Remarks:

**WETLAND DETERMINATION DATA FORM – Arid West Region**  
 Routine Wetland Determination  
 (September 2008 V2.0 COE Arid West Wetlands Delineation Manual)

Project/Site: Stonehenge Springs City/County: El Dorado County Sampling Date: 9/7/17  
 Applicant/Owner: Stonehenge Springs LLC State: CA Sampling Point: 19  
 Investigator(s): Chuck Hughes Section, Township, Range: See report  
 Landform (hillslope, terrace, etc.): Swale Local relief (concave, convex, none): Linear-concave Slope (%): 1  
 Subregion (LRR): C Lat: See report Long: See report Datum: See report  
 Soil Map Unit Name: Mixed alluvial land NWI Classification: R4SBC

Are climatic/hydrologic conditions on the site typical for this time of the year? Yes  No  (If no, explain in remarks.)  
 Are Vegetation  Soil  Or Hydrology  Significantly disturbed? Are "Normal Circumstances" present? Yes  No   
 Are Vegetation  Soil  Or Hydrology  Naturally problematic? (If needed, explain any answers in remarks.)

**SUMMARY OF FINDINGS – Attach site map showing sampling point locations, transects, important features, etc.**

**WETLAND DETERMINATION DATA FORM – Arid West Region**  
 Routine Wetland Determination  
 (September 2008 V2.0 COE Arid West Wetlands Delineation Manual)

Project/Site: Stonehenge Springs City/County: El Dorado County Sampling Date: 9/7/17  
 Applicant/Owner: Stonehenge Springs LLC State: CA Sampling Point: 21  
 Investigator(s): Chuck Hughes Section, Township, Range: See report  
 Landform (hillslope, terrace, etc.): Swale Local relief (concave, convex, none): Linear-concave Slope (%): 3  
 Subregion (LRR): C Lat: See report Long: See report Datum: See report  
 Soil Map Unit Name: Diamond Springs very fine sandy loam NWI Classification: none

Are climatic/hydrologic conditions on the site typical for this time of the year? Yes  No  (If no, explain in remarks.)  
 Are Vegetation  Soil , Or Hydrology  Significantly disturbed? Are "Normal Circumstances" present? Yes  No   
 Are Vegetation  Soil , Or Hydrology  Naturally problematic? (If needed, explain any answers in remarks.)

**SUMMARY OF FINDINGS – Attach site map showing sampling point locations, transects, important features, etc.**

**WETLAND DETERMINATION DATA FORM – Arid West Region**  
 Routine Wetland Determination  
 (September 2008 V2.0 COE Arid West Wetlands Delineation Manual)

Project/Site: Stonehenge Springs City/County: El Dorado County Sampling Date: 9/7/17  
 Applicant/Owner: Stonehenge Springs LLC State: CA Sampling Point: 26  
 Investigator(s): Chuck Hughes Section, Township, Range: See report  
 Landform (hillslope, terrace, etc.): Swale Local relief (concave, convex, none): Linear-concave Slope (%): 1  
 Subregion (LRR): C Lat: See report Long: See report Datum: See report  
 Soil Map Unit Name: Mixed alluvial land NWI Classification: none

Are climatic/hydrologic conditions on the site typical for this time of the year? Yes  No  (If no, explain in remarks.)  
 Are Vegetation  Soil , Or Hydrology  Significantly disturbed? Are "Normal Circumstances" present? Yes  No   
 Are Vegetation  Soil , Or Hydrology  Naturally problematic? (If needed, explain any answers in remarks.)

**SUMMARY OF FINDINGS – Attach site map showing sampling point locations, transects, important features, etc.**

WETLAND DETERMINATION DATA FORM – Arid West Region  
 Routine Wetland Determination  
 (September 2008 V2.0 COE Arid West Wetlands Delineation Manual)

Project/Site: Stonehenge Springs City/County: El Dorado County Sampling Date: 9/13/17  
 Applicant/Owner: Stonehenge Springs LLC State: CA Sampling Point: 27  
 Investigator(s): Chuck Hughes Section, Township, Range: See report  
 Landform (hillslope, terrace, etc.): Road cut Local relief (concave, convex, none): Linear-concave Slope (%): 1  
 Subregion (LRR): C Lat: See report Long: See report Datum: See report  
 Soil Map Unit Name: Diamond Springs very fine sandy loam NWI Classification: none

Are climatic/hydrologic conditions on the site typical for this time of the year? Yes  No  (If no, explain in remarks.)  
 Are Vegetation  Soil , Or Hydrology  Significantly disturbed? Are "Normal Circumstances" present? Yes  No   
 Are Vegetation  Soil , Or Hydrology  Naturally problematic? (If needed, explain any answers in remarks.)

**SUMMARY OF FINDINGS – Attach site map showing sampling point locations, transects, important features, etc.**

**WETLAND DETERMINATION DATA FORM – Arid West Region**  
 Routine Wetland Determination  
 (September 2008 V2.0 COE Arid West Wetlands Delineation Manual)

Project/Site: Stonehenge Springs City/County: El Dorado County Sampling Date: 9/13/17  
 Applicant/Owner: Stonehenge Springs LLC State: CA Sampling Point: 28  
 Investigator(s): Chuck Hughes Section, Township, Range: See report  
 Landform (hillslope, terrace, etc.): Graded area Local relief (concave, convex, none): Linear-linear Slope (%): 1  
 Subregion (LRR): C Lat: See report Long: See report Datum: See report  
 Soil Map Unit Name: Placer diggings NWI Classification: None

Are climatic/hydrologic conditions on the site typical for this time of the year? Yes  No  (If no, explain in remarks.)  
 Are Vegetation  Soil , Or Hydrology  Significantly disturbed? Are "Normal Circumstances" present? Yes  No   
 Are Vegetation  Soil , Or Hydrology  Naturally problematic? (If needed, explain any answers in remarks.)

**SUMMARY OF FINDINGS – Attach site map showing sampling point locations, transects, important features, etc.**

Remarks:

**WETLAND DETERMINATION DATA FORM – Arid West Region**  
 Routine Wetland Determination  
 (September 2008 V2.0 COE Arid West Wetlands Delineation Manual)

Project/Site: Stonehenge Springs City/County: El Dorado County Sampling Date: 9/13/17  
 Applicant/Owner: Stonehenge Springs LLC State: CA Sampling Point: 30  
 Investigator(s): Chuck Hughes Section, Township, Range: See report  
 Landform (hillslope, terrace, etc.): Graded area Local relief (concave, convex, none): Linear-linear Slope (%): 1  
 Subregion (LRR): C Lat: See report Long: See report Datum: See report  
 Soil Map Unit Name: Placer diggings NWI Classification: None

Are climatic/hydrologic conditions on the site typical for this time of the year? Yes  No  (If no, explain in remarks.)  
 Are Vegetation  Soil , Or Hydrology  Significantly disturbed? Are "Normal Circumstances" present? Yes  No   
 Are Vegetation  Soil , Or Hydrology  Naturally problematic? (If needed, explain any answers in remarks.)

**SUMMARY OF FINDINGS – Attach site map showing sampling point locations, transects, important features, etc.**

Describe Recorded Data (stream gauge, monitoring well, aerial photos, previous inspections, if available):

Remarks:

**WETLAND DETERMINATION DATA FORM – Arid West Region**  
 Routine Wetland Determination  
 (September 2008 V2.0 COE Arid West Wetlands Delineation Manual)

Project/Site: Stonehenge Springs City/County: El Dorado County Sampling Date: 9/13/17  
 Applicant/Owner: Stonehenge Springs LLC State: CA Sampling Point: 31  
 Investigator(s): Chuck Hughes Section, Township, Range: See report  
 Landform (hillslope, terrace, etc.): Hillslope Local relief (concave, convex, none): Concave-concave Slope (%): 0  
 Subregion (LRR): C Lat: See report Long: See report Datum: See report  
 Soil Map Unit Name: Diamond Springs very fine sandy loam NWI Classification: None

Are climatic/hydrologic conditions on the site typical for this time of the year? Yes  No  (If no, explain in remarks.)  
 Are Vegetation  Soil , Or Hydrology  Significantly disturbed? Are "Normal Circumstances" present? Yes  No   
 Are Vegetation  Soil , Or Hydrology  Naturally problematic? (If needed, explain any answers in remarks.)

**SUMMARY OF FINDINGS – Attach site map showing sampling point locations, transects, important features, etc.**

|  |   |                             |   |
|--|---|-----------------------------|---|
| Hydrophytic Vegetation Present?                                  | Yes <input checked="" type="checkbox"/> | No <input type="checkbox"/> |   |
| Hydric Soil Present?   | Yes <input checked="" type="checkbox"/> | No <input type="checkbox"/> | Is the Sampled Area   |
| Wetland Hydrology Present?                                       | Yes <input checked="" type="checkbox"/> | No <input type="checkbox"/> | within a Wetland? Yes <input checked="" type="checkbox"/> No <input type="checkbox"/> |
| Remarks: DP in small depression that may pond a few inches deep. |   |                             |   |

Describe Recorded Data (stream gauge, monitoring well, aerial photos, previous inspections, if available):

Remarks:

**WETLAND DETERMINATION DATA FORM – Arid West Region**  
 Routine Wetland Determination  
 (September 2008 V2.0 COE Arid West Wetlands Delineation Manual)

Project/Site: Stonehenge Springs City/County: El Dorado County Sampling Date: 9/13/17  
 Applicant/Owner: Stonehenge Springs LLC State: CA Sampling Point: 33  
 Investigator(s): Chuck Hughes Section, Township, Range: See report  
 Landform (hillslope, terrace, etc.): Depression Local relief (concave, convex, none): Concave-concave Slope (%): 0  
 Subregion (LRR): C Lat: See report Long: See report Datum: See report  
 Soil Map Unit Name: Diamond Springs very fine sandy loam NWI Classification: None

Are climatic/hydrologic conditions on the site typical for this time of the year? Yes  No  (If no, explain in remarks.)  
 Are Vegetation  Soil , Or Hydrology  Significantly disturbed? Are "Normal Circumstances" present? Yes  No   
 Are Vegetation  Soil , Or Hydrology  Naturally problematic? (If needed, explain any answers in remarks.)

**SUMMARY OF FINDINGS – Attach site map showing sampling point locations, transects, important features, etc.**

**WETLAND DETERMINATION DATA FORM – Arid West Region**  
 Routine Wetland Determination  
 (September 2008 V2.0 COE Arid West Wetlands Delineation Manual)

Project/Site: Stonehenge Springs City/County: El Dorado County Sampling Date: 9/13/17  
 Applicant/Owner: Stonehenge Springs LLC State: CA Sampling Point: 34  
 Investigator(s): Chuck Hughes Section, Township, Range: See report  
 Landform (hillslope, terrace, etc.): Road cut Local relief (concave, convex, none): Linear-concave Slope (%): 1  
 Subregion (LRR): C Lat: See report Long: See report Datum: See report  
 Soil Map Unit Name: Diamond Springs very fine sandy loam NWI Classification: None

Are climatic/hydrologic conditions on the site typical for this time of the year? Yes  No  (If no, explain in remarks.)  
 Are Vegetation  Soil , Or Hydrology  Significantly disturbed? Are "Normal Circumstances" present? Yes  No   
 Are Vegetation  Soil , Or Hydrology  Naturally problematic? (If needed, explain any answers in remarks.)

**SUMMARY OF FINDINGS – Attach site map showing sampling point locations, transects, important features, etc.**

**WETLAND DETERMINATION DATA FORM – Arid West Region**  
 Routine Wetland Determination  
 (September 2008 V2.0 COE Arid West Wetlands Delineation Manual)

Project/Site: Stonehenge Springs City/County: El Dorado County Sampling Date: 9/13/17  
 Applicant/Owner: Stonehenge Springs LLC State: CA Sampling Point: 36  
 Investigator(s): Chuck Hughes Section, Township, Range: See report  
 Landform (hillslope, terrace, etc.): Dirt road Local relief (concave, convex, none): Concave-concave Slope (%): 0  
 Subregion (LRR): C Lat: See report Long: See report Datum: See report  
 Soil Map Unit Name: Diamond Springs very fine sandy loam NWI Classification: None

Are climatic/hydrologic conditions on the site typical for this time of the year? Yes  No  (If no, explain in remarks.)  
 Are Vegetation  Soil , Or Hydrology  Significantly disturbed? Are "Normal Circumstances" present? Yes  No   
 Are Vegetation  Soil , Or Hydrology  Naturally problematic? (If needed, explain any answers in remarks.)

**SUMMARY OF FINDINGS – Attach site map showing sampling point locations, transects, important features, etc.**

**Hydric Soil Indicators: (Applicable to all LRRs, unless otherwise noted.)**

Histosol (A1)                                         Sandy Redox (S5)  
 Histic Epipedon (A2)                               Stripped Matrix (S6)  
 Black Histic (A3)                                     Loamy Mucky Mineral (F1)  
 Hydrogen Sulfide (A4)                               Loamy Gleyed Matrix (F2)  
 Stratified Layers (A5) (**LRR C**)                     Depleted Matrix (F3)  
 1 cm Muck (A9) (**LRR D**)                             Redox Dark Surface (F6)  
 Depleted Below Dark Surface (A11)               Depleted Dark Surface (F7)  
 Thick Dark Surface (A12)                           Redox Depressions (F8)  
 Sandy Mucky Mineral (S1)                           Vernal Pools (F9)  
 Sandy Gleyed Matrix (S4)

**Indicators for Problematic Hydric Soils<sup>3</sup>:**

1 cm Muck (A9) (**LRR C**)  
 2 cm Muck (A10) (**LRR B**)  
 Reduced Vertic (F18)  
 Red Parent Material (TF2)  
 Other (Explain in Remarks)

<sup>3</sup>Indicators of hydrophytic vegetation and wetland hydrology must be present, unless disturbed or problematic.

**Restrictive Layer (if present):**  
 Type: \_\_\_\_\_  
 Depth (inches): \_\_\_\_\_

**Hydric Soil Present?    Yes     No**

Remarks:

**HYDROLOGY**

**Wetland Hydrology Indicators:**

Primary Indicators (minimum of one required; check all that apply)

Surface water (A1)                                         Salt Crust (B11)  
 High water Table (A2)                                     Biotic Crust (B12)  
 Saturation (A3)     Aquatic Invertebrates (B13)  
 Water Marks (B1) (**Nonriverine**)                     Hydrogen Sulfide Odor (C1)  
 Sediment Deposits (B2) (**Nonriverine**)               Oxidized Rhizospheres along Living Roots (C3)  
 Drift Deposits (B3) (**Nonriverine**)                   Presence of Reduced Iron (C4)  
 Surface Soil Cracks (B6)                                 Recent Iron Reduction in Tilled Soils (C6)  
 Inundation Visible on Aerial Imagery (B7)           Thin Muck Surface (C7)  
 Water-Stained Leaves (B9)                               Other (Explain in Remarks)

Secondary Indicators (2or more required)

Water Marks (B1) (**Riverine**)  
 Sediment Deposits (B2) (**Riverine**)  
 Drift Deposits (B3) (**Riverine**)  
 Drainage Patterns (B10)  
 Dry-Season Water Table (C2)  
 Crayfish Burrows (C8)  
 Saturation Visible-Aerial Imagery (C9)  
 Shallow Aquitard (D3)  
 FAC-Neutral test (D5)

**Field Observations:**

Surface Water Present?      Yes     No     Depth (inches): \_\_\_\_\_  
 Water Table Present?        Yes     No     Depth (inches): \_\_\_\_\_  
 Saturation Present?         Yes     No     Depth (inches): \_\_\_\_\_  
 (includes capillary fringe)

**Wetland Hydrology Present?    Yes     No**

Describe Recorded Data (stream gauge, monitoring well, aerial photos, previous inspections, if available):

Remarks:

**WETLAND DETERMINATION DATA FORM – Arid West Region**  
 Routine Wetland Determination  
 (September 2008 V2.0 COE Arid West Wetlands Delineation Manual)

Project/Site: 17047 Stonehenge Springs City/County: El Dorado Co Sampling Date: 9/15/17  
 Applicant/Owner: Stonehenge Springs LLC State: CA Sampling Point: DP 39  
 Investigator(s): Nicole Desideri Section, Township, Range: See report  
 Landform (hillslope, terrace, etc.): terrace Local relief (concave, convex, none): Linear-concave Slope (%): 4-5%  
 Subregion (LRR): See report Lat: See report Long: See report Datum: See report  
 Soil Map Unit Name: \_\_\_\_\_ NWI Classification: \_\_\_\_\_

Are climatic/hydrologic conditions on the site typical for this time of the year? Yes  No  (If no, explain in remarks.)  
 Are Vegetation  Soil , Or Hydrology  Significantly disturbed? Are "Normal Circumstances" present? Yes  No   
 Are Vegetation  Soil , Or Hydrology  Naturally problematic? (If needed, explain any answers in remarks.)

**SUMMARY OF FINDINGS – Attach site map showing sampling point locations, transects, important features, etc.**

**WETLAND DETERMINATION DATA FORM – Arid West Region**

Routine Wetland Determination  
(September 2008 V2.0 COE Arid West Wetlands Delineation Manual)

Project/Site: 17047 Stonehenge Springs City/County: El Dorado Co Sampling Date: 9/15/17  
 Applicant/Owner: Stonehenge Springs LLC State: CA Sampling Point: DP 41  
 Investigator(s): Nicole Desideri Section, Township, Range: See report  
 Landform (hillslope, terrace, etc.): hillslope Local relief (concave, convex, none): linear Slope (%): 5  
 Subregion (LRR): See report Lat: See report Long: See report Datum: See report  
 Soil Map Unit Name: \_\_\_\_\_ NWI Classification: \_\_\_\_\_

Are climatic/hydrologic conditions on the site typical for this time of the year? Yes  No  (If no, explain in remarks.)  
 Are Vegetation  Soil , Or Hydrology  Significantly disturbed? Are "Normal Circumstances" present? Yes  No   
 Are Vegetation  Soil , Or Hydrology  Naturally problematic? (If needed, explain any answers in remarks.)

**SUMMARY OF FINDINGS – Attach site map showing sampling point locations, transects, important features, etc.**

|                                 |   |  |   |

**WETLAND DETERMINATION DATA FORM – Arid West Region**

Routine Wetland Determination

(September 2008 V2.0 COE Arid West Wetlands Delineation Manual)

Project/Site: 17047 Stonehenge Springs City/County: El Dorado Co Sampling Date: 9/15/17

Applicant/Owner: Stonehenge Springs LLC State: CA Sampling Point: DP 42

Investigator(s): Nicole Desideri Section, Township, Range: See report

Landform (hillslope, terrace, etc.): hillslope Local relief (concave, convex, none): linear Slope (%): 7%

Subregion (LRR): See report Lat: See report Long: See report Datum: See report

Soil Map Unit Name: \_\_\_\_\_ NWI Classification: \_\_\_\_\_

Are climatic/hydrologic conditions on the site typical for this time of the year? Yes  No  (If no, explain in remarks.)

Are Vegetation  Soil , Or Hydrology  Significantly disturbed? Are "Normal Circumstances" present? Yes  No

Are Vegetation  Soil , Or Hydrology  Naturally problematic? (If needed, explain any answers in remarks.)

**SUMMARY OF FINDINGS – Attach site map showing sampling point locations, transects, important features, etc.**

|                                 |   |  |   |

## Appendix B

### Photographs

#### Stonehenge Springs

---

Photo 1. View of the valley oak woodland community in the center of the BSA. Stonehenge Springs is characterized by oak woodlands, grassland, dirt roads and disturbed areas (13 June 2017).

Photo 2. View west of ephemeral Channel 2g. Oak woodlands surround this channel bed composed of cobble, gravel and bedrock (8 August 2017).

Photo 3. View looking downstream of the intermittent section of Channel 2, on the south side of the BSA (8 August 2017).

Photo 4. View of Channel 2, with standing water seeping out from among small bedrock outcrops, near the confluence of Channel 2e (27 June 2017).

Photo 5. View looking south at Wetland 23. The shovel is at DP 13 (8 August 2017).

Photo 6. View west of Wetland 3. The shovel is at DP 20 (7 September 2017).

Photo 7. View northwest of the intermittent portion of Channel 1. Water was present during fieldwork in this reach (7 September 2017).

Photo 8. View of the pond on the northwest side of the BSA. The pond had shallow water during fieldwork (13 September 2017).

Photo 9. View northeast of Wetland 2. The shovel is at DP 29. This wetland is part of the large area in the northern part of the BSA that was previously graded, and contains low spots with poor drainage.

## FEMA Flood Insurance Rate Map (FIRM)

### Stonehenge Springs

---

[This page intentionally blank]

NOTES TO USERS

This map is for use in administering the National Flood Insurance Program. It does not necessarily identify all areas subject to flooding...

To obtain more detailed information in areas where Base Flood Elevations (BFEs) and Floodway Data are provided...

Coastal Base Flood Elevations shown on this map apply only inland of 0.7 North American Vertical Datum of 1988 (NAVD)...

Boundaries of the floodways were computed at cross sections and interpolated between cross sections. The floodways were based on hydraulic considerations...

Certain areas not in Special Flood Hazard Areas may be protected by flood control structures. Refer to Section 2.4 "Flood Protection Measures" of the Flood Insurance Study report...

The projection used in the preparation of this map was California State Plane, Zone II. The horizontal datum was NAD83 (GRS80) spheroid...

Flood elevations on this map are referenced to the North American Vertical Datum of 1988. These flood elevations must be compared to structure and ground elevations...

NCS Information Services NCSA, NVNS212 National Geographic Survey, BSMC-3, #2022 1315 East-West Highway Silver Spring, Maryland 20910-3282 (301) 713-3242

To obtain current elevation, description, and/or location information for bench marks shown on this map, please contact the Information Services Branch of the National Geographic Survey at (301) 713-3242...

Base map information shown on this FIRM was derived from multiple sources. This information was compiled from the U.S. Geological Survey, 1989 and 1993, El Dorado County Surveyor Office, 2005; National Geographic Survey, 2005; California Department of Forestry, 2004, and U.S. Bureau of Reclamation, 2003...

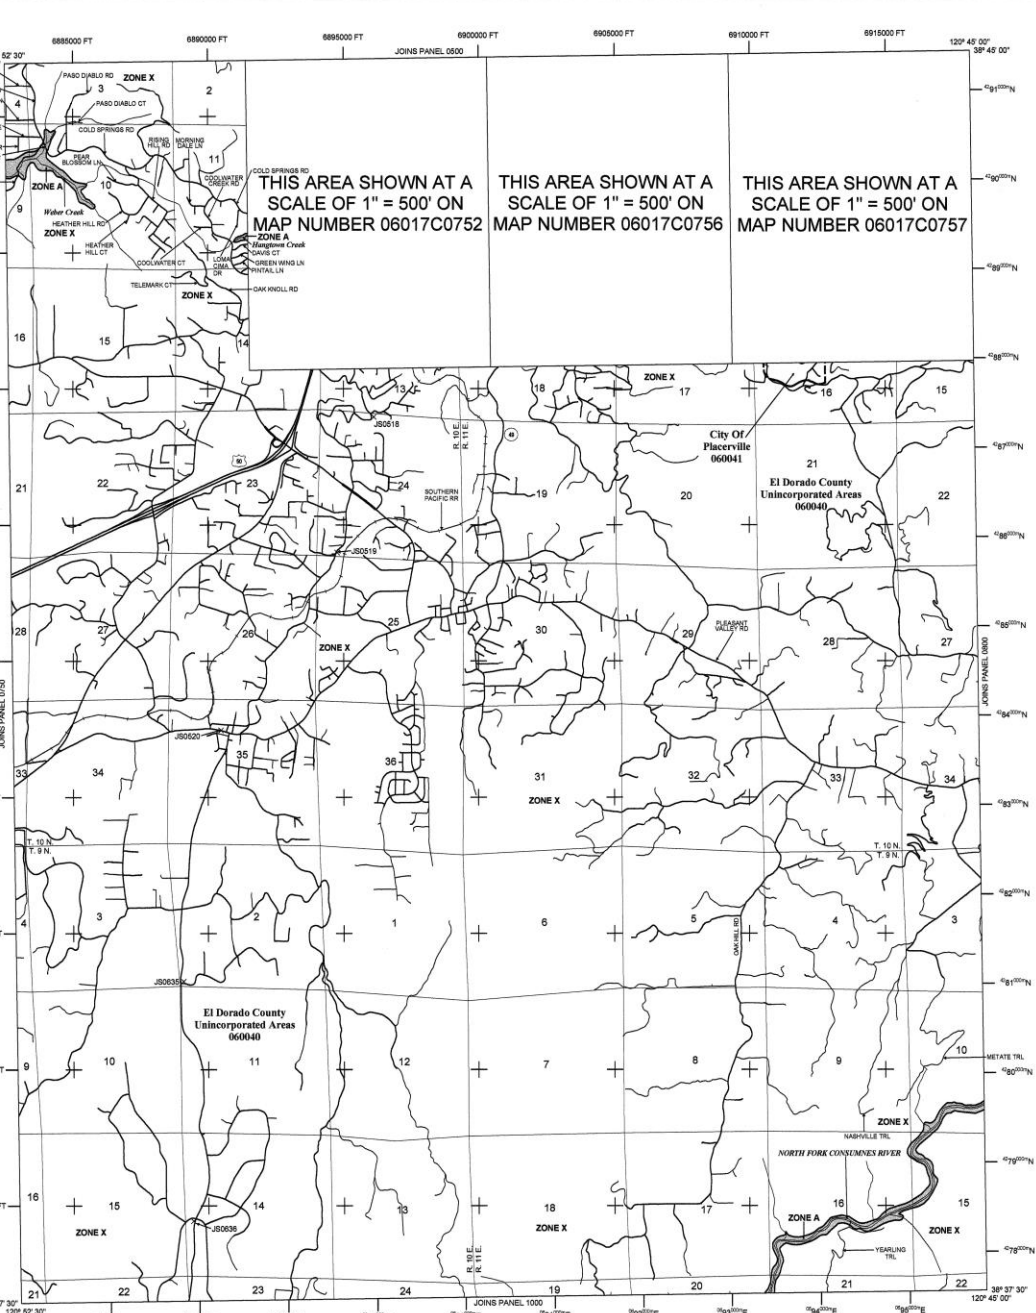

This map reflects more detailed and up-to-date stream channel configurations than those shown on the previous FIRM for this jurisdiction. The floodplains and floodways that were transferred from the previous FIRM may have been adjusted to conform to these new stream channel configurations...

Corporate limits shown on this map are based on the best data available at the time of publication. Because changes due to annexations or de-annexations may have occurred after this map was published, map users should contact appropriate community officials to verify current corporate limit locations.

Please refer to the separately printed Map Index for an overview map of the county showing the layout of map panels, community map repository addresses, and a listing of Communities Table containing National Flood Insurance Program data for each community as well as a listing of the panels on which each community is located.

Contact the FEMA Map Service Center at 1-800-358-9616 for information on available products associated with this FIRM. Available products may include previously issued Letters of Map Change, a Flood Insurance Study report, and/or digital versions of this map. The FEMA Map Service Center may also be reached by Fax at 1-800-358-9620 and their website at http://www.fema.gov.

If you have questions about this map or questions concerning the National Flood Insurance Program in general, please call 1-877-FEMA-MAP (1-877-366-2627) or visit the FEMA website at http://www.fema.gov.

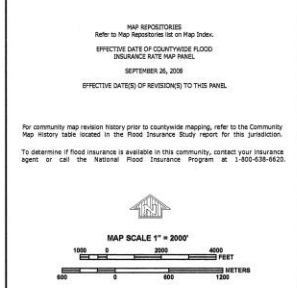

THIS AREA SHOWN AT A SCALE OF 1" = 500' ON MAP NUMBER 06017C0752

THIS AREA SHOWN AT A SCALE OF 1" = 500' ON MAP NUMBER 06017C0756

THIS AREA SHOWN AT A SCALE OF 1" = 500' ON MAP NUMBER 06017C0757

LEGEND

- SPECIAL FLOOD HAZARD AREAS (SFHA) SUBJECT TO INUNDATION BY THE 1% ANNUAL CHANCE FLOOD
ZONE A No Base Flood Elevations determined.
ZONE AH Flood depths of 1 to 3 feet (usually street or ponding); Base Flood Elevations determined.
ZONE AO Flood depths of 1 to 3 feet (usually street flow on sloping terrain); Base Flood Elevations determined.
ZONE AR Special Flood Hazard Areas determined relative to the 1% annual chance flood by a flood control system that was subsequently determined to be infeasible; the 1% annual chance flood is being retained to provide protection from the 1% annual chance or greater flood.
ZONE AR9 Area to be protected from 1% annual chance flood by a Federal Flood Protection System under construction; no Base Flood Elevations determined.
ZONE V Coastal flood zone with velocity hazard (wave action); no Base Flood Elevations determined.
ZONE VE Coastal flood zone with velocity hazard (wave action); Base Flood Elevations determined.

## **I. SUMMARY OF FINDINGS AND CONCLUSIONS**

---

This biological resources evaluation (BRE) was prepared for the Stonehenge Springs Project located in the unincorporated community of Diamond Springs in El Dorado County, CA. The approximately 143.83-acre Biological Study Area (BSA) consists mostly of oak woodland, grassland, and previously disturbed areas.

The BSA provides potential habitat for some species of special-status wildlife and plants that are considered during project review under the California Environmental Quality Act (CEQA). The BSA provides potential habitat for coast horned lizard. Western pond turtle could occur seasonally in the pond. Both coast horned lizard and western pond turtle are California Species of Special Concern. The BSA provides nesting habitat for birds regulated by State Fish and Game Code and listed under the Federal Migratory Bird Treaty Act (MBTA).

The BSA provides habitat for four special-status plant species. A botanical survey was conducted according to California Department of Fish and Wildlife guidelines. Three of the plant species were not found. A total of 88 shrubs of one of the species, Nissenan manzanita, were counted in the BSA.

Several natural communities occur in the BSA that are regulated under State and Federal law, or considered during CEQA review. Oak woodlands and trees are regulated by the County Oak Resources Management Plan. Waters and wetlands are regulated by State and Federal law, and impacts to them requires permitting. Impacts are also considered under CEQA. Sandbar willow scrub is a sensitive community in the BSA considered during CEQA review.

## **II. INTRODUCTION**

---

### **A. Purpose of Report**

The purpose of this report is to document baseline biological resources in the BSA. This report may be used in support of permit applications and in the California Environmental Quality Act (CEQA) review process. Project design is in preparation and biological impacts will be prepared separately.

### **B. Project Location**

The BSA is in Diamond Springs, an unincorporated community in El Dorado County, CA. The approximately 143.83-acre BSA is assessor's parcel numbers 054-402-18, 329-301-15, 329-301-20, 329-310-10, -11, and -12. The BSA is on the Placerville U.S. Geological Survey topographic quad (T10N, R10E, Section 25 and 36; T10N, R11E, Section 30 and 31; Figure 1), and is in the Upper Cosumnes hydrologic unit (18040013). Its centroid is 38.686355° north, 120.819115° west, UTM coordinate 689,690 meters E, 4,284,226 meters N, Zone 10S (WGS84). Figure 2 is an aerial photograph of the BSA and surrounding area.

El Dorado County parcel data indicates that the BSA is located in County rare plant mitigation zone 2, which is defined as the El Dorado Irrigation District Service Area. The BSA is outside the U.S. Fish and Wildlife Service (USFWS) recovery boundary for the Pine Hill plants (USFWS August 2002). The BSA is located outside the El Dorado County Important Biological Corridor (IBC) and Ecological Preserve (EP) overlay areas (El Dorado County 2004b).

### **C. Project Applicant**

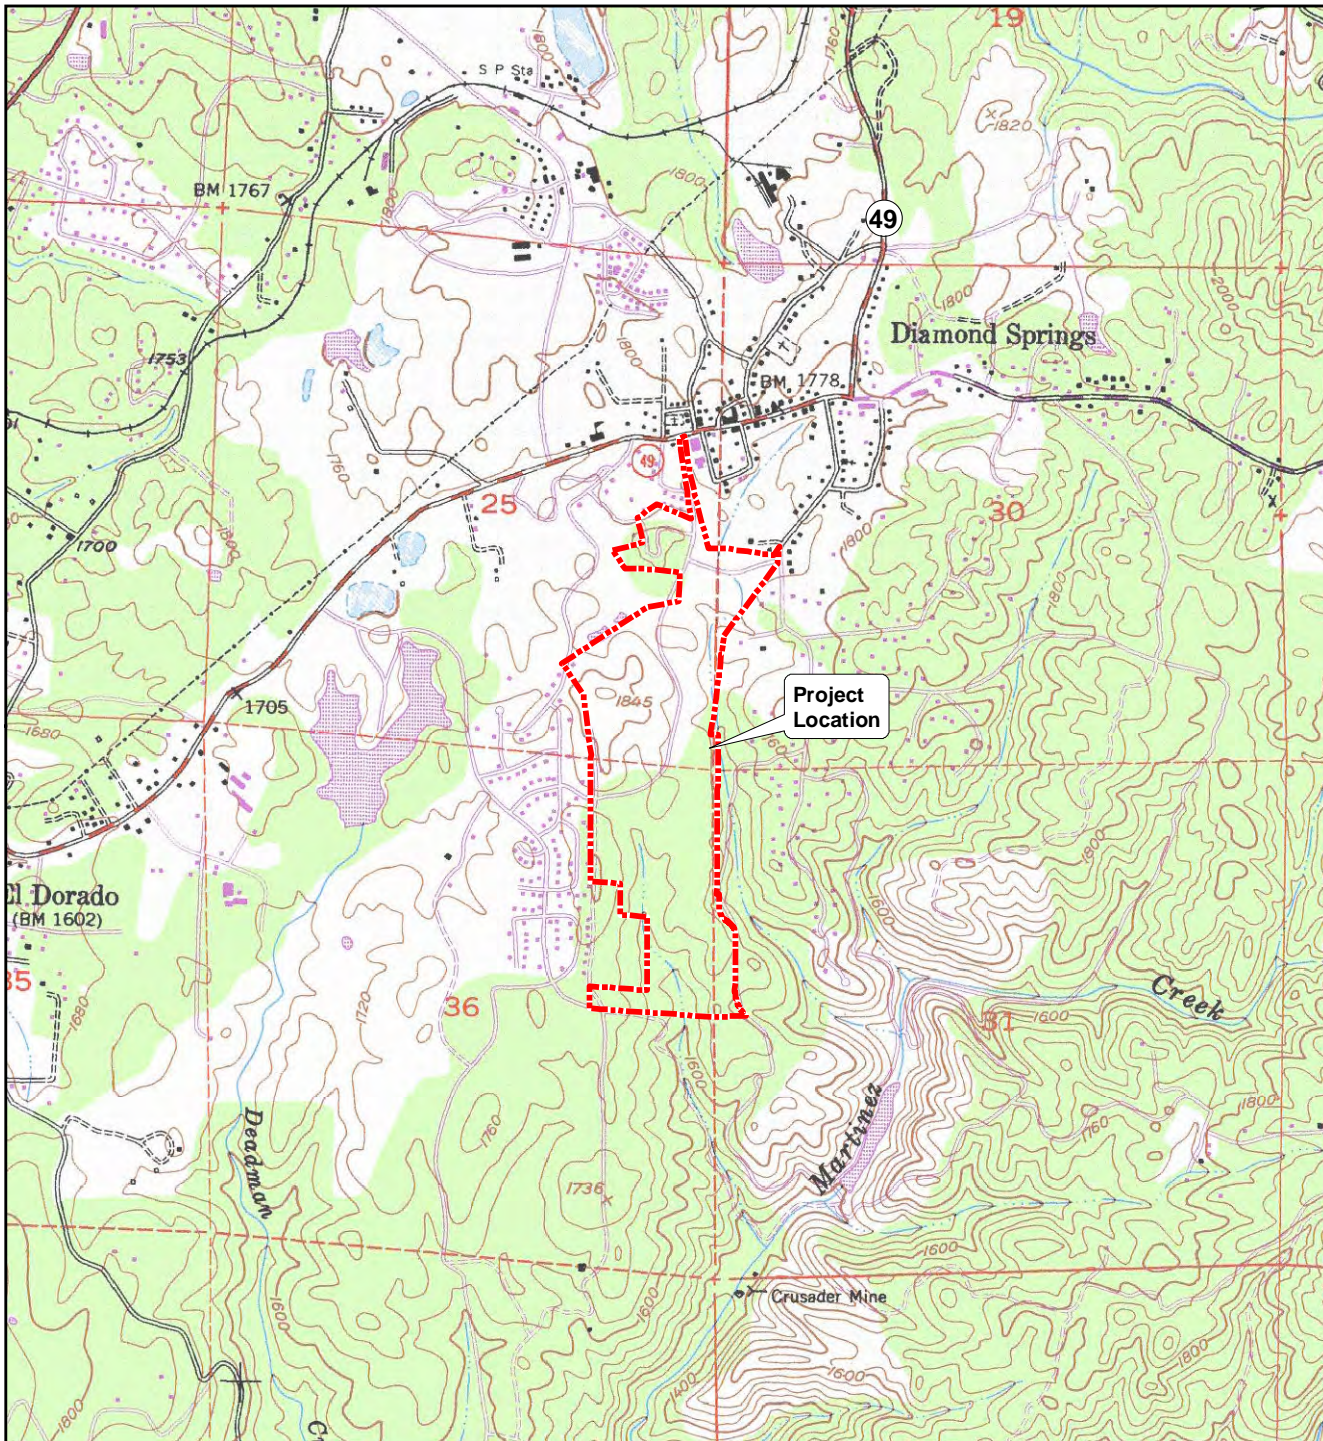

Stonehenge Springs, LLC  
2700 South Azusa Avenue  
West Covina, CA 91792

Contact: Mr. Kevin Sweeney  
Phone: 530/ 893-1515

### **D. Project Description**

The project intends to design a residential subdivision at the site. Project design has not been finalized, and this report does not quantify impacts or propose mitigation.

