Field surveys and the best professional judgment of North Fork Associates biologists were used to further refine the tables in these appendices. In general, plants on the CNPS List 3 are not considered further.

The refined list of status species in the region of the Stonehenge study area includes 15 plants and eight animals (Appendix C and Appendix D, respectively). Of the 15 plant species in Appendix C and eight animal species in Appendix D, eight plants and five animals occur or have some potential to occur because the study area has some areas of suitable habitat or they are known from nearby locations. Table 2 provides a summary of these species, and they are discussed in more detail in the paragraphs following the table.

Table 2. Special-Status Species That Could Occur Within the Stonehenge Study Area

| Species  | Status* |       |       | Habitat  | Potential for Occurrence**   |
|--|---------|-------|-------|--|--|
|  | Federal | State | CNPS  |  |  |
| <b>Plants</b>  |         |       |       |  |  |
| <b>Brandegee's clarkia</b><br><i>Clarkia biloba</i> subsp.<br><i>brandegeae</i>          | -       | -     | 1B.2  | Chaparral and woodlands  | Possible.<br>Suitable habitat occurs in the study area.  |
| <b>El Dorado County mules ears</b><br><i>Wyethia reticulata</i>                          | -       | -     | 1B.2  | Chaparral; cismontane woodland; lower montane coniferous forest; [clay or gabbroic]. | Possible.<br>Suitable habitat occurs in the study area.  |
| <b>Nissenan manzanita</b><br><i>Arctostaphylos nissenana</i>                             | -       | -     | 1B.1  | Closed-cone coniferous forest; chaparral.  | Occurs.  |
| <b>Northern California black walnut</b><br><i>Juglans hindsii</i>                        | -       | -     | 1B.1  | Riparian forests and Riparian woodlands.   | Occurs.  |
| <b>Oval-leaved viburnum</b><br><i>Viburnum ellipticum</i>                                | -       | -     | 2.3   | Chaparral; cismontane woodland; lower montane coniferous forest.                     | Possible. Limited suitable habitat occurs in the study area.   |
| <b>Parry's horkelia</b><br><i>Horkelia parryi</i>  | -       | -     | 1B.2  | Chaparral; cismontane woodland; [especially Ione formation]                          | Possible.<br>Suitable habitat occurs in the study area.  |
| <b>Pine Hill ceanothus</b><br><i>Ceanothus roderickii</i>                                | FE      | CR    | 1B.2  | Chaparral; cismontane woodland; [often serpentinite or gabbroic].                    | Possible.<br>Suitable habitat occurs in the study area.  |
| <b>Pleasant Valley mariposa lily</b><br><i>Calochortus clavatus</i> var.<br><i>avius</i> | -       | -     | 1B.1  | Lower montane coniferous forest, (Josephine silt loam and volcanic)                  | Possible.<br>Suitable habitat occurs in the study area.  |
| Species  | Status* |       |       | Habitat  | Potential for Occurrence**   |
|  | Federal | State | Other |  |  |
| <b>Amphibians</b>  |         |       |       |  |  |
| <b>California red-legged frog</b><br><i>Rana aurora draytonii</i>                        | FT      | CSC   | -     | Ponds and deeper sections of streams with emergent or overhanging vegetation.        | Possible – Potential habitat occurs in association with two ponds along western study area boundary. |

| Species  | Status* |       |      | Habitat  | Potential for Occurrence**  |
|--|---------|-------|------|--|---|
|  | Federal | State | CNPS |  |   |
| <b>Reptiles</b>  |         |       |      |  |   |
| <b>Northwestern pond turtle</b><br><i>Actinemys marmorata marmorata</i>    | -       | CSC   | -    | Ponds, marshes, river, streams and ditches with basking sites and vegetation.                                      | Occurs - Suitable habitat in ponds along western study area boundary. Three turtles observed in eastern-most pond during 2006 field survey. |
| <b>Birds</b>   |         |       |      |  |   |
| <b>Cooper's hawk (nesting)</b><br><i>Accipiter cooperii</i>                | -       | WL    | -    | Dense stands of oak woodland, riparian forest or other forested habitats near water.                               | Possible - Potential nesting and foraging habitat occurs in onsite woodlands.   |
| <b>Tricolored blackbird (nesting colonies)</b><br><i>Agelaius tricolor</i> | -       | CSC   | -    | Open water areas with tall emergent vegetation or in willow and blackberry thickets.                               | Possible- Limited amount of potential nesting habitat occurs near ponds in western portion of site.   |
| <b>Mammals</b>   |         |       |      |  |   |
| <b>Silver-haired bat</b><br><i>Lasionycteris noctivagans</i>               | -       | CSC   | -    | Occurs in coniferous forests, oak woodland and riparian habitats. Roosts in hollow trees, snags, buildings, rocks. | Possible-Limited roosting habitat associated with tree cavities on site. No significant roosting activity expected to occur.                |

 2- Fairly threatened in California  
 3- Not very threatened in California

\*\*Definitions for the Potential to Occur:

- **None.** Habitat does not occur.
- **Unlikely.** Some habitat may occur, but disturbance or other activities may restrict or eliminate the possibility of the species occurring. Habitat may be very marginal, or the study area may be outside the range of the species.
- **Possible.** Marginal to suitable habitat occurs, and the study area occurs within the range of the species.
- **Likely.** Good habitat occurs, but the species was not observed during surveys.
- **Occurs:** Species was observed during surveys.

**Plants**

Fifteen special status plant species are documented by the CNDDDB (CDFG, 2008) and other pertinent references as occurring in the broader project region (refer to *Appendix C*). Most of the species listed by the CNDDDB as occurring within the region are commonly associated with gabbro soils or serpentine soils which do not occur in the study area. Eight species listed by the CNDDDB were determined to have a low to moderate potential for occurring on site, and are described below.

**Brandege's clarkia** (*Clarkia biloba* subsp. *brandegeae*) is an erect annual member of the evening primrose family (Onagraceae). It has no state or federal status, but it is a CNPS List 1B.2. Brandege's clarkia differs from similar species by having pendant buds, notched petals, and eight stamens. It can be found in oak woodlands in the Sierra foothills from Butte County to El Dorado County. Its common name, farewell-to-spring suggests its late blooming period, usually from May to July.

During the floristic surveys, only the common *Clarkia purpurea* and *Clarkia biloba* ssp. *biloba* were observed and not Brandege's clarkia.

**El Dorado County mules-ears** (*Wyethia reticulata*) is a perennial member of the sunflower family (Asteraceae). It is a CNPS List 1B.2. El Dorado County mules-ears is distinct from other species in the area by lacking basal leaves and having many narrow outer phyllaries. It grows in chaparral, foothill woodland, and sometimes lower montane coniferous forest on clay and gabbro-derived soils. It is endemic to El Dorado County and blooms from May to July.

While suitable habitat occurs in the study area, El Dorado County mules-ear was not observed during the floristic surveys.

**Nissenan manzanita** (*Arctostaphylos nissenana*) is a two- to six-foot shrub in the heath family (Ericaceae) that appears on the CNPS List 1B.1. It differs from the much more common and widespread whiteleaf manzanita (*Arctostaphylos viscida*) in several respects: (1) Nissenan manzanita has a cylindrical rather than a round or ovoid fruit; (2) Nissenan manzanita fruits have two to five stones, whereas whiteleaf manzanita has eight to ten stones; (3) Nissenan branches have fibrous bark as opposed to smooth bark; and (4) Nissenan manzanita is much smaller (two to five feet tall) and more compact than whiteleaf manzanita (three to 15 feet tall). Nissenan and whiteleaf manzanitas hybridize where they grow together. Preferred habitat for the species is closed-cone coniferous forest or chaparral in El Dorado and Tuolumne Counties.

Sixty-two individuals of Nissenan manzanita were observed during the floristic surveys (See Figure 5). Most of the plants occurred within the disturbed habitat. Two individuals were located in oak woodland habitat near the southern study area boundary.

**Oval-leaved viburnum** (*Viburnum ellipticum*) is three- to 12-foot shrub in the honeysuckle family (Caprifoliaceae). It has no state or federal status. It is a CNPS List 2.3, meaning that it is rare in California, but more common elsewhere. It is differentiated from other members of the family by its simple, coarsely dentate leaves. It grows in chaparral, foothill woodlands, and lower montane forests at widely scattered locations in the Sierra Nevada and northern Coast Ranges of California. *Viburnum* is much more common and widespread from Oregon north. Oval-leaved viburnum blooms in May and June.

While suitable habitat occurs in the study area, oval-leaved viburnum was not observed during the field study.

**Parry's horkelia** (*Horkelia parryi*) is an aromatic, mat-forming perennial member of the rose family (Rosaceae). It has no state or federal status, but it is listed on CNPS List 1B.2. Parry's horkelia has white flowers typical of similar species, but the pedicels are curved when in fruit. It grows in chaparral and foothill woodlands from El Dorado County to Mariposa County, where it is often associated with the Ione Formation, and it blooms between April and June.

While suitable habitat occurs in the study area, Parry's horkelia was not observed during the floristic surveys.

**Pine Hill ceanothus** (*Ceanothus roderickii*) is a prostrate shrub in the buckthorn family (Rhamnaceae). It is a state-listed rare species and a federally-listed endangered species that also appears on CNPS List 1B.2. It differs from other similar species in having a fully prostrate habit, sub-erect leaves, and white flowers with a blue tinge. In addition, this species is restricted to serpentinite or gabbro soils, and occurs only in the Pine Hill area of El Dorado County. It blooms in May and June.

While suitable habitat occurs in the study area, Pine Hill ceanothus was not observed during the floristic surveys.

Study Area

\* *Arctostaphylos nissenana*  
(62 plants)

Aerial Photo Date: 2007 (ESRI)

**Figure 5**

**SPECIAL-STATUS PLANT LOCATIONS**

*Stonehenge Study Area*

El Dorado County, CA

**Pleasant Valley mariposa lily** (*Calochortus clavatus* var. *avius*) is bulb-forming member of the lily family (Liliaceae). It is listed on CNPS List 1B.1 with no state status. This species has a zigzag stem and yellow or gold petals that lack exterior green stripes. In addition, the nectary is densely covered with knobby hairs. Pleasant Valley mariposa lily grows in mixed oak and pine forests and has a preference for Josephine silt loams. It occurs in the foothills between El Dorado and Mariposa Counties, and it blooms from May to July.

While suitable habitat occurs in the study area, Pleasant Valley mariposa lily was not observed during the field study.

**Northern California black walnut** (*Juglans hindsii*) is a nut-bearing tree in the walnut family (Juglandaceae). This variety is a CNPS List 1B.1 species with no state or federal status. Its smooth shell distinguishes it from the non-native black walnut (*Juglans nigra*), which has a deeply ridged and furrowed shell. Northern California black walnut is known to occur natively at only a few locations. It has been used as rootstock for the cultivated English or Persian walnut (*Juglans regia*), and it now grows fairly widely in the Central Valley and adjacent coast range. It occurs naturally in canyons and creek bottoms, but is more often found now along streams, canals, and other waterways. Although this species was detected in the study area it is likely that it is not a naturally occurring population, but an escaped root stock variety and no mitigation should be required.

### *Wildlife*

**California red-legged frog** (*Rana aurora draytonii*), a federally-listed threatened species and a California species of special concern, historically ranged from Marin County southward to northern Baja California. This species is still locally abundant within portions of the San Francisco Bay area and along the central coast. Only isolated populations of California red-legged frog (CRLF) have been documented in the Sierra Nevada and foothills region. CRLF prefers aquatic habitats with little or no flow, the presence of surface water to at least early June, surface water depths to at least 0.7 meters (2.3 feet), and the presence of fairly sturdy underwater supports such as cattails. The largest densities of CRLF are typically associated with dense stands of overhanging willows and a fringe of sturdy emergent vegetation (USFWS, 2006). CRLF typically breeds from January to July, with peak breeding occurring in February. Eggs are attached to subsurface vegetation, and hatched tadpoles require eleven to twenty weeks to metamorphose.

There are no occurrences of CRLF previously reported from the 9 quadrangle region surrounding the project site (CNDDDB 2008). The closest documented occurrences of CRLF are reported from the east side of Folsom Lake, approximately 15 miles west of the study area (occurrence no. 814) and from just upstream of Weber Reservoir, approximately 7.5 miles east of the project site (occurrence no. 586) (CNDDDB 2008). There is some potential for CRLF to occur in the study area due to the presence of a limited amount of suitable habitat and the site's location within the known range of the species. Suitable habitat is, however, limited to the two ponds located along the western property boundary. The eastern-most pond appears to retain surface water throughout

the dry season and contains good vegetative cover around the perimeter. Both ponds contained numerous bullfrogs, a predator of CRLF, at the time of the August 2006 field survey. However, the presence of bullfrogs does not always exclude CRLF from occurring at a site (USFWS, 2005). While the two on-site ponds provide some habitat components considered suitable for CRLF, the potential for occurrence within the study area is expected to be low due to the distance from other known populations.

**Northwestern pond turtle** (*Actinemys marmorata marmorata*), a California species of special concern, occurs in association with streams, rivers, and ponds containing suitable cover and basking sites. This subspecies can be associated with both permanent and ephemeral water sources, including perennial and intermittent streams. Suitable basking sites along streams or ponds include partially submerged logs, rocks, mats of floating vegetation, or open stream banks. Suitable upland habitat, such as sandy banks or grassy fields, located adjacent to the aquatic habitat is required for egg-laying. Nesting may take place in a variety of soil types from loose sandy soils to compact soils, and in a variety of habitat types. Eggs are laid from March to August, depending on local climate and water conditions. Incubation ranges from 73 to 80 days (Zeiner et al., 1988).

Within the study area, suitable habitat for northwestern pond turtle is limited to the two ponds located along the western study area boundary. During the August 2006 field survey, three pond turtles were observed in the eastern-most of the two ponds. Surface water depth was deeper in the eastern pond at the time of the field survey, and therefore more suitable for turtles. It is expected, however, that turtles could occupy either of the two ponds throughout other times of the year when surface water is deeper. No pond turtles were detected within either of the two ponds during the May 2008 field survey.