### **III. STUDY METHODS**

---

#### **A. Studies Conducted**

An evaluation of biological resources was conducted to determine whether any special-status plant or wildlife species, their habitat, or sensitive habitats occur in the BSA. Data on known special-status species and habitats in the area was obtained from state and federal agencies. Maps and aerial photographs of the BSA and surrounding area were reviewed. An aquatic resources delineation (Sycamore Environmental 2018), reconnaissance wildlife survey, and appropriately-timed floristic botanical survey were conducted to determine what habitat types were present. The field surveys, map review, and a review of the biology of evaluated species and habitats were used to determine the special-status species and sensitive habitats that could occur in the BSA.

Special-status species in this report are those listed under the federal or state endangered species acts, under the California Native Plant Protection Act, as a California species of special concern or fully protected by the California Department of Fish and Wildlife (CDFW), that are Ranked 1 or 2 by the California Native Plant Society's Inventory of Rare and Endangered Plants of California (CNPS 2016), or are rare plants listed in the El Dorado County Ordinance Code §130.71.030. Special-status natural communities are waters, wetlands, riparian communities, any natural community ranked S1, S2, or S3 by CDFW (2018), and any community identified as sensitive in the El Dorado County General Plan EIR (2004a).

#### **B. Literature Search**

Sycamore Environmental obtained a list from the U.S. Fish and Wildlife Service (USFWS) that identifies federal-listed species that could potentially occur in or be affected by a project in the BSA. The California Natural Diversity Database (CNDDDB) and the California Native Plant Society (CNPS) Inventory were queried for the Placerville quad and eight surrounding USGS quads to determine known records of special-status species that occur in the vicinity of the BSA. The CNDDDB tracks some species that have not been designated by CDFW as a California species of special concern and do not otherwise meet the criteria for special-status species in this BRE. These species are not evaluated in this BRE. The results of the database queries are in Appendix A.

#### **C. Field Survey Methods**

##### **1. Survey History, Dates, and Personnel**

North Fork Associates (2009) prepared a biological resources assessment for most of the current BSA based on fieldwork conducted between 2006 and 2009. A special-status plant, Nissenan manzanita, was identified in the North Fork Associates report. Both the 2009 findings, and the current findings, are discussed in the context of Nissenan manzanita below in Section V.D.

Fieldwork for this BRE was conducted by Chuck Hughes, M.S., and Nicole Desideri on 13, 14, and 27 June 2017. The site was also visited on four days in August and September during an aquatic resources delineation, which is separately documented (Sycamore Environmental 2018).

## **2. Precipitation Conditions**

Historic average precipitation for the nearby Placerville gauge from 1 July through 31 May is 37.66 inches (CDEC 2018). From 1 July 2016 through 31 May 2017 the Placerville gauge reported 72.13 inches of precipitation. Precipitation for the rain-year at the time of the surveys was about 191% of normal at the nearby Placerville Gauge.

## **3. Biological Survey**

The general biological survey consisted of walking through the BSA while assessing potential habitat for special-status species and sensitive communities. Wildlife species and vegetation communities were identified and recorded. A list of plant and wildlife species observed in the BSA is in Appendix C. Photographs of the BSA are in Appendix D.

## **4. Botanical Survey**

The botanical survey followed the guidelines set forth by USFWS (1996) and CDFW (2009). The botanical survey complies with newer CDFW (2018) guidelines written after the fieldwork was conducted, which are similar to the 2009 guidelines. The June 2017 fieldwork was conducted during the published blooming period of special-status plants with potential to occur in the BSA, with the exception of Nissenan manzanita. Manzanitas generally bloom very early in the season, and the blooming period of Nissenan manzanita is February through March (CNPS 2016). However, Nissenan manzanita is best distinguished from the other manzanita in the BSA by bark characteristics, inflorescence bracts, and to a lesser extent by leaf size. The gray, shredding bark of Nissenan manzanita was clearly distinguishable from the red, smooth bark of the more common manzanita in the BSA (Appendix D, photo 4). The botanical survey was conducted during the evident and identifiable period of Nissenan manzanita.

Systematic transects were walked throughout the BSA to search for all vascular plant species present. Frequent deviations were made from the transects to search areas of different microhabitat, areas that were more likely to support special-status plants, or identify additional plant species. Approximately 36 person-hours were spent in the field during the June 2017 surveys. An additional 8 person-hours were spent keying plants collected in the field. All vascular plants found in the BSA were identified to the taxonomic level necessary to determine legal status. A list of all vascular plants observed in the BSA is in Appendix C. Scientific nomenclature follows the Jepson Flora Project (2018), based on

Baldwin *et al.* (2012). A CNDDDB field survey form for Nissenan manzanita was completed and submitted to CDFW (Appendix E).

#### **D. Mapping**

An aerial photograph acquired from Google Earth Pro (2016) provided the base layer for Figures 4, 5, and 6. Waters and wetland boundaries were mapped with a sub-meter accurate global positioning system (GPS) and were imported from the aquatic resources delineation (Sycamore Environmental 2018). Aerial photographs and field notes were used to estimate the boundaries of upland biological communities. Areas mapped as oak woodlands have a minimum of 10% cover of oak tree canopy, consistent with the new County Oak Resources Management Plan (ORMP) adopted in 2017. Acreages were calculated using ArcMap functions.

#### **E. Problems Encountered and Limitations That May Influence Results**

This BRE is intended to identify baseline biological resources to support review of a project under the California Environmental Quality Act (CEQA). The surveys conducted for this BRE are not intended to meet the documentation requirements of any published agency protocol or guideline surveys for special-status wildlife. A survey according to agency protocol for plants was conducted. No other problems or limitations were encountered during the fieldwork that would influence the results.

### **IV. ENVIRONMENTAL SETTING**

---

The BSA is in the community of Diamond Springs in the Sierra Nevada Mountains. The elevation ranges from approximately 1,620 to 1,840 feet. Most of the BSA is characterized by oak woodland, with ponderosa pine common in some areas. A substantial area (roughly 25 acres) in the northern portion of the BSA was graded prior to 1993. There are two intermittent channels and several ephemeral tributaries. The area surrounding the BSA consists of areas developed to residential and commercial uses, and undeveloped land with similar vegetation.

#### **A. Soils**

The primary component soils of mapping units in the BSA (Figure 3) are summarized below (NRCS 1974, USDA-NRCS 2017a, b). Reported colors are for moist soil.

Diamond Springs very fine sandy loam, 9–15% slopes;

Diamond Springs very rocky very fine sandy loam, 3–50% slopes:

The Diamond Springs series consists of well-drained soils underlain by fine-grained acidic igneous rocks at a depth of 24 to 50 inches. A typical profile has dark brown (10YR 4/3) very fine sandy loam from 0 to 3 inches, yellowish brown (10YR 5/4) loam from 3 to 9 inches, yellowish brown (10YR 5/4) light clay loam from 9 to 14 inches, light yellowish brown (10YR 6/4) clay loam from 14 to 28 inches, very pale brown (10YR 7/4) clay loam from 28 to 36 inches, and very pale brown (10YR 7/4) coarse sandy clay loam that has brownish-yellow (10YR 6/6) mineral grains from 36 to 40 inches. In Diamond Springs very rocky very fine sandy loam approximately 5–25 percent of the surface is rock outcrops. Surface runoff is medium to rapid, and the erosion hazard is slight to high. The soil profile has moderate to very strong acidity in the top 12 inches.

Mariposa very rocky silt loam, 50–70% slopes:

The Mariposa series consists of well-drained soils that are underlain by vertically tilted schists and slate and contact metamorphic rock. A typical profile has reddish brown (5YR 4/4) gravelly silt loam from 0 to 8 inches, yellowish red (5YR 4/6) gravelly silt loam from 8 to 15 inches, yellowish red (5YR 4/6) gravelly heavy silt loam from 15 to 26 inches, and yellowish brown weathered slate or schist below 26 inches. Surface runoff is rapid and erosion hazard is high. The soil profile has moderate acidity in the top 12 inches.

Mixed alluvial land:

Mixed alluvial land consists of small areas of recent mixed alluvium adjacent to stream channels. It is derived from volcanic and sedimentary rock. The color of this soil is variable. Mixed alluvial land is stratified gravelly sandy loam, gravelly loam, and gravelly clay loam that grades into sand and gravel as depth increases. Underlying bedrock is found 36 to 40 inches deep. This land type is poorly to moderately well drained, and permeability is moderately rapid to slow. Surface runoff is slow to medium, and the erosion hazard is moderate. This land is subject to frequent flooding in the winter (NRCS 1974; USDA-NRCS 2017a).

Placer diggings:

Placer diggings consists of areas of stony, cobbly and gravelly material. It is commonly found in beds of creeks and other streams on 2 to 15 percent slopes, or of areas that have been placer mined and contain enough fine sand or silt to support some grass for grazing. This material is derived from a mixture of rocks and commonly is stratified or poorly sorted. The depth is variable, from 6 inches to more than 5 feet deep. Areas in streambeds occasionally are flooded during the rainy season. Surface runoff is low and available water storage is very low (NRCS 1974; 2017b).

## B. Biological Communities

Biological communities are defined by species composition and relative abundance. The biological communities described below correlate where applicable with the California Natural Community List (CDFW 2018) and the El Dorado County General Plan EIR (2004a). The communities were identified based on Sawyer *et al.* (2009). Communities are identified at the alliance level. The list of sensitive associations within each alliance was checked to see if any occur (CDFW 2018). Biological communities are mapped on Figure 5 and listed in Table 1. Representative photographs of the BSA are in Appendix D.

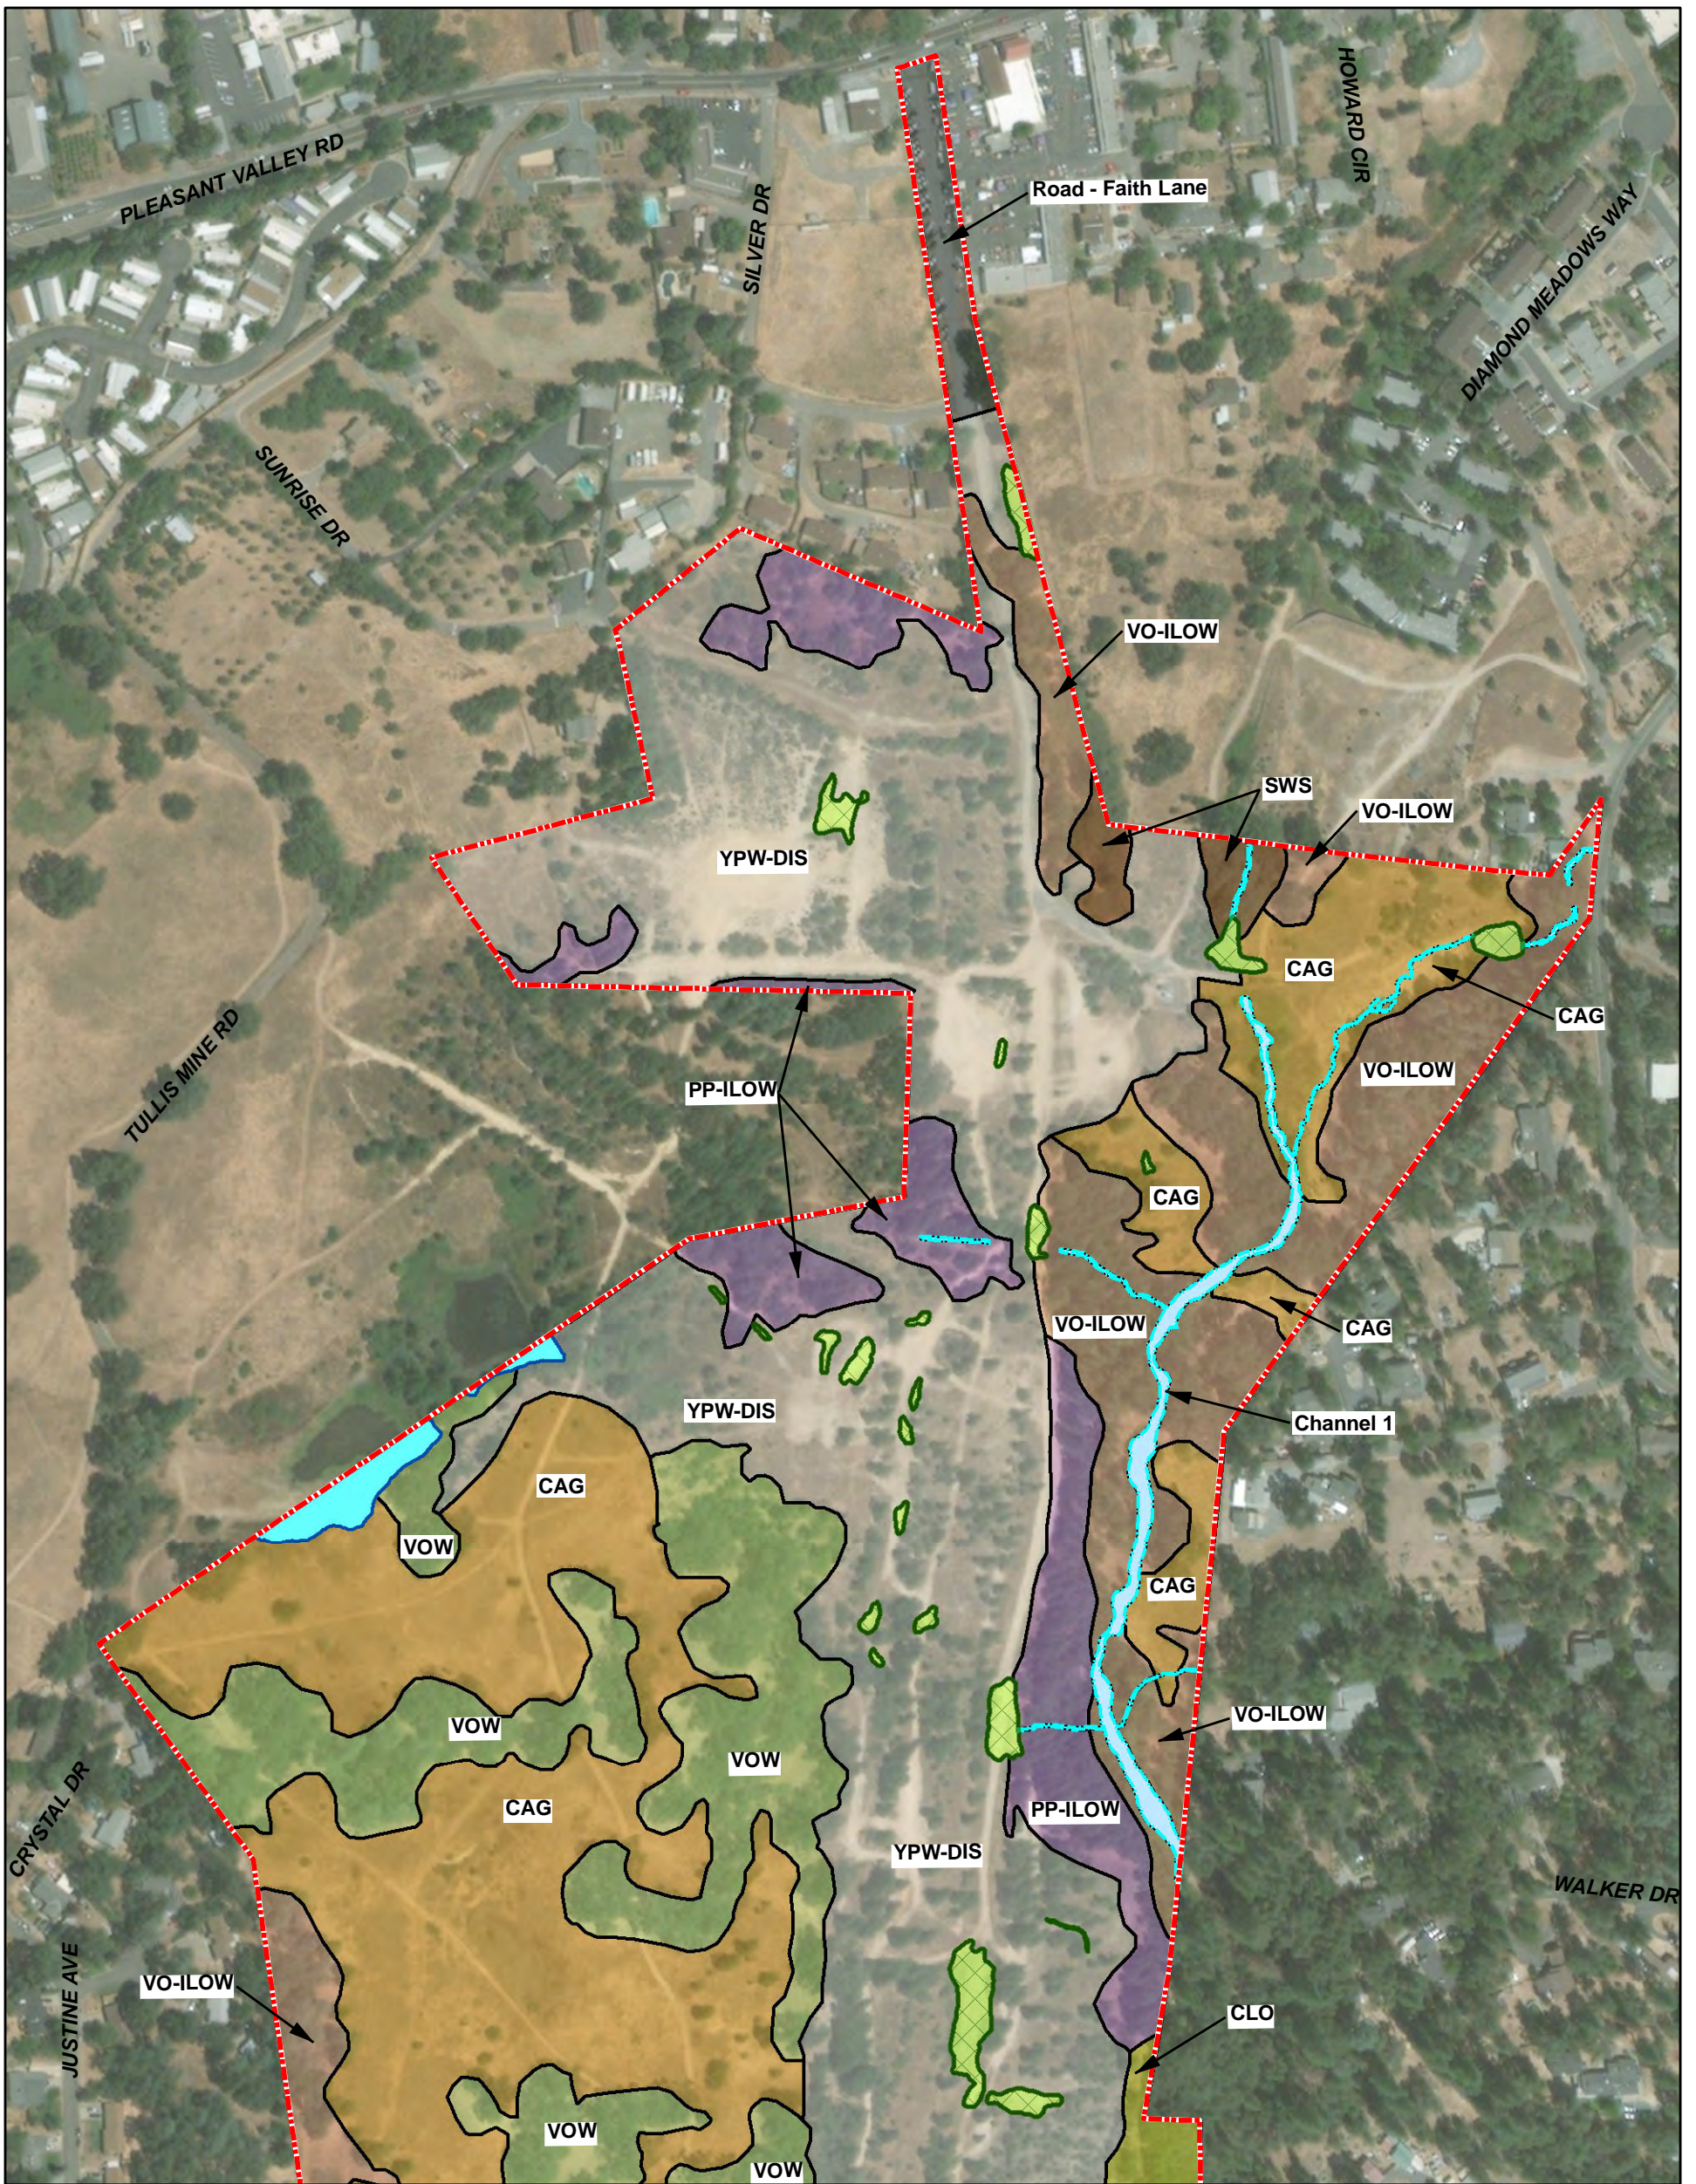

Table 1. Biological Communities.

### **1. California Black Oak Woodland**

California black oaks (*Quercus kelloggii*) are dominant in the woodland at the south end of the BSA. Other common trees in this community include interior live oak (*Q. wislizeni*), valley oak (*Q. lobata*), and foothill pine (*Pinus sabiniana*). The canopy is mostly closed, although some small open patches occur. The understory shrub layer is patchy, and where present is dominated by poison oak (*Toxicodendron diversilobum*), and chamise (*Adenostoma fasciculatum*) in more open areas. The herb layer is dominated by native and nonnative grasses, and mostly native forbs.

### **2. California Annual Grassland**

California annual grassland is an upland, herbaceous community dominated by nonnative grasses including wild oat (*Avena* sp.), ripgut grass (*Bromus diandrus*), soft chess (*Bromus hordeaceus*), and medusa-head (*Elymus caput-medusae*). Trees and shrubs are sparse and widely spaced.

### **3. Young Ponderosa Pine Woodland – Disturbed**

This community encompasses most of an area that was graded for development prior to 1993. Since that time substantial woody vegetation has grown back in much of the area, although some of the area remains mostly unvegetated. Tree cover is dominated by ponderosa pine (*Pinus ponderosa*), with interior live oak in lesser abundance. Nearly all of the trees are young and have grown back since the grading. Shrubs are sporadic and consist mostly of coyote brush (*Baccharis pilularis*) and manzanita (*Arctostaphylos viscida* ssp. *viscida*). Herbs consist mostly of nonnative grasses and forbs similar to the California annual grassland, with patches of rye grass (*Festuca perennis*) present in some areas.

### **4. Valley Oak – Interior Live Oak Woodland**

This community is dominated by valley oak and interior live oak. In the BSA the canopy is mostly closed, although some open areas of with low vegetation similar to the California annual grassland occur. The shrub layer is patchy, and where present is dominated by poison oak. Other common shrubs include buckbrush (*Ceanothus cuneatus*), California coffee berry (*Frangula californica* ssp. *tomentella*), and hollyleaf redberry (*Rhamnus ilicifolia*).

### **5. Valley Oak Woodland**

This community is dominated almost entirely by valley oak trees. In most places the trees are well spaced and are large. The canopy is partially open. Shrubs are relatively sparse in this community and where present are dominated by poison oak. Herbaceous vegetation similar to California annual grassland is present in most areas.

## **6. Ponderosa Pine – Interior Live Oak Woodland**

This community has a nearly closed canopy of ponderosa pine, with interior live oak sub-dominant. Some of this area was graded for development prior to 1993, but has since grown back with thick woody vegetation. The shrub layer is patchy and dominated by poison oak where present. Much of this community has deep shade at ground level and the herbaceous layer is sparse. Some more open areas have herbaceous vegetation similar to California annual grassland, with more Baltic rush (*Juncus balticus*) present.

## **7. Canyon Live Oak Woodland**

This community has a nearly closed canopy dominated by canyon live oak (*Quercus chrysolepis*). Interior live oak is also common. The shrub layer is patchy and generally sparse. Where present it is dominated by poison oak. Much of this community has deep shade at ground level and the herbaceous layer is sparse.

## **8. Sandbar Willow Scrub**

This upland community is along two small drainages in the northern end of the BSA. It is dominated by sandbar willow (*Salix exigua*) and the nonnative invasive Himalayan blackberry (*Rubus armeniacus*). The herb layer is mostly absent, and where present is dominated by nonnative annual grasses.

## **9. Wetlands**

Wetlands in the BSA have seasonal hydrology and are dominated by hydrophytic vegetation capable of withstanding the summer dry season. Vegetation is herbaceous and dominated by Baltic rush, whiteroot sedge (*Carex barbarae*), spikerush (*Eleocharis macrostachya*), annual hair grass (*Deschampsia danthonoides*), loosestrife (*Lythrum portula*), rye grass (*Festuca perennis*), and annual beard grass (*Polypogon monspeliensis*). Many wetlands occur in low spots in previously graded areas or dirt roads. These wetlands have substantial cover of bare soil. Wetlands are further described in the aquatic resources delineation report (Sycamore Environmental 6 February 2018).

## **10. Channels**

Most of the channels in the BSA are ephemeral and flow only for brief periods of up to a few days after storm events. The ephemeral channel beds consist mostly of scoured soil and there is no riparian vegetation community or aquatic wildlife.

The lower reaches of Channels 1 and 2 are small intermittent channels. They have a groundwater component to flow and contain water into the spring and summer, although they are dry throughout most of the summer and autumn. Scattered riparian vegetation is present in the streambeds or along the immediate streambanks. Many areas of the intermittent streams in the BSA are dominated by nonnative invasive Himalayan blackberry. The intermittent streams in the BSA are too small to support fish or most aquatic wildlife,

although they may be a seasonal water source for upland wildlife. Channels are further described in the aquatic resources delineation report (Sycamore Environmental 6 February 2018).

### **11. Seasonal Pond**

A seasonal pond is partially in, but mostly outside of, the BSA. Surface water accumulates in the pond up to a depth of several feet. On 13 September 2017, part of the pond off-site still had approximately 1 foot of water. Sycamore Environmental also observed remaining water in the deepest off-site parts of the pond on 12 September and 10 December 2006 for an adjacent project. Based on review of aerial photographs the pond may completely dry out in dry years, but retain some standing water in the deepest parts in wet years (Google, Inc. 2017). The pond is the result of an off-site impoundment of a wetland swale.

Some deeper parts of the pond are vegetated with aquatic emergent vegetation such as spikerush. Some pond margins in the BSA are thickly vegetated with willows and Himalayan blackberry. The pond supports some aquatic wildlife such as bullfrogs. The pond is further described in the aquatic resources delineation report (Sycamore Environmental 6 February 2018).

### **12. Roads**

This area includes mostly paved roads including Faith Lane and Fowler Lane, and includes the disturbed road shoulders.

## **C. The Existing Level of Disturbance**

Much of the northern half of the site, the area mapped as young ponderosa pine woodland – disturbed, was graded for development prior to 1993. Many young ponderosa pines have grown back. Substantial bare areas and dirt roads that experience ongoing disturbance from off-road vehicles remain. The soil has been significantly disturbed, and in some places scraped down to bedrock. There is also a sewer utility facility of about 0.04 acre in this area.

Many dirt roads occur throughout the BSA. There is also substantial disturbance from homeless camps. Most of the Channel 1 corridor has been heavily invaded by Himalayan blackberry, a perennial vine with severe ecological impacts (Cal-IPC 2016). Overall, the level of disturbance is greater in the northern half of the BSA than the south.

## V. BIOLOGICAL RESOURCES IN THE STUDY AREA

### A. Determination of Special-Status Species in the Study Area

USFWS file data, CNDDDB/CNPS records, and field surveys were used to determine the special-status species that could occur in the BSA (Appendix A). A field survey was conducted to determine whether habitat for special-status species identified in the file data is present in the BSA. Special-status species for which suitable habitat is present in the BSA are listed in Table 2.

Table 2. Special-Status Species and Natural Communities.

| Special-Status Species  | Common Name              | Federal Status <sup>a</sup> | State Status <sup>a</sup> & other codes <sup>b</sup> | Source <sup>c</sup> | Habitat Present? / Species Observed? |
|---|--------------------------|-----------------------------|--|---------------------|--------------------------------------|
| <b>Reptiles</b>   |                          |                             |  |                     |                                      |
| <i>Emys marmorata</i>   | Western pond turtle      | --                          | SSC  | 2                   | Yes/No                               |
| <i>Phrynosoma blainvillii</i>   | Coast (CA) horned lizard | --                          | SSC  | 2                   | Yes/No                               |
| <b>Birds</b>  |                          |                             |  |                     |                                      |
| Nesting Birds (MBTA or CA regulated)  |                          | --                          | --   | 3                   | Yes/Yes                              |
| <b>Plants</b> / CNPS List <sup>b</sup>  |                          |                             |  |                     |                                      |
| <i>Arctostaphylos nissenana</i>   | Nissenan manzanita       | --                          | --/1B.2  | 2, 3                | Yes/Yes                              |
| <i>Carex cyrtostachya</i>   | Sierra arching sedge     | --                          | --/1B.2  | 2                   | Yes/No                               |
| <i>Horkelia parryi</i>  | Parry's horkelia         | --                          | --/1B.2  | 2                   | Yes/No                               |
| <i>Viburnum ellipticum</i>  | Oval-leaved viburnum     | --                          | --/2B.3  | 2                   | Yes/No                               |
| <b>Natural Communities</b>  |                          |                             |  |                     |                                      |
| Oak Woodlands and Trees   |                          | --                          | --   | 3                   | Yes/Yes                              |
| Waters and Wetlands (Including Sacramento-San Joaquin foothill/valley ephemeral stream) |                          | --                          | --   | 3                   | Yes/Yes                              |
| Sandbar Willow Scrub  |                          | --                          | --   | 3                   | Yes/Yes                              |

<sup>a</sup> **Listing Status:** Federal status determined from USFWS letter. State status determined from CDFW (2016a, b, c, d). Codes used in table are: **E** = Endangered; **T** = Threatened; **P** = Proposed; **C** = Candidate; **R** = California Rare; \* = Possibly extinct.

<sup>b</sup> **Other Codes:** Other codes determined from USFWS letter; CDFW (2016a, b, c, and d). Codes used in table are as follows:  
 SSC = CDFW Species of Special Concern; **FP** = CDFW Fully Protected; **Prot** = CDFW Protected; **CH** = Critical habitat designated.  
**CNPS List** (plants only): **1A** = Presumed Extinct in CA; **1B** = Rare or Endangered (R/E) in CA and elsewhere; **2** = R/E in CA and more common elsewhere; **3** = Need more information; **4** = Plants of limited distribution  
**CNPS List Decimal Extensions:** **.1** = Seriously endangered in California (over 80% of occurrences threatened / high degree and immediacy of threat); **.2** = Fairly endangered in CA (20-80% of occurrences threatened); **.3** = Not very endangered in CA (< 20% of occurrences threatened or no current threats known).

<sup>c</sup> **Source:** **1** = USFWS letter. **2** = CNDDDB. **3** = Observed or included by Sycamore Environmental.

### B. Special-Status Species not in the Project Study Area

Special-status species for which suitable habitat is not present, or whose distributional limits preclude the possibility of their occurrence in the BSA, are not discussed in Section V of this report. An evaluation of these species is in Appendix B.

## C. Evaluation of Special-Status Wildlife Species

### 1. Reptiles

#### **Western Pond Turtle (WPT; *Emys marmorata*)**

**HABITAT AND BIOLOGY:** WPT are a CDFW species of special concern (CDFW 2016c). WPT prefer aquatic habitats with abundant vegetative cover and exposed basking sites such as partially submerged logs, rocks, mats of floating vegetation, or open mud banks. WPT are associated with permanent or nearly permanent water in a wide variety of habitat types, normally in ponds, lakes, streams, irrigation ditches, or permanent pools along intermittent streams (CWHR 2016). This species will also temporarily use semi-permanent or ephemeral water bodies, including stock ponds, vernal pools, and seasonal wetlands (Thomson *et al.* 2016). They are omnivorous generalists and opportunistic predators that prey upon small insects, aquatic invertebrates, fish, frogs, snakes, and small mammals. They also eat aquatic plant material and carrion (Stebbins 2003).

Two distinct habitats may be used for oviposition. Along large slow-moving streams, eggs are deposited in nests constructed in sandy banks. Along foothill streams, females may climb hillsides, sometimes traveling over 330 feet to find a suitable nest site. Upland nesting habitat must have soils that are loose enough for nest excavation, with infrequent or low intensity disturbance so that nests are not disturbed (Thomson *et al.* 2016). Soil must usually be at least 4 inches deep for nesting. WPT lay 3 to 11 eggs from March to August depending on local conditions. The eggs incubate for approximately 73 to 80 days (CWHR 2016).

**RANGE:** WPT occur throughout northern California west of the Sierra Nevada (Stebbins 2003) from sea level to about 4,700 feet (CWHR 2016).

**KNOWN RECORDS:** There are 7 CNDDDB records in the 9-quad area centered on the BSA. The nearest record is approximately two miles northeast of the BSA in habitat described as a freshwater pond, dominated by cattails; surrounded by willows, blackberry vines, rushes, native grasses, and toyon. Three adults and 2 juveniles were observed on 16 May 2001 through 2002.

**HABITAT PRESENT IN THE BSA:** The pond in the BSA provides marginal potential habitat for WPT. The pond has large seasonal variations in water level and may dry out completely in some years based on aerial photographs. Even in wet years, the pond dries down to about a foot of remaining water. WPT could occur in the pond seasonally. WPT may not be able survive at the pond year-round. The pond is not along a channel or ditch that provides connectivity to other WPT habitat. The pond is marginal WPT habitat due to its seasonal nature and poor connectivity. The channels in the BSA are too small to provide habitat for WPT.

**DISCUSSION:** WPT was not observed in the BSA during the general biological field surveys, but could occur in the pond. Avoiding the pond could avoid impacts to WPT.

**Coast (=California) Horned Lizard (*Phrynosoma blainvillii*)**

**HABITAT AND BIOLOGY:** Coast horned lizard is a CDFW species of special concern (CDFW 2016c). They may occur in valley-foothill hardwood, conifer, riparian, pine-cypress, juniper, and annual grassland habitats. Within these habitats, they especially use sandy areas, washes, floodplains, and wind-blown deposits. Coast horned lizards forage on the ground in open areas, usually between shrubs and often near ant nests. Coast horned lizards burrow into loose soil to avoid extreme heat and predators. Periods of inactivity and winter hibernation are spent burrowed into the soil under surface objects such as logs or rocks, in mammal burrows, or in crevices (CWHR 2015).

Coast horned lizard tends not to persist where the argentine ant invades (Suarez *et al.* 2000, Suarez and Case 2002). All four records of coast horned lizard in El Dorado County are in areas of chaparral. Areas of chaparral are generally dominated in both the herb and shrub layers by native plants that co-occur with native ant populations. Coast horned lizards eat native ants.

The reproductive season for coast horned lizard varies from year to year and geographically depending on local conditions. Egg-laying in southern California has been reported from late May through June (CWHR 2015).

**RANGE:** Coast horned lizards occur in the Sierra Nevada foothills from Butte county to Kern county and throughout the central and southern California coast. The elevation range extends up to 4,000 feet in the Sierra Nevada foothills and up to 6,000 feet in the mountains of southern California, though they are primarily found below 2,000 feet in the north and 3,000 feet in the south (CWHR 2015). Coast horned lizards have a spotty distribution from Shasta Lake southward along the edges of the Sacramento Valley into much of the south Coast Ranges, San Joaquin valley, and Sierra Nevada foothills to northern Los Angeles, Santa Barbara and Ventura counties (Jennings and Hayes 1994).

**KNOWN RECORDS:** There are four CNDDDB records in the 9-quad area centered on the BSA. The nearest record is approximately 7.6 miles west of the BSA in habitat described as northern gabbroic mixed chaparral on rescue series soils. Two individuals were observed in April 2005.

**HABITAT PRESENT IN THE BSA:** The BSA provides marginal potential habitat for coast horned lizard. Coast horned lizards are more likely to occur in areas of dense native shrubs, which are patchy throughout the BSA, including some areas under tree canopy.

**DISCUSSION:** Coast horned lizard was not observed during the general biological surveys in 2008 or 2017. Coast horned lizards are camouflaged well and are not easily seen. The BSA provides potential habitat for coast horned lizard, but the habitat is not unique or regionally scarce.

## 2. Birds

### Nesting Birds Listed Under the MBTA or Regulated by CA Fish and Game Code

California Fish and Game Code §3503 protects most birds and their nests. CA Fish and Game Code §3503.5 further protects all birds in the orders Falconiformes and Strigiformes (collectively known as birds of prey). Birds of prey include raptors, falcons, and owls. The federal Migratory Bird Treaty Act (MBTA) of 1918 (16 U.S.C. 703-711) also protects most birds and their nests, including most non-migratory birds in California. The MBTA makes it unlawful to take, possess, buy, sell, purchase, or barter any bird listed in 50 CFR Part 10 including feathers or other parts, nests, eggs, or products, except as allowed by implementing regulations. Any disturbance that causes direct injury, death, nest abandonment, or forced fledging of migratory birds, is restricted under the MBTA. Any removal of active nests during the breeding season or any disturbance that results in the abandonment of nestlings is considered a 'take' of the species under federal law.