**Cooper's hawk** (*Accipiter cooperii*), a California Department of Fish and Game "watch list" species, is a breeding resident throughout most woodland habitats of California. Breeding takes place in dense-canopied trees from foothill pine-oak woodlands up to ponderosa pine forest. Nesting sites are usually located near water. This species hunts in broken woodland and habitat edges, where they catch small birds in the air. They prefer nesting sites in riparian growths of deciduous trees, as in canyon bottoms and on river flood plains, although live oaks are often used. Breeding takes place from March through August, with peak activity occurring in May and June. Cooper's hawk nests are often constructed in deciduous trees in crotches approximately 20 to 50 feet above ground. The nest is a stick platform lined with bark. This species incubates eggs for about 35 days, and young are fledged between 30 to 34 days. Young birds often remain in the vicinity of the nest after they fledge, while they are learning to hunt.

Cooper's hawk was not observed onsite during the field assessment. However, potential foraging and nesting habitat for the species occurs throughout the study area and adjacent woodland areas. This species prefers nesting in riparian woodland habitats, but is also known to nest in oaks near water. The study area may therefore provide marginal quality nesting habitat for this species.

**Tricolored blackbird** (*Agelaius tricolor*) a California species of special concern, is a highly colonial species that primarily nests in freshwater emergent wetlands. Nesting colonies

of this species are considered sensitive by the California Department of Fish and Game. This species generally requires open water, with protected nesting habitat, and suitable foraging areas close to the colony. Breeding and nesting typically take place in dense cattails or tules and may also occur in thickets of willow, blackberry, wild rose, and tall herbs. Nests are usually located a few feet over or near freshwater. Nesting areas must be large enough to support a minimum colony of about 50 pairs (Zeiner et al., 1990a). Colonies may vary in size from about 50 nests to over 20,000 in an area of ten acres or less. The breeding season is typically mid-April through late July. Incubation takes about 11 days, and young leave the nest at about 13 days.

The closest previously documented occurrence of tricolored blackbird nesting is from approximately six miles northwest of the study area, near Gold Hill Road (CNDDDB, 2008). Within the study area, a limited amount of suitable nesting habitat occurs in association with freshwater marsh vegetation and blackberry thickets located adjacent to the two ponds. Based on the presence of suitable nesting habitat, this species is expected to have a reasonable potential for nesting within the study area.

**Silver-haired bat** (*Lasionycteris noctivagans*) is a common species throughout California, but fluctuates significantly in abundance (Zeiner et al., 1990b). It occurs in coastal and montane coniferous forest, oak woodland, and riparian habitats. This species roosts in hollow trees, snags, buildings, rock crevices, in caves, and under bark of trees. Females can form nursery colonies or roost as solitary individuals in hollow trees or dense foliage. Mating primarily occurs in the fall. Young are born from May through July and are weaned at about six weeks (Zeiner et al., 1990b).

There is only one documented occurrence of silver-haired bat in the region surrounding the study area (CNDDDB, 2008). This occurrence is from approximately six miles northeast of the study area along the South Fork of the American River, in an area with dense willow thickets and steep-walled cliffs. The study area may provide periodic foraging habitat for the species and limited suitable roosting habitat for individuals in onsite woodlands. However, no significant roosting activity or nursery colonies are expected to occur on site.

## RECOMMENDATIONS

---

### Waters of the United States

The study area has areas considered waters of the United States. Activities that affect these areas would require a permit from the U.S. Army Corps of Engineers pursuant to Section 404 of the federal Clean Water Act. The project would also need to obtain a water quality certification from the Regional Water Quality Control Board pursuant to Section 401 of the federal Clean Water Act. The Corps and the Regional Board would add conditions to the permits that would stipulate the appropriate mitigation, which could include one or more of the following: on site creation, offsite creation, purchase of credits in a mitigation bank, or payments to an in-lieu fund. The precise mitigation and monitoring requirements would depend on the extent of impacts.

## **Streams, Pond, and Riparian Habitat**

Impacts to the bed, bank, or channel of streams or ponds would require a Streambed Alteration Agreement with the California Department of Fish and Game (CDFG). Impacts to the riparian habitat may require a Streambed Alteration Agreement with the CDFG.

## **Oak Woodland, Oaks and Other Trees**

An oak canopy analysis per the El Dorado County General Plan may be required.

## **Special-Status Plants**

Floristic surveys were conducted in accordance to the California Fish and Game guidelines. Approximately 62 Nissenan manzanita individuals were observed during surveys. No other special-status plant species were observed and no further special-status plant surveys are recommended.

## **Special-Status Wildlife**

The two ponds located along the western study area boundary may provide suitable habitat for California red-legged frog. Disturbance of the pond or adjacent vegetation could therefore result in adverse impacts to individuals that may occupy suitable aquatic habitat of the site. Potential disturbance can be avoided, however, through implementation of appropriate protective measures. All disturbance of potential habitat for California red-legged frog, including the two ponds and adjacent vegetation, should be avoided to the extent feasible. In the event that disturbance of aquatic habitat cannot be avoided, a *California Red-legged Frog Habitat Assessment* (USFWS, 2005) should be prepared and submitted to the U.S. Fish and Wildlife Service Sacramento Field Office. The applicant should then contact the U.S. Fish and Wildlife Service to determine if follow-up surveys and avoidance measures are required.

The two ponds located along the western study area boundary provide suitable habitat for northwestern pond turtle. Occurrence of this species was confirmed through direct observation during the August 2006 field survey. Any disturbance of the ponds or adjacent upland habitat should therefore be avoided to the extent feasible. In the event that disturbance cannot be avoided, the California Department of Fish and Game should be contacted immediately to determine appropriate avoidance measures and additional mitigation responsibilities.

Based on the presence of marginal quality nesting and foraging habitat, Cooper's hawk is expected to have some potential for occurring in the study area. Project implementation could therefore result in disturbance of breeding and nesting of this species if construction occurs at any time during the typical breeding season (approximately March 1 through August 31). Nesting of other raptors known from the region, including red-shouldered hawk and red-tailed hawk, could also be adversely affected if construction takes place during the identified breeding/nesting season. Take of any active raptor nest is prohibited under Fish and Game Code Section 3503.5. To avoid take of active raptor nests, pre-construction surveys should be conducted by a qualified biologist no more than 30 days prior to initiation of proposed development

activities. Survey results should then be submitted to the California Department of Fish and Game. If active raptor nests are found on or immediately adjacent to the site, consultation should be initiated with the California Department of Fish and Game to determine appropriate avoidance measures.

Suitable nesting habitat for tricolored blackbird occurs in the vicinity of the two ponds located along the western study area boundary. Depending on the timing of construction, site disturbance could result in disturbance of breeding and nesting activity of this species. According to the California Department of Fish and Game Code 3503, "take" of the nest or eggs of any bird is prohibited, except upon approval from the California Department of Fish and Game. Disturbance of active nests can be avoided during construction through appropriate measures. To the extent feasible, ground disturbance and removal of vegetation should be avoided in the vicinity of the ponds during the typical breeding and nesting period for this species (approximately April through July). If construction activities cannot be avoided during the typical breeding season, the applicant should retain a qualified biologist to conduct a pre-construction survey (approximately one week prior to construction) to determine presence/absence of active nests. If no nesting activities are detected within proposed work areas, construction activities may proceed. If, however, active nests are found, construction should be avoided until after the young have fledged from the nest and achieved independence, or upon approval from the California Department of Fish and Game.

## Appendix A

### Plant Species Observed Within the Stonehenge Study Area

---

#### Ferns and Allies

---

##### Pteridaceae

*Pentagramma triangularis subsp. triangularis* Goldback fern

#### Gymnosperms

---

##### Pinaceae

*Pinus ponderosa* Pacific ponderosa pine

*Pinus sabiniana* Foothill pine

#### Angiosperms - Dicots

---

##### Amaranthaceae

\**Amaranthus sp.* Amaranthus

##### Anacardiaceae

*Toxicodendron diversilobum* Western poison-oak

##### Apiaceae (Umbelliferae)

\**Anthriscus caucalis* Bur-chervil

\**Daucus carota* Queen Anne's lace

*Daucus pusillus* Rattlesnake weed

*Eryngium castrense* Coyote-thistle

*Sanicula bipinnata* Poison sanicle

*Sanicula bipinnatifida* Purple sanicle

*Sanicula crassicaulis* Gamble weed

\**Torilis arvensis* Field hedge-parsley

##### Apocynaceae

*Asclepias cordifolia* Purple milkweed

*Asclepias sp.* Milkweed

##### Asteraceae (Compositae)

*Achillea millefolium* Common yarrow

*Agoseris grandiflora* Large-flower agoseris

*Agoseris retrorsa* Spear-leaf agoseris

*Agoseris sp.* Agoseris

*Artemisia douglasiana* California mugwort

*Baccharis pilularis* Coyote brush

*Calycadenia sp.* Calycadenia

\**Carduus pycnocephalus* Italian thistle

\**Centaurea solstitialis* Yellow starthistle

*Centromadia fitchii* Fitch's spikeweed

\**Chondrilla juncea* Skeleton weed

\**Cichorium intybus* Chicory

\**Cirsium vulgare* Bull thistle

*Eriophyllum lanatum* Woolly sunflower

---

\* Indicates a non-native species

|  |                        |
|--|------------------------|
| <i>Gnaphalium palustre</i>                       | Western marsh cudweed  |
| <i>Grindelia hirsutula</i>                       | Gumplant               |
| <i>Holocarpha virgata subsp. virgata</i>         | Virgate tarweed        |
| * <i>Hypochaeris glabra</i>                      | Smooth cat's-ear       |
| * <i>Hypochaeris radicata</i>                    | Rough cat's-ear        |
| <i>Jensia rammii</i>                             | Ramm's madia           |
| * <i>Lactuca serriola</i>                        | Prickly lettuce        |
| * <i>Leontodon saxatilis</i>                     | Long-beaked hawkbit    |
| <i>Lessingia nemaclada</i>                       | Lessingia              |
| * <i>Logfia gallica</i>                          | Narrowleaf cottonrose  |
| <i>Madia elegans</i>                             | Common madia           |
| <i>Madia exigua</i>                              | Threadstem madia       |
| <i>Madia gracilis</i>                            | Slender tarweed        |
| <i>Madia subspicata</i>                          | Foothill tarweed       |
| <i>Matricaria discoidea</i>                      | Pineapple-weed         |
| <i>Micropus californicus subsp. californicus</i> | Cottontop              |
| <i>Pseudognaphalium benolens</i>                 | Everlasting            |
| <i>Pseudognaphalium californicum</i>             | California everlasting |
| <i>Psilocarphus brevissimus var. brevissimus</i> | Dwarf woolly-heads     |
| <i>Psilocarphus tenellus var. globiferus</i>     | Round woolly-marbles   |
| <i>Psilocarphus tenellus var. tenellus</i>       | Slender woolly-marbles |
| * <i>Silybum marianum</i>                        | Milk thistle           |
| <i>Solidago velutina subsp. californica</i>      | California goldenrod   |
| * <i>Soliva sessilis</i>                         | Field burrweed         |
| * <i>Sonchus asper</i>                           | Prickly sow-thistle    |
| * <i>Tragopogon dubius</i>                       | Yellow salsify         |
| * <i>Tragopogon porrifolius</i>                  | Common salsify         |
| <i>Wyethia angustifolia</i>                      | Narrowleaf mules ears  |
| <i>Wyethia helenioides</i>                       | Gray mules ears        |
| <i>Wyethia sp.</i>                               | Mule's ears            |
| <i>Xanthium strumarium</i>                       | Cocklebur              |

### **Boraginaceae**

|   |                         |
|---|-------------------------|
| <i>Amsinckia menziesii</i>                      | Common fiddleneck       |
| <i>Eriodictyon californicum</i>                 | California yerba santa  |
| <i>Nemophila heterophylla</i>                   | White nemophila         |
| <i>Pectocarya pusilla</i>                       | Pectocarya              |
| <i>Phacelia sp.</i>                             | Phacelia                |
| <i>Plagiobothrys nothofulvus</i>                | Rusty popcornflower     |
| <i>Plagiobothrys stipitatus var. micranthus</i> | Stipitate popcornflower |

### **Brassicaceae (Cruciferae)**

|  |                      |
|--|----------------------|
| * <i>Hirschfeldia incana</i>           | Short-podded mustard |
| <i>Lepidium oblongum var. oblongum</i> | Wayside peppergrass  |
| * <i>Nasturtium officinale</i>         | Water cress          |
| <i>Rorippa curvisiliqua</i>            | Western yellow cress |
| <i>Thysanocarpus curvipes</i>          | Lacepod              |
| <i>Thysanocarpus radians</i>           | Spoke-pod            |

### **Caprifoliaceae**

|                              |                       |
|------------------------------|-----------------------|
| <i>Lonicera interrupta</i>   | Chaparral honeysuckle |
| <i>Symphoricarpos mollis</i> | Creeping snowberry    |

## Caryophyllaceae

|   |                     |
|---|---------------------|
| * <i>Cerastium glomeratum</i>             | Mouse-ear chickweed |
| * <i>Scleranthus annuus subsp. annuus</i> | Annual knawel       |
| * <i>Silene gallica</i>                   | Windmill-pink       |
| * <i>Spergularia rubra</i>                | Ruby sand-spurrey   |
| * <i>Stellaria media</i>                  | Common chickweed    |

## Convolvulaceae

|                                |               |
|--------------------------------|---------------|
| <i>Calystegia occidentalis</i> | Morning-glory |
| * <i>Convolvulus arvensis</i>  | Bindweed      |

## Crassulaceae

|                           |                  |
|---------------------------|------------------|
| * <i>Crassula tillaea</i> | Mossy pygmy-weed |
|---------------------------|------------------|

## Cucurbitaceae

|                       |                |
|-----------------------|----------------|
| <i>Marah oreganus</i> | Coast man-root |
|-----------------------|----------------|

## Ericaceae

|                                 |                     |
|---------------------------------|---------------------|
| <i>Arctostaphylos nissenana</i> | Nissenan manzanita  |
| <i>Arctostaphylos viscida</i>   | Whiteleaf manzanita |

## Euphorbiaceae

|                             |                |
|-----------------------------|----------------|
| <i>Croton setigerus</i>     | Turkey mullein |
| * <i>Euphorbia lathyris</i> | Caper spurge   |

## Fabaceae (Leguminosae)

|  |                      |
|--|----------------------|
| * <i>Lathyrus cicera</i>                   | Wild-pea             |
| <i>Lathyrus sulphureus var. sulphureus</i> | Snub pea             |
| * <i>Lotus corniculatus</i>                | Birdfoot trefoil     |
| <i>Lotus micranthus</i>                    | Hill lotus           |
| <i>Lotus purshianus var. purshianus</i>    | Spanish-clover       |
| <i>Lupinus albicaulis</i>                  | Pine lupine          |
| <i>Lupinus bicolor</i>                     | Miniature lupine     |
| <i>Lupinus formosus var. robustus</i>      | Lupine               |
| <i>Lupinus nanus</i>                       | Sky lupine           |
| * <i>Medicago polymorpha</i>               | California burclover |
| * <i>Trifolium dubium</i>                  | Little hop clover    |
| * <i>Trifolium glomeratum</i>              | Clover               |
| * <i>Trifolium hirtum</i>                  | Rose clover          |
| * <i>Trifolium repens</i>                  | White clover         |
| * <i>Trifolium subterraneum</i>            | Subterranean clover  |
| <i>Trifolium wormskioldii</i>              | Cow clover           |
| * <i>Vicia hirsuta</i>                     | Tiny vetch           |
| * <i>Vicia sativa</i>                      | Common vetch         |
| * <i>Vicia villosa</i>                     | Winter vetch         |

## Fagaceae

|   |                      |
|---|----------------------|
| <i>Quercus chrysolepis</i>              | Canyon live oak      |
| <i>Quercus douglasii</i>                | Blue oak             |
| <i>Quercus kelloggii</i>                | California black oak |
| <i>Quercus lobata</i>                   | Valley oak           |
| <i>Quercus wislizeni var. wislizeni</i> | Interior live oak    |
| <i>Quercus xmorehus</i>                 | Oracle oak           |

## Gentianaceae

*Zeltnera muehlenbergii*

June centaury

## Geraniaceae

\**Erodium botrys*

Broad-leaf filaree

\**Erodium cicutarium*

Red-stem filaree

\**Erodium moschatum*

White-stem filaree

*Erodium sp.*

Filaree

\**Geranium dissectum*

Cut-leaf geranium

\**Geranium molle*

Dove's-foot geranium

## Hypericaceae

\**Hypericum perforatum*

Klamathweed

## Juglandaceae

*Juglans hindsii*

Northern California black walnut

## Lamiaceae (Labiatae)

\**Mentha pulegium*

Pennyroyal

*Monardella candicans*

Sierra monardella

*Pogogyne serphylloides*

Thyme-like mesamint

*Scutellaria californica*

California skullcap

*Trichostema lanceolatum*

Vinegar weed

## Linaceae

\**Linum usitatissimum*

Common flax

## Lythraceae

\**Lythrum hyssopifolia*

Hyssop loosestrife

## Malvaceae

*Sidalcea malviflora*

Checker mallow

## Myrsinaceae

\**Anagalis arvensis*

Scarlet pimpernel

## Onagraceae

*Clarkia biloba subsp. biloba*

Mule-ear clarkia

*Clarkia purpurea*

Winecup clarkia

*Epilobium brachycarpum*

Summer cottonweed

*Epilobium ciliatum*

Hairy willow-herb

*Epilobium densiflorum*

Dense-flower spike-primrose

*Epilobium torreyi*

Brook spike-primrose

*Ludwigia peploides*

Water-primrose

## Orobanchaceae

*Castilleja attenuata*

Valley tassels

*Castilleja lacera*

Owl's clover

*Triphysaria eriantha*

Butter-and-eggs

## Papaveraceae

*Eschscholzia californica*

California poppy

*Eschscholzia lobbii*

Fryingpan poppy

## Phrymaceae

*Mimulus aurantiacus*

Sticky monkeyflower

*Mimulus guttatus*

Common monkeyflower

## Plantaginaceae

|  |                        |
|--|------------------------|
| <i>Callitriche heterophylla</i> var. <i>heterophylla</i> | Larger water-starwort  |
| <i>Collinsia heterophylla</i>                            | Chinese houses         |
| <i>Gratiola ebracteata</i>                               | Bractless hedge-hyssop |
| * <i>Kickxia elatine</i>                                 | Sharppoint fluvellin   |
| <i>Plantago erecta</i>                                   | Plantain               |
| * <i>Plantago lanceolata</i>                             | English plantain       |

## Polemoniaceae

|   |                          |
|---|--------------------------|
| <i>Allophyllum divaricatum</i>                        | False gilia              |
| <i>Allophyllum gilioides</i> subsp. <i>gilioides</i>  | Blue false gilia         |
| <i>Gilia capitata</i>                                 | Globe gilia              |
| <i>Leptosiphon bicolor</i>                            | Bicolored linanthus      |
| <i>Leptosiphon parviflorus</i>                        | Linanthus                |
| <i>Navarretia intertexta</i> subsp. <i>intertexta</i> | Needle-leaved navarretia |
| <i>Navarretia squarrosa</i>                           | Skunkweed                |

## Polygonaceae

|                              |                 |
|------------------------------|-----------------|
| <i>Eriogonum nudum</i>       | Nude buckwheat  |
| <i>Persicaria</i> sp.        | Smartweed       |
| * <i>Polygonum aviculare</i> | Common knotweed |
| <i>Polygonum</i> sp.         | Polygonum       |
| * <i>Rumex acetosella</i>    | Sheep sorrel    |
| * <i>Rumex crispus</i>       | Curly dock      |
| * <i>Rumex pulcher</i>       | Fiddle dock     |

## Portulacaceae

|                             |                 |
|-----------------------------|-----------------|
| <i>Claytonia perfoliata</i> | Miner's lettuce |
|-----------------------------|-----------------|

## Ranunculaceae

|   |                       |
|---|-----------------------|
| <i>Delphinium hansenii</i> subsp. <i>hansenii</i>     | Hansen's larkspur     |
| <i>Delphinium variegatum</i> subsp. <i>variegatum</i> | Royal larkspur        |
| <i>Ranunculus bonariensis</i> var. <i>trisepalus</i>  | Vernal pool buttercup |
| * <i>Ranunculus muricatus</i>                         | Spiny-fruit buttercup |
| <i>Ranunculus occidentalis</i>                        | Western buttercup     |

## Rhamnaceae

|  |                      |
|--|----------------------|
| <i>Ceanothus cuneatus</i> var. <i>cuneatus</i>       | Buck brush           |
| <i>Ceanothus integerrimus</i>                        | Deer brush           |
| <i>Ceanothus lemmonii</i>                            | Lemmon's ceanothus   |
| <i>Ceanothus tomentosus</i>                          | Woollyleaf ceanothus |
| <i>Frangula californica</i> subsp. <i>tomentella</i> | Hoary coffeeberry    |
| <i>Rhamnus ilicifolia</i>                            | Hollyleaf redberry   |

## Rosaceae

|   |                      |
|---|----------------------|
| <i>Adenostoma fasciculatum</i>                    | Chamise              |
| * <i>Cotoneaster</i> sp.                          | Cotoneaster          |
| <i>Heteromeles arbutifolia</i>                    | Toyon                |
| <i>Horkelia californica</i> subsp. <i>dissita</i> | California honey-dew |
| <i>Potentilla glandulosa</i>                      | Glandular cinquefoil |
| * <i>Prunus cerasifera</i>                        | Cherry plum          |
| * <i>Pyracantha</i> sp.                           | Pyracantha           |
| * <i>Rosa</i> sp.                                 | Wild rose            |
| * <i>Rubus discolor</i>                           | Himalayan blackberry |

**Rubiaceae**

|   |                   |
|---|-------------------|
| * <i>Galium aparine</i>                   | Goose grass       |
| * <i>Galium parisiense</i>                | Wall bedstraw     |
| <i>Galium porrigens</i> var. <i>tenue</i> | Climbing bedstraw |

**Salicaceae**

|  |                      |
|--|----------------------|
| <i>Populus fremontii</i> subsp. <i>fremontii</i> | Fremont cottonwood   |
| <i>Salix exigua</i>                              | Narrow-leaved willow |
| <i>Salix laevigata</i>                           | Red willow           |
| <i>Salix lasiolepis</i>                          | Arroyo willow        |

**Sapindaceae**

|                             |                    |
|-----------------------------|--------------------|
| <i>Aesculus californica</i> | California buckeye |
|-----------------------------|--------------------|

**Saxifragaceae**

|                               |               |
|-------------------------------|---------------|
| <i>Lithophragma affine</i>    | Woodland star |
| <i>Lithophragma bolanderi</i> | Woodland star |

**Scrophulariaceae**

|                                 |                    |
|---------------------------------|--------------------|
| <i>Scrophularia californica</i> | California figwort |
| * <i>Verbascum blattaria</i>    | Moth mullein       |
| * <i>Verbascum thapsus</i>      | Woolly mullein     |

**Simaroubaceae**

|                              |                |
|------------------------------|----------------|
| * <i>Ailanthus altissima</i> | Tree of heaven |
|------------------------------|----------------|

**Solanaceae**

|                        |         |
|------------------------|---------|
| * <i>Nicotiana</i> sp. | Tobacco |
|------------------------|---------|

**Valerianaceae**

|                             |                          |
|-----------------------------|--------------------------|
| <i>Plectritis macrocera</i> | Short-spurred plectritis |
|-----------------------------|--------------------------|

**Verbenaceae**

|  |                 |

#### \*Status

Federal:  
 FE - Federal Endangered  
 FT - Federal Threatened  
 FPE - Federal Proposed Endangered  
 FPT - Federal Proposed Threatened  
 FC - Federal Candidate

State:  
 CE - California Endangered  
 CT - California Threatened  
 CR - California Rare  
 CSC - California Species of Special Concern

CNPS (California Native Plant Society - List.RED Code):  
 List 1A - Extinct  
 List 1B - Plants rare, threatened, or endangered in California and elsewhere  
 List 2 - Plants rare, threatened, or endangered in California, more common elsewhere  
 List 3 - Plants about which more information is needed, a review list  
 List 4 - Plants of limited distribution, a watch list  
 RED Code  
 1 - Seriously endangered (>80% of occurrences threatened)  
 2 - Fairly endangered (20 to 80% of occurrences threatened)  
 3 - Not very endangered (<20% of occurrences threatened)

**Appendix D.**  
**Special-Status Wildlife Species Known to Occur in the Region of the Stonehenge  
Study Area**

**Appendix D.**  
**Special-Status Wildlife Species Known to Occur in the Region of the Stonehenge Study Area**

|   | Status*                           | Habitat  | Probability on Project Site   |
|---|-----------------------------------|--|---|
| <b>Insects</b>  |                                   |  |   |
| Valley elderberry longhorn beetle<br><i>Desmocerus californicus dimorphus</i> | Fed: FT<br>State: -<br>Other: *   | Requires host plant, elderberry ( <i>Sambucus</i> spp.) for most of its life cycle. Shrubs must have stem diameters at ground level of 1.0 inch or greater and shrubs must be found less than 3,000 feet in elevation. Typically riparian and upland associated. | None. No suitable habitat (elderberry plants) present onsite.   |
| <b>Amphibians</b>   |                                   |  |   |
| California red-legged frog<br><i>Rana aurora draytonii</i>                    | Fed: FT<br>State: CSC<br>Other: - | Occurs in lowlands and foothills in deeper pools and slow-moving streams, usually with emergent wetland vegetation. Requires 11-20 weeks of permanent water for larval development.  | Possible. Marginal quality habitat occurs in association with two ponds located along western site boundary. Closest known occurrence is from approximately 12 miles east of the site, along the east side of Folsom Lake.                                |
| Foothill yellow-legged frog<br><i>Rana boylei</i>                             | Fed: -<br>State: CSC<br>Other: *  | Found in partially shaded, shallow streams with rocky substrates. Needs some cobble-sized rocks as a substrate for egg laying. Requires water for 15 weeks for larval transformation.  | Unlikely. No suitable aquatic habitat observed within project site. Closely associated with steeper gradient streams with rocky substrate and some permanent surface water. Closest known occurrence is from Indian Creek, 10 miles northwest of site.    |
| <b>Reptiles</b>   |                                   |  |   |
| Northwestern pond turtle<br><i>Actinemys marmorata marmorata</i>              | Fed: -<br>State: CSC<br>Other: *  | Inhabits ponds, marshes, rivers, streams, and irrigation ditches with aquatic vegetation. Requires suitable basking sites and upland habitat for egg laying.   | Occurs. Limited area of suitable habitat in two ponds located along western site boundary. Three pond turtles observed in eastern pond during field survey.   |
| California horned lizard<br><i>Phrynosoma coronatum frontale</i>              | Fed: -<br>State: CSC<br>Other: -  | Found in a variety of habitats, but most common in sandy washes with scattered shrubs. Requires open areas for sunning, shrubs for cover, and sandy soil for hiding.   | Unlikely. Marginal quality habitat on site. Prefers open habitats of lowlands, such as sandy washes and flood plains. No individuals observed within project site during field survey. Closest known occurrence is from 9 miles west of the project site. |
| <b>Birds</b>  |                                   |  |   |
| Cooper's hawk<br><i>Accipiter cooperii</i>                                    | Fed: -<br>State: WL<br>Other: -   | Breeds in deciduous, mixed, and coniferous forests. Becoming more common in suburban and urban areas. Occurs in open to interrupted woodland.  | Possible. Suitable foraging and nesting habitat located throughout woodland areas of the project site. Known from project region.   |

## Appendix D.

### Special-Status Wildlife Species Known to Occur in the Region of the Stonehenge Study Area

|  | Status*                          | Habitat  | Probability on Project Site   |
|--|----------------------------------|--|---|
| Northern goshawk<br><i>Accipiter gentilis</i>    | Fed: -<br>State: CSC<br>Other: * | Dense, mature coniferous forests, most typically dense fir stands in the Sierra Nevada mountains.  | Unlikely. No suitable habitat (dense, mature coniferous forest) present on site. Associated with coniferous forests at higher elevations. |
| Tricolored blackbird<br><i>Agelaius tricolor</i> | Fed: -<br>State: CSC<br>Other: * | Colonial nester in dense cattails, tules, brambles or other dense vegetation. Requires open water, dense vegetation, and open grassy areas for foraging. | Possible. Limited suitable nesting habitat occurs in vicinity of two ponds located along western site boundary.                           |

#### Mammals

|   |                                  |  |  |

## **I. INTRODUCTION**

---

### **A. Purpose**

Sycamore Environmental Consultants, Inc., conducted a delineation of aquatic resources for the Stonehenge Springs Biological Study Area (BSA) in El Dorado County. The purpose of the delineation was to identify wetlands and waters, and identify features that meet the definition of waters of the U.S. Verifications of the extent of waters of the U.S. may be made by the U.S. Army Corps of Engineers (Corps). Ultimate determination of the extent of waters of the U.S. may be determined by the Environmental Protection Agency (EPA).