**HABITAT PRESENT IN THE BSA:** The BSA provides potential nesting habitat for birds listed under the MBTA or regulated by California Fish and Game Code. Depending on the species, birds may nest on trees, shrubs, in or on the ground, and on artificial structures such as buildings, poles, and signs.

**DISCUSSION:** Bird species observed in the BSA are identified in Appendix C. Active nests could become established prior to construction. The nesting season is typically considered to be 15 February to 31 August for most bird species. Avoidance of vegetation removal during that time period, and surveys and avoidance of nests during that time period, could minimize impacts to nesting birds.

### D. Evaluation of Special-Status Plants

#### Nissenan Manzanita (*Arctostaphylos nissenana*)

**HABITAT AND BIOLOGY:** Nissenan manzanita is an evergreen shrub found on rocky soil and ridges in closed-cone coniferous forest or chaparral habitats from about 1,475 to 5,400 feet. It typically blooms from February through March (CNPS 2016, Jepson 2018).

**RANGE:** Nissenan manzanita is known from three counties (Placer, El Dorado, and Tuolumne) in the northern Sierra Nevada Mountains and central Sierra Nevada foothills (CNPS 2016, Jepson 2018).

**KNOWN RECORDS:** There are 15 CNDDDB records in the 9-quad area centered at the BSA. North Fork Associates prepared a Biological Resources Assessment, including a botanical survey, for most of the current BSA in 2009. North Fork reported 62 Nissenan manzanita plants from the site. Sycamore Environmental visited the site briefly in 2013, made a collection of Nissenan manzanita that was deposited at the UC Davis herbarium, and became CNDDDB Occurrence 14 in the BSA. CNDDDB Occurrence 1 is much larger and is near the BSA to the east and south.

**HABITAT PRESENT IN THE BSA:** The BSA provides habitat for Nissenan manzanita. A total of 88 Nissenan manzanita shrubs were counted in the BSA during the botanical survey in 2017 (Figure 6). A CNDDDB report is in Appendix E. The locations of the shrubs are very similar to the locations observed by North Fork in 2009.

**DISCUSSION:** Nearly all of the Nissenan manzanita in the BSA is growing in the areas that were graded for development prior to 1993. Nissenan manzanita seeds likely germinated after the disturbance. Nissenan manzanita that are not avoided by work in the BSA could be propagated to reduce impacts. Propagation by seed is the mostly likely method for this species. Nissenan manzanita in the BSA is not a good candidate for transplantation because it is growing in rocky areas where excavation without severe root damage is unlikely.

### **Sierra Arching Sedge (*Carex cyrtostachya*)**

**HABITAT AND BIOLOGY:** Sierra arching sedge is a perennial herb found in wet meadows, marshes, seasonally wet outcrops, seeps, swales, riparian margins, and floodplain terraces from about 2,000 to 4,500 feet in elevation. It blooms May through August (CNPS 2016, Jepson 2018).

**RANGE:** Sierra arching sedge is known from three counties (Butte, El Dorado, and Yuba) in the northern Sierra Nevada Mountains (CNPS 2016, Jepson 2018).

**KNOWN RECORDS:** There is one CNDDDB record in the 9-quad area centered on the BSA. The record occurs approximately 12.3 miles north of the BSA in habitat described as a narrow Creekside strip of riparian woodland through open serpentine chaparral dominated by *Quercus durata* with scattered gray pine, *Fraxinus*, *Acer macrophyllum*, *Alnus rhombifolia*, *Aster oregonensis* and *Artemisia*. Over 30 clumps were observed in 2007.

**HABITAT PRESENT IN THE BSA:** The margins of seasonally wet areas in the BSA, including the pond and Channel 1, may provide potential habitat for Sierra arching sedge.

**DISCUSSION:** Sierra arching sedge was not observed in the BSA during the botanical surveys in 2008 and 2017.

### **Parry's Horkelia (*Horkelia parryi*)**

**HABITAT AND BIOLOGY:** Parry's horkelia is a perennial herb found in chaparral and cismontane woodland, especially of the Ione formation, from about 250 to 3,400 feet in elevation. It blooms April through June (CNPS 2016, Jepson 2018).

**RANGE:** Parry's horkelia is known from the northern and central Sierra Nevada foothills (CNPS 2016, Jepson 2018).

**KNOWN RECORDS:** There are 13 CNDDDB records in the 9-quad area centered on the BSA. The nearest record occurs approximately 2 miles northeast of the BSA. The record is a 1923 collection, with the exact location unknown and mapped as best guess in the vicinity of Placerville. The nearest detailed record occurs 10.5 miles northeast of the BSA in habitat described as along an abandoned OHV trail among thick shrubs, California black oak, Douglas fir, whiteleaf manzanita, and Nissenan manzanita. A total of 150 plants were observed in 2015, following a burn in the King Fire in 2014.

**HABITAT PRESENT IN THE BSA:** The upland areas of the BSA may provide potential habitat for Parry's horkelia.

**DISCUSSION:** Parry's horkelia was not observed in the BSA during the botanical surveys in 2008 and 2017.

### **Oval-leaved Viburnum (*Viburnum ellipticum*)**

**HABITAT AND BIOLOGY:** Oval-leaved viburnum is a deciduous shrub found in chaparral, cismontane woodland, and lower montane coniferous forest from 700 to 4,600 feet (CNPS 2016). Jepson (2018) describes it as occurring above 980 feet in chaparral or yellow-pine forest, generally on north facing slopes. It blooms May through August (CNPS 2016, Jepson 2018).

**RANGE:** Known from the north coast, Klamath ranges, north Coast Ranges, Bay Area, and northern/central Sierra Nevada foothills (Jepson 2018).

**KNOWN RECORDS:** There is one CNDDDB record in the 9-quad area centered on the BSA. The record is a 1901 collection mapped approximately 2 miles northeast of the BSA. The exact location of the record is unknown, so it is mapped as best guess in the vicinity of Placerville.

**HABITAT PRESENT IN THE BSA:** The BSA may provide potential habitat for oval-leaved viburnum.

**DISCUSSION:** Oval-leaved viburnum was not observed in the BSA during the botanical surveys in 2008 and 2017.

## **E. Evaluation of Sensitive Natural Communities**

### **Oak Woodlands and Trees**

There are about 79.27 acres of oak woodlands in the BSA. Areas mapped as oak woodland have at least 10% canopy cover, consistent with the Oak Resources Management Plan (ORMP) adopted by the County in October 2017. Sparser individual oak trees occur outside of areas mapped as oak woodlands, mostly in the disturbed area of young ponderosa pine woodland. Of the overall oak woodlands in the BSA, about 33.05 acres are valley oak woodland, which is classified as sensitive habitat in the El Dorado County General Plan EIR (2004a) and the ORMP.

**DISCUSSION:** The ORMP regulates oak woodlands, individual oak trees outside of oak woodlands, and heritage trees. Oak woodlands, areas with at least 10% cover of oak canopy, are regulated by acreage. Individual oak trees outside oak woodlands, of at least six inches dbh, are regulated by size. Heritage oaks, of at least 36 inches dbh, are regulated by size at a higher mitigation ratio, both inside and outside of oak woodlands. Mitigation may occur based on on-site replacement, off-site replacement or preservation, or payment of an in-lieu fee. The oak resources analysis is a stand-alone report that is being prepared separately.

### **Waters and Wetlands (Including Sacramento-San Joaquin foothill/valley ephemeral stream)**

There are about 2.48 acres of channels, wetlands, and a seasonal pond in the BSA. An Aquatic Resources Delineation Report (ARDR) was prepared separately (Sycamore Environmental 2018). The ARDR was prepared to specifications of the U.S. Army Corps of Engineers (Corps).

Portions of Channels 1 and 2 in the BSA are intermittent, meaning groundwater is a source of flow at least seasonally. The other channels are ephemeral, meaning surface runoff is the sole source of flow. The sensitive natural community known as “Sacramento-San Joaquin foothill/valley ephemeral stream” appears on the CNDDDB query in Appendix A. CNDDDB classifies “ephemeral” streams differently than the Corps. Under the CNDDDB classification, ephemeral streams support the larval development of some aquatic invertebrates and amphibians. Under the Corps definition, ephemeral streams flow only for a few hours or days after precipitation events and hence cannot support such larval development. A stream defined by CNDDDB as “ephemeral” would be classified as “intermittent” or even “perennial” under the Corps definition. The streams labeled “ephemeral” in the ARDR follow the Corps classification and hence do not meet the criteria of a Sacramento-San Joaquin foothill/valley ephemeral stream. The intermittent streams in the ARDR, portions of Channels 1 and 2, do meet the definition.

**DISCUSSION:** Fill of waters and wetlands generally requires a permit under Sections 404 and 401 of the federal Clean Water Act. A formal wetland delineation has been prepared for the BSA. The Corps Section 404 permitting process requires mitigation for all waters of the U.S. filled under a “no net loss” policy.

The California Department of Fish and Wildlife (CDFW) regulates intermittent and ephemeral channels under the Streambed Alteration program (§1600 CA Fish and Game Code). CDFW approves mitigation under the Streambed Alteration program on a project-specific basis based upon design impacts.

El Dorado County General Plan Policy 7.3.3.4 and its implementing zoning code (§130.30.030(G)) identify parameters for setbacks from intermittent creeks and wetlands. Ephemeral channels are not included. Part of the purpose of the setbacks is to avoid riparian habitat. The zoning code specifies that discretionary projects shall avoid and minimize impacts “to the maximum extent practicable.” The areas in the BSA subject to consideration under the County code are wetlands, the seasonal pond, and the intermittent channels. Intermittent and perennial channels are defined in County zoning code §130.80.020.

The wetlands in the BSA are mostly highly disturbed and result from poor drainage in parts of the area that was previously graded for development, or result from the construction of dirt roads. Only wetland 26 appears to be a naturally-occurring feature. The seasonal wetlands are dry most of the year, have no riparian vegetation outside the wetland, and offer little value for wildlife. No setback is necessary for the seasonal wetlands.

The pond contains water for much of the year, and perhaps the entire year in wet years. Scattered native willows occur along the pond margin, although the margin is largely covered by nonnative invasive Himalayan blackberry. A setback of 25 feet from the pond would retain most of the adjacent riparian vegetation.

Portions of Channels 1 and 2 are small intermittent channels. Native riparian vegetation is scattered or absent along these small channels. Nonnative invasive Himalayan blackberry dominates along much of Channel 1. A setback of 25 feet from the intermittent channels would retain most of the adjacent riparian vegetation.

### **Sandbar Willow Scrub**

The sandbar willow scrub in the BSA is classified as valley foothill riparian, a sensitive habitat in the El Dorado County General Plan EIR (2004a). The sandbar willow scrub did not meet wetland criteria, but does occur in a low area, and part of it is along Channel 1. The sandbar willow scrub is dominated by sandbar willow and nonnative invasive Himalayan blackberry.

**DISCUSSION:** If the sandbar willow scrub is not avoided by the Project, there may be opportunities for on-site mitigation in open space areas.

## VII. PREPARERS

---

**Chuck Hughes, M.S.**, Plant Biology, Michigan State University. Over 15 years experience preparing biological/botanical resource evaluations, wetland delineations, arborist reports, impact analyses, and mitigation/restoration plans. He is a Professional Wetland Scientist (#2029), an ISA Certified Arborist (WE-6885A), holds a California Department of Fish and Wildlife Rare, Threatened and Endangered Plant Voucher Collecting Permit (2081(a)-14-072-V), is a Principal Scientific Investigator on the CDFW Scientific Collecting Permit (SC-7617), and is authorized individual on a USFWS recovery permit for listed vernal pool branchiopods (TE799564-4). His bachelor's degree from UC Davis is in environmental horticulture and urban forestry, with an emphasis in plant biodiversity.

Responsibilities: Fieldwork and report preparation.

**Nicole Desideri, B.S.**, Biological Sciences (concentration in Field and Wildlife Biology), California Polytechnic State University. Conducts monitoring, plant and wildlife surveys, and assists with preparation of Biological Resource Evaluations, Natural Environment Study reports, permit applications, and documents used in the CEQA/NEPA process. Serves as both field biologist and technical report writer, and conducts database research on special status species' biology, habitat and distribution. She holds a California Department of Fish and Wildlife Rare, Threatened and Endangered Plant Voucher Collecting Permit (2081(a)-16-107-V) and is an authorized individual on the CDFW Scientific Collecting Permit (SC-7617). Responsibilities: Fieldwork and report preparation.

**Cody Aylward, M.S.**, Natural Resources (concentration in Wildlife Science), University of Vermont. Conducts biological surveys, assists with preparation of Biological Resource Evaluations, Natural Environment Study reports, Biological Assessments, Sensitive Species Site Assessments, and reports used in the CEQA/NEPA process. He holds a California Department of Fish and Wildlife Rare, Threatened and Endangered Plant Voucher Collecting Permit (#2081(a)-17-102-v) and is an authorized individual on the CDFW Scientific Collecting Permit (SC-7617). He has professional experience using DNA-based wildlife detection techniques. His bachelor's degree from the University of Vermont is in Zoology. Responsibilities: Report preparation.

**Aramis Respoll, GIS Analyst/ CAD Operator.** Over 20 years experience in drafting and spatial analysis using AutoCAD and ArcGIS. He prepares figures for biological and permitting documents such as project location maps, aerial photographs, biological resource maps, wetlands/waters delineation maps, impact analysis maps, tree location maps and other supporting graphics. Mr. Respoll provides geospatial analysis and support involving geodesy, hydrology, watershed studies, project impact analysis, CNDDDB species, and critical habitat and mitigation information. Primary experience evolved from conventional surveying and civil engineering practices to advanced GPS and GIS based technology. Responsibilities: Figure preparation and spatial analysis.

**Jeffery Little**, Vice President, Sycamore Environmental.

Responsibilities: Principal in charge.

Consultation Code: 08ESMF00-2018-SLI-0446

Event Code: 08ESMF00-2018-E-01190

Project Name: Stonehenge Springs

Subject: List of threatened and endangered species that may occur in your proposed project location, and/or may be affected by your proposed project

To Whom It May Concern:

The enclosed species list identifies threatened, endangered, proposed and candidate species, as well as proposed and final designated critical habitat, under the jurisdiction of the U.S. Fish and Wildlife Service (Service) that may occur within the boundary of your proposed project and/or may be affected by your proposed project. The species list fulfills the requirements of the Service under section 7(c) of the Endangered Species Act (Act) of 1973, as amended (16 U.S.C. 1531 et seq.).

Please follow the link below to see if your proposed project has the potential to affect other species or their habitats under the jurisdiction of the National Marine Fisheries Service:

[http://www.nwr.noaa.gov/protected\\_species/species\\_list/species\\_lists.html](http://www.nwr.noaa.gov/protected_species/species_list/species_lists.html)

New information based on updated surveys, changes in the abundance and distribution of species, changed habitat conditions, or other factors could change this list. Please feel free to contact us if you need more current information or assistance regarding the potential impacts to federally proposed, listed, and candidate species and federally designated and proposed critical habitat. Please note that under 50 CFR 402.12(e) of the regulations implementing section 7 of the Act, the accuracy of this species list should be verified after 90 days. This verification can be completed formally or informally as desired. The Service recommends that verification be completed by visiting the ECOS-IPaC website at regular intervals during project planning and implementation for updates to species lists and information. An updated list may be requested through the ECOS-IPaC system by completing the same process used to receive the enclosed list.

The purpose of the Act is to provide a means whereby threatened and endangered species and the ecosystems upon which they depend may be conserved. Under sections 7(a)(1) and 7(a)(2) of the Act and its implementing regulations (50 CFR 402 et seq.), Federal agencies are required to

utilize their authorities to carry out programs for the conservation of threatened and endangered species and to determine whether projects may affect threatened and endangered species and/or designated critical habitat.

A Biological Assessment is required for construction projects (or other undertakings having similar physical impacts) that are major Federal actions significantly affecting the quality of the human environment as defined in the National Environmental Policy Act (42 U.S.C. 4332(2) (c)). For projects other than major construction activities, the Service suggests that a biological evaluation similar to a Biological Assessment be prepared to determine whether the project may affect listed or proposed species and/or designated or proposed critical habitat. Recommended contents of a Biological Assessment are described at 50 CFR 402.12.

If a Federal agency determines, based on the Biological Assessment or biological evaluation, that listed species and/or designated critical habitat may be affected by the proposed project, the agency is required to consult with the Service pursuant to 50 CFR 402. In addition, the Service recommends that candidate species, proposed species and proposed critical habitat be addressed within the consultation. More information on the regulations and procedures for section 7 consultation, including the role of permit or license applicants, can be found in the "Endangered Species Consultation Handbook" at:

<http://www.fws.gov/endangered/esa-library/pdf/TOC-GLOS.PDF>

Please be aware that bald and golden eagles are protected under the Bald and Golden Eagle Protection Act (16 U.S.C. 668 et seq.), and projects affecting these species may require development of an eagle conservation plan ([http://www.fws.gov/windenergy/eagle\\_guidance.html](http://www.fws.gov/windenergy/eagle_guidance.html)). Additionally, wind energy projects should follow the wind energy guidelines (<http://www.fws.gov/windenergy/>) for minimizing impacts to migratory birds and bats.

Guidance for minimizing impacts to migratory birds for projects including communications towers (e.g., cellular, digital television, radio, and emergency broadcast) can be found at: <http://www.fws.gov/migratorybirds/CurrentBirdIssues/Hazards/towers/towers.htm>; <http://www.towerkill.com>; and <http://www.fws.gov/migratorybirds/CurrentBirdIssues/Hazards/towers/comtow.html>.

We appreciate your concern for threatened and endangered species. The Service encourages Federal agencies to include conservation of threatened and endangered species into their project planning to further the purposes of the Act. Please include the Consultation Tracking Number in the header of this letter with any request for consultation or correspondence about your project that you submit to our office.

Counties: El Dorado, CA

## Endangered Species Act Species

There is a total of 3 threatened, endangered, or candidate species on this species list. Species on this list should be considered in an effects analysis for your project and could include species that exist in another geographic area. For example, certain fish may appear on the species list because a project could affect downstream species. See the "Critical habitats" section below for those critical habitats that lie wholly or partially within your project area under this office's jurisdiction. Please contact the designated FWS office if you have questions.

### Amphibians

| NAME  | STATUS     |
|---|------------|
| California Red-legged Frog <i>Rana draytonii</i><br>There is <b>final</b> critical habitat for this species. Your location is outside the critical habitat.<br>Species profile: <a href="https://ecos.fws.gov/ecp/species/2891">https://ecos.fws.gov/ecp/species/2891</a> | Threatened |

### Fishes

| NAME   | STATUS     |
|--|------------|
| Delta Smelt <i>Hypomesus transpacificus</i><br>There is <b>final</b> critical habitat for this species. Your location is outside the critical habitat.<br>Species profile: <a href="https://ecos.fws.gov/ecp/species/321">https://ecos.fws.gov/ecp/species/321</a> | Threatened |

### Flowering Plants

| NAME   | STATUS     |

## APPENDIX B.

### Species Evaluated Table

Special-Status Species from USFWS Letter, CNDDDB Data, CNPS Data

| Special-Status Species/<br>Common Name              | Federal<br>Status <sup>a, b</sup> | State<br>Status <sup>a, b</sup> | Source <sup>c</sup> | Habitat Requirements  | Potential to Occur in the BSA   |
|---|-----------------------------------|---------------------------------|---------------------|---|---|
| <b>Fish</b>   |                                   |                                 |                     |   |   |
| <i>Hypomesus transpacificus</i><br>Delta smelt      | T, CH                             | E                               | 1                   | Euryhaline (tolerant of a wide salinity range) species that spawns in freshwater dead-end sloughs and shallow edge-waters of channels of the Delta (USFWS 1994). Confined to the San Francisco Estuary, principally in the Delta and Suisun Bay. Currently found only from the San Pablo Bay upstream through the Delta in Contra Costa, Sacramento, San Joaquin, Solano, and Yolo cos. Can be washed into San Pablo Bay during high-outflow periods, but do not establish permanent populations there (Moyle 2002).  | No. The BSA is outside the range and there is no suitable habitat. The BSA is not in critical habitat.  |
| <b>Amphibians</b>                                   |                                   |                                 |                     |   |   |
| <i>Rana boylei</i><br>Foothill yellow-legged frog   | --                                | CT, SSC                         | 2                   | Found in or near rocky streams in a variety of habitats, including valley-foothill hardwood, valley-foothill hardwood-conifer, valley-foothill riparian, ponderosa pine, mixed conifer, coastal scrub, mixed chaparral, and wet meadow types. Egg clusters are attached to gravel or rocks in moving water near stream margins. This species is rarely encountered (even on rainy nights) far from permanent water. Its elevation range extends from near sea level to 6,370 ft in the Sierra (CWHR 2016).  | No. The intermittent channels hydroperiod is insufficient.  |
| <i>Rana draytonii</i><br>California red-legged frog | T, CH                             | SSC                             | 1, 2                | Inhabits ponds, quiet pools of streams, marshes, and riparian areas with dense, shrubby, or emergent vegetation. Requires permanent or nearly permanent pools for larval development (CWHR 2016; USFWS 2010). May use ephemeral water bodies for breeding if permanent water is nearby (Thomson <i>et al.</i> 2016). The range of CA red-legged frog extends from near sea level to approximately 5,200 ft, though nearly all sightings have occurred below 3,500 ft. CA red-legged frog was probably extirpated from the floor of the Central Valley before 1960 (USFWS May 2002). | No. The channels in the BSA do not have sufficient water or flow regimes to provide breeding habitat. There are no known breeding populations within dispersal distance. The pond in the BSA has a large bullfrog population. |
| <b>Reptiles</b>                                     |                                   |                                 |                     |   |   |
| <i>Emys marmorata</i><br>Western pond turtle        | --                                | SSC                             | 2                   | Occurs in suitable aquatic habitat throughout CA, west of the Sierra-Cascade crest and absent from desert regions, except in the Mojave Desert along the Mojave River and its tributaries from near sea level to approximately 4,690 ft. Associated with permanent or nearly permanent water in a wide variety of habitats with basking sites such as submerged logs, rocks, mats of floating vegetation, or open mud banks (CWHR 2016).  | Yes. See discussion.  |

| Special-Status Species/<br>Common Name                            | Federal<br>Status <sup>a, b</sup> | State<br>Status <sup>a, b</sup> | Source <sup>c</sup> | Habitat Requirements   | Potential to Occur in the BSA   |
|---|-----------------------------------|---------------------------------|---------------------|--|---|
| <i>Phrynosoma blainvillii</i><br>Coast (California) horned lizard | --                                | SSC                             | 2                   | Occurs in valley-foothill hardwood, conifer and riparian habitats, as well as in pine-cypress, juniper and annual grassland habitats, especially sandy areas, washes, flood plains and wind-blown deposits. Basks in the early morning (CWHR 2016). Needs loose or sandy soil for burrowing and reproduction. Needs open areas for thermoregulation and shrub cover or kangaroo rat burrows for refugia. Negatively associated with non-native Argentine ant ( <i>Linepithema humile</i> ) presence; positively associated with presence of native ants, and chaparral vegetation (Thomson <i>et al.</i> 2016). Occurs in the Sierra Nevada foothills from Butte Co. to Kern Co. and throughout the central and southern California coast. Found up to 4,000 ft in the northern end of its range and 6,000 ft in the southern end (CWHR 2016).   | Yes. See discussion.  |
| <b>Birds</b>  |                                   |                                 |                     |  |   |
| <i>Accipiter gentilis</i><br>Northern goshawk                     | --                                | SSC                             | 2                   | Breeds in the North Coast Ranges, Sierra Nevada, Klamath, Cascade, and Warner Mountains. Also breeds in the Piños, San Jacinto, San Bernardino, and White Mtns. Remains yearlong in breeding areas as an uncommon resident. Prefers middle and higher elevations in mature, dense conifer forests. Habitat requirements include meadows and riparian habitat. Casual in winter along north coast, throughout foothills, and in northern deserts, where it may be found in pinyon-juniper and low-elevation riparian habitats. Usually nests near water on north slopes, in the densest parts of vegetation stands, staying close to openings (CWHR 2016). In the west side Ponderosa pine zone, northern goshawks are known to nest down to approximately 2,500 ft. Nest stands consistently have larger trees, greater canopy cover, and relatively more open understories than stands lacking nests (Shuford and Gardali 2008). Goshawks generally do not nest near areas of human habitation or paved roads (USFWS 2001). | No. There are no dense mature conifer groves. The BSA is below the nesting elevation range. |
| <i>Agelaius tricolor</i><br>Tricolored blackbird                  | --                                | SSC                             | 2                   | Mostly a resident in California. Common locally throughout the Central Valley and in coastal districts from Sonoma Co. south. Breeds near freshwater, preferably in emergent wetland with tall, dense cattails or tules, but also in thickets of willow, blackberry, tall herbs, and wild rose. Highly colonial; nesting area must be large enough to support a minimum colony of about 50 pairs (CWHR 2016). Chooses areas with widespread water and large, thick patches of vegetation for colonies to reduce predation (Hamilton 2004).   | No. There is no suitable nesting habitat.   |
| <i>Riparia riparia</i><br>Bank swallow                            | --                                | T                               | 2                   | Found primarily west of CA deserts in riparian and other lowland habitats during the spring-fall period. In summer, restricted to riparian, lacustrine, and coastal areas with vertical banks, bluffs, and cliffs with fine textured sandy soils, into which it digs nesting holes. About 75% of the breeding population in CA occurs along banks of the Sacramento and Feather Rivers in the northern Central Valley. Other colonies are known from the central coast from Monterey to San Mateo cos., and in northeastern California in Shasta, Siskiyou, Lassen, Plumas, and Modoc cos. Breeding colonies can have between 10 and 1,500, but typically between 100 and 200, nesting pairs (CWHR 2016).  | No. There is no suitable nesting habitat.   |

| Special-Status Species/<br>Common Name             | Federal<br>Status <sup>a, b</sup> | State<br>Status <sup>a, b</sup> | Source <sup>c</sup> | Habitat Requirements   | Potential to Occur in the BSA  |
|--|-----------------------------------|---------------------------------|---------------------|--|--|
| <i>Strix nebulosa</i><br>Great gray owl            | --                                | E                               | 2                   | Occurs between 4,500 and 7,500 ft in the Sierra Nevada in the vicinity of Quincy in Plumas Co. south to Yosemite. Occasionally reported in Northwestern CA in winter and in the Warner Mtns. in summer. Breeds in old-growth red fir, mixed conifer, and lodgepole pine habitats in the vicinity of wet meadows. Uses trees in dense forest stands for roosting cover and small trees and snags in or bordering meadows for hunting perches. Nests in large, broken-topped snags 25 to 72 ft above the ground. Often uses old hawk or eagle nests (CWHR 2016). Nesting sites are of concern to CDFW (2016c).   | No. The BSA is below the elevation range. There is no old-growth coniferous forest suitable for nesting habitat. |
| <b>Mammals</b>                                     |                                   |                                 |                     |  |  |
| <i>Pekania pennanti</i><br>Fisher – West Coast DPS | FT                                | CT/ SSC                         | 2                   | Uncommon permanent resident of the Sierra Nevada, Cascades, Klamath Mountains, and the North Coast Ranges (CWHR 2016). Occurs above 3,200 ft in the Sierra Nevada and Cascades (Jameson and Peeters 2004). Today, fisher distribution in CA is represented by two populations: northwestern California and the southern Sierra Nevada. Fishers apparently no longer inhabit the area between the Pit River in the northern Sierra Nevada/Cascades to the Merced River in the southern Sierra Nevada; a separation of approximately 270 miles. There is little empirical evidence that fishers previously inhabited this gap in the Sierra Nevada (CDFW 2010a). Occurs in intermediate- to large-stages of coniferous forest and deciduous-riparian habitat with high percent canopy closure. Canopy closure must be greater than 50% to be suitable habitat. Dens in a variety of protected cavities, brush piles, logs, and upturned trees. Hollow logs, trees, and snags are especially important. Mostly nocturnal and crepuscular, with some diurnal activity (CWHR 2016). | No. There is no mature conifer forest with >50% canopy cover. The BSA occurs below the elevation range.          |
| <i>Antrozous pallidus</i><br>Pallid bat            | --                                | --                              | 2                   | Occupies a wide variety of habitats including grasslands, shrublands, woodlands, and forests from sea level up through mixed conifer forests. The species is most common in open, dry habitats with rocky areas for roosting. It feeds on a wide variety of insects and arachnids, foraging over open ground, usually 1.6 to 8 ft above level ground. Day roosts in caves, crevices, mines, and occasionally buildings and in hollow trees. Roost must protect bats from high temperatures. Night roosts may be in more open sites, such as porches and open buildings. Prefers rocky outcrops, cliffs, and crevices with access to open habitats for foraging. Locally common in low elevations in CA, it occurs throughout CA except for the high Sierra Nevada from Shasta to Kern counties, and the northwestern corner of the state from Del Norte and western Siskiyou counties to northern Mendocino County. It is a yearlong resident in most of the range (CHWR 2016).  | No. There are no suitable rock outcrops/cliffs, or mature conifer forests likely to have suitable hollow trees.  |

Known only from the Central Sierra Nevada foothills, from El Dorado and Placer cos. Blooms May through August (CNPS 2016).  | No. There are no suitable soils.  |
| <i>Carex cyrtostachya</i><br>Sierra arching sedge                              | --                                | --/1B.2                         | 2                   | Perennial herb found in mesic lower montane coniferous forest, meadows and seeps, marshes and swamps, and riparian forest margins from 2,000 to 4,460 ft. Known from Butte, El Dorado, and Yuba cos. Blooms May through August (CNPS 2016).  | Yes. See discussion.  |
| <i>Carex xerophila</i><br>Chaparral sedge                                      | --                                | --/1B.2                         | 2                   | Perennial herb found in serpentinite or gabbroic soil in chaparral, cismontane woodland, and lower montane coniferous forest from 1,445 to 2,530 ft. Known from Butte, El Dorado, Nevada and Yuba cos. Blooms March through June (CNPS 2016).  | No. There are no suitable soils.  |
| <i>Ceanothus roderickii</i><br>Pine Hill ceanothus                             | E                                 | R/ 1B.1                         | 2                   | Perennial evergreen shrub found on serpentine or gabbroic soils in chaparral and cismontane woodland from 804 to 3,576 ft. Known from less than 10 occurrences in El Dorado Co. Blooms April through June (Baldwin <i>et al.</i> 2012, CNPS 2016).   | No. There are no suitable soils.  |
| <i>Chlorogalum grandiflorum</i><br>Red Hills soaproot                          | --                                | --/ 1B.2                        | 2                   | Perennial bulbiferous herb found in serpentine, gabbroic, and other soils in chaparral, cismontane woodland, and lower montane coniferous forest from 800 to 5,540 ft. Known from Amador, Butte, Calaveras, El Dorado, Placer, and Tuolumne cos. Blooms May through June (Baldwin <i>et al.</i> 2012, CNPS 2016).  | No. There are no suitable soils. In El Dorado County this species is known from the gabbro soils of the Pine Hill formation, elsewhere in the County. |
| <i>Erigeron miser</i><br>Starved daisy   | --                                | --/1B.3                         | 2                   | Perennial herb found on rocky substrates in upper montane coniferous forest from 6,000 to 8,600 ft. This species is endemic to CA, and found in Lassen, Mono, Nevada and Placer Cos. Blooms June through October (CNPS 2016).  | No. The BSA is below the elevation range and there is no suitable habitat.  |
| <i>Fremontodendron decumbens</i><br>Pine Hill flannelbush                      | E                                 | R/ 1B.2                         | 2                   | Perennial evergreen shrub found on rocky, gabbroic, and serpentine soil in chaparral and cismontane woodland from 1,394 to 2,494 ft. Known from 10 occurrences in El Dorado, Nevada, and Yuba cos. Uncertain about distribution or identity in Nevada and Yuba cos. Blooms April through July (Baldwin <i>et al.</i> 2012, CNPS 2016).                                 | No. There are no suitable soils.  |

| Special-Status Species/<br>Common Name                               | Federal<br>Status <sup>a, b</sup> | State<br>Status <sup>a, b</sup> | Source <sup>c</sup> | Habitat Requirements   | Potential to Occur in the BSA    |

| <i>Galium californicum</i> ssp. <i>sierrae</i><br>El Dorado bedstraw | E                                 | R/ 1B.2                         | 2                   | Perennial herb found on gabbroic soils in chaparral, cismontane woodland, and lower montane coniferous forest from 328 to 1,920 ft. Known from fewer than 20 occurrences in El Dorado Co. (CNPS 2016). Blooms March through July (Baldwin <i>et al.</i> 2012).   | No. There are no suitable soils. |
| <i>Horkelia parryi</i><br>Parry's horkelia                           | --                                | --/ 1B.2                        | 2                   | Perennial herb found on Ione formation and in other soils in chaparral and cismontane woodland from 260 to 3,510 ft. Known from Amador, Calaveras, El Dorado, and Mariposa cos. Blooms April through September (Baldwin <i>et al.</i> 2012, CNPS 2016). Jepson (2018) describes the habitat as open chaparral.   | Yes. See discussion.             |
| <i>Packera</i> (= <i>Senecio</i> ) <i>layneae</i><br>Layne's ragwort | T                                 | R/ 1B.2                         | 1, 2                | Perennial herb found in rocky, serpentine, or gabbroic soils in chaparral and cismontane woodland from 650 to 3,560 ft. Known from Butte, El Dorado, Placer, Tuolumne, and Yuba cos. Blooms April through August (Baldwin <i>et al.</i> 2012, CNPS 2016).  | No. There are no suitable soils. |
| <i>Viburnum ellipticum</i><br>Oval-leaved viburnum                   | --                                | --/ 2B.3                        | 2                   | Deciduous shrub found in chaparral, cismontane woodland, and lower montane coniferous forest from 700 to 4,600 ft. Known from Alameda, Contra Costa, El Dorado, Fresno, Glenn, Humboldt, Lake, Mendocino, Mariposa, Napa, Placer, Shasta, Solano, Sonoma, and Tehama cos. Blooms May through August (Baldwin <i>et al.</i> 2012, CNPS 2016). Jepson (2018) describes the habitat as chaparral, yellow-pine forest, generally on north-facing slopes. | Yes. See discussion.             |
| <i>Wyethia reticulata</i><br>El Dorado County mule ears              | --                                | --/ 1B.2                        | 2                   | Perennial rhizomatous herb found on clay or gabbroic soils in chaparral, cismontane woodland, and lower montane coniferous forest from 600 to 2,100 ft. Known from El Dorado and Yuba cos. Blooms April through August (Baldwin <i>et al.</i> 2012, CNPS 2016).  | No. There are no suitable soils. |

| Special-Status Species/<br>Common Name                     | Federal<br>Status <sup>a, b</sup> | State<br>Status <sup>a, b</sup> | Source <sup>c</sup> | Habitat Requirements   | Potential to Occur in the BSA  |

| <b>Natural Communities</b>                                 |                                   |                                 |                     |  |  |
| Central Valley drainage<br>hardhead/ squawfish stream      | --                                | --                              | 2                   | Hardhead occur in low- to mid-elevation streams in the main Sacramento-San Joaquin drainage and in the Russian River. Their range extends from the Kern River in Kern County, in the south, to the Pit River in Modoc County in the north. In the San Joaquin drainage, the species is scattered in tributary streams and absent from valley reaches of the San Joaquin River. In the Sacramento drainage, the hardhead is present in most large tributary streams as well as in the Sacramento River. Hardhead are typically found in undisturbed areas of larger low- to mid-elevation streams, although they are also found in the mainstem Sacramento River at low elevations and in its tributaries to about 4,920 ft. They prefer clear, deep (>32 inches) pools and runs with sand-gravel-boulder substrates and slow velocities. Hardhead are always found in association with Sacramento pikeminnow (squawfish) and usually with Sacramento sucker. They tend to be absent from streams where introduced species, especially centrarchids (sunfish), predominate and from streams that have been severely altered by human activity. Sacramento pikeminnow occur in clear rivers and creeks of central California and occur in small numbers in the Sacramento-San Joaquin Delta. They are most characteristic of low- to mid-elevation streams with deep pools, slow runs, and undercut banks, and overhanging vegetation. They are most abundant in lightly disturbed, tree-lined reaches that also contain other native fish (Moyle 2002). | No. This community does not occur. The intermittent channels in the BSA are too small to support this community. |
| Central Valley drainage resident<br>rainbow trout stream   | --                                | --                              | 2                   | Rainbow trout occur in low order (high elevation) cold streams with a high gradient. These streams are dominated by rainbow trout and often riffle sculpin (Moyle and Ellison 1991).   | No. This community does not occur. The intermittent channels in the BSA are too small to support this community. |
| Sacramento-San Joaquin<br>foothill/valley ephemeral stream | --                                | --                              | 2                   | Low elevation streams that flow primarily in response to winter and spring rainfall. Found in oak woodland/ valley grassland areas. Some water may be present in semi-permanent bedrock pools. Streams have a distinct succession of invertebrates and may be important spawning areas for Sierran treefrogs ( <i>Pseudacris sierra</i> ) and newts ( <i>Taricha</i> spp.; Moyle and Ellison 1991).  | Yes. See discussion.   |

<sup>a</sup> **Listing Status:** **E** = Endangered; **T** = Threatened; **P** = Proposed; **C** = Candidate; **R** = California Rare; **D** = Delisted; \* = Possibly extinct.

<sup>b</sup> **Other Codes:** **SSC** = CA Species of Special Concern; **FP** = CA Fully Protected; **Prot** = CA Protected; **CH** = Critical habitat designated.