### **B. Project Location**

The north end of the BSA is at Faith Lane and Highway 49 in Diamond Springs, a census-designated place in El Dorado County, CA. The approximately 144-acre BSA is assessor's parcel numbers 054-402-18, 329-301-15, 329-301-20, 329-310-10, -11, and -12. The BSA is on the Placerville U.S. Geological Survey topographic quad (T10N, R10E, Section 25 and 36; T10N, R11E, Section 30 and 31; Figure 1), and is in the Upper Cosumnes hydrologic unit (18040013). Its centroid is 38.686355° north, 120.819115° west, UTM coordinate 689,690 meters E, 4,284,226 meters N, Zone 10N (WGS84). Figure 2 is an aerial photograph of the BSA.

To access the BSA from Sacramento, take Highway 50 east to the Missouri Flat Road exit. Turn right onto Missouri Flat Road, then left onto Pleasant Valley Rd. In 0.3 miles, Faith Lane, the northern end of the BSA, will be on the right.

### **C. Project Applicant**

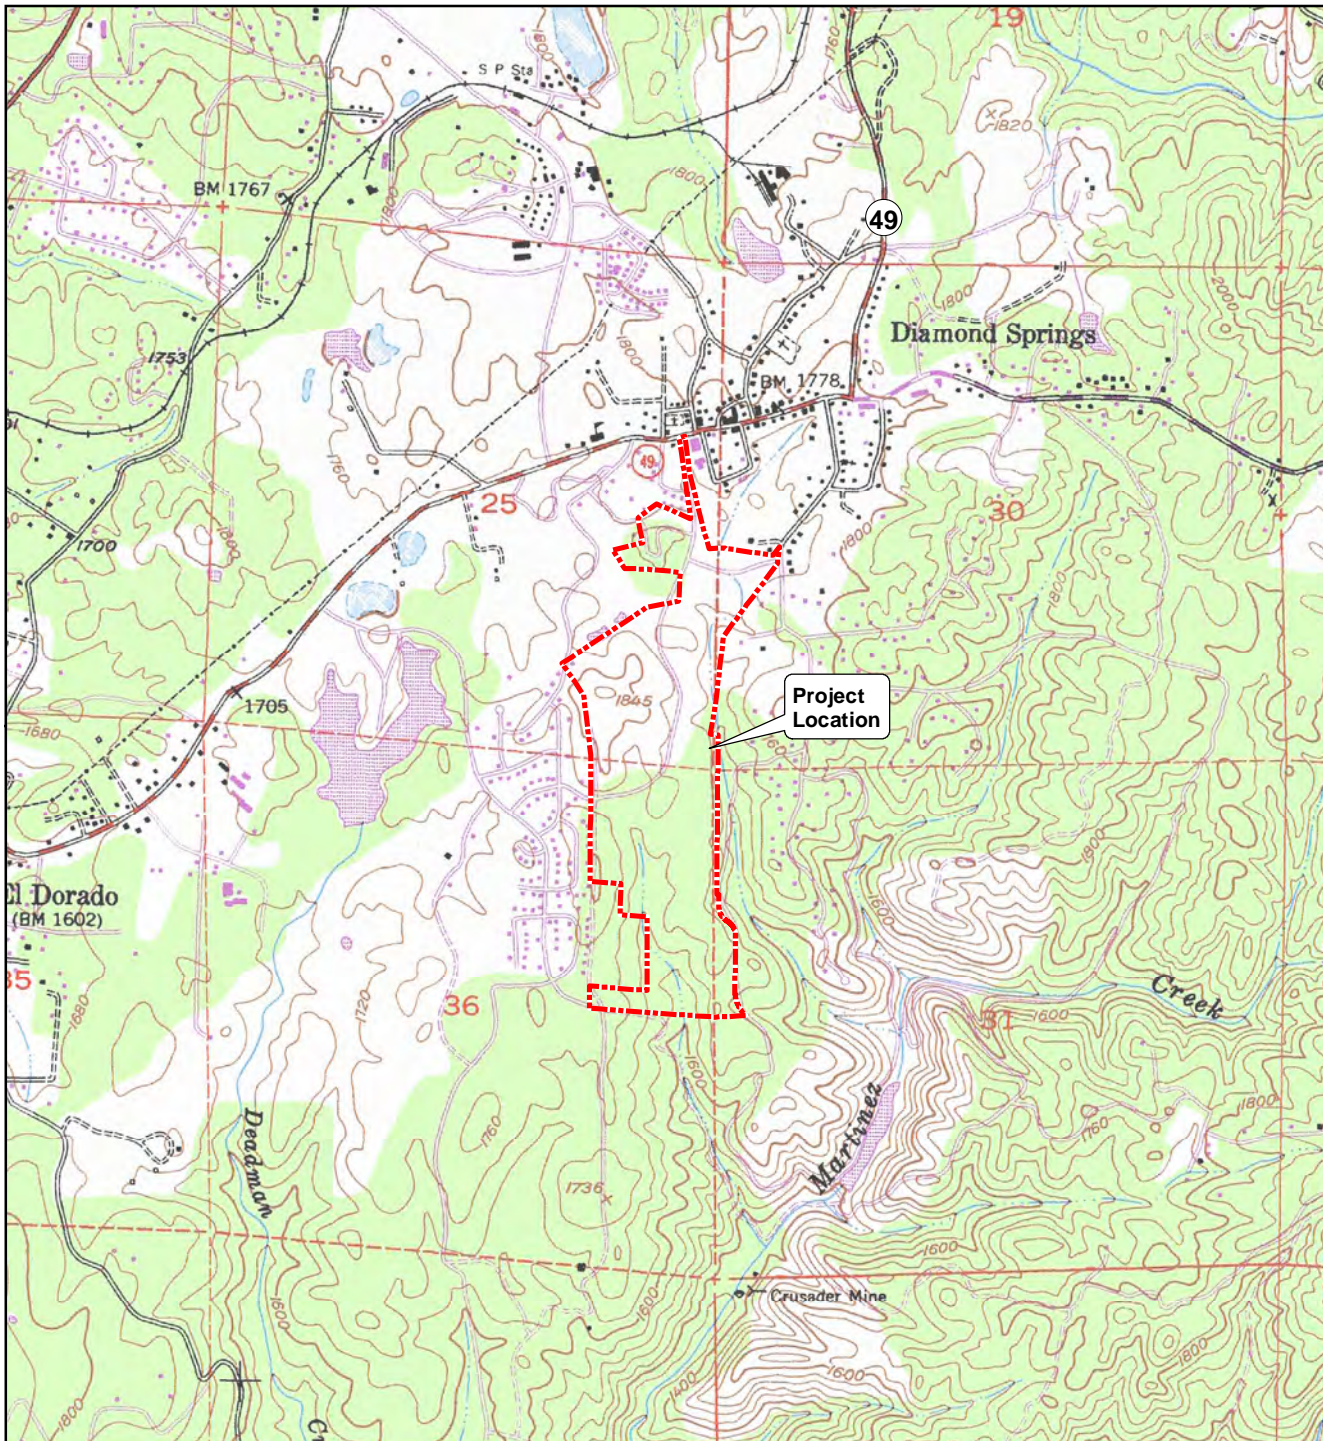

Stonehenge Springs, LLC  
2700 South Azusa Avenue  
West Covina, CA 91792

Contact: Mr. Kevin Sweeney  
Phone: 530/ 893-1515

### **D. Project Description**

The project intends to design a residential subdivision at the site. Project design has not been finalized, and this report does not quantify impacts or propose mitigation.

### E. Previous Delineation Work

A previous determination was verified for the majority of the BSA in a letter dated 18 August 2008 (Corps File #SPK-200702110). That determination covered all of the northern portion of the current BSA, but some of the southern portion of the current BSA was not included. The 2008 verification determined there were 2.97 acres of waters of the U.S., and 0.19 acre of isolated waters. The 0.19 acre of isolated waters consisted of ten small seasonal wetlands that have formed in the previously graded areas of the site. The 2008 delineation report was conducted in part with datasheets and indicators in use prior to the finalization of the Corps' (2008) Arid West delineation manual. The general location of mapped features, including isolated wetlands, verified in 2008 is similar to the current results.

## II. STUDY METHODS

---

### A. Data Sources

Table 1 is a list of data sources compiled for this report.

Table 1. Data Sources

| Data Source   | Data Location/Results  |
|---|--|
| 1. Maps, plans, plots or plat submitted by or on behalf of the applicant  | See Figures 1 through 4.   |
| 2. Data sheets prepared/submitted by or on behalf of the applicant  | See Appendix A.  |
| 3. Corps navigable waters study   | Corps (September 2017).  |
| 4. U.S. Geological Survey Hydrologic Atlas <ul style="list-style-type: none"> <li>• USGS NHD data</li> <li>• USGS 8- and 12-digit HUC maps</li> </ul> | Upper Cosumnes (18040013)<br>Martinez Creek (18400130203)  |
| 5. U.S. Geological Survey map(s)  | Placerville USGS quad, see Figure 1.   |
| 6. USDA Natural Resources Conservation Service Soil Survey  | NRCS 1974, USDA-NRCS 2017a, b; see Figure 3.   |

| 8. State/Local wetland inventory map(s)   | None known.  |
| 9. FEMA/FIRM maps   | See Appendix D.  |
| 10. 100-year Floodplain Elevation is: (e.g. National Geodetic Vertical Datum of 1929)   | The BSA is determined to be outside the 0.2% annual chance floodplain.   |
| 11. Photographs: <ul style="list-style-type: none"> <li>• Aerial (Name &amp; Date):</li> <li>• Other (Name &amp; Date):</li> </ul>                    | <ul style="list-style-type: none"> <li>• Figure 2, Aerial Photograph, 11 July 2016</li> <li>• Appendix B, Photographs, 2017</li> </ul> |
| 12. Previous determination(s). File no. and date of response letter   | File no. SPK-200702110.<br>Verified 18 August 2008.  |

## **B. Survey Dates and Personnel**

Fieldwork for the jurisdictional delineation was conducted by Chuck Hughes, M.S., and Nicole Desideri, B.S., on 27 June 2017. Chuck Hughes conducted fieldwork on 8 August, 7 September, and 13 September 2017. Nicole Desideri conducted additional fieldwork on 15 September 2017.

## **C. Survey Methods**

This report has been prepared in accordance with the Sacramento District minimum standards (Corps January 2016), U.S. Army Corps of Engineers Wetland Delineation Manual (Corps 1987), the Regional Supplement to the Corps of Engineers Wetland Delineation Manual: Arid West Region (Version 2.0; Corps 2008), and the guide to OHWM for the western mountains, valleys, and coast (August 2014). The western mountains OHWM guide was used because the regional streams around the BSA are more accurately represented by that guide. The Arid West supplement for wetlands is intended to bring the Corps Manual (Corps 1987) up to date with current knowledge and practice in the region. Use of the Corps Manual in combination with the supplement is intended to improve the accuracy and efficiency of wetland delineation procedures in the Arid West regions. The Arid West Regional Supplement is applicable because the BSA experiences hot, dry summers typical of a Mediterranean climate, and the surrounding landscape is dominated by oak woodland and annual grassland (Corps 2008).

All areas possessing an ordinary high water mark or meeting the three criteria for wetlands were identified and mapped. Hydrophytic classifications of plants were determined from the national list of plant species that occur in wetlands (Lichvar et al. 2016).

## **D. Jurisdictional Data**

The jurisdictional delineation was conducted using the Routine On-Site Determination Method (Corps 1987). Jurisdictional data were recorded using the Wetland Determination Data Form for the Arid West Region (Corps 2008). Soil, vegetation, and hydrology data were recorded at the data points. Data sheets are in Appendix A. Photographs are in Appendix B. Appendix C is a list of plant species recorded at the data points.

## **E. Mapping of Data and Calculation of Acreages**

Waters and wetland boundaries were mapped with a sub-meter accurate global positioning system (GPS). The GPS data were exported to a geographic information system (GIS) shapefile mapping format and overlaid onto a topographic contour map to create Figure 4. Field notes, contours, and aerial photography supplemented GPS data wherever a signal could not be received or terrain prevented access. Acreages were calculated using ESRI® ArcMap™ mapping functions.