**CNPS Rank:** (plants only): **1A** = Presumed Extinct in CA; **1B** = Rare or Endangered (R/E) in CA and elsewhere; **2** = R/E in CA and more common elsewhere; **3** = Need more information; **4** = Plants of limited distribution

**CNPS List Decimal Extensions:** **.1** = Seriously endangered in California (over 80% of occurrences threatened / high degree and immediacy of threat); **.2** = Fairly endangered in CA (20-80% of occurrences threatened); **.3** = Not very endangered in CA (< 20% of occurrences threatened or no current threats known).

## APPENDIX D.

### Photographs

---

Photo 1. View of the young ponderosa pine – disturbed community in the BSA that was graded for development over 25 years ago. This is one of the denser areas of young pines (13 June 2017).

Photo 2. View of a more barren area of the young ponderosa pine – disturbed community. The larger shrub in the foreground is Nissenan manzanita. The other smaller shrubs are the more common manzanita (13 June 2017).

Photo 3. A Nissenan manzanita (arrow) growing next to the more common manzanita. Nissenan manzanita tends to grow as a shorter, broader shrub (13 June 2017).

Photo 4. A close-up of the grayish-red, shredding bark of Nissenan manzanita. The more common manzanita has smooth red bark that peels cleanly as it grows (13 June 2017).

Photo 5. View of valley oak woodland from near the top of a hill in the north end of the BSA (13 June 2017).

Photo 6. View of Channel 2 in California black oak woodland in the south end of the BSA (27 June 2017).

Photo 7. View of sandbar willow scrub (17 September 2017).

Photo 8. View north of seasonal wetland 26, the low spot around the shovel (8 August 2017).

Photo 9. View north of the deepest part of the pond in the BSA. Most of the pond is outside of the BSA on adjacent property (13 September 2017).

Photo 10. View of an ephemeral channel in valley oak – interior live oak woodland (15 September 2017).

This data has been reported to the CNDDDB, but may not have been evaluated by the CNDDDB staff

**Scientific name:** *Arctostaphylos nissenana*

**Common name:** Nissenan manzanita

**Date of field work (mm-dd-yyyy):** 06-27-2017

**Comment about field work date(s):**

## OBSERVER INFORMATION

**Observer:** Charles Hughes

**Affiliation:** Sycamore Environmental

**Address:** Sycamore Environmental 6355 Riverside Blvd, Suite C, Sacramento, CA 95831

**Email:** [chuck.hughes@sycamoreenv.com](mailto:chuck.hughes@sycamoreenv.com)

**Phone:** (916) 427-0703

**Other observers:** Nicole Desideri

## DETERMINATION

**Keyed in:** Jepson Manual, 2nd Edition

**Compared w/ specimen at:**

**Compared w/ image in:** Cal Photos

**By another person:**

**Other:** *A. nissenana* also reported from site by a 2009 botanical survey.

**Identification explanation:**

**Identification confidence:** Very confident

**Species found:** Yes If not found, why not?

**Level of survey effort:** Botanical survey consistent with CDFW 2009 Protocols.

**Total number of individuals:** 88

**Collection?** Yes

**Collection number:** Hughes 472

**Museum/Herbarium:** UC Davis (Collection not delivered yet)

## PLANT INFORMATION

|                   |            |           |          |
|-------------------|------------|-----------|----------|
| <b>Phenology:</b> | 90 %       | 1 %       | 9 %      |
|                   | vegetative | flowering | fruiting |

## SITE INFORMATION

**Habitat description:** Plants are growing primarily in an area that was graded for development more than 20 years ago but never built. Most of the woody plants sprouting in the graded area are *Pinus ponderosa*, *Arctostaphylos viscida*, *Baccharis pilularis*, and *Arctostaphylos nissenana*. *A. nissenana* at this site appears to prefer the areas areas that were graded down to near bedrock. Areas with deeper soil, or natural slopes, have few *A. nissenana* plants.

**Slope:** Near level

Land owner/manager: Private

**Aspect:**

**Site condition + population viability:** Fair

**Immediate & surrounding land use:** Mostly residential and commercial uses on the north, mostly natural oak woodland on the south.

**Visible disturbances:** The area where most of the *A. nissenana* is growing was graded over 20 years ago, and has thin remaining soil over rock. Currently, off-road vehicles continue to disturb the area but have little direct effect on established *A. nissenana*.

**Threats:** Development.

**General comments:**

GEOLOGY AND SOILS**

## TECHNICAL MEMORANDUM

**Date:** September 27, 2018  
**To:** El Dorado County  
**From:** Brian Hammer  
**CC:** Greg Stedfield  
**Subject:** Dorado Oaks Drainage and Storm Water Quality Technical Memo for Tentative Map

---

### Introduction

This Technical Memorandum (TM) is a technical drainage assessment for the Dorado Oaks proposed development and provides a tentative map level of analysis for the proposed storm drainage infrastructure and storm water quality facilities.

The contributory area analyzed herein is comprised of approximately 501 acres of which approximately 70 acres are developed with the remainder consisting of off-site and on-site contributory areas not developed for this project. See Appendix A for existing and developed watershed Maps.

The purpose of this technical memo is to:

- Present technical storm drainage and stormwater quality calculations for the proposed project development.
- Conclude that the proposed infrastructure is sufficient to serve the planned development.

The data, modeling, and exhibits herein are based upon the NGVD 29 datum. No previous studies were utilized in the preparation of this report.

**Figure 1. Project Location**

### Model Assumptions and Design Criteria

HEC-HMS was used to calculate runoff and to perform hydraulic calculations. The site discharges primarily to the south and east of the project with two small watersheds discharging to the West. There are two ridgelines in the project which results in a drainage path to the center of the project which continues south and a drainage path to the west of the project. There are five points of compliance for the project which can be seen on Figure 2. The path to the center and south is considered a single location in which the developed flow will be compared to the existing flows. The west slope of the project drains to compliance point 1 and 2. Compliance point 2 does not collect to a single point at the property line and therefore the flows leaving the site will be summed up and compared against the developed flows leaving the site to the west.

Due to the slope of the watershed it is assumed there will be no backwater condition placed on the swale outfalls.

**Figure 2. Compliance Point Locations**

The hydrologic input and criteria used for the development of this study are summarized below:

- The site consists of USGS Soil Type C Soils (See Figure 3 Below).
- The percent impervious rates used are as follows:
  - Roadway: 95%
  - Single Family Lots:
  - T-Court Lots:
  - Apartments or Condominiums:
  - Open Space or Existing: 2%

The hydraulic input and criteria used for the development of this study are summarized below:

- The following Manning's 'n' values were used:

- Pipes 0.015
- Gutters 0.015
- Asphalt Street Section 0.019
- Minimum pipe velocity of 2.0fps
- Minimum pipe diameter of 12"
- Data was input with information matching the tentative map grading plans.
- The 10-year hydraulic grade line shall stay at a minimum 1-foot below all manhole rims and inlet grates.
- The 100-year event shall be greater than 1 foot below adjacent finished pad elevations.
- 10-year and 100-year mitigation will be achieved for the development.
- Water Quality Swales and Basins will mitigate for the development impacts. No LID is assumed in the sizing of these facilities. If LID is proposed in the improvement plans these water quality features can be reduced in size.

Exhibit 1 displays the sheds, proposed pipe system, and pertinent results. The hydrologic data and parameters that were used to develop the runoff are included in Appendix A.

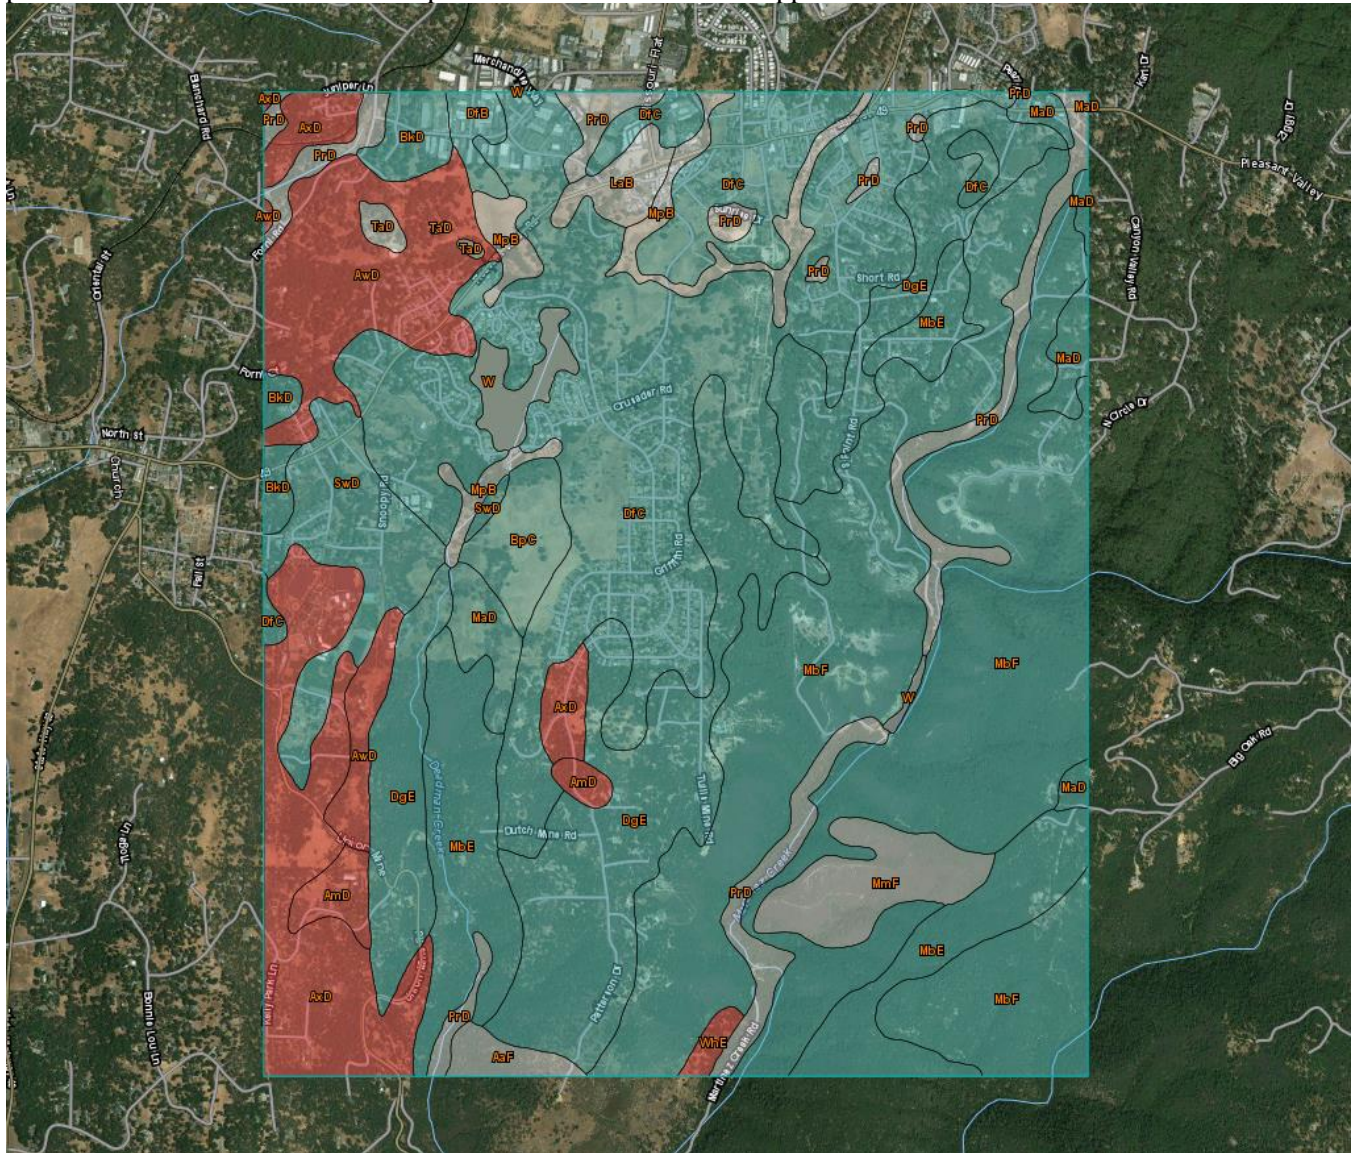

Figure 3. USGS Soil Map (Type C Soils)

### 10-Year Analysis and Results

The 10-year event for existing and proposed conditions was analyzed in HEC-HMS. Table 1 shows the resultant peak flows at each compliance point and the difference in flow leaving the site. The complete data and results are attached as Appendix B.

**Table 1. 10-Year Peak Flows**

| Point of Compliance | Existing (cfs) | Proposed (cfs) | Difference (cfs) |
|---------------------|----------------|----------------|------------------|
| 1                   | 347            | 330            | -17              |
| 2                   | 17             | 13.7           | -3.3             |
| 3                   | 48             | 16             | -32              |
| 4                   | 87             | 87             | 0                |
| 5                   | 4.4            | 12.4           | 8                |
| 6                   | 19             | 13.6           | -5.4             |
| Total               | 522.4          | 472.7          | -49.7            |

### 100-Year Analysis and Results

The 100-year event for existing and proposed conditions was analyzed in HEC-HMS. Table 2 shows the resultant peak flows at each compliance point and the difference in flow leaving the site. The complete data and results are attached as Appendix C.

**Table 2. 100-Year Peak Flows**

| Point of Compliance | Existing (cfs) | Proposed (cfs) | Difference (cfs) |
|---------------------|----------------|----------------|------------------|
| 1                   | 575            | 546            | -29              |
| 2                   | 28             | 21.9           | -6.1             |
| 3                   | 77.6           | 26             | -51.6            |
| 4                   | 141            | 142            | 1                |
| 5                   | 7              | 20.9           | 13.9             |
| 6                   | 19             | 20.7           | 1.7              |
| Total               | 847.6          | 777.5          | -70.1            |

### Storm Water Quality and Hydromodification

The Dorado Oaks proposed development projects create more than one acre of impervious surface. Due to this, it is required to provide storm water treatment for the 85th percentile event.

The first line of defense in maintaining storm water quality is to keep polluted water from commingling with clean water through the use of Source Controls. This can be done using structural and operational measures at the pollutant source. At this time in the development process source control measures are not yet implemented. It is anticipated that source control measures will be proposed for the apartment and T-lot development products. For the tentative map design, it is assumed no source control is proposed to show the largest size of water quality features.

Additionally, several Low Impact Development strategies are anticipated to reduce the post-development flows. These strategies remove pollutants from runoff, attenuate peak flows, and reduce runoff volume. The proposed LID measures include tree planting, disconnected impervious areas, bioretention facilities, and a vegetated swale. Similar to source controls, the LID features anticipated to be installed were not assumed to provide water quality or hydromodification reductions. This results in the greatest sized

facilities for purposes of land allocation. These facilities can be reduced at the improvement plan level analysis when LID feature locations and quantities are finalized.

No LID measures are proposed for off-site areas that contribute to the project's outfall nor for the interim graded pervious areas (future roadway).

The swale was sized to treat the entire stormwater quality flow without accounting for the tree planting, disconnected impervious areas, and bioretention facilities. Appendix D contains the calculations for sizing of the water quality swales which will adequately treat the development.

### Conclusion

The results of the analysis performed for this Technical Memorandum demonstrate that the proposed improvements can be satisfactorily treated and conveyed within the proposed drainage facilities without damage to structures or downstream receiving waters. Further detail on the storm drain system, swale grading, final basin grading, and culverts will be provided with the improvement plan submittal.

Overland time per equation 3-3 TR 55:  $n=0.24$  or  $0.15$ ,  $p=7.0$ ,  $Max L=300$ ,  $Tt=(.007(nL)^.8)/((P)^.5 (s)^.4)$

Shallow concentrated flow velocity based on Figure 3-1, TR-55:  $Length(ft) = 2000$  max

Channel flow based on Manning's equation

Lag time = total travel time x 0.6

3) Loss RatePer SCS Method (now NRCS)

SOIL TYPES C throughout the watershed

SCS CURVE NUMBER(average moisture C Soil)= 81

Overland time per equation 3-3 TR 55:  $n=0.24$  or  $0.15$ ,  $p=7.0$ ,  $Max L=300$ ,  $Tt=(.007(nL)^{.8})/((P)^{.5} (s)^{.4})$

Shallow concentrated flow velocity based on Figure 3-1, TR-55:  $Length(ft) = 2000$  max

Channel flow based on Manning's equation

Lag time = total travel time x 0.6

**3) Loss RatePer SCS Method (now NRCS)**

# SECTION 1.0

---

## Executive Summary

This Initial Site Assessment (ISA) was conducted on behalf of Caltrans and Stonehenge Springs, LLC (Stonehenge) for the proposed State Route 49/Pleasant Valley Road at Faith Lane Project (SR-49 project) located at the intersection of State Route 49/Pleasant Valley Road and Faith Lane in Diamond Springs in El Dorado County, California (see **Figure 1**). This SR-49 project would be constructed in conjunction with a proposed Stonehenge residential development along Faith Lane to the south of SR-49.

This ISA identifies Recognized Environmental Conditions (RECs) for the project site that may adversely affect roadway construction or right-of-way acquisition. This ISA was conducted in general conformance with the scope and limitations of the American Society for Testing and Materials (ASTM) Standard Practice E 1527-13, which describes the standard practice for conducting assessments. This ISA includes a summary of the site reconnaissance conducted on January 10, 2019, a review of environmental databases, and a review of historical data sources. A REC is defined by ASTM Practice E 1527-13 as: “The presence or likely presence of any hazardous substances or petroleum products in, on, or at a property: (1) due to any release to the environment; (2) under conditions indicative of a release to the environment; or (3) under conditions that pose a material threat of a future release to the environment.”

The SR-49 Project evaluates four potential realignments of the intersection of Faith Lane with State Route 49 to accommodate ingress/egress to/from the aforementioned proposed residential development and to improve traffic flow in Diamond Springs. The proposed work would result in less than 2 feet of excavation with the exception of some utility trenching that may be down to 4 feet below grade. The four options are collectively located within the red outlined area shown on **Figure 2** and listed below. The outlined area provides for a suitable buffer areas extending up to about 50 feet from either side of the likely edge-of-pavement of the various options.

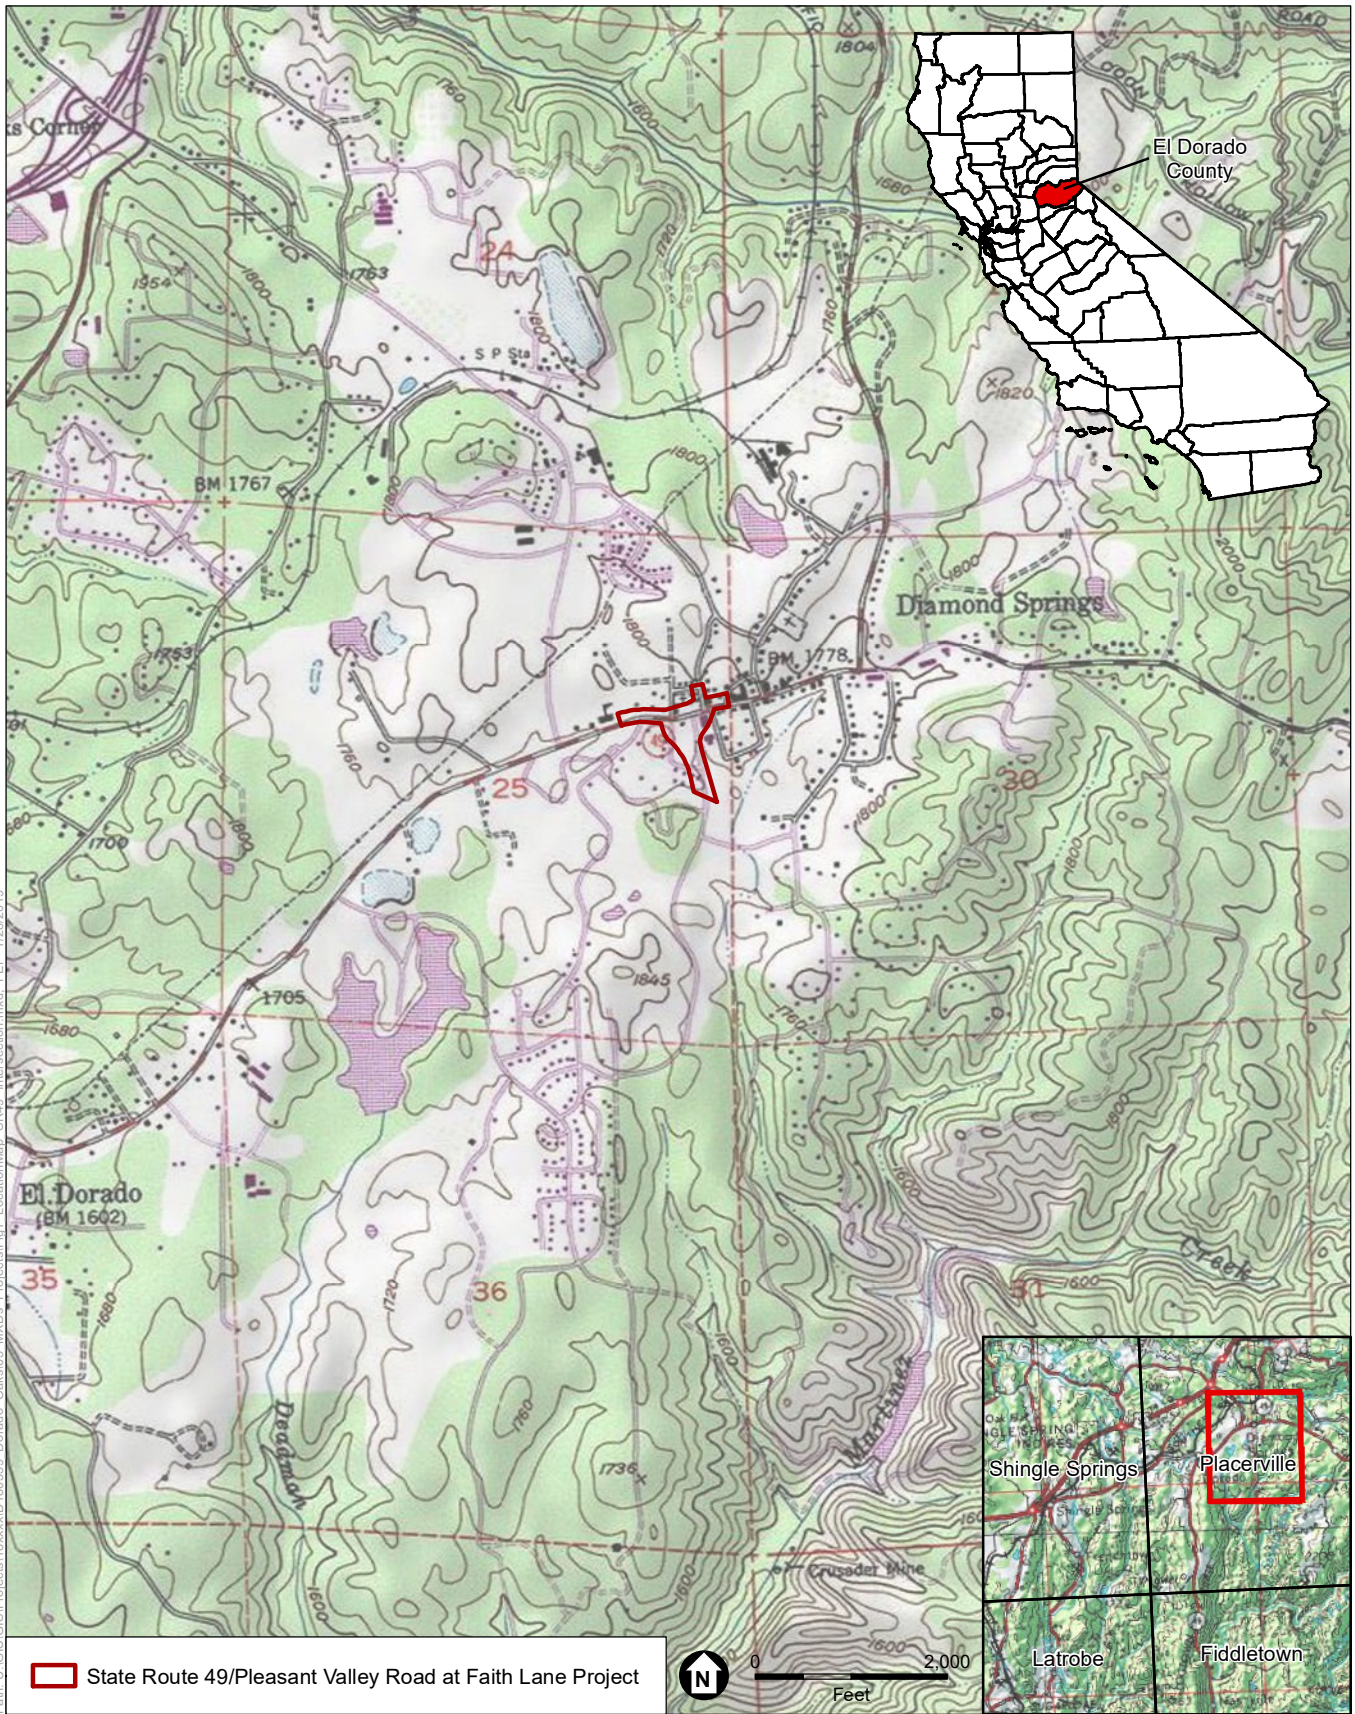

- Option A: a four-way roundabout at the intersection of China Garden Road and SR-49 to the east of Faith Lane.
- Option B: a three-way roundabout between Silver Drive and Faith Line at SR-49.
- Option C: a signalized T-shaped intersection at Faith Lane and SR-49.
- Option D: a signalized T-shaped intersection at Silver Drive and SR-49.

Depending on the selected option, the project would take place on some combination of parts of 13 parcels, one of which appears on the searched regulatory agency records as a former leaking underground storage tank (LUST) site. One former service station was previously located at 493 Main Street (now referred to as Pleasant Valley Road and/or State Route 49) on APN 054-490-04 on the northeast corner of State Route 49 and China Garden Road. Two 500-gallon gasoline underground storage tanks (USTs) were removed in 1992 and the Regional Water Quality Control Board (RWQCB) issued a No Further Action (NFA) letter in 1996. However, the NFA letter states that contaminated soil and groundwater are present along the south side of the former service station site extending to some unknown distance beneath State Route 49 and possibly under the footprint of the project site, depending on the selected option. No map of the site was provided. It is unknown whether the contamination extends to beneath the project site and there is no definitive visual indication of the former UST locations. **This is considered an REC because excavation for the project close to or under State Route 49 may encounter contaminated soil and groundwater.**

Various businesses and residences are located within the footprint of the four options, but none are listed on regulatory records as having violations or hazardous materials spoils, leaks, or releases. The various businesses are small commercial retail businesses that would use small quantities of cleaning solvents, and other small quantities of chemicals specific to the particular business. None of the businesses would be expected to use large quantities of hazardous materials and no USTs, above-ground storage tanks, hazardous materials containers, soil or pavement staining indicative of chemical spills, or stressed vegetation was observed.

The road sides do not have standard curbs and gutters. Most drainage is to dirt shoulders or unlined ditches. Some occasional trash was observed in the ditches and shoulder areas; however, no containers, staining indicative of chemical releases, or stressed vegetation was observed. The trash and debris are considered a *de minimus* condition because the materials can readily be recycled or disposed of at any municipal (Class III non-hazardous waste) landfill.

Although not an ASTM 1527 Phase I assessment consideration, it should be noted that if older structures that predate the 1970s US EPA ban on asbestos-containing materials (ACM) or lead-based paint (LBP) need to be removed (e.g., the 1877 Carpenter Building on the southwest corner of State Route 49 and Faith Lane), those older structures may contain ACM and/or LBP that would require surveying and removal by state-licensed professional as hazardous materials. In addition, various underground utilities were noted within and along the sides of most road segments. Construction activities would need to account for these utilities. Finally, soil along the sides of the roadways may have concentrations of aerially-deposited lead above action levels and would require investigation and if present above regulatory action levels, management as a hazardous material.

## SECTION 2.0

---

### Introduction

#### 2.1 Purpose, Standards, and Definitions

Environmental Science Associates (ESA) conducted this Initial Site Assessment (ISA) for the proposed SR-49 project located in Diamond Springs in El Dorado County, California. This ISA was conducted in accordance with ESA's scope of work with Stonehenge Springs, LLC dated November 11, 2018. In addition, this ISA uses relevant guidance from the Caltrans *Standard Environmental Reference, Volume 1 Guidance for Compliance, Section 3 Topics, Chapter 10 - Hazardous Materials, Hazardous Waste, and Contamination, Initial Site Assessment*, last updated June 21, 2016, and the American Society of Testing and Materials (ASTM) *Standard Practice for Environmental Site Assessments: Phase I Environmental Site Assessment Process* (ASTM E1527-13). This ISA is focused on and limited to identifying potential contamination sources or issues at or within 1/8-mile of the project site because of the limited footprint of the proposed project activities.

Three types of Recognized Environmental Conditions (RECs) are defined by the ASTM E1527-13, as listed below. The term Recognized Environmental Conditions (REC) means:

- “The presence or likely presence of any hazardous substances or petroleum products in, on, or at a property: (1) due to any release to the environment; (2) under conditions indicative of a release to the environment; or (3) under conditions that pose a material threat of a future release to the environment.”

In addition, the updated ASTM E1527-13 defined the two additional categories cited below.

- The term Historical Recognized Environmental Conditions (HREC) means: “A past release of any hazardous substances or petroleum products that has occurred in connection with the property and has been addressed to the satisfaction of the applicable regulatory authority or meeting unrestricted use criteria established by a regulatory authority, without subjecting the property to any required controls (for example, property use restrictions, activity and use limitations, institutional controls, or engineering controls). Before calling the past release a historical recognized environmental condition, the environmental professional must determine whether the past release is a recognized environmental condition at the time the Initial Site Assessment is conducted (for example, if there has been a change in the regulatory criteria). If the EP considers the past release to be a recognized environmental condition at the time the Initial Site Assessment

is conducted, the condition shall be included in the conclusions section of the report as a recognized environmental condition.”

For a past REC to be considered an HREC it must:

- Have already been remediated (or meet current standards without remediation);
- Not require use restrictions or engineering controls (e.g., cap, subslab depressurization system); and
- Meet current standards.

If the REC has use restrictions or engineering controls (e.g., cap, subslab depressurization system), then the REC may be designated as a Controlled Recognized Environmental Condition (CREC), as defined below. Unlike HRECs, a CREC will be listed in the conclusions section of the Phase I assessment, along with other RECs. The purpose of this new category is to bring continuing obligations such as use restrictions, maintenance requirements, reporting requirements to the forefront. The term Controlled Recognized Environmental Conditions (CREC) means:

“A recognized environmental condition resulting from a past release of hazardous substances or petroleum products that has been addressed to the satisfaction of the applicable regulatory authority (for example, as evidenced by the issuance of a no further action letter or equivalent, or meeting risk-based criteria established by regulatory authority), with hazardous substances or petroleum products allowed to remain in place subject to the implementation of required controls (for example, property use restrictions, activity and use limitations, institutional controls, or engineering controls). A condition considered by the environmental professional to be a controlled recognized environmental condition shall be listed in the findings section of the Initial Site Assessment report, and as a recognized environmental condition in the conclusions section of the Initial Site Assessment report.”

RECs, HRECs, and CRECs are not intended to include *de minimis* conditions that generally do not present a material risk of harm to public health or the environment and that generally would not be the subject of an enforcement action if brought to the attention of appropriate governmental agencies.

## 2.2 Scope of Services

The following sections describe ESA’s work scope:

Section 2, *Introduction, Standards, and Definitions*, includes a discussion of the purpose for performing the ISA; the standards and definitions used for the ISA; and the significant assumptions and limitations.

Section 3, *Site Description*, compiles information concerning the location, current and proposed use, a description of any structures and improvements at the time of ESA’s assessment, and adjoining property uses.

Section 4, *Records Review and Site Reconnaissance*, includes ESA’s review of the Cortese List databases available from the federal, state, and local regulatory agencies regarding hazardous

materials use, storage, or disposal at or adjacent to the bridge. Applicable information is summarized and copies of relevant documents are included in the appendices of this report. Historical aerial photographs and topographic maps are reviewed for indications of historical environmental conditions. In addition, the Site Reconnaissance, describing ESA's observations during reconnaissance of the project area, was keyed to sites identified during the records review. The methodology used and limiting conditions are described herein.

Section 5, *Findings and Opinions*, presents ESA's findings and professional opinions regarding the information contained in this report. It provides ESA's conclusions regarding the presence of RECs, HRECs, and CRECs connected with the bridge and data gaps, if any, that could affect the recognition of RECs.

Section 6, *Report Authors and Signatures*, provides the signatures of the qualified personnel that conducted this assessment.

Section 7, *References*, is a summary of the resources used to compile this report that are not already included in the Appendices.

The appendices contain certain pertinent documentation regarding the parcels. Appendices A and B contain the regulatory agency database search results report, historical aerial photographs and topographic maps, fire insurance map and city directory search results, and the permit history. No interviews of site owners were conducted for this assessment because the project footprint is on public roads and does not have any operations that would use hazardous materials. Instead, this ISA relied on the project design documents prepared for this project (CTA, 2018), the site reconnaissance, and the regulatory records search (GeoSearch, 2018).

## 2.3 Limitations and Exceptions

No environmental site assessment can wholly eliminate uncertainty regarding the potential for RECs, HRECs, and CRECs in connection with a property. Conformance of this limited ISA with ASTM E1527-13 reduces, but does not eliminate, uncertainty regarding the potential for RECs, HRECs, and CRECs in connection with the subject property. While ESA has made every effort to discover and interpret available information regarding the bridge within the time available, some potential always remains for undiscovered contamination to be present. ESA's report is a best-efforts collection and interpretation of available information, and cannot be considered wholly conclusive. This report and the associated work were provided in accordance with the principles and practices generally employed by the local environmental consulting profession. This is in lieu of all warranties, expressed or implied. No other warranty is expressed or implied.

This limited ISA is based primarily on a database review and a site reconnaissance of accessible areas. This limited ISA does not include "non-scope issues" as specified by ASTM E1527-13, such as invasive<sup>1</sup> surveys for the presence of the following items on or in the vicinity of the subject property: asbestos-containing materials, poly-chlorinated biphenyls (PCBs), radon, indoor

---

<sup>1</sup> Invasive surveys include sampling of materials.

air quality, lead-based paint analysis, lead in drinking water, regulatory compliance, and high voltage lines.

The conclusions presented are professional opinions based solely upon indicated data described in this report, visual site and vicinity observations, and the interpretation of the available historical information and documents reviewed, as described in this report. Unless ESA has actual knowledge to the contrary, information obtained from interviews or provided to ESA is assumed to be correct and complete. ESA does not assume any liability for information that was misrepresented to ESA by others or for items not visible, accessible, or present on or at the bridge during the time of the site reconnaissance. The conclusions are intended exclusively for the purpose outlined herein and the site location and project indicated. Any use or reuse of this document or the findings, conclusions, or recommendations presented herein is at the sole risk of the user.

Opinions and recommendations presented herein apply to the site conditions existing at the time of this limited ISA and cannot necessarily apply to site changes of which ESA is not aware and has not had the opportunity to evaluate. Changes in the conditions of the bridge may occur with time due to natural processes or the works of man on the property or adjacent properties. Changes in applicable standards may also occur as a result of legislation or the broadening of knowledge. Accordingly, the findings of this report may be invalidated, wholly or in part, by changes beyond ESA's control. Opinions and judgments expressed herein are based on ESA's understanding and interpretation of current regulatory standards, and should not be construed as legal opinions.

## SECTION 3.0

---

### Site Description

#### 3.1 General Setting and Location

The SR-49 Project area consists SR-49/Pleasant Valley Road (also referred to a Main Street), the northern portion of Faith Lane, possibly the northern portion of Silver Drive, possibly the southern portion of China Garden Road, along with some portions of the areas adjacent to the roadways (**Figures 1 and 2**). Some of these adjacent areas are occupied by buildings. The local area is a mix of residential, rural, commercial/retail land uses, and one cemetery.

#### 3.2 Project Description

The SR-49 Project would construct one of four potential realignments of the intersection of Faith Lane with State Route 49 to improve traffic flow in Diamond Springs. The four options are within the red area shown on **Figure 2** and listed below. The outlined area provides for a suitable buffer areas extending up to about 50 feet from either side of the likely edge-of-pavement of the various options.

- Option A: a four-way roundabout at the intersection of China Garden Road/SR-49, to the east of Faith Lane.
- Option B: a three-way roundabout between Silver Drive and Faith Line at SR-49.
- Option C: a signalized T-shaped intersection at Faith Lane/SR-49.
- Option D: a signalized T-shaped intersection at Silver Drive/SR-49.

The proposed work would result in less than 2 feet of excavation with the exception of some utility trenching that may be to 4 feet below grade. Depending on the selected option, the project would take place on some combination of the parcels listed below in **Table 3-1**. The project would construct either a round-about or a typical signalized intersection; standard sidewalks, curbs, and gutters; and underground utility corridors. Depending on the selected option, some buildings may be removed.