## F. Definitions

The Corps and EPA regulate the discharge of dredge and fill material into “waters of the United States” under Section 404 of the Clean Water Act (CWA; 33 U.S.C. 1344). The lateral limits of jurisdiction in waters of the U.S. may be divided into three categories. The categories are the territorial seas, tidal waters, and non-tidal waters [see 33 CFR 328.4 (a), (b), and (c), respectively]. The current regulations defining waters of the U.S. [33 CFR 328.3(a)] and defining features that are excluded [33 CFR 328.3(b)], became effective on 28 August 2015 (80 FR 37054), but has since been stayed by the U.S Sixth Circuit Court of Appeals on 9 October 2015. The definition of waters of the U.S. below, from prior to 28 August 2015, is the definition currently implemented by the Corps while the stay from the Circuit Court is in effect.

Wetlands, where jurisdictional under the CWA, are a subset of waters of the U.S. Wetlands, as defined by the Corps for regulatory purposes, are identified using a three-parameter test that considers whether hydrophytic vegetation, hydric soils, and wetland hydrology are present (Corps 1987, 2008).

The term “waters of the U.S.” is defined at 33 CFR 328.3(a) as:

1. All waters which are currently used, or were used in the past, or may be susceptible to use in interstate or foreign commerce, including all waters which are subject to the ebb and flow of the tide;
2. All interstate waters including interstate wetlands;
3. All other waters such as intrastate lakes, rivers, streams (including intermittent streams), mudflats, sandflats, wetlands, sloughs, prairie potholes, wet meadows, playa lakes, or natural ponds, the use, degradation or destruction of which could affect interstate or foreign commerce including any such waters:
  - i. Which are or could be used by interstate or foreign travelers for recreational or other purposes; or
  - ii. From which fish or shellfish are or could be taken and sold in interstate or foreign commerce; or
  - iii. Which are used or could be used for industrial purpose by industries in interstate commerce;
4. All impoundments of waters otherwise defined as waters of the United States under the definition;
5. Tributaries of waters identified in paragraphs (a)(1)-(4) of this section;
6. The territorial seas;
7. Wetlands adjacent to waters (other than waters that are themselves wetlands) identified in paragraphs (a)(1) through (6) of this section.
8. Waters of the United States do not include prior converted cropland. Notwithstanding the determination of an area’s status as prior converted cropland by any other Federal agency, for the purposes of the Clean Water Act, the final authority regarding Clean Water Act jurisdiction remains with EPA.

The term “adjacent” is defined at 33 CFR 328.3(c):

The term *adjacent* means bordering, contiguous, or neighboring. Wetlands separated from other waters of the United States by man-made dikes or barriers, natural river berms, beach dunes and the like are “adjacent wetlands.”

The limits of jurisdiction are identified in 33 CFR 328.4 as:

- a. Territorial Seas. The limit of jurisdiction in the territorial seas is measured from the baseline in a seaward direction a distance of three nautical miles. (See 33 CFR 329.12)
- b. Tidal Waters of the United States. The landward limits of jurisdiction in tidal waters:
  1. Extends to the high tide line, or
  2. When adjacent non-tidal waters of the United States are present, the jurisdiction extends to the limits identified in paragraph (c) of this section.
- c. Non-Tidal Waters of the United States. The limits of jurisdiction in non-tidal waters:
  1. In the absence of adjacent wetlands, the jurisdiction extends to the ordinary high water mark, or
  2. When adjacent wetlands are present, the jurisdiction extends beyond the ordinary high water mark to the limit of the adjacent wetlands.
  3. When the water of the United States consists only of wetlands the jurisdiction extends to the limit of the wetland.

The term “ordinary high water mark” is defined at 33 CFR 328.3(e):

The term *ordinary high water mark* means that line on the shore established by the fluctuations of water and indicated by physical characteristics such as clear, natural line impressed on the bank, shelving, changes in the character of soil, destruction of terrestrial vegetation, the presence of litter and debris, or other appropriate means that consider the characteristics of the surrounding areas.

An ephemeral tributary has flowing water only during and for a short duration after, precipitation events in a typical year. Ephemeral tributary beds are located above the water table year-round. Groundwater is not a source of water for the tributary. Runoff from rainfall is the primary source of water for tributary flow. An intermittent tributary has flowing water during certain times of the year, when groundwater provides water for tributary flow. During dry periods, intermittent tributaries may not have flowing water. Runoff from rainfall is a supplemental source of water for stream flow. A perennial tributary has flowing water year-round during a typical year (66 FR 42099).

### **III. SETTING**

---

The BSA is on the south side of Highway 49 in the community of Diamond Springs, California. Much of the BSA is characterized by undeveloped oak woodland. A substantial area of the BSA was graded in the past, prior to 1993. There are two intermittent channels and several ephemeral tributaries flowing through the BSA. The area surrounding the BSA consists of both residential and commercial uses.

#### **A. Topography**

The elevation ranges from approximately 1,690 to 1,825 feet. The terrain is uneven, with gentle to moderate slopes.

## B. Existing Field Conditions

Fieldwork for the jurisdictional delineation was conducted on 27 June – 15 September 2017. Average precipitation through 27 June 2017 at the Placerville National Weather Service (NWS 2017) station is 38.07 inches (rain-year beginning 1 July). As of 27 June 2017, 66.96 inches had been recorded, or 175.9% of normal. The region, including the BSA, had wetter than normal hydrologic conditions during the fieldwork.

## C. Vegetation

Vegetation in the overstory of the BSA consists primarily of oak trees. Valley oak (*Quercus lobata*), interior live oak (*Quercus wislizeni*), and black oak (*Quercus kelloggii*) are the dominant overstory components in most of the BSA. Ponderosa pine (*Pinus ponderosa*) and canyon live oak (*Quercus chrysolepis*) are also common. The shrub layer is dominated by manzanita (*Arctostaphylos viscida*), but toyon (*Heteromeles arbutifolia*), coyote brush (*Baccharis pilularis*) and poison oak (*Toxicodendron diversilobum*) are common as well. The understory is primarily composed of annual grasses and forbs. Dominant species include bromes (*Bromus* sp.), rye grass (*Festuca* [=*Lolium*] *perennis*), wild oat (*Avena* sp.), annual hair grass (*Deschampsia danthonoides*), and rose clover (*Trifolium hirtum*). See section IV for further discussion of vegetation in and along waters and in wetlands. Appendix C contains a list of plant species recorded at the data points.

## D. Existing Level of Disturbance

Much of the north and central areas of the BSA were previously graded for development prior to 1993. Some of the previously graded areas remain mostly bare, with little vegetation. In some areas, young trees and shrubs, particularly ponderosa pine and manzanita, are recolonizing this area. Several dirt roads occur throughout the BSA. Many areas of the BSA have been used as homeless campsites, as well as dumping grounds for car parts, tires and other trash.

## E. Soils

Soil pits were dug to observe the chroma, texture, degree of saturation, and other characteristics. The primary component soils of mapping units in the BSA (Figure 3) are summarized below (NRCS 1974, USDA-NRCS 2017a, b). Reported colors are for moist soil. Placer diggings is identified as hydric across 10 percent of its total acreage in the El Dorado Area by the USDA (2015). None of the other soils are identified as hydric.

Diamond Springs very fine sandy loam, 9 to 15 percent slopes;

Diamond Springs very rocky very fine sandy loam, 3 to 50 percent slopes;

The Diamond Springs series consists of well-drained soils underlain by fine-grained acidic igneous rocks at a depth of 24 to 50 inches. A typical profile has dark brown (10YR 4/3) very fine sandy loam from 0 to 3 inches, yellowish brown (10YR 5/4) loam from 3 to 9 inches, yellowish brown (10YR 5/4) light clay loam from 9 to 14 inches, light yellowish brown (10YR 6/4) clay loam from 14 to 28 inches, very pale brown (10YR 7/4) clay loam from 28 to 36 inches, and very pale brown (10YR 7/4) coarse sandy clay loam that has

brownish-yellow (10YR 6/6) mineral grains from 36 to 40 inches. In Diamond Springs very rocky very fine sandy loam, 3 to 50 percent slopes, approximately 5-25 percent of the surface is rock outcrops. Surface runoff is medium to rapid, and the erosion hazard is slight to high. The soil profile has medium to very strong acidity.

Mariposa very rocky silt loam, 50 to 70 percent slopes:

The Mariposa series consists of well-drained soils that are underlain by vertically tilted schists and slate and contact metamorphic rock. A typical profile has reddish brown (5YR 4/4) gravelly silt loam from 0 to 8 inches, yellowish red (5YR 4/6) gravelly silt loam from 8 to 15 inches, yellowish red (5YR 4/6) gravelly heavy silt loam from 15 to 26 inches, and yellowish brown weathered slate or schist below 26 inches. Surface runoff is rapid and erosion hazard is high.

Mixed alluvial land:

Mixed Alluvial Land consists of small areas of recent mixed alluvium adjacent to stream channels. It is derived from volcanic and sedimentary rock. The color of this soil is variable. Mixed Alluvial Land is stratified gravelly sandy loam, gravelly loam, and gravelly clay loam that grades into sand and gravel as depth increases. Underlying bedrock is found 36 to 40 inches deep. This land type is poorly to moderately well drained, and permeability is moderately rapid to slow. Surface runoff is slow to medium, and the erosion hazard is moderate. This land is subject to frequent flooding in the winter (NRCS 1974; USDA-NRCS 2017).

Placer diggings:

The Placer Diggings soil consists of areas of stony, cobbly and gravelly material. It is commonly found in beds of creeks and other streams on 2 to 15 percent slopes, or of areas that have been placer mined and contain enough fine sand or silt to support some grass for grazing. This material is derived from a mixture of rocks and commonly is stratified or poorly sorted. The depth of the soil is variable, from 6 inches to more than 5 feet deep. Areas in streambeds occasionally are flooded during the rainy season. Surface runoff is low and available water storage is very low (NRCS 1974; 2016b). Placer Diggings may meet hydric soil criteria when it occurs in channels (NRCS 2015).

## **F. National Wetlands Inventory Map**

Channel 1 and Channel 2, two unnamed tributaries to Martinez Creek that occur in the northeast and south of the BSA, are identified as riverine, intermittent, seasonally flooded streambeds (R4SBC) on the NWI map. The pond that occurs along the western edge of the BSA is identified as palustrine, emergent, persistent, and seasonally flooded (PEMIC). There are no other features in the BSA on the NWI map.

## IV. WATERS AND WETLANDS

Waters and wetlands are shown on the jurisdictional delineation map in Figure 4. A summary of acreages by feature is in Table 2 below. On 28 August 2015 a new regulation defining what features are and are not waters of the U.S. became effective (32 CFR 328.3), but was stayed by the U.S Sixth Circuit Court of Appeals on 9 October 2015. An evaluation of waters and wetlands pursuant to the definition of waters of the U.S. and their potential jurisdiction under Section 404 of the Clean Water Act (33 U.S.C. 1344) is in Section V. Section V uses the Waters of the U.S. rule in effect prior to 28 August 2015.

Table 2. Summary of Waters and Wetlands

| Feature                 | Hydrology/ Cowardin Classification | Length (ft)  | Avg. Width (ft) | Area (ac)    |
|-------------------------|------------------------------------|--------------|-----------------|--------------|

### A. Waters

Channels 1 and 1a–f: Channel 1 is an intermittent channel south of Wetland 3, and an ephemeral channel north of Wetland 3. Some of the intermittent reaches of Channel 1 had standing water, or a small amount of surface flow, in September 2017 (see Photo 7, Appendix B). No nearby sources of urban irrigation runoff were identified. The reach of Channel 1 above Wetland 3 was dry. The OHWM was identified based on scoured rock and soil. The substrate is mostly cobble, with some areas of soil or recent fine sediment. There is patchy riparian vegetation along some of Channel 1, consisting mostly of willows (*Salix* sp.) and nonnative invasive Himalayan blackberry (*Rubus armeniacus*). Channel 1 is a tributary to Martinez Creek, 0.3 mile southeast of the BSA.

Channels 1a–f are all ephemeral tributaries to Channel 1. Channel 1d is the largest and enters the BSA from the east through a culvert under Fowler Road. All of these ephemeral tributaries to Channel 1 were dry during delineation fieldwork, as well as dry during separate botanical fieldwork conducted in June 2017. The OHWM for Channels 1a–f was identified based on scoured soil.

Channels 2 and 2a–j: Channel 2 flows south through the southern half of the BSA, and is a tributary to Martinez Creek, 0.3 mile southeast of the BSA. Channel 2 is ephemeral above the tributary Channel 2e. Standing water seeping out from among some small bedrock outcrops was still present near the Channel 2e confluence in late June 2017 (see Photo 4,

Appendix B). By early August 2017, all of Channel 2 was dry. The OHWM was identified based on scoured rock and cobble for the intermittent reach of Channel 2, and on scoured soil and cobble for the ephemeral reach of Channel 2. There is no developed riparian community along Channel 2, although there are a few patches of obligate herbaceous vegetation within the intermittent reach.

Channels 2a–i are all ephemeral tributaries to Channel 2. The OHWM of these channels was identified based on scoured soil. All of these tributaries were dry at the time of August and September delineation fieldwork, as well as dry during separate botanical fieldwork conducted in June 2017.

Channel 3: Channel 3 is an ephemeral channel. The OHWM was identified based mostly on scoured soil. There is no riparian community along Channel 3. Channel 3 was dry during August 2017 delineation fieldwork, as well as dry during separate botanical fieldwork conducted in June 2017. Channel 3 is culverted under Fowler Lane on the east side of the BSA. Farther east and outside of the BSA, Channel 3 is tributary to Channel 1.

Pond: The pond occurs along the western edge of the BSA and is mostly outside the BSA. Two portions of the pond are in the BSA, but are part of the same pond that is connected outside the BSA. A total of 0.384 acre of the pond is within the BSA. Surface water accumulates in the pond up to a depth of several feet. On 13 September 2017, part of the pond off-site still had approximately 1 foot of water. Sycamore Environmental also observed remaining water in the deepest off-site parts of the pond on 12 September and 10 December 2006 for an adjacent project. Based on review of aerial photographs the pond may completely dry out in dry years, but retain some standing water in the deepest parts in wet years (Google, Inc. 2017). The OHWM was identified based on the destruction of terrestrial vegetation and wracking. The pond is the result of an off-site impoundment of a wetland swale.