**TABLE 3-1  
PARCELS AND CONDITIONS**

| APN        | Existing Use  |
|------------|---|
|            | North of SR 49  |

| 054-402-39 | Deb's Frosty Restaurant   |
| 054-402-40 | Diamond Village; various retail outlets;<br>historic Carpenter building         |
| 054-402-49 | One portable storage shed; mostly undeveloped                                   |
| 054-402-18 | Paved road  |

SOURCE: El Dorado County, 2018

### 3.3 Project Need

The existing intersection at Faith Lane to State Route 49 does not include stoplights or a stop sign on the highway. The addition of the residences south of the existing intersection would add to the level of traffic. In addition, none of this section of State Route 49 has standard sidewalks, curbs, or gutters. This combination of conditions would likely worsen the area's Level of Service (LOS) for traffic operations. Implementation of the project would improve the LOS, as well as improve the drainage.

## SECTION 4.0

---

# Records Review

The purpose of the records review is to obtain and examine records that could help to evaluate potential RECs, HRECs, and CRECs in connection with the proposed project. This section documents the database records search and evaluation of other records that were conducted, and describes the physical setting of the project area.

### 4.1 Results of Database Search

Federal, state, and local regulatory agencies publish databases of businesses and properties that handle hazardous materials or hazardous waste, including those properties with a known release of hazardous substances to soil and/or groundwater. These databases are available for review and/or purchase at the regulatory agencies, or the information may be obtained through a commercial database service. ESA contracted with a commercial database service to perform the regulatory agency database search for listings within the appropriate ASTM Standard minimum search distance (GeoSearch, 2018). A detailed description of the types of information contained in each of the databases reviewed and the agency responsible for compiling the data is included in the Radius Report provided as **Appendix A**, which includes a list of acronyms for the individual searched databases.

ESA evaluated the listings with regard to the nature of potential chemicals of concern, the extent of known releases, and the physical setting of the parcels (e.g., soil properties, geology, and seismicity). In general, reported or potential releases likely to affect a property would include those located on or within 1/8-mile radius of the parcels. Sites that are reported to use or have used hazardous materials but do not have any records of leaks, spills, or releases are not considered further since such sites would not have affected the project site. ESA also considered additional factors such as chemical properties, regional knowledge of the site vicinity, groundwater flow direction, and available past regulatory documentation as part of the REC evaluation.

All information on hazardous materials sites is from the regulatory database search (GeoSearch, 2018) unless otherwise indicated. Updates to the regulatory agency database records search were acquired by checking the State Water Resources Control Board (SWRCB) GeoTracker and the Department of Toxic Substances Control (DTSC) EnviroStor websites to search for other possible site listings and updated information to the database search, and to identify sites that have been recently cleanup and closed after the database search was conducted.

### **Subject Site Listings**

The following one listing is located within the project site as shown on Figure 2. The site numbers keyed to the listings and maps in the regulatory database report in Appendix A.

**8 – Former service station** – One former service station was previously located at 493 Main Street (now Pleasant Valley Road and State Route 49; see Figure 2), about 250 feet northeast of the northernmost part of the project site (GeoSearch, 2018; RWQCB, 1996). Two 500-gallon gasoline USTs were removed in 1992. The USTs had numerous holes and the surrounding soil was contaminated. Although the RWQCB issued a No Further Action (NFA) letter in 1996, the NFA letter states that contaminated soil and groundwater are present along the south side of the former service station site extending to beneath State Route 49 and toward the project site. Soil samples from the south wall of the UST excavation facing State Route 49 had 540 milligrams per kilograms (mg/kg) of total petroleum hydrocarbons (TPH) as gasoline, 1.4 mg/kg of toluene, 2.2 mg/kg of ethylbenzene, and 11 mg/kg of xylenes. Soil samples collected further south and closer to State Route 49 had 260 to 1,400 mg/kg of TPH as gasoline, 0.49 to 3.8 mg/kg of toluene, non-detect to 16 mg/kg of ethylbenzene, and 3.0 to 86 mg/kg of xylenes. In addition, groundwater collected from the excavation pit had 40 micrograms per liter (ug/L) of TPH as gasoline, 500 ug/L of benzene, 1,200 ug/L of toluene, 410 ug/L of ethylbenzene, and 3,000 ug/L of xylenes. The RWQCB concluded that contaminated soil and groundwater extends to an unknown distance beneath State Route 49. No maps of this site were provided. It is unknown whether the soil and groundwater contamination extends further to beneath the project site. Note that the available records did not include maps showing the location of the USTs or contamination. **This is considered an REC because excavation for the project within, adjacent, and possibly south of State Route 49 may encounter contaminated soil and groundwater.**

### **Offsite Listings**

Twenty-two offsite locations were listed for hazardous materials use within the ASTM search distances. However, most of the offsite listings are listings for routine hazardous materials use or disposal but with no records of spills, leaks, or releases. Sites with no records of leaks, spills, or releases are not considered further.

The following 12 sites are located upgradient of or near to the project site and have records of spills, leaks, or releases. The site numbers are keyed to the listings and maps in the regulatory database report in Appendix A.

**2 - Phillip N. Hufft mining claim** – A claim for placer gold mining is listed under the name of Phillip N. Hufft and the majority of the project site shows extensive evidence of reworking for placer mining operations. No mining equipment or associated contamination was observed during the site reconnaissance. An internet check of the mining name claim identified a Phillip Newton Hufft that died in Placerville on February 7, 1878, suggesting that this is a gold rush-era claim that is still listed but hasn't been active since then. The mining operations appear to have used placer mining techniques where gold was separated using water and gravity. This technique would not have used chemicals, such as mercury. Therefore, this placer mining operation is not anticipated to have resulted in residual environmental issues and is not considered a REC.

**4 – Potable water leak** – About 1,000 gallons of potable water was released from a pipe break in 2004. However, given that the released material was water treated to drinking water standards, this would not be a hazardous material and would not have adversely affected the project site.

**6 – Waste water spill** – About 300 gallons of waste water was spilled into a drainage ditch in 2008. No information was listed regarding the nature of the waste water, the extent of the spill, or the cleanup activities. Given the date of the spill, this spill is considered unlikely to be a continuing environmental concern. This site is considered to be an HREC but not a current REC.

**11 – El Dorado Union High School** – This school site has six active USTs: two 12,000-gallon diesel USTs, two 8,000-gallon gasoline USTs, and two 1,000-gallon gasoline USTs. This site has no records of violations, spills, leaks, or releases. Therefore, this site would not have affected the project site.

**12 – Waste connections** – This site is a waste recycling and disposal center located at 4100 Throwita Way that was constructed on a former lime processing facility. The environmental concern is that lime has an elevated pH that could threaten groundwater quality. However, the direction of groundwater flow is to the northwest away from the project site (Youngdahl, 2018). Therefore, any contamination issues with the former lime processing center would be unable to affect the project site.

**14 – Foothill Auto Repair** – The site is listed for poor housekeeping that allowed solvents, antifreeze, and waste oil to be spilled on the ground (GeoSearch, 2019). However, a nearby well was sampled and the testing results indicated that the spills had not migrated to groundwater. Therefore, any contamination issues with the auto repair facility were limited to the repair facility and would be unable to affect the project site.

**18 and 21 – Celebrity Plating** – This site is a plating shop cited for poor housekeeping with cyanide, chromium, nickel and other metals detected in soil from spills. However, this site is located about ½-mile north of the project site. Investigations at the nearby Site 12, discussed above, indicated that the direction of groundwater flow is to the northwest, away from the project site (Youngdahl, 2018). In addition, the DTSC determined that this site does not pose a threat to other properties. Therefore, any contamination issues with this site would be unable to affect the project site.

**20 – Teters Auto Wrecking** – This site, located about ½-mile north of the project site, is listed as a one-acre auto wrecking yard in 1987 based on the nature of the site activities. No further investigation is documented, no records of spills, leaks, or releases are recorded, and the site is listed as a low priority. Investigations at the nearby Site 12, discussed above, indicated that the direction of groundwater flow is to the northwest, away from the project site (Youngdahl, 2018). Therefore, any contamination issues with this site would be unable to affect the project site.

**22 – Oxygen Service and Supply Company** – This site, located about ½-mile north of the project site, is an oxygen service and supply facility listed due to the nature of the facility. No further investigation is documented, and no records of spills, leaks, or releases are recorded.

Investigations at the nearby Site 12, discussed above, indicated that the direction of groundwater flow is to the northwest, away from the project site (Youngdahl, 2018). Therefore, any contamination issues with this site would be unable to affect the project site.

**23 – Old Caldor Lumber Company** – This site, located about 3/4-mile north of the project site, is a former lumber yard, listed due to the nature of the previous activities. The DTSC completed a Preliminary Endangerment Assessment in 1989 and concluded that this site does not pose a threat to public health or the environment (GeoSearch, 2018).

### ***Sites with Poor or Inadequate Addresses***

Sites not plotted due to poor or inadequate address information are referred to as orphan sites. Three orphan sites were listed. The Union Mine address is about 1-1/2 mile to the southwest and cross- to downgradient of the project site. The two Bright Court addresses are located about one mile west of the project site and cross gradient of the project site. These three orphan site listings are not upgradient of the project site and would not be able to affect the project site.

## **4.2 Other Records Reviewed**

ESA accessed websites for the State Water Resources Control Board and Department of Toxic Substance Control that track hazardous materials sites. In addition, the regulatory agency records search provides historical aerial photographs, historical topographic maps, and a search of Sanborn insurance maps and city directories for review. The results of the review of these records are discussed below.

### **Hazardous Materials Websites**

ESA accessed the SWRCB and DTSC combined online GeoTracker database at <http://geotracker.waterboards.ca.gov/> and EnviroStor database at <http://www.envirostor.dtsc.ca.gov/public> for cleanup sites located on or near the subject property under SWRCB jurisdiction. The former service station previously located at 493 Main Street is discussed above as Site 2 was listed and the available information incorporated above. The Youngdahl, 2018, report was acquired from the GeoTracker website and used to augment the discussions above for Sites 12, 18, 20, 21, and 22. No other active sites were listed upslope (upgradient) of the proposed project.

### **Historical Aerial Photographs**

Historical aerial photographs are available for the years 1946, 1952, 1964, 1975, 1980, 1984, 1993, 2004, 2005, 2006, 2009, 2010, 2012, 2014, and 2016, included in **Appendix B** (GeoSearch, 2018). The 2018 aerial photograph is used as the base for Figure 2.

#### **1946**

The 1946 aerial photograph shows State Route 49 and China Garden Road in their current alignment. Faith Lane and Silver Drive are not yet present. Evidence of the placer mining activities south of State

Route 49 of the late 1800's has been muted by time, consisting of various unpaved roads, paths, and other ground surface works. No mining equipment is visible in the photograph, assuming any had been used for placer mining; placer mining generally uses only water and gravity to separate the gold from soil. The area next to and south of State Route 49 have what appears to be an orchard with two structures likely to be a residence and agricultural support structure. As discussed above in the regulatory records search, a service station with USTs removed in 1992 was reportedly present at the location in the blue oval. A building is present within the blue oval and does not appear to be different from the present building occupying this location. The site reconnaissance observed the building is identified as the Gust Brothers Building constructed in 1930. No obvious fuel islands are visible although the 1946 station configuration may have been different from modern fuel island configurations. Given the documentation of a fuel leak next to and underneath State Route 49, the USTs and fuel dispensers are assumed to have been located between the building and the highway or perhaps along the side of the building near the highway. The surrounding area is a mix of rural use with some development. The cemetery, Carpenter house, and Morrill building identified on Figure 2 are present.

## **1952**

In the 1952 aerial photograph, almost all of the orchard and building closest to State Route 49 are gone; the assumed agricultural structure set further back from the highway is still present.

## **1964**

The 1964 aerial photograph shows increased development in the area. Silver Road is present.

## **1975**

The 1975 aerial photograph shows Faith Lane in its current alignment. The Diamond Springs shopping center is also present at the southeast corner of State Route 49 and Faith Lane.

## **1980**

The 1980 aerial photograph is of poor quality and does not appear to show any changes.

## **1984**

The 1984 aerial photograph is of poor quality but shows extensive grading associated with a previous development south of State Route 49 that did not proceed beyond initial grading.

## **1993**

The 1993 aerial photograph is of good quality and shows increased development in the area.

## **2004 through 2016**

The 2004 through 2016 aerial photographs show no substantive changes.

## Historical Topographic Maps

Historical topographic maps are available for the years 1891, 1892, 1893, 1949, 1950, 1973, and 2012, and are included in **Appendix B** (GeoSearch, 2018).

The 1891, 1892, 1893 are all small scale topographic maps (1:125,000-scale) that provide limited detail, but each show the project site with no development and State Route 49 in its current alignment. One unimproved road is shown along the western side of the project site. The 1949 topographic map is a larger scale map (1:24,000-scale) and shows China Garden Road and other nearby roadways. Diamond Springs is shown largely as currently developed. The 1950, 1973, and 2012 topographic maps show no substantive changes, though Faith Lane and Silver Road appear on the 1975 and later maps.

## Fire Insurance Maps

Fire insurance maps did not cover the area of the project site, as documented in Appendix B (GeoSearch, 2018).

## City Directory

A city directory search was conducted for the project site and nearby parcels (GeoSearch, 2018). The listings for section of Pleasant Valley Road within the proposed project are for residential or commercial properties not anticipated to handle significant quantities of hazardous materials. The search report is in Appendix B.

## Permit History

Previous residential development efforts referred to as the Missouri Flat-Diamond Springs Redevelopment Project in the early 1980s proceeded as far as some limited initial grading visible beginning with the 1984 aerial photograph, discussed above (Snoke, 1984). The project did not proceed further. The Eldorado County online permit website was checked for violations; no violations were recorded (El Dorado County, 2019).

## County Assessor Records

The El Dorado County Recorders records were checked for environmental liens on APN 329-301-20-100, the parcel adjacent to State Route 49 (GeoSearch, 2018). No liens were recorded.

## 4.3 Physical Setting

The following sections provide information about the physical setting of the parcels obtained the regulatory agency records search in Appendix B. Although geotechnical information is not a required element of ASTM E1527-13 Phase I assessments, the regulatory records search includes some geotechnical information, as provided below.

## Topography

The U.S. Geological Survey (USGS), 7.5 minute Placerville, California, topographic quadrangle map, 1973, depicts the subject property at an elevation ranging from about 1,819 feet above sea level at the northern end of the project site on China Garden Road to about 1,794 feet above sea at the southern end of the project site on Faith Lane. Most of the project site is hilly and sloping to the west or south.

## Geology and Hydrology

Surface soil types consist of very fine sandy loam to very rocky sandy loam, with placer diggings throughout the area (GeoSearch, 2018). The entire project site is underlain Mesozoic granitic rocks with rock exposures in various locations. No wells are located on the project site. The flow direction of groundwater likely mimics the ground surface flowing to the northeast.

## Oil and Gas Fields

There are no recorded oil or natural gas wells located on or within ½ mile of the parcel (GeoSearch, 2018).

## Flood Zone Designation

The parcel is not located within the 100-year flood zone (GeoSearch, 2018).

## **SECTION 5.0**

### **Site Reconnaissance**

---

#### **5.1 Methodology and Limiting Conditions**

The purpose of the site reconnaissance was to identify visible hazardous materials on the project site. Michael Burns of ESA conducted the site reconnaissance on January 10, 2019, to assess present conditions. Weather at the time of the site visit was clear. The site conditions discussed below are limited to readily apparent environmental conditions observed. ESA archaeologists Heidi Koenig and Robin Hoffman accompanied Mr. Burns on the site reconnaissance. Local resident Mike Roberts and Native American representatives Ramona Tripp-Verbeck, Joseph Valdez, and John McGregor also accompanied the group for some of the reconnaissance.

#### **5.2 Site Observations**

The project site consists of State Route 49 and adjacent areas. Access is from State Route 49 (also referred to as Main Street or Pleasant Valley Road) and sections of Faith Lane, China Garden Road, and/or Silver Road, as needed. Drainage generally flows south. The project site consists paved roads, paved parking areas, and unimproved drainages and areas along the sides of the roads and parking areas. No standard sidewalks, curbs, and gutters are present anywhere in the project area; drainage flows to unlined ditches or across roadways. Several structures are present along the sides of the roads and within one or more of the potential road realignment option areas. Notable features and site conditions are identified on Figure 2 and discussed in the text below, along with photographs of features of interest. The reconnaissance is organized by subareas divided by the roads.

##### **North of State Route 49 and East of China Garden Road**

The Gust Brothers Building, located at 493 Main Street (State Route 49) and identified on Figure 2, was constructed in 1930. The building is currently occupied by a café, hair salon, and a dentist, as shown in the photographs below. A fire station is located next door. No USTs or above ground storage tanks (ASTs) are present. No hazardous materials, stained soil or pavement, or stressed vegetation were observed.

The photographs below show the existing Gust Brothers Building, which does not have the appearance of a former service station. As previously discussed above in the records review, this site was previously a service station with two 500-gallon gasoline USTs that were removed in 1992. The 1996 No Further Action letter issued by the RWQCB stated that contaminated soil and groundwater extended south to an unknown distance beneath State Route 49 and was left in place (RWQCB, 1996). Given the documentation that contamination extended to beneath the highway, it is assumed that the USTs must have been located in between the building and the highway or possibly to one side of the building but near the highway. Visual inspection did not indicate an obvious concrete or asphalt patch suggesting a filled-in excavation, as shown in the photographs

below. Therefore, it is uncertain where the documented contamination was located or how far it extended beneath the highway; this uncertain condition is considered a REC.

## North of State Route 49 and West of China Garden Road

The El Dorado County Ambulance JPA building and parking lot is at 480 Locust Road and the northwest corner of State Route 49 and China Garden Road, and covers most of parcel. No USTs, ASTs, hazardous materials, stained soil or pavement, or stressed vegetation were observed.

← Ambulance Building

Drainage ditch between ambulance building and China Garden Road →

Ambulance building parking lot  
↓

A cemetery that dates to the 1800s is adjacent and west of the ambulance building. Further west are several residences, undeveloped land, and the vacant, dilapidated, and historic stone Morrill Building built in 1857 at 425 Pleasant Valley Road. No USTs, ASTs, hazardous materials, stained soil or pavement, or stressed vegetation were observed. The photographs below show the cemetery and the Morrill Building, whose locations are identified on Figure 2.

## South of State Route 49 and West of Faith Lane

Deb's Frosty is a restaurant located at 460 Pleasant Valley Road (State Route 49), the southwest corner of State Route 49 and Faith Lane, as identified on Figure 2. The area behind Deb's Frosty has one propane tank, two dumpsters, one refrigeration unit, and one 55-gallon drum that was empty, as shown in the bottom photograph below. No USTs, ASTs, hazardous materials, stained soil or pavement, or stressed vegetation were observed.

The Diamond Springs Plaza Shopping Center at 444 Pleasant Valley Road is located adjacent and west of Deb's Frosty. The center is occupied by a small strip mall occupied by small commercial retail outlets, including a hair salon, a massage parlor, a printer, and an internet carrier office. The retail outlets are anticipated to use small quantities of cleaning solutions, solvents, and other small quantities of chemicals specific to each business. No USTs, ASTs, hazardous materials, stained soil or pavement, or stressed vegetation were observed.

## South of State Route 49 and East of Faith Lane

The area south of State Route 49 and east of Faith Lane is occupied by the Diamond Village Shopping Center at 484 and 478 Pleasant Valley Road. The center consists of several strip mall buildings occupied by small commercial retail outlets, including a chiropractor, cash for gold service, a Humane Society office (no outdoor animals or animal pens were observed), a television and computer repair shop, a bakery/market, barber shop, an income tax preparer, a printer/embroiderer, a bicycle sales and repair shop, a gift shop, a medical equipment and supply outlet (e.g., wheelchairs and walkers), and several other spaces of uncertain use. The various outlets are anticipated to use small quantities of cleaning solutions, solvents, and other small quantities of chemicals specific to each business. No hazardous materials, ASTs, USTs, soil or pavement staining, or stressed vegetation were observed.

The historic brick Carpenter Building at 478 Pleasant Valley Road is also located in this shopping center at the location identified on Figure 2. This brick structure was constructed in 1877 by C. G. Carpenter, an early pioneer of Diamond Springs. The brick building and attached more recent structures are shown in the photographs below. No USTs, ASTs, hazardous materials, stained soil or pavement, or stressed vegetation were observed. Given the age of the structure, ACM and/or LBP may be present. These are common building materials with existing regulations for proper handling and disposal.

## Faith Lane

Faith Lane is a paved road section that extends south from State Route 49/Pleasant Valley Road. The road extends south to a locked gate and an unpaved road section further south, as shown in the photographs below. A buried sewer line is located under the length of Faith Lane. Drainage ditches are on both sides of the road and drain to the south. No USTs, ASTs, hazardous materials, stained soil or pavement, or stressed vegetation were observed.

The area west of Faith Lane is a fenced unpaved area with one closed storage trailer, whose contents are unknown. The rest of the area was empty. The area east of Faith Lane is empty and undeveloped but shows a hummocky topographic surface indicating historical placer mining activities. No USTs, ASTs, hazardous materials, stained soil or pavement, or stressed vegetation were observed.

## 5.3 Results of Site Reconnaissance

No evidence of discolored or stained pavement, soil, or water; stressed vegetation; ASTs; USTs; pits; or lagoons were observed at the project site. Trash and debris were observed in scattered locations, particularly inside the Morrill Building. However, the trash and debris are considered a *de minimus* condition because the materials can readily be recycled or disposed of at any municipal (Class III non-hazardous waste) landfill. The Carpenter Building may have ACM and/or LBP; these are common building materials with existing regulations for proper handling and disposal.

The release of gasoline to soil and groundwater from two USTs removed from the Gust Brothers Building site is considered a REC because the regulatory agency stated that contamination extended to some unknown distance beneath State Route 49. Depending on the extent of contamination and the footprint of the selected roadway and intersection alignment, the project may encounter soil and groundwater contaminated with fuel.

## SECTION 6.0

---

# Findings and Opinions

### 6.1 Findings and Opinions

Relevant federal, state, and local regulatory agency lists for sites at or near the project site were reviewed. A former service station at the corner of State Route 49 and China Garden Road was identified as the location of contaminated soil and groundwater that extend to an unknown distance beneath the highway. **This is considered a REC since excavation for the project may encounter contaminated soil and groundwater.** No other hazardous materials sites at or near the project were indicated in the database search results or by the regulatory agencies as being able to affect the project site. Various other sites have records of past minor releases that have been cleaned up and the cases closed by regulatory agencies. Various businesses that use small quantities of hazardous materials consisting of cleaning solutions and are located along the segments but none are listed on regulatory records as having violations or hazardous materials releases. In addition, all of the listed facilities are set back from the road segments. Given the setback distances, it is unlikely that any of the listed sites would be able to affect soil conditions in the road segments.

The site reconnaissance did not observe any RECs and verified that previous sites with cleanup actions are set back from the road. Some of the road segments have dirt shoulders or ditches without sidewalks or gutters. Some trash was observed in the ditches and shoulder areas; however, no containers, staining indicative of chemical releases, or stressed vegetation was observed. The trash and debris are considered a *de minimus* condition because the materials can be recycled or disposed of at any Class III (non-hazardous materials) landfill.

Although not an ASTM 1527 Phase I assessment consideration, it should be noted that structures that predate the 1970s USEPA ban on ACM and LBP may have these materials. Hazardous building materials would be required to be disposed of as licensed facilities permitted to accept the waste.

Various underground utilities were noted within and along the sides of most road segments. Construction activities would need to account for these utilities.

In addition, soil along the sides of the subject roadways may have concentrations of lead above action levels. Caltrans and the DTSC have developed guidance for evaluating and addressing aerially deposited lead at <http://www.dot.ca.gov/env/hazwaste/adl.html>. The investigation for aerially deposited lead would be included in the Preliminary Site Assessment (PSI) conducted for this project.

## 6.2 Data Gaps

ESA attempted to obtain reasonably ascertainable information regarding the bridge and the surrounding environs within the limited scope of work. There were no data gaps identified that could affect the identification of RECs, HRECs, or CRECs at the parcels.

## SECTION 7.0

# Report Authors and Qualifications

---

This section includes qualification statements of the environmental professionals responsible for conducting the Phase I assessment and preparing this report.

Mr. Michael Burns, PG, CEG, CHG, of ESA conducted the data review for the bridge, conducted the site reconnaissance, and prepared the Initial Site Assessment report. Mr. Burns has over 30 years of experience in environmental site investigations, characterizations, and assessments, including Initial Site Assessments.

The work conducted and the report written by Mr. Burns was reviewed by Mr. Luke Evans. Mr. Evans has 20 years of experience in environmental site investigations, characterizations, and assessments, including Initial Site Assessments.

Mr. Burns declares that, to the best of his professional knowledge and belief, he meets the definition of Environmental Professional as defined in 40 CFR §312.10. Mr. Evans declares that, to the best of his professional knowledge and belief, he meets the definition of Environmental Professional as defined in 40 CFR §312.10.

Mr. Burns has the specific qualifications based on education, training, and experience to assess a property of the nature, history, and setting of this property. With the assistance of Mr. Evans, he has developed and performed all the appropriate inquiries in conformance with the standards and practices set forth in 40 CFR Part 312.

## Disclaimer

---

*This report was designed by GeoSearch to meet or exceed the records search requirements of the All Appropriate Inquiries Rule (40 CFR § 312.26) and the current version of the ASTM International E1527, Standard Practice for Environmental Site Assessments: Phase I Environmental Site Assessment Process or, if applicable, the custom requirements requested by the entity that ordered this report. The records and databases of records used to compile this report were collected from various federal, state and local governmental entities. It is the goal of GeoSearch to meet or exceed the 40 CFR § 312.26 and E1527 requirements for updating records by using the best available technology. GeoSearch contacts the appropriate governmental entities on a recurring basis. Depending on the frequency with which a record source or database of records is updated by the governmental entity, the data used to prepare this report may be updated monthly, quarterly, semi-annually, or annually.*

*The information provided in this report was obtained from a variety of public sources. GeoSearch cannot ensure and makes no warranty or representation as to the accuracy, reliability, quality, errors occurring from data conversion or the customer's interpretation of this report. This report was made by GeoSearch for exclusive use by its clients only. Therefore, this report may not contain sufficient information for other purposes or parties. GeoSearch and its partners, employees, officers And independent contractors cannot be held liable For actual, incidental, consequential, special or exemplary damages suffered by a customer resulting directly or indirectly from any information provided by GeoSearch.*

## Target Property Summary

### **Target Property Information**

Stonehenge Springs

Faith Lane

Diamond Springs, California 95619

#### **Coordinates**

Area centroid (-120.81907, 38.6845057)

1,761 feet above sea level

#### **USGS Quadrangle**

Placerville, CA

### **Geographic Coverage Information**

**County/Parish:** El Dorado (CA)

#### **ZipCode(s):**

Diamond Springs CA: 95619

El Dorado CA: 95623

Placerville CA: 95667

DIAMOND SPRINGS, CA 95619

COUNTY: EL DORADO

### FACILITY DETAILS

CASE TYPE: LUST CLEANUP SITE

CASE NUMBER: 90096

STATUS: COMPLETED - CASE CLOSED 01/02/2013

POTENTIAL CONTAMINATION:

#### GASOLINE

POTENTIAL MEDIA AFFECTED:

AQUIFER USED FOR DRINKING WATER SUPPLY

SITE HISTORY:

THE FIRST THREE MONITORING WELLS WERE INSTALLED ON SITE IN NOVEMBER 1999. BY THE TIME OF THE INITIATION OF THE OFF SITE INVESTIGATION IN THE FALL OF 2001, THE AVERAGE REPORTED MTBE CONCENTRATIONS IN THESE THREE WELLS WAS 50,083 µG/L. THE AVERAGE CONCENTRATION IN THESE THREE WELLS FOR THE LAST FOUR SEMI-ANNUAL MONITORING EVENTS IS 566 µG/L. THIS REPRESENTS A 98.9 PERCENT REDUCTION SINCE ONSITE REMEDIATION BEGAN IN EARLY 2002. OFF SITE INVESTIGATION CONTINUED THROUGH TO THE SUMMER OF 2004 WITH CONCURRENT REMEDIAL ACTIVITIES. BY AUGUST 2004 THERE WERE 29 MONITORING WELLS AND TWO EXTRACTION WELLS IN USE. ELEVEN OF THE MONITORING WELLS DEFINE THE OUTWARD EXTENT OR EDGES OF THE MTBE PLUME, COMPRISING THE WELLS THAT HAVE CONSISTENTLY BEEN REPORTED WITH MTBE BELOW THE DRINKING WATER STANDARD. A SENSITIVE RECEPTOR SURVEY WAS COMPLETED IN LATE 2000. THERE WERE NO WATER SUPPLY WELLS LOCATED WITHIN THE EXTENT OF THE PLUME, LATER DEFINED, AND ONLY FIVE WELLS WERE FOUND IN THE 2000 FOOT SEARCH RADIUS. THE CLOSEST WAS OVER 500 FEET CROSS GRADIENT OF THE PLUME AND HAS SUBSEQUENTLY BEEN REMOVED. GROUNDWATER AS A POTENTIAL SOURCE VAPOR EMANATIONS WAS ADDRESSED IN WORKPLAN DATED JANUARY 26, 2007 INDICATING THAT THERE WERE NO AREAS THAT COULD POTENTIALLY BE IMPACTED TO INVESTIGATE. THIS WAS AFFIRMED IN THE WORKPLAN APPROVAL LETTER FROM THE REGIONAL BOARD DATED 6 FEBRUARY 2007. PATTERSON LAKE IS SITUATED DOWNGRADIENT OF THE SOUTHWESTERLY DIRECTED PLUME THAT ORIGINATED AT THE PROPERTY NOW OWNED BY TOWER ENERGY GROUP. THE LAKE HAS FUNCTIONED AS A HYDRAULIC BARRIER, LOWERING THE GROUNDWATER GRADIENT IN ITS AREA AND SLOWING THE PREREMEDIAL ADVANCEMENT OF THE PLUME. THREE 10,000 GALLON UST'S AND ASSOCIATED PIPING WERE REMOVED FROM THE SITE IN THE SUMMER OF 2010 STATION UPGRADES ACTIVITIES.

### REGULATORY ACTIVITIES

## CALSITES Database (CALSITES)

**MAP ID# 18**

Distance from Property: 0.497 mi. (2,624 ft.) NNW  
Elevation: 1,817 ft. (Higher than TP)

### **FACILITY INFORMATION**

ID #: 09340001

NAME: CELEBRITY PLATING

ADDRESS: 4502 MISSOURI FLAT ROAD  
PLACERVILLE, CA

STATUS (DATE): PRELIMINARY ENDANGERMENT ASSESSMENT REQUIRED (04/14/1997)

STANDARD INDUSTRIAL CLASSIFICATION BELIEVED TO BE CAUSE OF (POTENTIAL) CONTAMINATION:

**MANU - FABRICATED METAL PRODUCTS**

ACCESS TO SITE: NOT REPORTED

GROUNDWATER CONTAMINATION: NOT REPORTED

### **COMMENTS**

SITE SCREENING COMPLETED. EL DORADO COUNTY HEALTH DEPARTMENT SUBMITTED AN INVESTIGATION REPORT TO DTSC FOR REVIEW AND COMMENT. DTSC STAFF PERFORMED A CURSORY REVIEW OF THE REPORT AND CONDUCTED A SITE VISIT. THE HOUSEKEEPING PRACTICES IN THE PLATING AREA WERE POOR. MOST OF THE FLOOR AND WALLS SHOWED SIGNS OF SPILLS AND LEAKS. SOIL SAMPLES FROM BENEATH THE FLOOR WERE CONTAMINATED WITH 42 PPM CYANIDE, 159 PPM CHROMIUM, 123 PPM COPPER, 1010 PPM NICKEL AND OTHER METALS. A PRELIMINARY ENDANGERMENT ASSESSMENT IS REQUIRED TO DETER- THE POTENTIAL THREAT POSED BY ONSITE CONTAMINATION.

## ***Environmental Records Definitions - FEDERAL***

**AIRSAFS** Aerometric Information Retrieval System / Air Facility Subsystem

VERSION DATE: 10/20/14

The United States Environmental Protection Agency (EPA) modified the Aerometric Information Retrieval System (AIRS) to a database that exclusively tracks the compliance of stationary sources of air pollution with EPA regulations: the Air Facility Subsystem (AFS). Since this change in 2001, the management of the AIRS/AFS database was assigned to EPA's Office of Enforcement and Compliance Assurance.

**BRS** Biennial Reporting System

VERSION DATE: 12/31/15

The United States Environmental Protection Agency (EPA), in cooperation with the States, biennially collects information regarding the generation, management, and final disposition of hazardous wastes regulated under the Resource Conservation and Recovery Act of 1976 (RCRA), as amended. The Biennial Report captures detailed data on the generation of hazardous waste from large quantity generators and data on waste management practices from treatment, storage and disposal facilities. Currently, the EPA states that data collected between 1991 and 1997 was originally a part of the defunct Biennial Reporting System and is now incorporated into the RCRAInfo data system.

**CDL** Clandestine Drug Laboratory Locations

VERSION DATE: 10/05/17

The U.S. Department of Justice ("the Department") provides this information as a public service. It contains addresses of some locations where law enforcement agencies reported they found chemicals or other items that indicated the presence of either clandestine drug laboratories or dumpsites. In most cases, the source of the entries is not the Department, and the Department has not verified the entry and does not guarantee its accuracy. Members of the public must verify the accuracy of all entries by, for example, contacting local law enforcement and local health departments. The Department does not establish, implement, enforce, or certify compliance with clean-up or remediation standards for contaminated sites; the public should contact a state or local health department or environmental protection agency for that information.

**DOCKETS** EPA Docket Data

VERSION DATE: 12/22/05

The United States Environmental Protection Agency Docket data lists Civil Case Defendants, filing dates as far back as 1971, laws broken including section, violations that occurred, pollutants involved, penalties assessed and superfund awards by facility and location. Please refer to ICIS database as source of current data.

**EC** Federal Engineering Institutional Control Sites

VERSION DATE: 08/03/15

This database includes site locations where Engineering and/or Institutional Controls have been identified as part

## ***Environmental Records Definitions - FEDERAL***

of a selected remedy for the site as defined by United States Environmental Protection Agency official remedy decision documents. A site listing does not indicate that the institutional and engineering controls are currently in place nor will be in place once the remedy is complete; it only indicates that the decision to include either of them in the remedy is documented as of the completed date of the document. Institutional controls are actions, such as legal controls, that help minimize the potential for human exposure to contamination by ensuring appropriate land or resource use. Engineering controls include caps, barriers, or other device engineering to prevent access, exposure, or continued migration of contamination.

**ECHOR09** Enforcement and Compliance History Information

VERSION DATE: 09/01/18

The EPA's Enforcement and Compliance History Online (ECHO) database, provides compliance and enforcement information for facilities nationwide. This database includes facilities regulated as Clean Air Act stationary sources, Clean Water Act direct dischargers, Resource Conservation and Recovery Act hazardous waste handlers, Safe Drinking Water Act public water systems along with other data, such as Toxics Release Inventory releases.

**ERNSCA** Emergency Response Notification System

VERSION DATE: 10/28/18

This National Response Center database contains data on reported releases of oil, chemical, radiological, biological, and/or etiological discharges into the environment anywhere in the United States and its territories. The data comes from spill reports made to the U.S. Environmental Protection Agency, U.S. Coast Guard, the National Response Center and/or the U.S. Department of Transportation.

**FRSCA** Facility Registry System

VERSION DATE: 10/09/18

The United States Environmental Protection Agency's Office of Environmental Information (OEI) developed the Facility Registry System (FRS) as the centrally managed database that identifies facilities, sites or places subject to environmental regulations or of environmental interest. The Facility Registry System replaced the Facility Index System or FINDS database.

**HMIRSR09** Hazardous Materials Incident Reporting System

VERSION DATE: 09/30/18

The HMIRS database contains unintentional hazardous materials release information reported to the U.S. Department of Transportation located in EPA Region 9. This region includes the following states: Arizona, California, Hawaii, Nevada, and the territories of Guam and American Samoa.

**ICIS** Integrated Compliance Information System (formerly DOCKETS)

VERSION DATE: 09/01/18

## ***Environmental Records Definitions - FEDERAL***

ICIS is a case activity tracking and management system for civil, judicial, and administrative federal Environmental Protection Agency enforcement cases. ICIS contains information on federal administrative and federal judicial cases under the following environmental statutes: the Clean Air Act, the Clean Water Act, the Resource Conservation and Recovery Act, the Emergency Planning and Community Right-to-Know Act - Section 313, the Toxic Substances Control Act, the Federal Insecticide, Fungicide, and Rodenticide Act, the Comprehensive Environmental Response, Compensation, and Liability Act, the Safe Drinking Water Act, and the Marine Protection, Research, and Sanctuaries Act.

**ICISNPDES** Integrated Compliance Information System National Pollutant Discharge Elimination System

VERSION DATE: 07/09/17

Authorized by the Clean Water Act, the National Pollutant Discharge Elimination System (NPDES) permit program controls water pollution by regulating point sources that discharge pollutants into waters of the United States.

**LUCIS** Land Use Control Information System

VERSION DATE: 09/01/06

The LUCIS database is maintained by the U.S. Department of the Navy and contains information for former Base Realignment and Closure (BRAC) properties across the United States.

**MLTS** Material Licensing Tracking System

VERSION DATE: 06/29/17

MLTS is a list of approximately 8,100 sites which have or use radioactive materials subject to the United States Nuclear Regulatory Commission (NRC) licensing requirements. Disclaimer: Due to agency regulations and policies, this database contains applicant/licensee location information which may or may not be related to the physical location per MLTS site.