## **B. Wetlands**

Wetlands 1, 3, and 4: These three wetlands are near the upper reaches of the Channel 1 complex, and they all drain into Channel 1. Wetland 1 is dominated by Baltic rush (*Juncus balticus*, FACW), met the depleted matrix soil indicator, and met the drainage patterns and FAC-neutral test secondary hydrology indicators. Wetlands 3 and 4 are both dominated by whiteroot sedge (*Carex barbarae*, FAC). Wetland 3 met the depleted matrix soil indicator, and both wetlands had sediment deposits. The soil in wetland 4 was problematic because there was deep, recently deposited sand. Hydric soil was assumed in wetland 4 based on vegetation and hydrology indicators.

Wetlands 2, 5–22, and 25: All of these wetlands occur in areas of the BSA that were previously graded for development, or on adjacent dirt roads. The wetlands have since developed in low spots that either do not drain well or do not drain at all. They have substantial bare soil as a result of ongoing vehicle disturbance. Vegetation, where present, is dominated by herbaceous species including spikerush (*Eleocharis macrostachya*, OBL), annual hair grass (*Deschampsia danthonoides*, FACW), loosestrife (*Lythrum portula*, OBL; *L. hyssopifolia*, OBL), and rye grass (*Festuca perennis*; FAC). Soils were generally thin over rock or compacted layers as a result of the past grading. Soil profiles that were present met the redox depressions indicator. The hydrology indicators were biotic crust and FAC-neutral test.

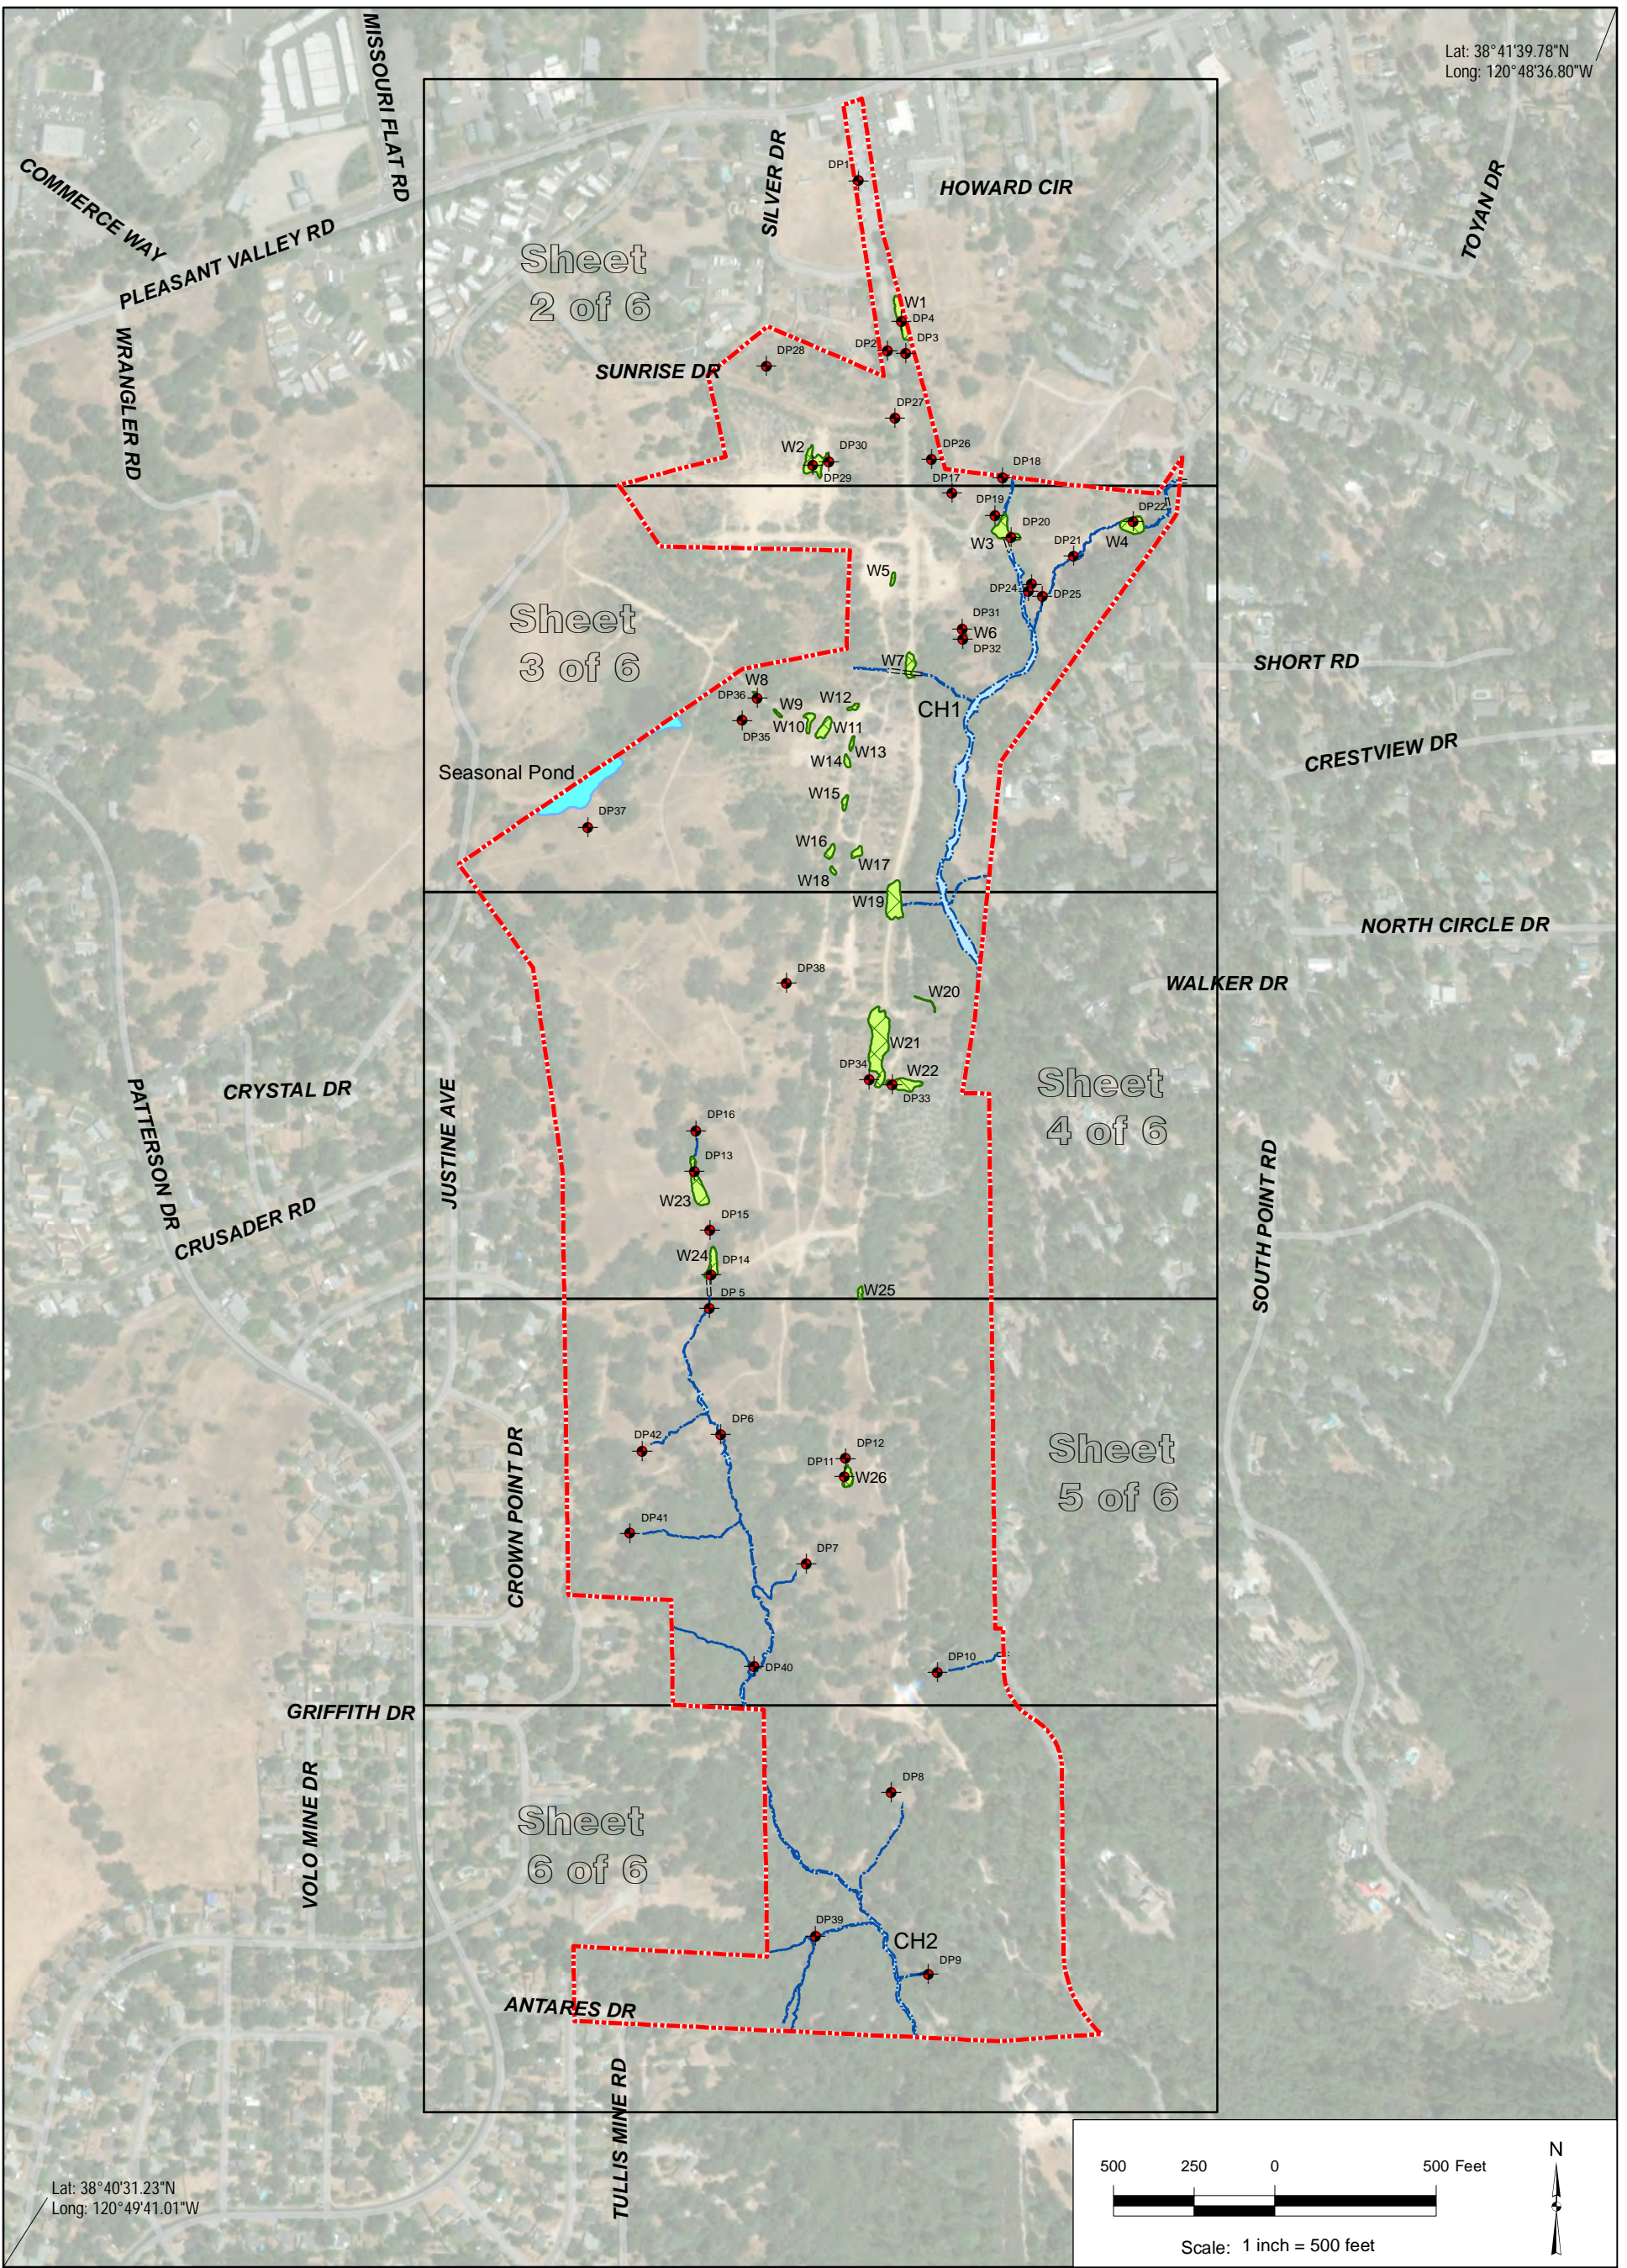

Wetlands 7 and 19 are low spots in dirt roads in previously graded areas. When full, these features would drain into Channels 1c and 1a, respectively.

Wetlands 2, 5, 6, 8–18, 20–22, and 25 are low spots in previously graded areas or dirt roads that do not appear to ever inundate enough to drain to other areas or features in the BSA.

Wetlands 23 and 24: These two wetlands are impoundments along the upper reach of Channel 2. Wetland 23 is a stock pond impounded by an earthen berm across the drainage of Channel 2. No spillway around the berm or culvert through the berm was found. Vegetation was dominated by loosestrife and annual beard grass (*Polypogon monspeliensis*, FACW). Soil met the redox depressions indicator. The hydrology indicators were biotic crust and FAC-neutral test. Wetland 23 may contain up to about 2 feet of inundation when full.

Wetland 24 is below the earthen berm that impounds Wetland 23. Wetland 24 is impounded by a culvert under a dirt road that does not drain well. Vegetation is dominated by rye grass. Soil met the redox depressions indicator. The hydrology indicator was biotic crust. Wetland 23 may inundate up to a few inches in depth due to the poor drainage of the adjacent culvert.

Wetland 26: This wetland is in a natural swale, and when full, drains via sheet flow into Channel 2g. Vegetation is dominated by loosestrife. Soil met the depleted matrix and redox depressions indicators. The hydrology indicators were biotic crust and FAC-neutral test.

## V. REGULATORY ANALYSIS AND DISCUSSION

---

On 5 June 2007, the Corps issued a memorandum providing guidance on implementation of the Supreme Court's decision in the consolidated cases *Rapanos v. United States* and *Carabell v. United States* (Corps and EPA 2008). The guidance distinguishes among traditional navigable waters (TNW), relatively permanent waters (RPW), and non-relatively permanent waters (non-RPW). The Corps will routinely exercise jurisdiction over traditional navigable waters, relatively permanent waters, and wetlands adjacent to those waters. The jurisdictional determination for non-relatively permanent waters and their adjacent wetlands (if any) will be based on whether there exists a significant nexus with a traditional navigable water. Factors evaluated by the Corps during the significant nexus evaluation will include ecology, hydrology, and the influence of the water on the "chemical, physical, and biological integrity of downstream traditional navigable waters" (Corps and EPA 2008). The Corps may exert jurisdiction if the findings of the significant nexus evaluation indicate that "the tributary and its adjacent wetlands are likely to have an effect [on downstream traditional navigable waters] that is more than speculative or insubstantial" (Corps and EPA 2008).

The Rapanos memorandum (Corps and EPA 2008) does not affect the Court's decision in *Solid Waste Agency of Northern Cook County v. U.S. Army Corps of Engineers*, No. 99-1178 (January 2001; "SWANCC"), which involved statutory and constitutional challenges to the assertion of CWA jurisdiction over isolated, non-navigable, intrastate waters used as habitat by migratory birds. Isolated wetlands and waters are not subject to Clean Water Act jurisdiction. Table 3 applies the "significant nexus" status of waters in the BSA.

Wetlands and waters not subject to the Corps' jurisdiction may come under the jurisdiction of CDFW and/or the RWQCB. For example, "isolated" wetlands not subject to Section 404 in accordance with the SWANCC decision are subject to regulation by the RWQCB.

### A. TNWs and Adjacent Wetlands

No TNWs or wetlands adjacent to TNWs occur in the BSA.

### B. RPWs that flow directly or indirectly into TNWs

Channel 1, Channel 2, and the pond are RPWs that flow indirectly into TNWs. The intermittent segments of Channel 1 and Channel 2 are identified as seasonally flooded on the NWI map and are considered relatively permanent waters by the Corps. Channel 1 and 2 are tributaries to Martinez Creek south of the BSA. Martinez Creek is a tributary to Deadman Creek, which is a tributary to the Cosumnes River, which is a tributary to the Mokelumne River, which is a TNW.

The pond is identified as permanently flooded on the NWI map. Field observations and review of aeriels suggest that it holds water for most of the year, and is dry for a short period, at least in some years. The pond drains through an off-site wetland swale to the

west into Patterson Lake. Patterson Lake drains to Deadman Creek, which is a tributary to the Cosumnes River, which is a tributary to the Mokelumne River, which is a TNW.

### **C. Non-RPWs that flow directly or indirectly into TNWs**

The ephemeral channels (segments of CH 1 and CH 2, CH 1a-f, CH 2a-i, CH 3) are non-RPWs that flow indirectly into TNWs. All of these channels are ephemeral, and typically only flow in response to precipitation events. Channels 1a-f, the ephemeral segment of Channel 1, and Channel 3 all flow into Channel 1, which indirectly flows into the Mokelumne River, which is a TNW. Channels 2a-i all flow into Channel 2, which indirectly flows into the Mokelumne River, a TNW.

The ephemeral channels do not have “continuous flow at least seasonally (e.g., typically three months)” (Corps December 2008). The jurisdictional determination for non-RPWs is based on whether there exists a significant nexus with a TNW (Corps December 2008). The watershed of the Mokelumne River encompasses approximately 1,397,203 acres. The watershed of the largest ephemeral channel in the BSA (the ephemeral reach of CH 1) encompasses approximately 30 acres. This acreage represents about 2 one-hundred thousandths (0.00002) of the watershed of the Mokelumne River.

The capacity of ephemeral channels in the BSA to carry or reduce pollutants, flood waters, nutrients, or organic carbon is insubstantial relative to the Mokelumne River watershed. The ephemeral channels do not provide habitat for fish or other aquatic species present in the Mokelumne River. The ephemeral channels in the BSA may not have sufficient volume, duration, or frequency of flow to have a significant nexus with the chemical, physical, or biological integrity of the Mokelumne River based on the negligible contributions of the watersheds, and the lack of a relatively permanent hydrologic connection.

### **D. Wetlands directly abutting RPWs that flow directly or indirectly into TNWs**

There are no wetlands directly abutting an RPW that flows directly or indirectly into a TNW in the BSA.

### **E. Wetlands adjacent to but not directly abutting RPWs that flow directly or indirectly into TNWs**

Wetlands 1 and 3 are adjacent to but not directly abutting RPWs that flow directly or indirectly into TNWs. These wetlands drain into Channel 1 via sheet flow or a culvert when full. Wetland 3 drains into the intermittent reach of Channel 1 via a culvert.

These small wetlands are over 61 river miles distant from the Mokelumne River, the nearest downstream TNW. They do not support the aquatic habitats or species that occur in the nearest downstream TNW.

Wetland 1 is separated by several hundred feet of uplands from the nearest RPW. Wetland 1 has no more than a speculative or insubstantial effect on the chemical, physical, and biological integrity of the nearest downstream TNW.

Wetland 3 is at the head of the intermittent reach of Channel 1, and the watershed above that point drains through Wetland 3. Much of the watershed above is developed to urban use. Wetland 3 may trap or filter pollutants prior to draining into the intermittent reach of Channel 1.

#### **F. Wetlands adjacent to non-RPWs that flow directly or indirectly into TNWs**

Wetlands 4, 7, 19, 23, 24, and 26 are adjacent to ephemeral non-RPWs in the BSA. These small wetlands are over 61 river miles distant from the Mokelumne River, the nearest downstream TNW. They do not support the aquatic habitats or species that occur in the nearest downstream TNW. They have no more than a speculative or insubstantial effect on the chemical, physical, and biological integrity of the nearest downstream TNW.

#### **G. Impoundments of waters**

The pond is the result of an off-site impoundment of a wetland swale. The pond contains water at least seasonally and is therefore treated as an RPW above. Wetland 23 is created by an earthen berm across an upland swale. Wetland 23 is treated as a wetland adjacent to a non-RPW above because it is in the watershed of Channel 2.

#### **H. Isolated (interstate or intrastate) waters, including isolated wetlands**

Wetlands 2, 5, 6, 8–18, 20–22, and 25 are low spots in previously graded areas or dirt roads that do not appear to ever inundate enough to drain to other areas or features in the BSA. These wetlands are isolated.

#### **I. Non-jurisdictional waters**

The ephemeral channels, and the wetlands with the exception of Wetland 3, are either isolated or have no more than a speculative or insubstantial nexus to the nearest downstream TNW.

#### **J. Summary of Jurisdictional Acreages**

The intermittent channels and pond are RPWs presumed to have a substantial nexus to the nearest downstream TNW (Corps 2008). Wetland 3 is also presumed to have a substantial nexus because it may trap or filter pollutants from an upstream urbanized area prior to reaching the intermittent reach of Channel 1.

Table 3. Rapanos Guidance Correlation of Wetlands and Waters

| Feature                  | Rapanos Guidance Correlation | Jurisdictional Acreage | Non-Jurisdictional Acreage |
|--------------------------|------------------------------|------------------------|----------------------------|
| Channel 1 (ephemeral)    | Non-RPW                      | --                     | 0.011                      |
| Channel 1 (intermittent) | RPW                          | 0.545                  | --                         |

## **VII. REPORT PREPARERS**

---

**Chuck Hughes, M.S.**, Plant Biology, Michigan State University, East Lansing, MI. Fifteen years of experience preparing biological/botanical resource evaluations, wetland delineations, arborist reports, impact analyses, and mitigation/restoration plans. He is a Professional Wetland Scientist (#2029), an ISA Certified Arborist (WE-6885A), holds a CDFW Plant Voucher Collecting Permit (2081(a)-12-16-V), is a Principal Scientific Investigator on a CDFW Scientific Collecting Permit (SC-7617), and is on a USFWS recovery permit for listed vernal pool branchiopods (TE799564-4). His bachelor's degree from UC Davis is in environmental horticulture and urban forestry, with an emphasis in plant biodiversity.

Responsibilities: Project manager, fieldwork, report preparation.

**Nicole Desideri, B.S.**, Biological Sciences (concentration in Field and Wildlife Biology), California Polytechnic State University, San Luis Obispo, CA. Ms. Desideri conducts preconstruction and construction monitoring, assists with plant and wildlife surveys, wetland delineations, and assists with preparation of biological resource evaluations, Natural Environment Study reports, permit applications, and other documents used in the CEQA/NEPA process. Serving as both field biologist and technical writer, she conducts database research on special status species' biology, habitat and distribution. She assists with mapping and figure preparation for biological and permitting documents such as project location maps, aerial photograph exhibits, soils maps, biological resource maps, wetlands/waters delineation maps, tree location maps and other supporting graphics. She holds a California Department of Fish and Wildlife Rare, Threatened and Endangered Plant Voucher Collecting Permit (2081(a)-16-107-V) and is an authorized individual on the CDFW Scientific Collecting Permit (SC-7617).

Responsibilities: Fieldwork, Report preparation

**Aramis Respoll, GIS Analyst/ CAD Operator.** Over 20 years of experience in drafting and spatial analysis using AutoCAD and ArcGIS for public and private projects. He prepares figures for biological and permitting documents such as project location maps, aerial photograph exhibits, biological resource maps, CNDDDB proximity maps, wetlands/waters delineation maps, impact analysis maps, tree location maps and other supporting graphics. Mr. Respoll provides geospatial analysis and support for projects involving geodesy, hydrology, watersheds, project impact analysis, CNDDDB occurrences, and critical habitat information. Primary experience evolved from conventional surveying and civil engineering practices to advanced GPS and GIS based technology.

Responsibilities: Figure preparation and spatial analysis.

**Jeffery Little**, Vice President, Sycamore Environmental.

Responsibilities: Principal in charge.

**WETLAND DETERMINATION DATA FORM – Arid West Region**  
 Routine Wetland Determination  
 (September 2008 V2.0 COE Arid West Wetlands Delineation Manual)

Project/Site: Stonehenge Springs City/County: El Dorado County Sampling Date: 6/27/17  
 Applicant/Owner: Stonehenge Springs LLC State: CA Sampling Point: 1  
 Investigator(s): Chuck Hughes, Nicole Desideri Section, Township, Range: See report  
 Landform (hillslope, terrace, etc.): Roadside swale Local relief (concave, convex, none): Linear-concave Slope (%): 2  
 Subregion (LRR): C Lat: See report Long: See report Datum: \_\_\_\_\_  
 Soil Map Unit Name: Diamond Springs very fine sandy loam NWI Classification: none

Are climatic/hydrologic conditions on the site typical for this time of the year? Yes  No  (If no, explain in remarks.)  
 Are Vegetation  Soil  Or Hydrology  Significantly disturbed? Are "Normal Circumstances" present? Yes  No   
 Are Vegetation  Soil  Or Hydrology  Naturally problematic? (If needed, explain any answers in remarks.)

**SUMMARY OF FINDINGS – Attach site map showing sampling point locations, transects, important features, etc.**

|                                 |   |  |                     |                              |  |

(includes capillary fringe)

**Wetland Hydrology Present?**    Yes     No

Describe Recorded Data (stream gauge, monitoring well, aerial photos, previous inspections, if available):

Remarks:

WETLAND DETERMINATION DATA FORM – Arid West Region  
 Routine Wetland Determination  
 (September 2008 V2.0 COE Arid West Wetlands Delineation Manual)

Project/Site: Stonehenge Springs City/County: El Dorado County Sampling Date: 6/27/17  
 Applicant/Owner: Stonehenge Springs LLC State: CA Sampling Point: 2  
 Investigator(s): Chuck Hughes, Nicole Desideri Section, Township, Range: See report  
 Landform (hillslope, terrace, etc.): Terrace Local relief (concave, convex, none): Linear-concave Slope (%): 2  
 Subregion (LRR): C Lat: See report Long: See report Datum: \_\_\_\_\_  
 Soil Map Unit Name: Diamond Springs very fine sandy loam NWI Classification: none

Are climatic/hydrologic conditions on the site typical for this time of the year? Yes  No  (If no, explain in remarks.)  
 Are Vegetation  Soil , Or Hydrology  Significantly disturbed? Are "Normal Circumstances" present? Yes  No   
 Are Vegetation  Soil , Or Hydrology  Naturally problematic? (If needed, explain any answers in remarks.)