**NPDES09** National Pollutant Discharge Elimination System

VERSION DATE: 04/01/07

Authorized by the Clean Water Act, the National Pollutant Discharge Elimination System (NPDES) permit program controls water pollution by regulating point sources that discharge pollutants into waters of the United States. The NPDES database was collected from December 2002 until April 2007. Refer to the PCS and/or ICIS-NPDES database as source of current data. This database includes permitted facilities located in EPA Region 9. This region includes the following states: Arizona, California, Hawaii, Nevada, and the territories of Guam and American Samoa.

**PADS** PCB Activity Database System

VERSION DATE: 09/14/18

## ***Environmental Records Definitions - FEDERAL***

PADS Identifies generators, transporters, commercial storers and/or brokers and disposers of PCB's who are required to notify the EPA of such activities.

**PCSR09** Permit Compliance System

VERSION DATE: 08/01/12

The Permit Compliance System is used in tracking enforcement status and permit compliance of facilities controlled by the National Pollutant Discharge Elimination System (NPDES) under the Clean Water Act and is maintained by the United States Environmental Protection Agency's Office of Compliance. PCS is designed to support the NPDES program at the state, regional, and national levels. This database includes permitted facilities located in EPA Region 9. This region includes the following states: Arizona, California, Hawaii, Nevada, and the territories of Guam and American Samoa. PCS has been modernized, and no longer exists. National Pollutant Discharge Elimination System (ICIS-NPDES) data can now be found in Integrated Compliance Information System (ICIS).

**RCRASC** RCRA Sites with Controls

VERSION DATE: 09/26/18

The Resource Conservation and Recovery Act (RCRA) gives EPA the authority to control hazardous waste from the "cradle-to-grave." This includes the generation, transportation, treatment, storage, and disposal of hazardous waste. RCRA also set forth a framework for the management of non-hazardous solid wastes. The 1986 amendments to RCRA enabled EPA to address environmental problems that could result from underground tanks storing petroleum and other hazardous substances. This listing refers to facilities with institutional controls in place.

**SEMSLIENS** SEMS Lien on Property

VERSION DATE: 08/13/18

The U.S. Environmental Protection Agency's (EPA) Office of Solid Waste and Emergency Response, Office of Superfund Remediation and Technology Innovation (OSRTI), has implemented The Superfund Enterprise Management System (SEMS), formerly known as CERCLIS (Comprehensive Environmental Response, Compensation and Liability Information System) to track and report on clean-up and enforcement activities taking place at Superfund sites. SEMS represents a joint development and ongoing collaboration between Superfund's Remedial, Removal, Federal Facilities, Enforcement and Emergency Response programs. This is a listing of SEMS sites with a lien on the property.

**SFLIENS** CERCLIS Liens

VERSION DATE: 06/08/12

A Federal CERCLA ("Superfund") lien can exist by operation of law at any site or property at which United States Environmental Protection Agency has spent Superfund monies. These monies are spent to investigate and address releases and threatened releases of contamination. CERCLIS provides information as to the identity of

## ***Environmental Records Definitions - FEDERAL***

these sites and properties. This database contains those CERCLIS sites where the Lien on Property action is complete.

**SSTS** Section Seven Tracking System

VERSION DATE: 02/01/17

The United States Environmental Protection Agency tracks information on pesticide establishments through the Section Seven Tracking System (SSTS). SSTS records the registration of new establishments and records pesticide production at each establishment. The Federal Insecticide, Fungicide and Rodenticide Act (FIFRA) requires that production of pesticides or devices be conducted in a registered pesticide-producing or device-producing establishment. ("Production" includes formulation, packaging, repackaging, and relabeling.)

**TRI** Toxics Release Inventory

VERSION DATE: 12/31/16

The Toxics Release Inventory, provided by the United States Environmental Protection Agency, includes data on toxic chemical releases and waste management activities from certain industries as well as federal and tribal facilities. This inventory contains information about the types and amounts of toxic chemicals that are released each year to the air, water, and land as well as information on the quantities of toxic chemicals sent to other facilities for further waste management.

**TSCA** Toxic Substance Control Act Inventory

VERSION DATE: 12/31/12

The Toxic Substances Control Act (TSCA) was enacted in 1976 to ensure that chemicals manufactured, imported, processed, or distributed in commerce, or used or disposed of in the United States do not pose any unreasonable risks to human health or the environment. TSCA section 8(b) provides the United States Environmental Protection Agency authority to "compile, keep current, and publish a list of each chemical substance that is manufactured or processed in the United States." This TSCA Chemical Substance Inventory contains non-confidential information on the production amount of toxic chemicals from each manufacturer and importer site.

**RCRAGR09** Resource Conservation & Recovery Act - Generator

VERSION DATE: 03/01/18

The Resource Conservation and Recovery Act (RCRA) gives EPA the authority to control hazardous waste from the "cradle-to-grave." This includes the generation, transportation, treatment, storage, and disposal of hazardous waste. RCRA also set forth a framework for the management of non-hazardous solid wastes. The 1986 amendments to RCRA enabled EPA to address environmental problems that could result from underground tanks storing petroleum and other hazardous substances. This listing refers to facilities currently generating hazardous waste. EPA Region 9 includes the following states: Arizona, California, Hawaii, Nevada, and the territories of Guam and American Samoa.

## ***Environmental Records Definitions - FEDERAL***

### **RCRANGR09**

Resource Conservation & Recovery Act - Non-Generator

VERSION DATE: 03/01/18

The Resource Conservation and Recovery Act (RCRA) gives EPA the authority to control hazardous waste from the "cradle-to-grave." This includes the generation, transportation, treatment, storage, and disposal of hazardous waste. RCRA also set forth a framework for the management of non-hazardous solid wastes. The 1986 amendments to RCRA enabled EPA to address environmental problems that could result from underground tanks storing petroleum and other hazardous substances. This listing refers to facilities classified as non-generators. Non-Generators do not presently generate hazardous waste. EPA Region 9 includes the following states: Arizona, California, Hawaii, Nevada, and the territories of Guam and American Samoa.

### **ALTFUELS**

Alternative Fueling Stations

VERSION DATE: 09/01/18

Nationwide list of alternative fueling stations made available by the US Department of Energy's Office of Energy Efficiency & Renewable Energy. Includes Biodiesel stations, Ethanol (E85) stations, Liquefied Petroleum Gas (Propane) stations, Ethanol (E85) stations, Natural Gas stations, Hydrogen stations, and Electric Vehicle Supply Equipment (EVSE).

### **FEMAUST**

FEMA Owned Storage Tanks

VERSION DATE: 12/01/16

This is a listing of FEMA owned underground and aboveground storage tank sites. For security reasons, address information is not released to the public according to the U.S. Department of Homeland Security.

### **HISTPST**

Historical Gas Stations

VERSION DATE: NR

This historic directory of service stations is provided by the Cities Service Company. The directory includes Cities Service filling stations that were located throughout the United States in 1930.

### **ICISCLEANERS**

Integrated Compliance Information System Drycleaners

VERSION DATE: 09/01/18

This is a listing of drycleaner facilities from the Integrated Compliance Information System (ICIS). The Environmental Protection Agency (EPA) tracks facilities that possess NAIC and SIC codes that classify businesses as drycleaner establishments.

### **MRDS**

Mineral Resource Data System

VERSION DATE: 03/15/16

## ***Environmental Records Definitions - FEDERAL***

MRDS (Mineral Resource Data System) is a collection of reports describing metallic and nonmetallic mineral resources throughout the world. Included are deposit name, location, commodity, deposit description, geologic characteristics, production, reserves, resources, and references. This database contains the records previously provided in the Mineral Resource Data System (MRDS) of USGS and the Mineral Availability System/Mineral Industry Locator System (MAS/MILS) originated in the U.S. Bureau of Mines, which is now part of USGS.

**MSHA** Mine Safety and Health Administration Master Index File

VERSION DATE: 08/31/18

The Mine dataset lists all Coal and Metal/Non-Metal mines under MSHA's jurisdiction since 1/1/1970. It includes such information as the current status of each mine (Active, Abandoned, NonProducing, etc.), the current owner and operating company, commodity codes and physical attributes of the mine. Mine ID is the unique key for this data. This information is provided by the United States Department of Labor - Mine Safety and Health Administration (MSHA).

**BF** Brownfields Management System

VERSION DATE: 10/01/18

Brownfields are real property, the expansion, redevelopment, or reuse of which may be complicated by the presence or potential presence of a hazardous substance, pollutant, or contaminant. Cleaning up and reinvesting in these properties takes development pressures off of undeveloped, open land, and both improves and protects the environment. The United States Environmental Protection Agency maintains this database to track activities in the various brown field grant programs including grantee assessment, site cleanup and site redevelopment. This database included tribal brownfield sites.

**DNPL** Delisted National Priorities List

VERSION DATE: 11/14/18

This database includes sites from the United States Environmental Protection Agency's Final National Priorities List (NPL) where remedies have proven to be satisfactory or sites where the original analyses were inaccurate, and the site is no longer appropriate for inclusion on the NPL, and final publication in the Federal Register has occurred.

**NLRRCRAT** No Longer Regulated RCRA Non-CORRACTS TSD Facilities

VERSION DATE: 03/01/18

This database includes RCRA Non-Corrective Action TSD facilities that are no longer regulated by the United States Environmental Protection Agency or do not meet other RCRA reporting requirements. This listing includes facilities that formerly treated, stored or disposed of hazardous waste.

**ODI** Open Dump Inventory

VERSION DATE: 06/01/85

## **Environmental Records Definitions - FEDERAL**

The open dump inventory was published by the United States Environmental Protection Agency. An "open dump" is defined as a facility or site where solid waste is disposed of which is not a sanitary landfill which meets the criteria promulgated under section 4004 of the Solid Waste Disposal Act (42 U.S.C. 6944) and which is not a facility for disposal of hazardous waste. This inventory has not been updated since June 1985.

**RCRAT** Resource Conservation & Recovery Act - Non-CORRACTS Treatment, Storage & Disposal Facilities

VERSION DATE: 03/01/18

The Resource Conservation and Recovery Act (RCRA) gives EPA the authority to control hazardous waste from the "cradle-to-grave." This includes the generation, transportation, treatment, storage, and disposal of hazardous waste. RCRA also set forth a framework for the management of non-hazardous solid wastes. The 1986 amendments to RCRA enabled EPA to address environmental problems that could result from underground tanks storing petroleum and other hazardous substances. This listing refers to facilities recognized as hazardous waste treatment, storage, and disposal sites (TSD).

**SEMS** Superfund Enterprise Management System

VERSION DATE: 08/13/18

The U.S. Environmental Protection Agency's (EPA) Office of Solid Waste and Emergency Response, Office of Superfund Remediation and Technology Innovation (OSRTI), has implemented The Superfund Enterprise Management System (SEMS), formerly known as CERCLIS (Comprehensive Environmental Response, Compensation and Liability Information System) to track and report on clean-up and enforcement activities taking place at Superfund sites. SEMS represents a joint development and ongoing collaboration between Superfund's Remedial, Removal, Federal Facilities, Enforcement and Emergency Response programs.

**SEMSARCH** Superfund Enterprise Management System Archived Site Inventory

VERSION DATE: 08/13/18

The Superfund Enterprise Management System Archive listing (SEMS-ARCHIVE) has replaced the CERCLIS NFRAP reporting system in 2015. This listing reflect sites that have been assessed and no further remediation is planned and is of no further interest under the Superfund program.

**SMCRA** Surface Mining Control and Reclamation Act Sites

VERSION DATE: 09/14/18

An inventory of land and water impacted by past mining (primarily coal mining) is maintained by OSMRE to provide information needed to implement the Surface Mining Control and Reclamation Act of 1977 (SMCRA). The inventory contains information on the location, type, and extent of AML impacts, as well as, information on the cost associated with the reclamation of those problems. The inventory is based upon field surveys by State, Tribal, and OSMRE program officials. It is dynamic to the extent that it is modified as new problems are identified and existing problems are reclaimed.

## ***Environmental Records Definitions - FEDERAL***

**USUMTRCA** Uranium Mill Tailings Radiation Control Act Sites

VERSION DATE: 03/04/17

The Legacy Management Office of the Department of Energy (DOE) manages radioactive and chemical waste, environmental contamination, and hazardous material at over 100 sites across the U.S. The L.M. Office manages this database of sites registered under the Uranium Mill Tailings Control Act (UMTRCA).

**DOD** Department of Defense Sites

VERSION DATE: 12/01/14

This information originates from the National Atlas of the United States Federal Lands data, which includes lands owned or administered by the Federal government. Army DOD, Army Corps of Engineers DOD, Air Force DOD, Navy DOD and Marine DOD areas of 640 acres or more are included.

**FUDS** Formerly Used Defense Sites

VERSION DATE: 06/01/15

The Formerly Used Defense Sites (FUDS) inventory includes properties previously owned by or leased to the United States and under Secretary of Defense Jurisdiction, as well as Munitions Response Areas (MRAs). The remediation of these properties is the responsibility of the Department of Defense. This data is provided by the U.S. Army Corps of Engineers (USACE), the boundaries/polygon data are based on preliminary findings and not all properties currently have polygon data available. **DISCLAIMER:** This data represents the results of data collection/processing for a specific USACE activity and is in no way to be considered comprehensive or to be used in any legal or official capacity as presented on this site. While the USACE has made a reasonable effort to insure the accuracy of the maps and associated data, it should be explicitly noted that USACE makes no warranty, representation or guaranty, either expressed or implied, as to the content, sequence, accuracy, timeliness or completeness of any of the data provided herein. For additional information on Formerly Used Defense Sites please contact the USACE Public Affairs Office at (202) 528-4285.

**FUSRAP** Formerly Utilized Sites Remedial Action Program

VERSION DATE: 03/04/17

The U.S. DOE established the Formerly Utilized Sites Remedial Action Program (FUSRAP) in 1974 to remediate sites where radioactive contamination remained from the Manhattan Project and early U.S. Atomic Energy Commission (AEC) operations. The DOE Office of Legacy Management (LM) established long-term surveillance and maintenance (LTS&M) requirements for remediated FUSRAP sites. DOE evaluates the final site conditions of a remediated site on the basis of risk for different future uses. DOE then confirms that LTS&M requirements will maintain protectiveness.

**NLRRCRAC** No Longer Regulated RCRA Corrective Action Facilities

VERSION DATE: 03/01/18

## ***Environmental Records Definitions - FEDERAL***

This database includes RCRA Corrective Action facilities that are no longer regulated by the United States Environmental Protection Agency or do not meet other RCRA reporting requirements.

**NMS** Former Military Nike Missile Sites

VERSION DATE: 12/01/84

This information was taken from report DRXTH-AS-IA-83A016 (Historical Overview of the Nike Missile System, 12/1984) which was performed by Environmental Science and Engineering, Inc. for the U.S. Army Toxic and Hazardous Materials Agency Assessment Division. The Nike system was deployed between 1954 and the mid-1970's. Among the substances used or stored on Nike sites were liquid missile fuel (JP-4); starter fluids (UDKH, aniline, and furfuryl alcohol); oxidizer (IRFNA); hydrocarbons (motor oil, hydraulic fluid, diesel fuel, gasoline, heating oil); solvents (carbon tetrachloride, trichloroethylene, trichloroethane, stoddard solvent); and battery electrolyte. The quantities of material a disposed of and procedures for disposal are not documented in published reports. Virtually all information concerning the potential for contamination at Nike sites is confined to personnel who were assigned to Nike sites.

During deactivation most hardware was shipped to depot-level supply points. There were reportedly instances where excess materials were disposed of on or near the site itself at closure. There was reportedly no routine site decontamination.

**NPL** National Priorities List

VERSION DATE: 11/14/18

This database includes United States Environmental Protection Agency (EPA) National Priorities List sites that fall under the EPA's Superfund program, established to fund the cleanup of the most serious uncontrolled or abandoned hazardous waste sites identified for possible long-term remedial action.

**PNPL** Proposed National Priorities List

VERSION DATE: 11/14/18

This database contains sites proposed to be included on the National Priorities List (NPL) in the Federal Register. The United States Environmental Protection Agency investigates these sites to determine if they may present long-term threats to public health or the environment.

**RCRAC** Resource Conservation & Recovery Act - Corrective Action Facilities

VERSION DATE: 03/01/18

The Resource Conservation and Recovery Act (RCRA) gives EPA the authority to control hazardous waste from the "cradle-to-grave." This includes the generation, transportation, treatment, storage, and disposal of hazardous waste. RCRA also set forth a framework for the management of non-hazardous solid wastes. The 1986 amendments to RCRA enabled EPA to address environmental problems that could result from underground tanks storing petroleum and other hazardous substances. This listing refers to facilities with corrective action activity.

## ***Environmental Records Definitions - FEDERAL***

**RCRASUBC**

Resource Conservation &amp; Recovery Act - Subject to Corrective Action Facilities

VERSION DATE: 03/01/18

The Resource Conservation and Recovery Act (RCRA) gives EPA the authority to control hazardous waste from the "cradle-to-grave." This includes the generation, transportation, treatment, storage, and disposal of hazardous waste. RCRA also set forth a framework for the management of non-hazardous solid wastes. The 1986 amendments to RCRA enabled EPA to address environmental problems that could result from underground tanks storing petroleum and other hazardous substances. This listing refers to facilities subject to corrective actions.

**RODS**

Record of Decision System

VERSION DATE: 08/13/18

These decision documents maintained by the United States Environmental Protection Agency describe the chosen remedy for NPL (Superfund) site remediation. They also include site history, site description, site characteristics, community participation, enforcement activities, past and present activities, contaminated media, the contaminants present, and scope and role of response action.

## **Environmental Records Definitions - STATE (CA)**

**CDL** Clandestine Drug Labs

VERSION DATE: 12/31/17

The California Department of Toxic Substance Control (DTSC) provides this listing of illegal drug laboratories. Pursuant to Section 25354.5 of the California Health and Safety Code, DTSC conducts emergency removal actions at clandestine drug labs at the request of State and local law enforcement agencies. DTSC's contractors typically remove hazardous substances that may pose an immediate threat to public health and the environment while the enforcement officials are on scene. During the emergency removal actions, contractors remove and properly dispose of contaminated lab equipment, chemicals used to make the illegal drugs (usually methamphetamine), lab chemical wastes, and other grossly contaminated materials. DTSC does not perform additional assessment work beyond standard emergency removal actions and makes no further determination regarding the need for future cleanup work at the emergency removal location. The reported location information may or may not include the actual location of the illegal drug lab. The DTSC does not guarantee the accuracy of the address or location information or the condition of the location listed.

**CHMIRS** California Hazardous Material Incident Report System

VERSION DATE: 10/24/18

The California Hazardous Material Incident Report System database is provided by the California Emergency Management Agency. This database contains accidental or spill release information from reported hazardous material incidents since 1993.

**DTSCDR** DTSC Deed Restrictions

VERSION DATE: 10/07/18

The California Department of Toxic Substances Control (DTSC) maintains this listing of sites with deed restrictions. According to the DTSC, restricted land use indicates whether the site or area within the site has an environmental restriction recorded and/or other institutional control preventing certain types of land use or activities. The land use restrictions listed under the site management requirements are only an abbreviated summary of the land use restrictions, and may not encompass all restrictions and notification requirements placed on a property. For complete land use restriction information please contact the DTSC to review associated Land Use Restriction documents.

**EMI** Emissions Inventory Data

VERSION DATE: 12/31/16

The Air Resources Board's Emissions Inventory Database contains criteria pollutant data and toxic data on facilities throughout the state of California for the 2012-2000 inventory years.

**HWTS** Hazardous Waste Tanner Summary

VERSION DATE: 12/31/17

## **Environmental Records Definitions - STATE (CA)**

This data is prepared from information extracted from copies of hazardous waste manifests received each year by the Department of Toxic Substances Control. The Hazardous Waste Summary Report (Tanner Report) currently includes manifest data from the 1993 through the 2016 reporting years.

**LDS** Land Disposal Sites

VERSION DATE: 10/09/18

Land Disposal sites (Landfills) included in GeoTracker. GeoTracker is the Water Boards data management system for sites that impact, or have the potential to impact, water quality in California, with emphasis on groundwater.

**LIENS** Recorded Environmental Cleanup Liens

VERSION DATE: 05/17/18

The California Department of Toxic Substance Control (DTSC) maintains this listing of liens placed upon real properties. A lien is utilized by the DTSC to obtain reimbursement from responsible parties for costs associated with the remediation of contaminated properties.

**MCS** Military Cleanup Sites

VERSION DATE: 07/09/18

Military sites (consisting of: Military UST sites; Military Privatized sites; and Military Cleanup sites [formerly known as DoD non UST]) included in GeoTracker. GeoTracker is the Water Boards data management system for sites that impact, or have the potential to impact, water quality in California, with emphasis on groundwater

**NPDES** National Pollutant Discharge Elimination System Facilities

VERSION DATE: 09/04/18

Authorized by the Clean Water Act, the National Pollutant Discharge Elimination System (NPDES) permit program controls water pollution by regulating point sources that discharge pollutants into waters of the United States.

**ABST** Above Ground Storage Tanks

VERSION DATE: 09/13/18

This database, provided by the California Environmental Protection Agency's (CalEPA) Regulated Site Portal, contains aboveground petroleum storage tank facilities originating from the California Environmental Reporting System (CERS). These facilities store petroleum in aboveground storage tanks with oversight by local agencies. As of January 1, 2008, Assembly Bill No. 1130 of the Aboveground Petroleum Storage Act (APSA) authorized the Certified Unified Program Agencies to implement and administer the requirements of the APSA. CalEPA Data Disclaimer: Information displayed in the portal is collected from separate agency databases and displayed unaltered. Information that is considered confidential, trade secret, or is otherwise protected by the agency that

## **Environmental Records Definitions - STATE (CA)**

manages the database is not loaded into the portal. For more detail about information displayed in the portal, please visit the data source sites. Please refer to AST2007 database for aboveground storage tank information obtained from the California State Water Resources Control Board prior to 2008 APSA requirements.

**AST2007** Aboveground Storage Tanks Prior to January 2008

VERSION DATE: 12/01/07

This database contains aboveground storage tank facilities registered with the California State Water Resources Control Board (SWRCB) between 2007 and 2003. Since 2006, tanks were required to contain a minimum (even as cumulative) of 1320 gallons to be in the program. As of January 1, 2008, the SWRCB no longer maintains a list of registered aboveground storage tanks, due to effective Assembly Bill No. 1130 (Laird) of the Aboveground Petroleum Storage Act (APSA). This Bill authorized the Certified Unified Program Agencies to implement and administer the requirements of the APSA. Please refer to ABST database as a current source for aboveground petroleum storage tank data.

**CLEANER** Dry Cleaner Facilities

VERSION DATE: 06/20/18

This database, created by accessing the California Department of Toxic Substances Control's (DTSC) Hazardous Waste Tracking System, includes dry cleaner facilities that have registered EPA identification numbers. These facilities are categorized with one of the following NAICS Codes: 81231 or 81232. This database may also include facilities other than dry cleaners who also register with these same NAICS Codes. Not all companies report their NAICS/SIC Codes to the DTSC and therefore this database may exclude registered dry cleaner facilities with incomplete classification information.

**DTSCHWT** DTSC Registered Hazardous Waste Transporters

VERSION DATE: 10/14/18

The Department of Toxic Substances Control provides this list of Registered Hazardous Waste Transporters.

**HISTUST** Historical Underground Storage Tanks

VERSION DATE: 12/31/87

The Hazardous Substance Storage Container Database is a historical list of Underground Storage Tank sites, compiled from tank survey and registration information collected at one time between 1984 and 1987 by the State Water Resources Control Board. The hazardous substances stored within these tanks includes, but not restricted to, petroleum products, industrial solvents, and other materials.

**MINES** Mines Listing

VERSION DATE: 07/31/18

This database includes mine site locations from the California Office of Mine Reclamation.

## **Environmental Records Definitions - STATE (CA)**

**MWMP** California Medical Waste Management Program Facility List

VERSION DATE: 06/29/18

To protect the public and the environment from potential infectious exposure to disease causing agents, the Medical Waste Management Program (MWMP), in the Environmental Management Branch of the California Department of Public Health, regulates the generation, handling, storage, treatment, and disposal of medical waste by providing oversight for the implementation of the Medical Waste Management Act (MWMA). The MWMP permits and inspects all medical waste off-site treatment facilities, medical waste transporters, and medical waste transfer stations.

**SLIC** Spills, Leaks, Investigation & Cleanup Recovery Listing

VERSION DATE: 06/16/08

These records are maintained by the California Regional Water Quality Control Board (RWQCB). This list includes contaminated sites that impact groundwater or have the potential to impact ground water. Please refer to CLEANUPSITES database as source of current data.

**SWEEPS** Statewide Environmental Evaluation and Planning System

VERSION DATE: 10/01/94

The Statewide Environmental Evaluation and Planning System (SWEEPS) contains a historical listing of active and inactive underground storage tank locations from the State Water Resources Control Board. The hazardous substances stored within these tanks includes, but not restricted to, petroleum products, industrial solvents, and other materials. Refer to CUPA listing for source of current data.

**USTCUPA** Underground Storage Tanks

VERSION DATE: 10/18/18

An underground storage tank is an individual tank or group of tanks that store hazardous substances. Underground storage tanks are completely or considerably below the ground surface. This database contains UST permit data submitted from the Certified Unified Program Agencies (CUPA) directly to the State Water Resources Control Board. CUPA's are local agencies that have been certified by the California EPA to implement state environmental programs within the local agency's jurisdiction.

**BF** Brownfield Sites

VERSION DATE: 09/03/18

This database includes Brownfield sites from the State Water Resources Control Board. These are sites that have gone through the Moratorium of Agreement (MOA) process.

## **Environmental Records Definitions - STATE (CA)**

**CALSITES**                      CALSITES Database

VERSION DATE: 05/01/04

This historical database was maintained by the Department of Toxic Substance Control for more than a decade. CALSITES contains information on Brownfield properties with confirmed or potential hazardous contamination. In 2006, DTSC introduced EnviroStor as the latest Brownfields site database.

**CLEANUPSITES**                      GeoTracker Cleanup Sites

VERSION DATE: 10/09/18

This GeoTracker Cleanup Sites database is maintained by the State Water Resources Control Board. The database contains contaminated sites that impact groundwater or have the potential to impact ground water, including sites that require cleanup, such as Leaking Underground Storage Tank Sites, Department of Defense Sites, and Cleanup Program Sites. GeoTracker also contains records for various unregulated projects as well as permitted facilities including: Irrigated Lands, Oil and Gas production, operating Permitted USTs, and Land Disposal Sites. GeoTracker portals retrieve records and view integrated data sets from multiple State Water Board programs and other agencies.

**CORTESE**                      Cortese List

VERSION DATE: 10/18/18

This active listing includes hazardous waste and substances sites designated by the State Water Resources Control Board, the Integrated Waste Board, and the Department of Toxic Substance Control. The Cortese List is utilized by the State, local agencies and developers to comply with the California Environmental Quality Act requirements in providing information about the location of hazardous materials release sites.

**DROP**                      Listing of Certified Dropoff, Collection, and Community Service Programs

VERSION DATE: 10/14/18

Listing of Certified Dropoff, Collection, and Community Service Programs (non-buyback) operating under the state of California's Beverage Container Recycling Program. This list is maintained by the Department of Conservation.

**ERAP**                      Expedited Removal Action Program Sites

VERSION DATE: 10/14/18

The Expedited Remedial Action Program is a pilot project administered by the Department of Toxic Substances Control's Site Mitigation and Brownfields Reuse Program to promote the cleanup of up to 30 hazardous substance release sites. ERAP provides significant incentives for redevelopment of contaminated properties by promoting cleanups based on the planned land use, by providing a covenant not to sue, and by outlining a fair and equitable liability scheme.

## **Environmental Records Definitions - STATE (CA)**

**HISTCORTESE** Historical Cortese List

VERSION DATE: 11/02/02

This historical listing includes hazardous waste and substances sites designated by the State Water Resources Control Board, the Integrated Waste Board, and the Department of Toxic Substance Control. The Cortese List was utilized by the State, local agencies and developers to comply with the California Environmental Quality Act requirements in providing information about the location of hazardous materials release sites. See CACORTESE for an updated version of this database.

**LUST** Leaking Underground Storage Tanks

VERSION DATE: 10/09/18

This database is maintained by the State Water Resources Control Board. LUST records contain an inventory of reported leaking underground storage tank incidents. Please refer to the CLEANUPSITES database as source of current data.

**NFA** No Further Action Determination

VERSION DATE: 09/16/18

The NFA listing contains properties at which the Department of Toxic Substance Control has made a clear determination that the property does not pose a problem to the environment or to public health.

**NFE** Sites Needing Further Evaluation

VERSION DATE: 06/20/18

The NFE listing contains properties that the Department of Toxic Substance Control suspects with possible contamination. These are unconfirmed contaminated properties that need further assessment.

**PROC** Listing of Certified Processors

VERSION DATE: 08/12/18

Listing of Certified Processors that are operating under the state of California's Beverage Container Recycling Program. This list is maintained by the Department of Conservation.

**REF** Referred to Another Local or State Agency

VERSION DATE: 06/21/18

The REF listing contains properties where contamination has not been confirmed and which were determined as not requiring direct Department of Toxic Substance Control Site Mitigation Program action or oversight. Accordingly, these sites have been referred to another state or local regulatory agency.

## **Environmental Records Definitions - STATE (CA)**

**SWIS** Solid Waste Information System Sites

VERSION DATE: 10/08/18

The Solid Waste Information System (SWIS) database includes information on solid waste facilities, operations, and disposal sites located in California. This database is maintained by the California Department of Resources Recycling and Recovery.

**SWRCY** Recycling Centers

VERSION DATE: 08/13/18

Listing of Certified Recycling Centers that are operating under the state of California's Beverage Container Recycling Program. This list is maintained by the Department of Conservation.

**VCP** Voluntary Cleanup Program

VERSION DATE: 10/14/18

Contains low threat level properties with either confirmed or unconfirmed releases and the project proponents have request that DTSC oversee investigation and/or cleanup activities and have agreed to provide coverage for DTSC's costs.

**WMUDS** Waste Management Unit Database

VERSION DATE: 01/01/00

The Waste Management Unit Database System tracks and inventories waste management units. CCR Title 27 contains criteria stating that Waste Management Units are classified according to their ability to contain wastes. Containment shall be determined by geology, hydrology, topography, climatology, and other factors relating to the ability of the Unit to protect water quality. Water Code Section 13273.1 requires that operators submit a water quality solid waste assessment test (SWAT) report to address leak status. The WMUDS was last updated by the State Water Resources control board in 2000.

**ENVIROSTOR** EnviroStor Cleanup Sites

VERSION DATE: 10/14/18

The Department of Toxic Substances Control (DTSC) has developed the EnviroStor database system to evaluate and track sites with confirmed or potential contamination and sites where further investigation may be necessary. This EnviroStor database of cleanup sites contains the following: Federal Superfund sites (National Priorities List (NPL)); State Response, including Military Facilities and State Superfund; Voluntary Cleanup; and School sites. Sites where DTSC has made a "No Action Required" determination are not included in this database, as these sites had assessments that revealed no evidence of recognized environmental conditions in connection with the property.

## ***Environmental Records Definitions - STATE (CA)***

### **ENVIROSTORPCA**

EnviroStor Permitted and Corrective Action Sites

VERSION DATE: 10/18/18

The Department of Toxic Substances Control (DTSC) has developed the EnviroStor database system to evaluate and track sites with confirmed or potential contamination and sites where further investigation may be necessary. This EnviroStor database contains detailed information on hazardous waste permitted and corrective action facilities. Investigation and cleanup activities at hazardous waste facilities (either Resource Conservation and Recovery Act (RCRA) or State-only) that either were eligible for a permit or received a permit are called "corrective action." These facilities treated stored, disposed and/or transferred hazardous waste.

### **TOXPITS**

Toxic Pits Cleanup Act Sites

VERSION DATE: 07/01/95

Toxic Pits are sites with possible contamination of hazardous substances where cleanup is necessary. This listing is no longer updated by the State Water Resources Control Board.

## ***Environmental Records Definitions - TRIBAL***

**USTR09**                      Underground Storage Tanks On Tribal Lands

VERSION DATE: 04/10/18

This database, provided by the United States Environmental Protection Agency (EPA), contains underground storage tanks on Tribal lands located in EPA Region 9. This region includes the following states: Arizona, California, Hawaii, Nevada, and the territories of Guam and American Samoa.

**LUSTR09**                      Leaking Underground Storage Tanks On Tribal Lands

VERSION DATE: 04/10/18

This database, provided by the United States Environmental Protection Agency (EPA), contains leaking underground storage tanks on Tribal lands located in EPA Region 9. This region includes the following states: Arizona, California, Hawaii, Nevada, and the territories of Guam and American Samoa.

**ODINDIAN**                      Open Dump Inventory on Tribal Lands

VERSION DATE: 11/08/06

This Indian Health Service database contains information about facilities and sites on tribal lands where solid waste is disposed of, which are not sanitary landfills or hazardous waste disposal facilities, and which meet the criteria promulgated under section 4004 of the Solid Waste Disposal Act (42 U.S.C. 6944).

**TORRESDUMPSITES**                      Illegal Dump Sites on the Torres Martinez Reservation

VERSION DATE: 10/29/07

This listing of illegal dump site locations on the Torres Martinez Reservation is maintained by the United States Environmental Protection Agency, Region IX. These dump sites contain unlawfully discarded household waste such as landscaping and wood wastes with no known soil or groundwater contamination. A majority of the sites have already been cleaned up through the collaborative efforts of the EPA, The California Integrated Waste Management Board and the Torres Martinez Tribe.

**INDIANRES**                      Indian Reservations

VERSION DATE: 01/01/00

The Department of Interior and Bureau of Indian Affairs maintains this database that includes American Indian Reservations, off-reservation trust lands, public domain allotments, Alaska Native Regional Corporations and Recognized State Reservations.

# FEMA Report

## FEMA - Federal Emergency Management Agency

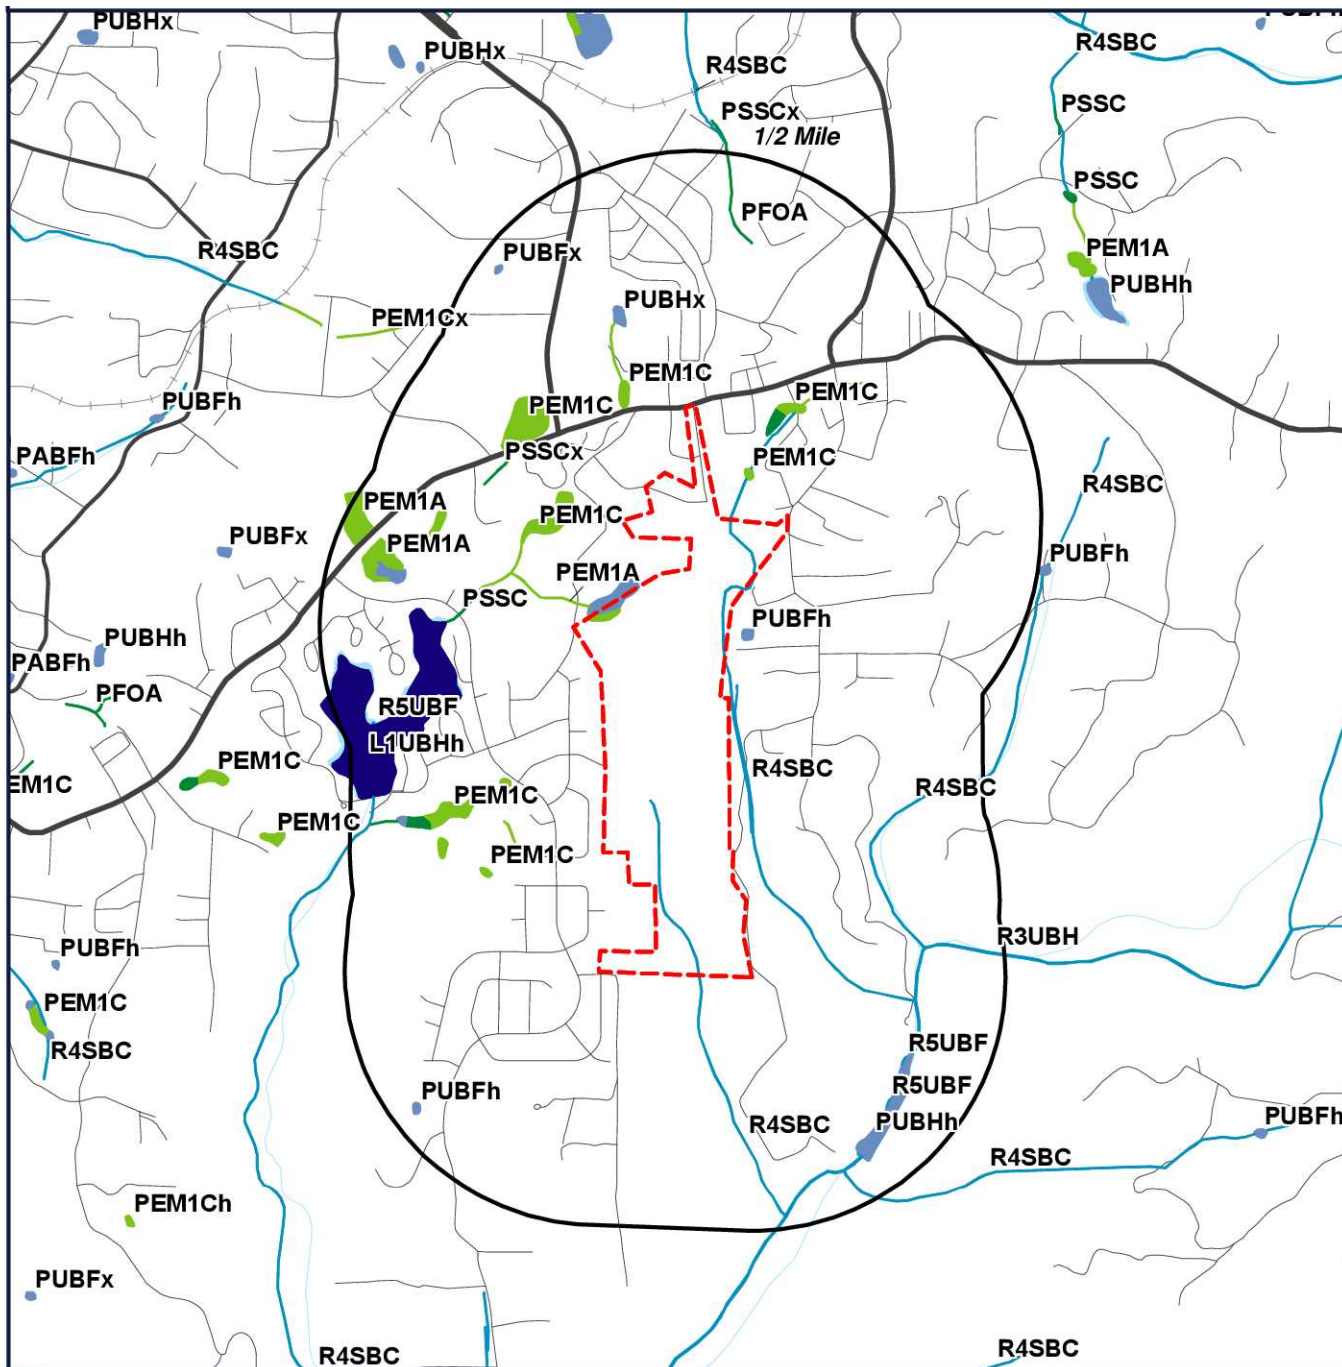

The National Flood Hazard Layer (NFHL) data used in this report is derived from the Federal Emergency Management Agency. The NFHL dataset is a compilation of effective Flood Insurance Rate Map (FIRM) databases (a collection of the digital data that are used in GIS systems for creating new Flood Insurance Rate Maps) and Letters of Map Change (Letters of Map Amendment and Letters of Map Revision only) that create a seamless GIS data layer for United States and its territories. The NFHL is updated as new study or LOMC data becomes effective. Note: Currently, not all areas have modernized FIRM database data available. As a result, users may need to refer to the effective Flood Insurance Rate Map for effective flood hazard information. This data was provided by the Federal Emergency Management Agency's Map Service Center in November of 2013.

# NWI Report

## NWI - National Wetlands Inventory

The US NWI digital data bundle is a set of records of wetlands location and classification as defined by the U.S. Fish & Wildlife Service. This dataset is one of a series available in 7.5 minute by 7.5 minute blocks containing ground planimetric coordinates of wetlands point, line, and area features and wetlands attributes. When completed, the series will provide coverage for all of the contiguous United States, Hawaii, Alaska, and U.S. protectorates in the Pacific and Caribbean. The digital data as well as the hardcopy maps that were used as the source for the digital data are produced and distributed by the U.S. Fish & Wildlife Service's National Wetlands Inventory project. Currently, this data is only available in select counties throughout the United States.

# SOIL Report

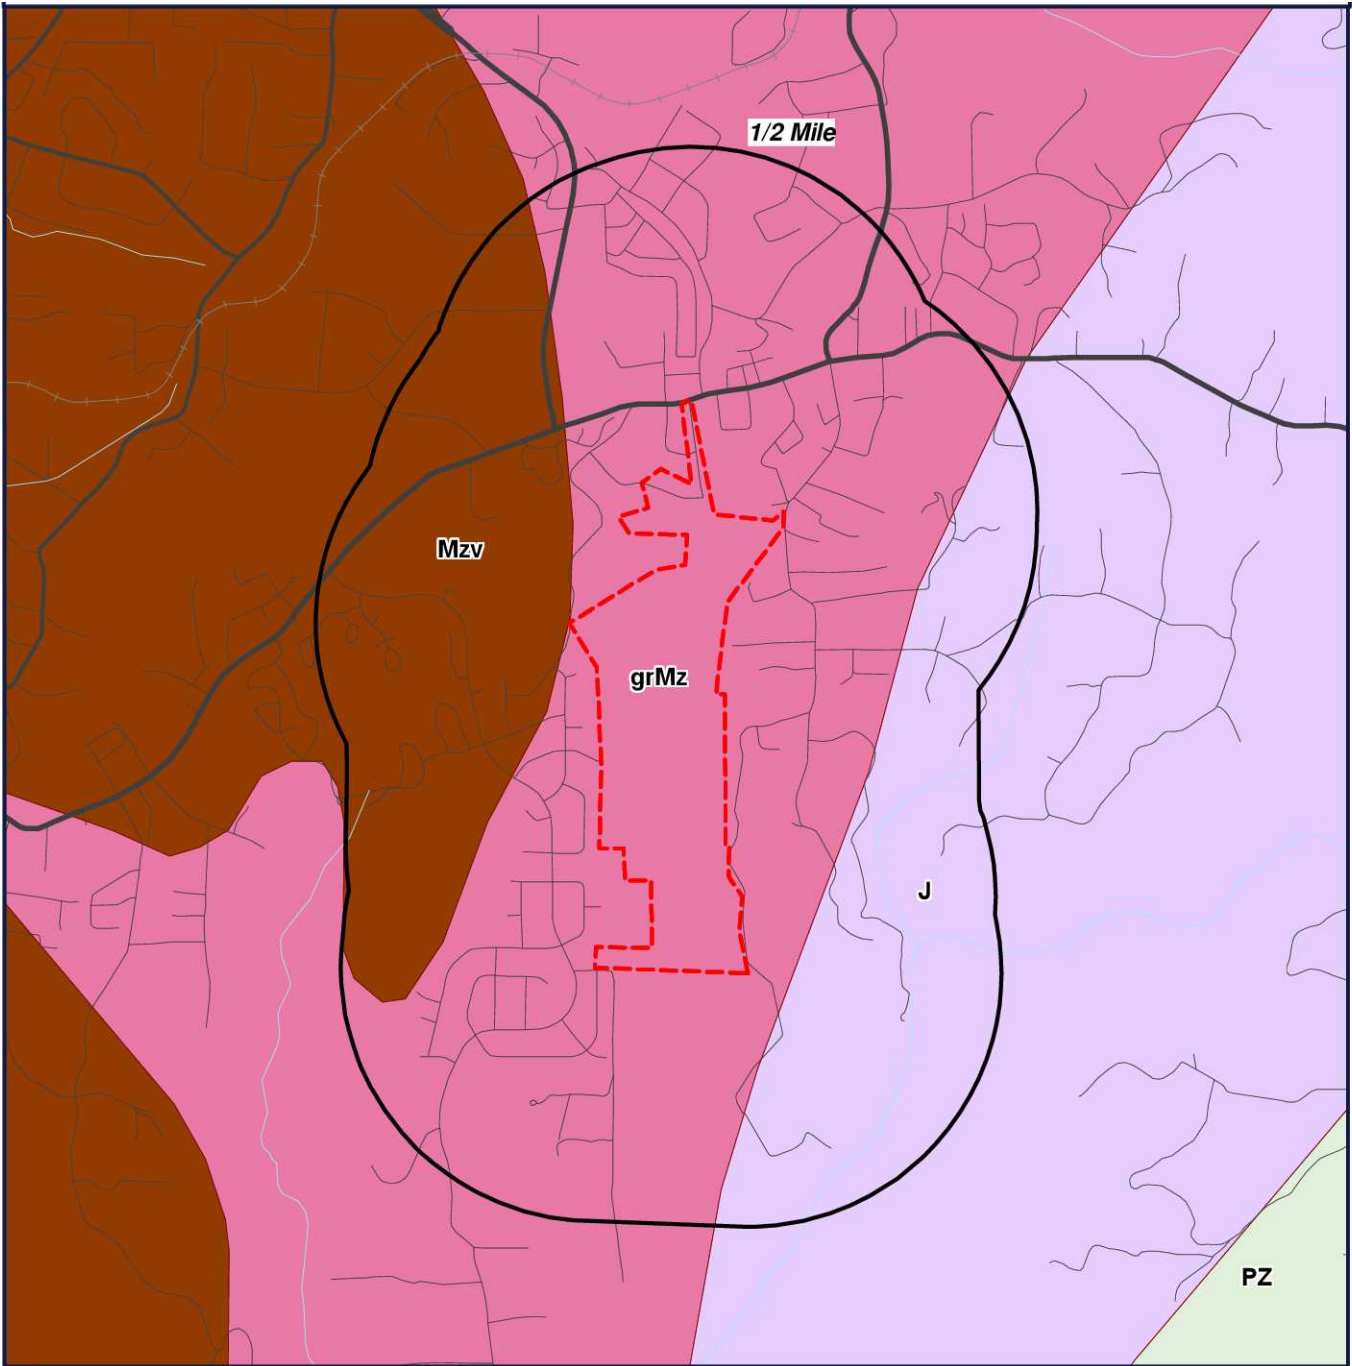

## Soil Surveys

The soil data used in this report is obtained from the Natural Resources Conservation Service (NRCS). The NRCS is the primary federal agency that works with private landowners to help them conserve, maintain and improve their natural resources. The soil survey contains information that can be applied in managing farms and ranches; in selecting sites for roads, ponds, buildings and other structures; and in determining the suitability of tracts of land for farming, industry and recreation. This data is available in select counties throughout the United States.

# GEOLOGY Report

## US GEOLOGY

THE GEOLOGY DATA USED IN THIS REPORT ORIGINATES FROM THE USGS. THE FIRST STAGE IN DEVELOPING STATE DATABASES FOR THE CONTERMINOUS UNITED STATES WAS TO ACQUIRE DIGITAL VERSIONS OF ALL EXISTING STATE GEOLOGIC MAPS. ALTHOUGH A SIGNIFICANT NUMBER OF DIGITAL STATE MAPS ALREADY EXISTED, A NUMBER OF STATES LACKED THEM. FOR THESE STATES NEW DIGITAL COMPILATIONS WERE PREPARED IN COOPERATION WITH STATE GEOLOGIC SURVEYS OR BY THE NSA (NATIONAL SURVEYS AND ANALYSIS) PROJECT. THESE NEW DIGITAL STATE GEOLOGIC MAPS AND DATABASES WERE CREATED BY DIGITIZING ALREADY EXISTING PRINTED MAPS, OR, IN A FEW CASES, BY MERGING EXISTING LARGER SCALE DIGITAL MAPS.

### GEOLOGY Definitions within Search Radius

GEOLOGY SYMBOL: **grMz**

UNIT NAME: **Mesozoic granitic rocks, unit 3 (Sierra Nevada, Death Valley area, Northern Mojave Desert and Transverse Ranges)**

UNIT AGE: **Permian to Tertiary; most Mesozoic**

UNIT DESCRIPTION:

**Mesozoic granite, quartz monzonite, granodiorite, and quartz diorite**

ADDITIONAL UNIT INFORMATION:

**Sierra Nevada, Death Valley area, Transverse Ranges and Mojave Desert. Primarily granodiorite, tonalite, quartz monzonite, and granite ranging in age from Late Triassic to Late Cretaceous. Includes some rocks as old as Permian and possibly a few as young as Tertiary. Three main periods of emplacement (Triassic, Jurassic, and Cretaceous); wide variety of rock types**

ROCKTYPE/S: **granodiorite; quartz monzonite; tonalite; quartz diorite; diorite; granite; monzodiorite; quartz syenite; quartz monzodiorite; gabbro; trondhjemite; alkali-granite (alaskite); pegmatite; monzonite; aplite**

GEOLOGY SYMBOL: **J**

UNIT NAME: **Jurassic marine rocks, unit 1 (Western Sierra Nevada and Western Klamath Mountains)**

UNIT AGE: **Triassic to Late Jurassic**

UNIT DESCRIPTION:

**Shale, sandstone, minor conglomerate, chert, slate, limestone; minor pyroclastic rocks**

ADDITIONAL UNIT INFORMATION:

**Western Klamath Mountains, western Sierra Nevada. Primarily slate and metamorphosed graywacke; minor siltstone, conglomerate, chert, and volcanic rocks. Mainly Late Jurassic in age, but also includes some Early Jurassic or older rocks**

ROCKTYPE/S: **slate; graywacke; siltstone; pyroclastic; conglomerate; chert; basalt**

GEOLOGY SYMBOL: **Mzv**

UNIT NAME: **Mesozoic volcanic rocks, unit 2 (Western Sierra Foothills and Western Klamath Mountains)**

UNIT AGE: **Jurassic**

UNIT DESCRIPTION:

**Undivided Mesozoic volcanic and metavolcanic rocks. Andesite and rhyolite flow rocks, greenstone, volcanic breccia and other pyroclastic rocks; in part strongly metamorphosed. Includes volcanic rocks of Franciscan Complex: basaltic pillow lava, diabase, greenstone, and minor pyroclastic rocks**

ADDITIONAL UNIT INFORMATION:

**Western Sierra Nevada and western Klamath Mountains. Mostly basaltic to andesitic breccias, flows, and tuffs, metamorphosed but with primary volcanic features generally recognizable. Minor associated sandstone and conglomerate. Largely or entirely of marine origin. Includes some rocks interpreted as ophiolites (Smartville complex)**

ROCKTYPE/S: **mafic volcanic rock; intermediate volcanic rock; felsic volcanic rock; chert; sandstone; conglomerate**

**NWIS**

United States Geological Survey National Water Information System

VERSION DATE: 12/14/16

This USGS National Water Information System database only includes groundwater wells. The USGS defines this well type as: A hole or shaft constructed in the earth intended to be used to locate, sample, or develop groundwater, oil, gas, or some other subsurface material. The diameter of a well is typically much smaller than the depth. Wells are also used to artificially recharge groundwater or to pressurize oil and gas production zones. Additional information about specific kinds of wells should be recorded under the secondary site types or the Use of Site field. Underground waste-disposal wells should be classified as waste-injection wells.

## ***Environmental Records Definitions - STATE (CA)***

**DWRWELLS**

California Department of Water Resources Water Wells

VERSION DATE: 05/09/18

The California Department of Water Resources (DWR) maintains this database of water wells, including California Statewide Groundwater Elevation Monitoring (CASGEM) program wells and Voluntary wells. In Late 2009 the State Legislature amended the Water Code with SBx7-6, which mandates a statewide groundwater elevation monitoring program to track seasonal and long-term trends in groundwater elevations in California's groundwater basins. To achieve that goal, the amendment requires collaboration between local monitoring entities and DWR to collect groundwater elevation data. In accordance with this amendment to the Water Code, DWR developed the CASGEM program.

## Executive Summary

*ESA compiled this Executive Summary using excerpts from the Phase I Environmental Site Assessment report that follows. This Executive Summary may not provide all the information necessary to fully characterize the site and gain an understanding of the issues nor does it detail the Phase I assessment and its findings. ESA does not recommend sole reliance on this Executive Summary.*

This Phase I Environmental Site Assessment was conducted on behalf of Stonehenge Springs, LLC (Stonehenge) for six parcels located along Faith Lane in Diamond Springs in El Dorado County, California (project site) (see **Figures 1 and 2**). This report was prepared in general accordance with guidance from the American Society of Testing and Materials (ASTM) *Standard Practice for Environmental Site Assessments: Phase I Environmental Site Assessment Process* (ASTM E1527-13). Any exceptions to, or deletions from, this practice are described in the Scope of Services and Limitations and Exceptions sections of this report.

Stonehenge is considering developing six combined parcels of approximately 144 acres for residential housing. The parcels are mostly undeveloped oak and pine forest, brush, and grassy areas. The mostly unpaved Faith Lane bisects the parcels north to south, and other unpaved roads and graded areas are present. One sewage lift station is the only development on the project site.

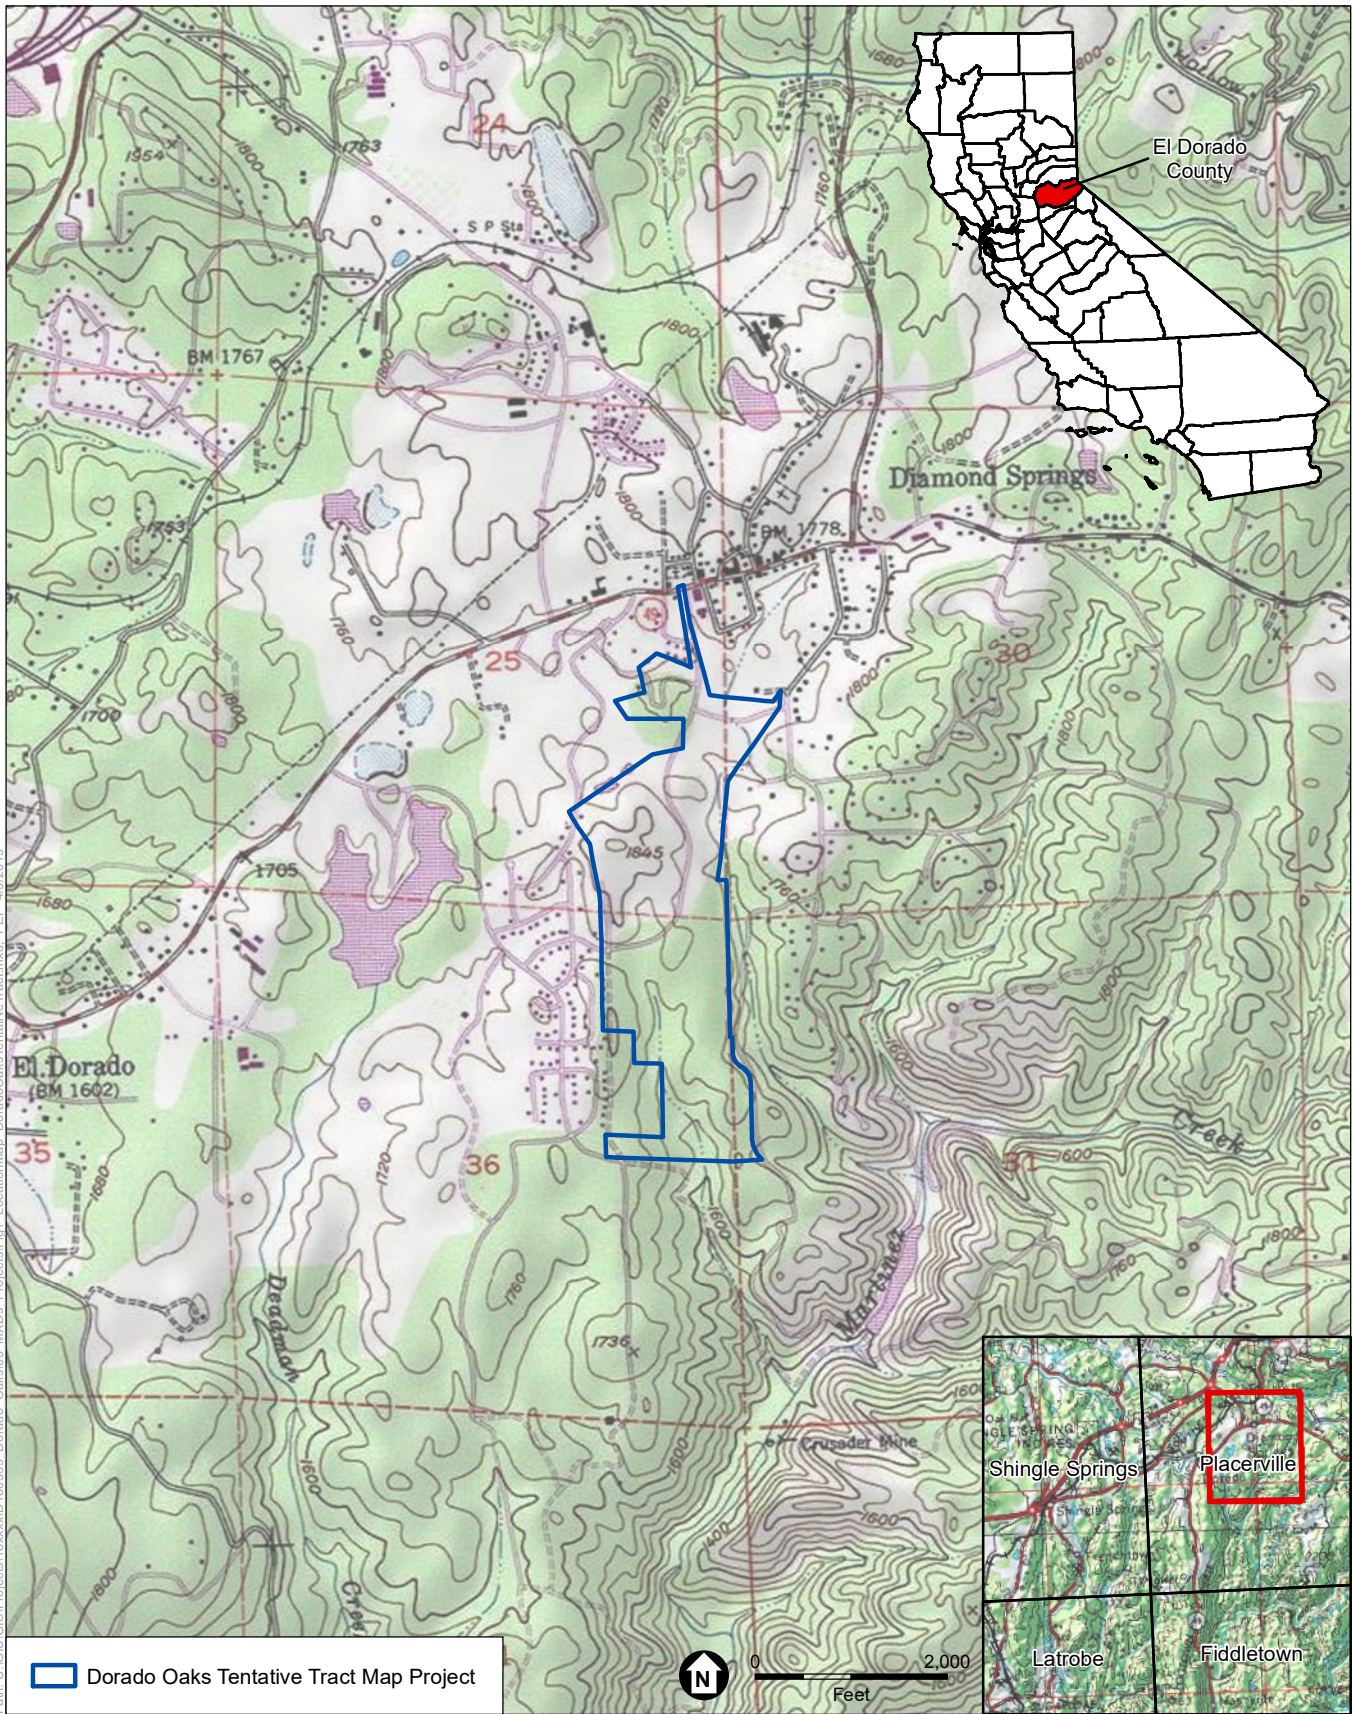

Based on the information reviewed and described in this report, a site reconnaissance of the subject property, and interviews with persons knowledgeable about the subject property, this assessment has noted the following in connection with the subject property:

- The reworking of the surface topography indicates that mining activities conducted in the late 1800s used placer mining techniques where the gold was separated using water and gravity. No mining equipment or associated contamination was observed during the site reconnaissance. The mining activities are not considered a Recognized Environmental Conditions (REC). Note: These terms are defined in Section 2.1.
- A raw sewage spill occurred in 1994 at the lift station on APN 329-310-10. No visual evidence of sewage or discolored soil at or around the lift station was observed during the January 2019 site reconnaissance. This is considered a Historical Recognized Environmental Condition (HREC) and not a current Recognized Environmental Condition (REC).

- With the exception of the lift station noted above, the project site is not identified as a location of soil or groundwater contamination on any of the regulatory databases that were searched.
- One former service station was previously located at 493 Main Street (now Pleasant Valley Road/State Route 49), about 250 feet northeast of the northernmost part of the project site. Two gasoline underground storage tanks (USTs) were removed in 1992 and the Regional Water Quality Control Board (RWQCB) issued a No Further Action (NFA) letter in 1996. However, the NFA letter states that contaminated soil and groundwater are present along the south side of the former service station site extending south to some unknown distance beneath State Route 49 and toward the project site. It is unknown whether the contamination extends to beneath the project site and there is no definitive visual indication of the former UST locations. **This is considered an REC because excavation for the project close to or under State Route 49 may encounter contaminated soil and groundwater.**
- The site reconnaissance observed occasional trash and debris piles in scattered locations throughout the southern portion of the project site. However, the discarded trash and debris is considered a *de minimus* condition because the materials can readily be recycled or disposed of at any municipal (Class III non-hazardous waste) landfill.

This Phase I Environmental Site Assessment did not identify any other RECs, HRECs, Controlled Recognized Environmental Conditions, or business environmental risks. This report should be read in its entirety for a comprehensive understanding of the proposed project conditions described.

# SECTION 2.0

---

## Introduction

### 2.1 Purpose, Standards, and Definitions

Stonehenge Springs, LLC, retained Environmental Science Associates (ESA) to conduct a Phase I Environmental Site Assessment for the Dorado Oaks Tentative Tract Map Project located in Diamond Springs in Sonoma County, California (see **Figures 1 and 2**). This Phase I assessment was conducted in accordance with ESA's scope of work with Stonehenge dated November 11, 2018 and in general accordance with the American Society of Testing Materials (ASTM) *Standard Practice for Environmental Site Assessments: Phase I Environmental Site Assessment Process* (ASTM E1527-13) and the U.S. Environmental Protection Agency (US EPA) Final Rule regarding Standards and Practices for All Appropriate Inquiries as published in the Federal Register on November 1, 2005 (70 FR 66070) and codified at 40 CFR Part 312 (AAI Rule). The US EPA has stated that the newly revised ASTM E1527-13 is consistent with the AAI rule (78 FR 79319, December 30, 2013). Specifically, this final rule amends the AAI Rule at 40 CFR Part 312 to reference ASTM E1527-13 and make clear that persons conducting all appropriate inquiries may use the procedures included in this standard to comply with the AAI Rule.

The purpose of this Phase I assessment is to enable the parties relying on it to satisfy one or more of the requirements for the innocent landholder defense to liability under the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA) and to evaluate the potential for Recognized Environmental Conditions (RECs) at the Project site in advance of Project development. Three types of RECs are defined by the ASTM E1527-13, as listed below. The term Recognized Environmental Conditions (REC) means:

“The presence or likely presence of any hazardous substances or petroleum products in, on, or at a property: (1) due to any release to the environment; (2) under conditions indicative of a release to the environment; or (3) under conditions that pose a material threat of a future release to the environment.”

The term Historical Recognized Environmental Conditions (HREC) means:

“A past release of any hazardous substances or petroleum products that has occurred in connection with the property and has been addressed to the satisfaction of the applicable regulatory authority or meeting unrestricted use criteria established by a regulatory authority, without subjecting the property to any required controls (for example, property use restrictions, activity and use limitations, institutional controls, or engineering controls). Before calling the past release a historical recognized environmental condition, the environmental professional must determine whether the past release is a recognized environmental condition at the time the Phase I Environmental Site Assessment is

conducted (for example, if there has been a change in the regulatory criteria). If the EP considers the past release to be a recognized environmental condition at the time the Phase I Environmental Site Assessment is conducted, the condition shall be included in the conclusions section of the report as a recognized environmental condition.”

For a past REC to be considered an HREC it must:

- Have already been remediated (or meet current standards without remediation);
- Not require use restrictions or engineering controls (e.g., cap, subslab depressurization system, etc.); and
- Meet current standards.

If the REC has use restrictions or engineering controls (e.g., caps, control and treatment systems), then the REC may be designated as a Controlled Recognized Environmental Condition (CREC), as defined below. Unlike HRECs, a CREC will be listed in the conclusions section of the Phase I assessment, along with other RECs. The purpose of this category is to bring continuing obligations such as use restrictions, maintenance requirements, reporting requirements to the forefront. The term Controlled Recognized Environmental Conditions (CREC) means:

“A recognized environmental condition resulting from a past release of hazardous substances or petroleum products that has been addressed to the satisfaction of the applicable regulatory authority (for example, as evidenced by the issuance of a no further action letter or equivalent, or meeting risk-based criteria established by regulatory authority), with hazardous substances or petroleum products allowed to remain in place subject to the implementation of required controls (for example, property use restrictions, activity and use limitations, institutional controls, or engineering controls). A condition considered by the environmental professional to be a controlled recognized environmental condition shall be listed in the findings section of the Phase I Environmental Site Assessment report, and as a recognized environmental condition in the conclusions section of the Phase I Environmental Site Assessment report.”

RECs, HRECs, and CRECs are not intended to include *de minimis* conditions that generally do not present a material risk of harm to public health or the environment and that generally would not be the subject of an enforcement action if brought to the attention of appropriate governmental agencies.

An additional category is termed business environmental risk, defined as

“A risk which can have a material environmental or environmentally-driven impact on the business associated with the current or planned use of a parcel of commercial real estate, not necessarily limited to those environmental issues required to be investigated in this practice. Consideration of business environmental risk issues may involve addressing one or more non-scope considerations.”

## 2.2 Scope of Services

The following sections describe ESA's work scope:

Section 2, *Introduction*, includes a discussion of the purpose for performing the Phase I assessment; the standards and definitions used for the Phase I assessment; and the significant assumptions and limitations.

Section 3, *Site Description*, compiles information concerning the location, legal description, current and proposed use, a description of any structures and improvements at the time of ESA's assessment, and adjoining property use for the parcels.

Section 4, *Records Review*, includes ESA's review of various databases available from the federal, state, and local regulatory agencies regarding hazardous materials use, storage, or disposal at the parcels. Client-provided information is summarized and copies of relevant documents are included in the appendices of this report. Physical setting information such as topography, soil, and groundwater conditions are described.

Section 5, *Site Reconnaissance*, describes ESA's observations during reconnaissance of the parcels. The methodology used and limiting conditions are described.

Section 6, *Interviews and User Provided Information*, summarizes telephone and personal interviews conducted with Key Site Managers and persons knowledgeable about site conditions and history.

Section 7, *Findings and Opinions*, presents ESA's findings and professional opinions regarding the information contained in this report. It provides ESA's conclusions regarding the presence of RECs connected with the ten parcels and data gaps, if any, that could affect the recognition of RECs.

Section 8, *Report Authors and Qualifications*, provides the signatures and qualifications of the report authors.

Section 9, *References*, is a summary of the resources used to compile this report that are in addition to the information provided in the appendices.

The appendices contain certain pertinent documentation regarding the parcels. Appendices A and B contain the regulatory agency database search results report, historical aerial photographs and topographic maps, fire insurance map and city directory search results, and the permit history. Appendix C provides the results of the interview questionnaire.

## 2.3 Limitations and Exceptions

No environmental site assessment can wholly eliminate uncertainty regarding the potential for RECs, HRECs, and CRECs in connection with a property. Conformance of this Phase I

assessment with ASTM E1527-13 reduces, but does not eliminate, uncertainty regarding the potential for RECs, HRECs, and CRECs in connection with the subject property. While ESA has made every effort to discover and interpret available historical and current information on the properties within the time available, some potential always remains for undiscovered contamination to be present. ESA's report is a best-efforts collection and interpretation of available information, and cannot be considered wholly conclusive. This report and the associated work were provided in accordance with the principles and practices generally employed by the local environmental consulting profession. This is in lieu of all warranties, expressed or implied. No other warranty is expressed or implied. ASTM E1527-13 is included in this report by reference.

This Phase I assessment is based primarily on historical research, a database review, and a site reconnaissance of accessible areas. This Phase I assessment does not include "non-scope issues" as specified by ASTM E1527-13, such as surveys for the presence of the following items on or in the vicinity of the subject property: asbestos-containing materials (ACMs), polychlorinated biphenyls (PCBs), radon, indoor air quality, lead-based paint (LBP) analysis, lead in drinking water, industrial hygiene, health and safety, regulatory compliance, and high voltage lines.

The conclusions presented are professional opinions based solely upon indicated data described in this report, visual site and vicinity observations, and the interpretation of the available historical information and documents reviewed, as described in this report. Unless ESA has actual knowledge to the contrary, information obtained from interviews or provided to ESA is assumed to be correct and complete. ESA does not assume any liability for information that was misrepresented to ESA by others or for items not visible, accessible, or present on the parcels during the time of the site reconnaissance. The conclusions are intended exclusively for the purpose outlined herein and the site location and project indicated. Any use or reuse of this document or the findings, conclusions, or recommendations presented herein is at the sole risk of the user.

Opinions and recommendations presented herein apply to the site conditions existing at the time of this Phase I assessment and cannot necessarily apply to site changes of which ESA is not aware and has not had the opportunity to evaluate. Changes in the conditions of the parcels may occur with time due to natural processes or the works of man on the property or adjacent properties. Changes in applicable standards may also occur as a result of legislation, regulation, or the broadening of knowledge. Accordingly, the findings of this report may be invalidated, wholly or in part, by changes beyond ESA's control. Opinions and judgments expressed herein are based on ESA's understanding and interpretation of current regulatory standards, and should not be construed as legal opinions.

# SECTION 3.0

---

## Site Description

### 3.1 General Setting and Location

The project site is located in Diamond Springs on the western slopes of the Sierra Nevada and consists of six undeveloped parcels with one paved access road, several sections of unpaved roads, and one sewer lift station. The parcels are mostly hilly and slope to the south with some flat areas. The majority of the project suite shows the residual surface reworking of late 1800s placer mining activities. The project site consists of six parcels with the Assessor Parcel Number (APN), acreage, land use, zoning, and development information tabulated below in **Table 3-1**. The regional location and project site are shown on **Figures 1 and 2**.

**TABLE 3-1  
LOCATION AND ZONING**

| APN        | Acres   | Development        | Land Use | Zoning |
|------------|---------|--------------------|----------|--------|

### 3.2 Current and Proposed Land Uses

The project site currently has no developed use, other than the sewer lift station. Stonehenge is considering developing the parcels with residential units.

# SECTION 4.0

---

## Records Review

The purpose of the records review is to obtain and examine records that could help to evaluate potential RECs, HRECs, and CRECs in connection with the parcels. This section documents the database records search, the evaluation of other records, summarizes information provided by the property owners, and describes the physical setting of the parcels.

### 4.1 Standard Environmental Record Sources

Federal, state, and local regulatory agencies publish databases of businesses and properties that handle hazardous materials or hazardous waste, including those properties with a known release of hazardous substances to soil and/or groundwater. These databases are available for review and/or purchase at the regulatory agencies, or the information may be obtained through a commercial database service. ESA contracted with a commercial database service to perform the regulatory agency database search for listings within the appropriate ASTM Standard minimum search distance (GeoSearch, 2018). A detailed description of the types of information contained in each of the databases reviewed and the agency responsible for compiling the data is included in the Radius Report provided as **Appendix A**, which includes a list of acronyms for the individual searched databases.

ESA evaluated the listings with regard to the nature of potential chemicals of concern, the extent of known releases, and the physical setting of the parcels (e.g., soil properties, geology, and seismicity). In general, reported or potential releases likely to affect a property would include those located on or within 1/8-mile radius of the parcels. Sites that are reported to use or have used hazardous materials but do not have any records of leaks, spills, or releases are not considered further since such sites would not have affected the project site. ESA also considered additional factors such as chemical properties, regional knowledge of the site vicinity, groundwater flow direction, and available past regulatory documentation as part of the REC evaluation.

### 4.2 Results of Database Search

All information on hazardous materials sites is from the regulatory database search (GeoSearch, 2018) unless otherwise indicated. Updates to the regulatory agency database records search were acquired by checking the State Water Resources Control Board (SWRCB) GeoTracker and the Department of Toxic Substances Control (DTSC) EnviroStor websites to search for other possible site listings and updated information to the database search, and to identify sites that have been recently cleanup and closed after the database search was conducted.

## ***Subject Parcel Listings***

The following two listings are located within the project site with locations shown on Figure 1. The site numbers are keyed to the listings and maps in the regulatory database report in Appendix A.

**1 – Deb’s Frosty Lift Station** – A raw sewage leak was reported on December 16, 1994, at the sewer lift station located on APN 329-310-10. The spill reportedly went to a nearby culvert. Cleanup was conducted by the El Dorado Irrigation District. As discussed below in Section 5.3, Site Observations, no visual evidence of sewage or discolored soil or concrete was observed at or around the lift station during the January 2019 site reconnaissance. Therefore, this is considered a HREC and not a current REC.

**2 - Phillip N. Hufft mining claim** – A claim for placer gold mining is listed under the name of Phillip N. Hufft and the majority of the project site shows extensive evidence of reworking for placer mining operations. No mining equipment or associated contamination was observed during the site reconnaissance. An internet check of the mining name claim identified a Phillip Newton Hufft that died in Placerville on February 7, 1878, suggesting that this is a gold rush-era claim that is still listed but hasn’t been active since the late 1800’s. The mining operations appear to have used placer mining techniques where gold was separated using water and gravity. This technique would not have used chemicals, such as mercury. Therefore, this placer mining operation is not anticipated to have resulted in residual environmental issues and is not considered a REC.

## ***Offsite Listings***

Twenty-one offsite locations were listed for hazardous materials use within the ASTM search distances. However, most of the offsite listings are listings for routine hazardous materials use or disposal but with no records of spills, leaks, or releases. Sites with no records of leaks, spills, or releases are not considered further.