**SUMMARY OF FINDINGS – Attach site map showing sampling point locations, transects, important features, etc.**

**WETLAND DETERMINATION DATA FORM – Arid West Region**  
 Routine Wetland Determination  
 (September 2008 V2.0 COE Arid West Wetlands Delineation Manual)

Project/Site: Stonehenge Springs City/County: El Dorado County Sampling Date: 6/27/17  
 Applicant/Owner: Stonehenge Springs LLC State: CA Sampling Point: 3  
 Investigator(s): Chuck Hughes, Nicole Desideri Section, Township, Range: See report  
 Landform (hillslope, terrace, etc.): Terrace Local relief (concave, convex, none): Linear-concave Slope (%): 2  
 Subregion (LRR): C Lat: See report Long: See report Datum: \_\_\_\_\_  
 Soil Map Unit Name: Diamond Springs very fine sandy loam NWI Classification: none

Are climatic/hydrologic conditions on the site typical for this time of the year? Yes  No  (If no, explain in remarks.)  
 Are Vegetation  Soil , Or Hydrology  Significantly disturbed? Are "Normal Circumstances" present? Yes  No   
 Are Vegetation  Soil , Or Hydrology  Naturally problematic? (If needed, explain any answers in remarks.)

**SUMMARY OF FINDINGS – Attach site map showing sampling point locations, transects, important features, etc.**

Describe Recorded Data (stream gauge, monitoring well, aerial photos, previous inspections, if available):

Remarks: Small swale, ill-defined, draining through this patch of Juncus.

**WETLAND DETERMINATION DATA FORM – Arid West Region**  
 Routine Wetland Determination  
 (September 2008 V2.0 COE Arid West Wetlands Delineation Manual)

Project/Site: Stonehenge Springs City/County: El Dorado County Sampling Date: 8/8/17  
 Applicant/Owner: Stonehenge Springs LLC State: CA Sampling Point: 5  
 Investigator(s): Chuck Hughes Section, Township, Range: See report  
 Landform (hillslope, terrace, etc.): Swale Local relief (concave, convex, none): Linear-concave Slope (%): 2  
 Subregion (LRR): C Lat: See report Long: See report Datum: \_\_\_\_\_  
 Soil Map Unit Name: Diamond Springs very rocky very fine sandy loam NWI Classification: None

Are climatic/hydrologic conditions on the site typical for this time of the year? Yes  No  (If no, explain in remarks.)  
 Are Vegetation  Soil , Or Hydrology  Significantly disturbed? Are "Normal Circumstances" present? Yes  No   
 Are Vegetation  Soil , Or Hydrology  Naturally problematic? (If needed, explain any answers in remarks.)

**SUMMARY OF FINDINGS – Attach site map showing sampling point locations, transects, important features, etc.**

Describe Recorded Data (stream gauge, monitoring well, aerial photos, previous inspections, if available):

Remarks:

**WETLAND DETERMINATION DATA FORM – Arid West Region**  
 Routine Wetland Determination  
 (September 2008 V2.0 COE Arid West Wetlands Delineation Manual)

Project/Site: Stonehenge Springs City/County: El Dorado County Sampling Date: 8/8/17  
 Applicant/Owner: Stonehenge Springs LLC State: CA Sampling Point: 6  
 Investigator(s): Chuck Hughes Section, Township, Range: See report  
 Landform (hillslope, terrace, etc.): Swale Local relief (concave, convex, none): Linear-concave Slope (%): 2  
 Subregion (LRR): C Lat: See report Long: See report Datum: \_\_\_\_\_  
 Soil Map Unit Name: Diamond Springs very rocky very fine sandy loam NWI Classification: R4SBC

Are climatic/hydrologic conditions on the site typical for this time of the year? Yes  No  (If no, explain in remarks.)  
 Are Vegetation  Soil , Or Hydrology  Significantly disturbed? Are "Normal Circumstances" present? Yes  No   
 Are Vegetation  Soil , Or Hydrology  Naturally problematic? (If needed, explain any answers in remarks.)

**SUMMARY OF FINDINGS – Attach site map showing sampling point locations, transects, important features, etc.**

**WETLAND DETERMINATION DATA FORM – Arid West Region**  
 Routine Wetland Determination  
 (September 2008 V2.0 COE Arid West Wetlands Delineation Manual)

Project/Site: Stonehenge Springs City/County: El Dorado County Sampling Date: 8/8/17  
 Applicant/Owner: Stonehenge Springs LLC State: CA Sampling Point: 7  
 Investigator(s): Chuck Hughes Section, Township, Range: See report  
 Landform (hillslope, terrace, etc.): Hillslope Local relief (concave, convex, none): Convex-concave Slope (%): 10  
 Subregion (LRR): C Lat: See report Long: See report Datum: \_\_\_\_\_  
 Soil Map Unit Name: Diamond Springs very rocky very fine sandy loam NWI Classification: None

Are climatic/hydrologic conditions on the site typical for this time of the year? Yes  No  (If no, explain in remarks.)  
 Are Vegetation  Soil , Or Hydrology  Significantly disturbed? Are "Normal Circumstances" present? Yes  No   
 Are Vegetation  Soil , Or Hydrology  Naturally problematic? (If needed, explain any answers in remarks.)

**SUMMARY OF FINDINGS – Attach site map showing sampling point locations, transects, important features, etc.**

Describe Recorded Data (stream gauge, monitoring well, aerial photos, previous inspections, if available):

Remarks:

**WETLAND DETERMINATION DATA FORM – Arid West Region**  
 Routine Wetland Determination  
 (September 2008 V2.0 COE Arid West Wetlands Delineation Manual)

Project/Site: Stonehenge Springs City/County: El Dorado County Sampling Date: 8/8/17  
 Applicant/Owner: Stonehenge Springs LLC State: CA Sampling Point: 10  
 Investigator(s): Chuck Hughes Section, Township, Range: See report  
 Landform (hillslope, terrace, etc.): Hillslope Local relief (concave, convex, none): Convex-concave Slope (%): 5  
 Subregion (LRR): C Lat: See report Long: See report Datum: \_\_\_\_\_  
 Soil Map Unit Name: Diamond Springs very fine sandy loam NWI Classification: none

Are climatic/hydrologic conditions on the site typical for this time of the year? Yes  No  (If no, explain in remarks.)  
 Are Vegetation  Soil , Or Hydrology  Significantly disturbed? Are "Normal Circumstances" present? Yes  No   
 Are Vegetation  Soil , Or Hydrology  Naturally problematic? (If needed, explain any answers in remarks.)

**SUMMARY OF FINDINGS – Attach site map showing sampling point locations, transects, important features, etc.**

Describe Recorded Data (stream gauge, monitoring well, aerial photos, previous inspections, if available):

Remarks:

**WETLAND DETERMINATION DATA FORM – Arid West Region**  
 Routine Wetland Determination  
 (September 2008 V2.0 COE Arid West Wetlands Delineation Manual)

Project/Site: Stonehenge Springs City/County: El Dorado County Sampling Date: 8/8/17  
 Applicant/Owner: Stonehenge Springs LLC State: CA Sampling Point: 11  
 Investigator(s): Chuck Hughes Section, Township, Range: See report  
 Landform (hillslope, terrace, etc.): Closed depression in swale Local relief (concave, convex, none): Concave-concave Slope (%): 1  
 Subregion (LRR): C Lat: See report Long: See report Datum: \_\_\_\_\_  
 Soil Map Unit Name: Diamond Springs very fine sandy loam NWI Classification: none

Are climatic/hydrologic conditions on the site typical for this time of the year? Yes  No  (If no, explain in remarks.)  
 Are Vegetation  Soil , Or Hydrology  Significantly disturbed? Are "Normal Circumstances" present? Yes  No   
 Are Vegetation  Soil , Or Hydrology  Naturally problematic? (If needed, explain any answers in remarks.)

**SUMMARY OF FINDINGS – Attach site map showing sampling point locations, transects, important features, etc.**

Describe Recorded Data (stream gauge, monitoring well, aerial photos, previous inspections, if available):

Remarks:

**WETLAND DETERMINATION DATA FORM – Arid West Region**  
 Routine Wetland Determination  
 (September 2008 V2.0 COE Arid West Wetlands Delineation Manual)

Project/Site: Stonehenge Springs City/County: El Dorado County Sampling Date: 8/8/17  
 Applicant/Owner: Stonehenge Springs LLC State: CA Sampling Point: 12  
 Investigator(s): Chuck Hughes Section, Township, Range: See report  
 Landform (hillslope, terrace, etc.): Swale Local relief (concave, convex, none): Linear-concave Slope (%): 2  
 Subregion (LRR): C Lat: See report Long: See report Datum: \_\_\_\_\_  
 Soil Map Unit Name: Diamond Springs very fine sandy loam NWI Classification: none

Are climatic/hydrologic conditions on the site typical for this time of the year? Yes  No  (If no, explain in remarks.)  
 Are Vegetation  Soil , Or Hydrology  Significantly disturbed? Are "Normal Circumstances" present? Yes  No   
 Are Vegetation  Soil , Or Hydrology  Naturally problematic? (If needed, explain any answers in remarks.)

**SUMMARY OF FINDINGS – Attach site map showing sampling point locations, transects, important features, etc.**

**Wetland Hydrology Present?**        Yes     No

Describe Recorded Data (stream gauge, monitoring well, aerial photos, previous inspections, if available):

Remarks:

**WETLAND DETERMINATION DATA FORM – Arid West Region**  
 Routine Wetland Determination  
 (September 2008 V2.0 COE Arid West Wetlands Delineation Manual)

Project/Site: Stonehenge Springs City/County: El Dorado County Sampling Date: 8/8/17  
 Applicant/Owner: Stonehenge Springs LLC State: CA Sampling Point: 14  
 Investigator(s): Chuck Hughes Section, Township, Range: See report  
 Landform (hillslope, terrace, etc.): Swale Local relief (concave, convex, none): Concave-concave Slope (%): 2  
 Subregion (LRR): C Lat: See report Long: See report Datum: \_\_\_\_\_  
 Soil Map Unit Name: Diamond Springs very rocky very fine sandy loam NWI Classification: none

Are climatic/hydrologic conditions on the site typical for this time of the year? Yes  No  (If no, explain in remarks.)  
 Are Vegetation  Soil , Or Hydrology  Significantly disturbed? Are "Normal Circumstances" present? Yes  No   
 Are Vegetation  Soil , Or Hydrology  Naturally problematic? (If needed, explain any answers in remarks.)

**SUMMARY OF FINDINGS – Attach site map showing sampling point locations, transects, important features, etc.**

Describe Recorded Data (stream gauge, monitoring well, aerial photos, previous inspections, if available):

Remarks:

WETLAND DETERMINATION DATA FORM – Arid West Region  
 Routine Wetland Determination  
 (September 2008 V2.0 COE Arid West Wetlands Delineation Manual)

Project/Site: Stonehenge Springs City/County: El Dorado County Sampling Date: 8/8/17  
 Applicant/Owner: Stonehenge Springs LLC State: CA Sampling Point: 15  
 Investigator(s): Chuck Hughes Section, Township, Range: See report  
 Landform (hillslope, terrace, etc.): Swale Local relief (concave, convex, none): Linear-concave Slope (%): 2  
 Subregion (LRR): C Lat: See report Long: See report Datum: \_\_\_\_\_  
 Soil Map Unit Name: Diamond Springs very rocky very fine sandy loam NWI Classification: None

Are climatic/hydrologic conditions on the site typical for this time of the year? Yes  No  (If no, explain in remarks.)  
 Are Vegetation  Soil , Or Hydrology  Significantly disturbed? Are "Normal Circumstances" present? Yes  No   
 Are Vegetation  Soil , Or Hydrology  Naturally problematic? (If needed, explain any answers in remarks.)

**SUMMARY OF FINDINGS – Attach site map showing sampling point locations, transects, important features, etc.**

Remarks:

**WETLAND DETERMINATION DATA FORM – Arid West Region**  
 Routine Wetland Determination  
 (September 2008 V2.0 COE Arid West Wetlands Delineation Manual)

Project/Site: Stonehenge Springs City/County: El Dorado County Sampling Date: 8/8/17  
 Applicant/Owner: Stonehenge Springs LLC State: CA Sampling Point: 16  
 Investigator(s): Chuck Hughes Section, Township, Range: See report  
 Landform (hillslope, terrace, etc.): Hillslope Local relief (concave, convex, none): Linear-concave Slope (%): 2  
 Subregion (LRR): C Lat: See report Long: See report Datum: \_\_\_\_\_  
 Soil Map Unit Name: Diamond Springs very rocky very fine sandy loam NWI Classification: none

Are climatic/hydrologic conditions on the site typical for this time of the year? Yes  No  (If no, explain in remarks.)  
 Are Vegetation  Soil , Or Hydrology  Significantly disturbed? Are "Normal Circumstances" present? Yes  No   
 Are Vegetation  Soil , Or Hydrology  Naturally problematic? (If needed, explain any answers in remarks.)

**SUMMARY OF FINDINGS – Attach site map showing sampling point locations, transects, important features, etc.**

Remarks:

**WETLAND DETERMINATION DATA FORM – Arid West Region**  
 Routine Wetland Determination  
 (September 2008 V2.0 COE Arid West Wetlands Delineation Manual)

Project/Site: Stonehenge Springs City/County: El Dorado County Sampling Date: 9/7/17  
 Applicant/Owner: Stonehenge Springs LLC State: CA Sampling Point: 18  
 Investigator(s): Chuck Hughes Section, Township, Range: See report  
 Landform (hillslope, terrace, etc.): Swale Local relief (concave, convex, none): Linear-concave Slope (%): 2  
 Subregion (LRR): C Lat: See report Long: See report Datum: See report  
 Soil Map Unit Name: Mixed alluvial land NWI Classification: R4SBC

Are climatic/hydrologic conditions on the site typical for this time of the year? Yes  No  (If no, explain in remarks.)  
 Are Vegetation  Soil , Or Hydrology  Significantly disturbed? Are "Normal Circumstances" present? Yes  No   
 Are Vegetation  Soil , Or Hydrology  Naturally problematic? (If needed, explain any answers in remarks.)

**SUMMARY OF FINDINGS – Attach site map showing sampling point locations, transects, important features, etc.**