The following 12 sites are located upgradient of or near to the project site and have records of spills, leaks, or releases. The site numbers are keyed to the listings and maps in the regulatory database report in Appendix A. As discussed below, only the former service station identified as Site #8 is considered a REC.

**4 – Illegal drug lab** – This site was located adjacent to the eastern border of APN 329-310-10 and reported in 2002. No additional information was available. The site was not listed on the DTSC EnviroStor website, which tracks active cleanup sites under their jurisdiction. Given the date of the lab discovery and the lack of an active listing, this site is considered to be an HREC but not a current REC.

**4 – Potable water leak** – About 1,000 gallons of potable water was released from a pipe break in 2004. However, given that the released material was water treated to drinking water standards, this would not be a hazardous material and would not have adversely affected the project site.

**6 – Waste water spill** – About 300 gallons of waste water was spilled into a drainage ditch in 2008. No information was listed regarding the nature of the waste water, the extent of the spill, or the cleanup activities. Given the date of the spill, this spill is considered unlikely to be a continuing environmental concern. This site is considered to be an HREC but not a current REC.

**8 – Former service station** – One former service station was previously located at 493 Main Street (now Pleasant Valley Road/State Route 49), about 250 feet northeast of the northernmost part of the project site (GeoSearch, 2018; RWQCB, 1996). Two 500-gallon gasoline USTs were removed in 1992. The USTs had numerous holes and the surrounding soil was contaminated. Although the RWQCB issued a No Further Action (NFA) letter in 1996, the NFA letter states that contaminated soil and groundwater are present along the south side of the former service station site extending south to beneath State Route 49 and toward the project site. Soil samples from the south wall of the UST excavation facing State Route 49 had 540 milligrams per kilograms (mg/kg) of total petroleum hydrocarbons (TPH) as gasoline, 1.4 mg/kg of toluene, 2.2 mg/kg of ethylbenzene, and 11 mg/kg of xylenes. Soil samples collected further south and closer to State Route 49 had 260 to 1,400 mg/kg of TPH as gasoline, 0.49 to 3.8 mg/kg of toluene, non-detect to 16 mg/kg of ethylbenzene, and 3.0 to 86 mg/kg of xylenes. In addition, groundwater collected from the excavation pit had 40 micrograms per liter (ug/L) of TPH as gasoline, 500 ug/L of benzene, 1,200 ug/L of toluene, 410 ug/L of ethylbenzene, and 3,000 ug/L of xylenes. The RWQCB concluded that contaminated soil and groundwater extends to an unknown distance beneath State Route 49. It is unknown whether the soil and groundwater contamination extends further to beneath the project site. Note that the available records did not include maps showing the location of the USTs or contamination. **This is considered an REC because excavation for the project close to and possibly south of State Route 49 may encounter contaminated soil and groundwater.**

**12 – Waste connections** – This site is a waste recycling and disposal center located at 4100 Throwita Way that was constructed on a former lime processing facility. The environmental concern is that lime has an elevated pH that could threaten groundwater quality. However, the direction of groundwater flow is to the northwest away from the project site (Youngdahl, 2018). Therefore, any contamination issues with the former lime processing center would be unable to affect the project site.

**14 – Foothill Auto Repair** – The site is listed for poor housekeeping that allowed solvents, antifreeze, and waste oil to be spilled on the ground (GeoSearch, 2019). However, a nearby well was sampled and the testing results indicated that the spills had not migrated to groundwater. Therefore, any contamination issues with the auto repair facility were limited to the repair facility and would be unable to affect the project site.

**16 – Steve’s Cheaper** – This service station, now a Tower Chevron station, located at 130 Pleasant Valley Road had leaking gasoline USTs that contaminated groundwater in 1997. Remediation was complete by 2012 and the RWQCB issued a no further action letter by 2013. In addition, the site is located about 3/4-mile southwest and downgradient of the project site. Therefore, any contamination issues with this service station would be unable to affect the project site.

**18 and 21 – Celebrity Plating** – This site is a plating shop cited for poor housekeeping with cyanide, chromium, nickel, and other metals detected in soil from spills. However, this site is located about ½-mile north of the project site. Investigations at the nearby Site 12, discussed above, indicated that the direction of groundwater flow is to the northwest, away from the project site (Youngdahl, 2018). In addition, the DTSC determined that this site does not pose a threat to other properties. Therefore, any contamination issues with this site would be unable to affect the project site.

**20 – Teters Auto Wrecking** – This site, located about ½-mile north of the project site, is listed as a one-acre auto wrecking yard in 1987 based on the nature of the site activities. No further investigation is documented, no records of spills, leaks, or releases are recorded, and the site is listed as a low priority. Investigations at the nearby Site 12, discussed above, indicated that the direction of groundwater flow is to the northwest, away from the project site (Youngdahl, 2018). Therefore, any contamination issues with this site would be unable to affect the project site.

**22 – Oxygen Service and Supply Company** – This site, located about ½-mile north of the project site, is an oxygen service and supply facility listed due to the nature of the facility. No further investigation is documented, and no records of spills, leaks, or releases are recorded. Investigations at the nearby Site 12, discussed above, indicated that the direction of groundwater flow is to the northwest, away from the project site (Youngdahl, 2018). Therefore, any contamination issues with this site would be unable to affect the project site.

**23 – Old Caldor Lumber Company** – This site, located about ¾-mile north of the project site, is a former lumber yard, listed due to the nature of the previous activities. The DTSC completed a Preliminary Endangerment Assessment in 1989 and concluded that this site does not pose a threat to public health or the environment (GeoSearch, 2018). Therefore, any contamination issues with the former lumber yard would be unable to affect the project site.

### ***Sites with Poor or Inadequate Addresses***

Sites not plotted due to poor or inadequate address information are referred to as orphan sites. Three orphan sites were listed. The Union Mine address is about 1-½ mile to the southwest and cross- to downgradient of the project site. The two Bright Court addresses are located about one mile west of the project site and cross gradient of the project site. These three orphan site listings are not upgradient of the project site and would not be able to affect the project site.

## **4.3 Other Records Reviewed**

ESA accessed websites for the State Water Resources Control Board (SWRCB) and Department of Toxic Substance Control (DTSC) that track hazardous materials sites. In addition, the regulatory agency records search provides historical aerial photographs, historical topographic maps, and a search of Sanborn insurance maps and city directories for review. The results of the review of these records are discussed below.

## Hazardous Materials Websites

ESA accessed the SWRCB and DTSC combined online GeoTracker database at <http://geotracker.waterboards.ca.gov/> and EnviroStor database at <http://www.envirostor.dtsc.ca.gov/public> for cleanup sites located on or near the subject property under SWRCB jurisdiction. The six parcels are not listed on the website. The former service station previously located at 493 Main Street is discussed above as Site 2 was listed and the available information incorporated above. The Youngdahl, 2018, report was acquired from the GeoTracker website and used to augment the discussions above for Sites 12, 18, 20, 21, and 22. No other active sites were listed upslope (upgradient) of the subject parcel.

## Historical Aerial Photographs

Historical aerial photographs are available for the years 1946, 1952, 1964, 1975, 1980, 1984, 1993, 2004, 2005, 2006, 2009, 2010, 2012, 2014, and 2016, included in **Appendix B** (GeoSearch, 2018). The 2018 aerial photograph is used as the base for Figure 2.

### 1946

The 1946 aerial photograph shows the project site largely in the current undeveloped condition with State Route 49 in its current alignment. Faith Lane and Silver Drive are not yet present. Evidence of the placer mining activities conducted south of State Route 49 in the late 1800's has been muted by time, consisting of various unpaved roads, paths, and other ground surface works. No mining equipment is visible in the photograph, assuming any had been used for placer mining. Two rectangular structures of unknown use are visible inside the green oval in the middle of the project site. The northernmost portion of the project site next to State Route 49 has what appears to be an orchard with two structures likely to be a residence and agricultural support structure. As discussed above in the regulatory records search, a service station with USTs removed in 1992 was reportedly present at the location in the blue oval. A building is present within the blue oval and does not appear to be different from the present building occupying this location. The site reconnaissance observed the building is identified as the Gust Brothers Building constructed in 1930. No obvious fuel islands are visible, although the 1946 station configuration may have been different from modern fuel island configurations. Given the documentation of a fuel leak next to and underneath State Route 49, the USTs and fuel dispensers are assumed to have been located between the building and the highway or perhaps along the side of the building near the highway. The surrounding area is a mix of rural use with some development. The graveyard, Carpenter house, and Morrill building identified on Figure 2 are present.

### 1952

In the 1952 aerial photograph, the two structures that were in the green oval are gone. Almost all of the orchard and building closest to State Route 49 are also gone; the assumed agricultural structure set further back from the highway is still present.

## **1964**

The 1964 aerial photograph shows one unpaved road entering the northwestern area but no other apparent changes on the project site.

## **1975**

The 1975 aerial photograph shows Faith Lane in its current alignment. The Diamond Springs shopping center is also present just east of the northernmost portion of the project site.

## **1980**

The 1980 aerial photograph is of poor quality and does not appear to show any changes.

## **1984**

The 1984 aerial photograph is of poor quality but shows some grading associated with previous development efforts that did not proceed beyond some initial grading.

## **1993**

The 1993 aerial photograph is of good quality and shows the grading of roads and other areas.

## **2004**

The 2004 aerial photograph shows the existing sewer lift station structure in the green oval.

## **2005 through 2016**

The 2005 through 2016 aerial photographs show no substantive changes.

## **Historical Topographic Maps**

Historical topographic maps are available for the years 1891, 1892, 1893, 1949, 1950, 1973, and 2012, and are included in **Appendix B** (GeoSearch, 2018).

The 1891, 1892, 1893 are all small scale topographic maps (1:125,000-scale) that provide limited detail, but each show the project site with no development and State Route 49 in its current alignment. One unimproved road is shown along the western side of the project site. The 1949 topographic map is a larger scale map (1:24,000-scale) and shows China Garden Road and other nearby roadways. Diamond Springs is shown largely as currently developed. The 1950, 1973, and 2012 topographic maps show no substantive changes, though Faith Lane and Silver Road appear on the 1975 and later maps.

## **Fire Insurance Maps**

Fire insurance maps did not cover the area of the project site, as documented in Appendix B (GeoSearch, 2018).

## City Directory

A city directory search was conducted for the project site and nearby parcels (GeoSearch, 2018). No listings were available for Faith Lane properties. The search report is in Appendix B.

## Permit History

Previous residential development efforts referred to as the Missouri Flat-Diamond Springs Redevelopment Project in the early 1980s proceeded as far as some limited initial grading visible beginning with the 1984 aerial photograph, discussed above (Snoke, 1984). The project did not proceed further. The Eldorado County online permit website was checked for violations; no violations were recorded (El Dorado County, 2019).

## County Assessor Records

The El Dorado County Recorders records were checked for environmental liens on APN 329-301-20-100, the parcel adjacent to State Route 49 (GeoSearch, 2018). No liens were recorded.

## 4.4 Physical Setting

The following sections provide information about the physical setting of the parcels obtained the regulatory agency records search in Appendix B. Although geotechnical information is not a required element of ASTM E1527-13 Phase I assessments, the regulatory records search includes some geotechnical information, as provided below.

### Topography

The U.S. Geological Survey (USGS), 7.5 minute Placerville, California, topographic quadrangle map, 1973, depicts the subject property at an elevation ranging from about 1,610 feet above sea level at the southernmost end of the project site to about 1,845 feet above sea level at a hilltop near the center of the project site. Most of the project site is hilly and sloping to the south.

### Geology and Hydrology

Surface soil types consist of very fine sandy loam to very rocky sandy loam, with placer diggings throughout the area (GeoSearch, 2018). The entire project site is underlain Mesozoic granitic rocks with rock exposures in various locations. No wells are located on the project site. The flow direction of groundwater likely mimics the ground surface flowing to the south.

### Oil and Gas Fields

There are no recorded oil or natural gas wells located on or within ½ mile of the parcel (GeoSearch, 2018).

## Flood Zone Designation

The parcel is not located within the 100-year flood zone (GeoSearch, 2018).

*This page intentionally left blank*

## **SECTION 5.0**

---

### **Site Reconnaissance**

#### **5.1 Methodology and Limiting Conditions**

The purpose of the site reconnaissance was to identify visible hazardous materials on the subject property. Mr. Michael Burns of ESA conducted the site reconnaissance on January 10, 2019, to assess present conditions. Weather at the time of the site visit was clear. The site conditions discussed below are limited to readily apparent environmental conditions observed. ESA archaeologists Heidi Koenig and Robin Hoffman accompanied Mr. Burns on the site reconnaissance. Local resident Mike Roberts and Native American representatives Ramona Tripp-Verbeck, Joseph Valdez, and John McGregor also accompanied the group for some of the reconnaissance. Notable features and site conditions are identified on Figure 2 and discussed below. Photographs of features of interest are included in the text below.

#### **5.2 General Site Setting**

The project site consists of six parcels totaling about 144 acres. Access is from State Route 49 (also referred to as Main Street or Pleasant Valley Road) and a paved section of Faith Lane that extends south to unpaved roads and footpaths further south into and throughout the project site. A stream drainage flows south along the eastern side of the project site and various drainages are present throughout the site, all flowing generally south.

#### **5.3 Site Observations**

The project site consists mostly of conifer, oak, and brush forest, and some open grassy areas. The majority of the project site has a highly disturbed topography from placer mining activities in the late 1800s and defunct development efforts during the 1980s. The site reconnaissance observations discussed below are from the north to the south, with items of interest noted on Figure 2.

The northernmost portion of the project site consists of the paved portion of Faith Lane (APN 054-402-18) that extends from State Route 49 south into the project site. The road extends south to a locked gate and an unpaved road section further south, as shown in the photographs below. The Diamond Village shopping center is along the east side of the paved road section. This shopping center consists of various commercial retail outlets; no industrial or manufacturing facilities were observed. Deb's Frosty, a fast food outlet, is located along the west side of Faith Lane. Hazardous materials use for these commercial facilities would be limited to small household quantities of cleaning solutions. A buried sewer line is located under Faith Lane. No RECs were observed.

As discussed above in the regulatory records search, a former service station was located at 493 Main Street (State Route 49), north and across the highway from the project site (see Figure 2). The photographs below show the existing building, built in 1930 but since modified, which does not have the appearance of a former service station. The USTs were likely near the street. The bottom photograph below shows a concrete area along the west side of the building that may have possibly been the location of the former USTs, but this is speculation. Otherwise, there were no distinct indications of the UST locations.

The El Dorado Irrigation District sewer lift station is shown in the photographs below. No staining was observed on the concrete pads or the surrounding soil.

The photographs below show a former mine adit, now filled in with soil (see Figure 2). One small section of railroad track rail was observed, likely used to stabilize the opening. No mining equipment or materials were observed.

The body of a flipped over 1968 Chevrolet Camaro was observed at the location shown on Figure 2. The engine and transmission had been removed, along with the fuel, oil, and lubricants within those parts. The fuel tank was still present. However, the fueling port was open, indicating that any gasoline left in the tank would have evaporated away long ago. No stressed vegetation was observed.

The northern portion of the project site is free of trash and discarded debris. As the site reconnaissance proceeded further south of the mine adit into the more heavily forested portions southern portion of the project site, the observations of trash increased. The photographs below show trash at the green oval location shown on Figure 2. The trash at this and other locations consisted of household trash, furniture and bedding, tires, a water heater, and other debris. Various discarded small containers of household-size cleaning solutions, motor oil, and pesticides were observed; all were examined and found to be empty. Therefore, the presence of the trash and debris is considered a *de minimus* condition because the materials could be disposed of at any municipal (Class III non-hazardous waste) landfill.

Miscellaneous individual items are scattered throughout the southern portion of the project site, including pieces of furniture, bedding, a refrigerator, containers, and other items, as shown in the photographs below. As previously noted, these are considered *de minimus* conditions since the materials could be recycled or disposed at any municipal landfill.

## 5.4 Results of Site Reconnaissance

No evidence of discolored or stained pavement, soil, or water; stressed vegetation; above ground or underground storage tanks; pits; or lagoons were observed at the project site. Trash and debris were observed in scattered locations throughout the southern portion of the project site. However, the trash and debris are considered a *de minimus* condition because the materials can readily be recycled or disposed of at any municipal landfill. No RECs were observed.

## **SECTION 6.0**

---

# **Interviews and User Provided Information**

The following sections highlight information provided during interviews conducted for the project. Interviews included contacting individuals familiar with the subject property and knowledgeable of the subject parcel's historic and existing conditions relative to hazardous materials. The objective of the interview process is to obtain additional information regarding the history and current uses of the subject parcel. Much of the information acquired has been incorporated into various sections of this report.

### **6.1 Interview with Current Property Owner**

Mr. Kevin Sweeney, the developer/owner was contacted and interviewed using the form provided in Appendix C. Mr. Sweeney has been associated with the property for about 20 years. He stated there are no known hazardous materials or environmental issues known to him. He is aware that one or more development projects prior to his time were considered but none of those project advanced beyond initial grading stages.

### **6.2 Interview with Local Resident**

Mr. Mike Robert, a long-time local resident and amateur historian, provided information during the site reconnaissance. He could not recall a service station being located at 493 Main Street (now Pleasant Valley Road and State Route 49), north and across the highway from the project site.

## SECTION 7.0

---

# Findings and Opinions

## 7.1 Findings and Opinions

ESA has performed a Phase I Environmental Site Assessment in general conformance with the scope and limitations of ASTM Standard Practice E1527-13. Any exceptions to, or deletions from, this practice are described in the Scope of Services and Limitations and Exceptions sections of this report. Based only on the information reviewed and described in this report, a site reconnaissance of the parcel, and interviews, this assessment has noted the following in connection with the project site:

- With the exception of the sewer lift station, the project site was not identified as a location of soil or groundwater contamination on any of the databases that were searched.
- There is one sewer lift station operating on the project site that appears to be good working order with no visible environmental issues.
- There is no indication that previous use as a placer mining operation resulted in contamination to the parcel. No mining equipment was observed. The reworking of the surface topography suggests all mining was conducted using placer mining techniques where the gold was separated using water and gravity.
- The site reconnaissance observed trash and debris scattered throughout the southern portion of the project site. However, the discarded trash and debris is considered a *de minimus* condition because the materials can readily be recycled or disposed of at any municipal (Class III non-hazardous waste) landfill.

This assessment has identified one REC adjacent to the project site:

- One former service station was previously located at 493 Main Street (now Pleasant Valley Road and State Route 49), about 250 feet northeast of the northernmost part of the project site. Two gasoline USTs were removed in 1992 and the Regional Water Quality Control Board (RWQCB) issued a No Further Action (NFA) letter in 1996. However, the NFA letter states that contaminated soil and groundwater are present along the south side of the former service station site extending to beneath State Route 49 and toward the project site. It is unknown whether the contamination extends to beneath the project site. **This is considered an REC because excavation for the project close to State Route 49 may encounter contaminated soil and groundwater.**

## 7.2 Data Gaps

ESA attempted to obtain reasonably ascertainable information regarding the subject property and their surrounding environs. There were no data gaps identified that could affect the identification of RECs, HRECs, or CRECs.

## SECTION 8.0

# Report Authors and Qualifications

---

### 8.1 Report Authors and Signatures

This section includes qualification statements of the environmental professionals responsible for conducting the Phase I assessment and preparing this report.

Mr. Michael Burns, PG, CEG, CHG, of ESA conducted the data review for the campground, conducted the site reconnaissance, and prepared the Phase I Environmental Site Assessment report. Mr. Burns has over 30 years of experience in environmental site investigations, characterizations, and assessments, including Phase I Environmental Site Assessments.

The work conducted and the report written by Mr. Burns was reviewed by Mr. Luke Evans. Mr. Evans has 20 years of experience in environmental site investigations, characterizations, and assessments, including Phase I Environmental Site Assessments.

Mr. Burns declares that, to the best of his professional knowledge and belief, he meets the definition of Environmental Professional as defined in 40 CFR §312.10. Mr. Evans declares that, to the best of his professional knowledge and belief, he meets the definition of Environmental Professional as defined in 40 CFR §312.10.

Mr. Burns has the specific qualifications based on education, training, and experience to assess a parcel of the nature, history, and setting of this parcel. With the assistance of Mr. Evans, he has developed and performed all the appropriate inquiries in conformance with the standards and practices set forth in 40 CFR Part 312.

## Disclaimer

---

*This report was designed by GeoSearch to meet or exceed the records search requirements of the All Appropriate Inquiries Rule (40 CFR § 312.26) and the current version of the ASTM International E1527, Standard Practice for Environmental Site Assessments: Phase I Environmental Site Assessment Process or, if applicable, the custom requirements requested by the entity that ordered this report. The records and databases of records used to compile this report were collected from various federal, state and local governmental entities. It is the goal of GeoSearch to meet or exceed the 40 CFR § 312.26 and E1527 requirements for updating records by using the best available technology. GeoSearch contacts the appropriate governmental entities on a recurring basis. Depending on the frequency with which a record source or database of records is updated by the governmental entity, the data used to prepare this report may be updated monthly, quarterly, semi-annually, or annually.*

*The information provided in this report was obtained from a variety of public sources. GeoSearch cannot ensure and makes no warranty or representation as to the accuracy, reliability, quality, errors occurring from data conversion or the customer's interpretation of this report. This report was made by GeoSearch for exclusive use by its clients only. Therefore, this report may not contain sufficient information for other purposes or parties. GeoSearch and its partners, employees, officers And independent contractors cannot be held liable For actual, incidental, consequential, special or exemplary damages suffered by a customer resulting directly or indirectly from any information provided by GeoSearch.*

## Target Property Summary

### **Target Property Information**

Stonehenge Springs

Faith Lane

Diamond Springs, California 95619

#### **Coordinates**

Area centroid (-120.81907, 38.6845057)

1,761 feet above sea level

#### **USGS Quadrangle**

Placerville, CA

### **Geographic Coverage Information**

**County/Parish:** El Dorado (CA)

#### **ZipCode(s):**

Diamond Springs CA: 95619

El Dorado CA: 95623

Placerville CA: 95667

PLACERVILLE, CA 95667

COUNTY: EL DORADO

## **FACILITY DETAILS**

CASE TYPE: CLEANUP PROGRAM SITE

CASE NUMBER: NOT REPORTED

STATUS: OPEN - SITE ASSESSMENT 08/12/2016

POTENTIAL CONTAMINATION:

**OTHER ACID OR CORROSIVE**

POTENTIAL MEDIA AFFECTED:

**NOT REPORTED**

SITE HISTORY:

**SITE WAS CONSTRUCTED ON A FORMER LIME PROCESSING FACILITY. LIME WASTE BENEATH SITE HAS ELEVATED PH AND THREATENS GROUNDWATER.**

## **REGULATORY ACTIVITIES**

### FACILITY DETAILS

CASE TYPE: LUST CLEANUP SITE

CASE NUMBER: 90096

STATUS: COMPLETED - CASE CLOSED 01/02/2013

POTENTIAL CONTAMINATION:

#### GASOLINE

POTENTIAL MEDIA AFFECTED:

AQUIFER USED FOR DRINKING WATER SUPPLY

SITE HISTORY:

THE FIRST THREE MONITORING WELLS WERE INSTALLED ON SITE IN NOVEMBER 1999. BY THE TIME OF THE INITIATION OF THE OFF SITE INVESTIGATION IN THE FALL OF 2001, THE AVERAGE REPORTED MTBE CONCENTRATIONS IN THESE THREE WELLS WAS 50,083 µG/L. THE AVERAGE CONCENTRATION IN THESE THREE WELLS FOR THE LAST FOUR SEMI-ANNUAL MONITORING EVENTS IS 566 µG/L. THIS REPRESENTS A 98.9 PERCENT REDUCTION SINCE ONSITE REMEDIATION BEGAN IN EARLY 2002. OFF SITE INVESTIGATION CONTINUED THROUGH TO THE SUMMER OF 2004 WITH CONCURRENT REMEDIAL ACTIVITIES. BY AUGUST 2004 THERE WERE 29 MONITORING WELLS AND TWO EXTRACTION WELLS IN USE. ELEVEN OF THE MONITORING WELLS DEFINE THE OUTWARD EXTENT OR EDGES OF THE MTBE PLUME, COMPRISING THE WELLS THAT HAVE CONSISTENTLY BEEN REPORTED WITH MTBE BELOW THE DRINKING WATER STANDARD. A SENSITIVE RECEPTOR SURVEY WAS COMPLETED IN LATE 2000. THERE WERE NO WATER SUPPLY WELLS LOCATED WITHIN THE EXTENT OF THE PLUME, LATER DEFINED, AND ONLY FIVE WELLS WERE FOUND IN THE 2000 FOOT SEARCH RADIUS. THE CLOSEST WAS OVER 500 FEET CROSS GRADIENT OF THE PLUME AND HAS SUBSEQUENTLY BEEN REMOVED. GROUNDWATER AS A POTENTIAL SOURCE VAPOR EMANATIONS WAS ADDRESSED IN WORKPLAN DATED JANUARY 26, 2007 INDICATING THAT THERE WERE NO AREAS THAT COULD POTENTIALLY BE IMPACTED TO INVESTIGATE. THIS WAS AFFIRMED IN THE WORKPLAN APPROVAL LETTER FROM THE REGIONAL BOARD DATED 6 FEBRUARY 2007. PATTERSON LAKE IS SITUATED DOWNGRADIENT OF THE SOUTHWESTERLY DIRECTED PLUME THAT ORIGINATED AT THE PROPERTY NOW OWNED BY TOWER ENERGY GROUP. THE LAKE HAS FUNCTIONED AS A HYDRAULIC BARRIER, LOWERING THE GROUNDWATER GRADIENT IN ITS AREA AND SLOWING THE PREREMEDIAL ADVANCEMENT OF THE PLUME. THREE 10,000 GALLON UST'S AND ASSOCIATED PIPING WERE REMOVED FROM THE SITE IN THE SUMMER OF 2010 STATION UPGRADES ACTIVITIES.

### REGULATORY ACTIVITIES

| TYPE OF ACTION: | DATE:      | ACTION:  |

### **FACILITY INFORMATION**

ID #: 09340001

NAME: CELEBRITY PLATING

ADDRESS: 4502 MISSOURI FLAT ROAD  
PLACERVILLE, CA

STATUS (DATE): **PRELIMINARY ENDANGERMENT ASSESSMENT REQUIRED (04/14/1997)**

STANDARD INDUSTRIAL CLASSIFICATION BELIEVED TO BE CAUSE OF (POTENTIAL) CONTAMINATION:

**MANU - FABRICATED METAL PRODUCTS**

ACCESS TO SITE: **NOT REPORTED**

GROUNDWATER CONTAMINATION: **NOT REPORTED**

### **COMMENTS**

SITE SCREENING COMPLETED. EL DORADO COUNTY HEALTH DEPARTMENT SUBMITTED AN INVESTIGATION REPORT TO DTSC FOR REVIEW AND COMMENT. DTSC STAFF PERFORMED A CURSORY REVIEW OF THE REPORT AND CONDUCTED A SITE VISIT. THE HOUSEKEEPING PRACTICES IN THE PLATING AREA WERE POOR. MOST OF THE FLOOR AND WALLS SHOWED SIGNS OF SPILLS AND LEAKS. SOIL SAMPLES FROM BENEATH THE FLOOR WERE CONTAMINATED WITH 42 PPM CYANIDE, 159 PPM CHROMIUM, 123 PPM COPPER, 1010 PPM NICKEL AND OTHER METALS. A PRELIMINARY ENDANGERMENT ASSESSMENT IS REQUIRED TO DETER- THE POTENTIAL THREAT POSED BY ONSITE CONTAMINATION.

## ***Environmental Records Definitions - FEDERAL***

**AIRSAFS** Aerometric Information Retrieval System / Air Facility Subsystem

VERSION DATE: 10/20/14

The United States Environmental Protection Agency (EPA) modified the Aerometric Information Retrieval System (AIRS) to a database that exclusively tracks the compliance of stationary sources of air pollution with EPA regulations: the Air Facility Subsystem (AFS). Since this change in 2001, the management of the AIRS/AFS database was assigned to EPA's Office of Enforcement and Compliance Assurance.

**BRS** Biennial Reporting System

VERSION DATE: 12/31/15

The United States Environmental Protection Agency (EPA), in cooperation with the States, biennially collects information regarding the generation, management, and final disposition of hazardous wastes regulated under the Resource Conservation and Recovery Act of 1976 (RCRA), as amended. The Biennial Report captures detailed data on the generation of hazardous waste from large quantity generators and data on waste management practices from treatment, storage and disposal facilities. Currently, the EPA states that data collected between 1991 and 1997 was originally a part of the defunct Biennial Reporting System and is now incorporated into the RCRAInfo data system.

**CDL** Clandestine Drug Laboratory Locations

VERSION DATE: 10/05/17

The U.S. Department of Justice ("the Department") provides this information as a public service. It contains addresses of some locations where law enforcement agencies reported they found chemicals or other items that indicated the presence of either clandestine drug laboratories or dumpsites. In most cases, the source of the entries is not the Department, and the Department has not verified the entry and does not guarantee its accuracy. Members of the public must verify the accuracy of all entries by, for example, contacting local law enforcement and local health departments. The Department does not establish, implement, enforce, or certify compliance with clean-up or remediation standards for contaminated sites; the public should contact a state or local health department or environmental protection agency for that information.

**DOCKETS** EPA Docket Data

VERSION DATE: 12/22/05

The United States Environmental Protection Agency Docket data lists Civil Case Defendants, filing dates as far back as 1971, laws broken including section, violations that occurred, pollutants involved, penalties assessed and superfund awards by facility and location. Please refer to ICIS database as source of current data.

**EC** Federal Engineering Institutional Control Sites

VERSION DATE: 08/03/15

This database includes site locations where Engineering and/or Institutional Controls have been identified as part

## ***Environmental Records Definitions - FEDERAL***

of a selected remedy for the site as defined by United States Environmental Protection Agency official remedy decision documents. A site listing does not indicate that the institutional and engineering controls are currently in place nor will be in place once the remedy is complete; it only indicates that the decision to include either of them in the remedy is documented as of the completed date of the document. Institutional controls are actions, such as legal controls, that help minimize the potential for human exposure to contamination by ensuring appropriate land or resource use. Engineering controls include caps, barriers, or other device engineering to prevent access, exposure, or continued migration of contamination.

**ECHOR09** Enforcement and Compliance History Information

VERSION DATE: 09/01/18

The EPA's Enforcement and Compliance History Online (ECHO) database, provides compliance and enforcement information for facilities nationwide. This database includes facilities regulated as Clean Air Act stationary sources, Clean Water Act direct dischargers, Resource Conservation and Recovery Act hazardous waste handlers, Safe Drinking Water Act public water systems along with other data, such as Toxics Release Inventory releases.

**ERNSCA** Emergency Response Notification System

VERSION DATE: 10/28/18

This National Response Center database contains data on reported releases of oil, chemical, radiological, biological, and/or etiological discharges into the environment anywhere in the United States and its territories. The data comes from spill reports made to the U.S. Environmental Protection Agency, U.S. Coast Guard, the National Response Center and/or the U.S. Department of Transportation.

**FRSCA** Facility Registry System

VERSION DATE: 10/09/18

The United States Environmental Protection Agency's Office of Environmental Information (OEI) developed the Facility Registry System (FRS) as the centrally managed database that identifies facilities, sites or places subject to environmental regulations or of environmental interest. The Facility Registry System replaced the Facility Index System or FINDS database.

**HMIRSR09** Hazardous Materials Incident Reporting System

VERSION DATE: 09/30/18

The HMIRS database contains unintentional hazardous materials release information reported to the U.S. Department of Transportation located in EPA Region 9. This region includes the following states: Arizona, California, Hawaii, Nevada, and the territories of Guam and American Samoa.

**ICIS** Integrated Compliance Information System (formerly DOCKETS)

VERSION DATE: 09/01/18

## ***Environmental Records Definitions - FEDERAL***

ICIS is a case activity tracking and management system for civil, judicial, and administrative federal Environmental Protection Agency enforcement cases. ICIS contains information on federal administrative and federal judicial cases under the following environmental statutes: the Clean Air Act, the Clean Water Act, the Resource Conservation and Recovery Act, the Emergency Planning and Community Right-to-Know Act - Section 313, the Toxic Substances Control Act, the Federal Insecticide, Fungicide, and Rodenticide Act, the Comprehensive Environmental Response, Compensation, and Liability Act, the Safe Drinking Water Act, and the Marine Protection, Research, and Sanctuaries Act.

**ICISNPDES** Integrated Compliance Information System National Pollutant Discharge Elimination System

VERSION DATE: 07/09/17

Authorized by the Clean Water Act, the National Pollutant Discharge Elimination System (NPDES) permit program controls water pollution by regulating point sources that discharge pollutants into waters of the United States.

**LUCIS** Land Use Control Information System

VERSION DATE: 09/01/06

The LUCIS database is maintained by the U.S. Department of the Navy and contains information for former Base Realignment and Closure (BRAC) properties across the United States.

**MLTS** Material Licensing Tracking System

VERSION DATE: 06/29/17

MLTS is a list of approximately 8,100 sites which have or use radioactive materials subject to the United States Nuclear Regulatory Commission (NRC) licensing requirements. Disclaimer: Due to agency regulations and policies, this database contains applicant/licensee location information which may or may not be related to the physical location per MLTS site.

**NPDES09** National Pollutant Discharge Elimination System

VERSION DATE: 04/01/07

Authorized by the Clean Water Act, the National Pollutant Discharge Elimination System (NPDES) permit program controls water pollution by regulating point sources that discharge pollutants into waters of the United States. The NPDES database was collected from December 2002 until April 2007. Refer to the PCS and/or ICIS-NPDES database as source of current data. This database includes permitted facilities located in EPA Region 9. This region includes the following states: Arizona, California, Hawaii, Nevada, and the territories of Guam and American Samoa.

**PADS** PCB Activity Database System

VERSION DATE: 09/14/18

## ***Environmental Records Definitions - FEDERAL***

PADS Identifies generators, transporters, commercial storers and/or brokers and disposers of PCB's who are required to notify the EPA of such activities.

**PCSR09** Permit Compliance System

VERSION DATE: 08/01/12

The Permit Compliance System is used in tracking enforcement status and permit compliance of facilities controlled by the National Pollutant Discharge Elimination System (NPDES) under the Clean Water Act and is maintained by the United States Environmental Protection Agency's Office of Compliance. PCS is designed to support the NPDES program at the state, regional, and national levels. This database includes permitted facilities located in EPA Region 9. This region includes the following states: Arizona, California, Hawaii, Nevada, and the territories of Guam and American Samoa. PCS has been modernized, and no longer exists. National Pollutant Discharge Elimination System (ICIS-NPDES) data can now be found in Integrated Compliance Information System (ICIS).

**RCRASC** RCRA Sites with Controls

VERSION DATE: 09/26/18

The Resource Conservation and Recovery Act (RCRA) gives EPA the authority to control hazardous waste from the "cradle-to-grave." This includes the generation, transportation, treatment, storage, and disposal of hazardous waste. RCRA also set forth a framework for the management of non-hazardous solid wastes. The 1986 amendments to RCRA enabled EPA to address environmental problems that could result from underground tanks storing petroleum and other hazardous substances. This listing refers to facilities with institutional controls in place.

**SEMSLIENS** SEMS Lien on Property

VERSION DATE: 08/13/18

The U.S. Environmental Protection Agency's (EPA) Office of Solid Waste and Emergency Response, Office of Superfund Remediation and Technology Innovation (OSRTI), has implemented The Superfund Enterprise Management System (SEMS), formerly known as CERCLIS (Comprehensive Environmental Response, Compensation and Liability Information System) to track and report on clean-up and enforcement activities taking place at Superfund sites. SEMS represents a joint development and ongoing collaboration between Superfund's Remedial, Removal, Federal Facilities, Enforcement and Emergency Response programs. This is a listing of SEMS sites with a lien on the property.

**SFLIENS** CERCLIS Liens

VERSION DATE: 06/08/12

A Federal CERCLA ("Superfund") lien can exist by operation of law at any site or property at which United States Environmental Protection Agency has spent Superfund monies. These monies are spent to investigate and address releases and threatened releases of contamination. CERCLIS provides information as to the identity of

## ***Environmental Records Definitions - FEDERAL***

these sites and properties. This database contains those CERCLIS sites where the Lien on Property action is complete.

**SSTS** Section Seven Tracking System

VERSION DATE: 02/01/17

The United States Environmental Protection Agency tracks information on pesticide establishments through the Section Seven Tracking System (SSTS). SSTS records the registration of new establishments and records pesticide production at each establishment. The Federal Insecticide, Fungicide and Rodenticide Act (FIFRA) requires that production of pesticides or devices be conducted in a registered pesticide-producing or device-producing establishment. ("Production" includes formulation, packaging, repackaging, and relabeling.)

**TRI** Toxics Release Inventory

VERSION DATE: 12/31/16

The Toxics Release Inventory, provided by the United States Environmental Protection Agency, includes data on toxic chemical releases and waste management activities from certain industries as well as federal and tribal facilities. This inventory contains information about the types and amounts of toxic chemicals that are released each year to the air, water, and land as well as information on the quantities of toxic chemicals sent to other facilities for further waste management.

**TSCA** Toxic Substance Control Act Inventory

VERSION DATE: 12/31/12

The Toxic Substances Control Act (TSCA) was enacted in 1976 to ensure that chemicals manufactured, imported, processed, or distributed in commerce, or used or disposed of in the United States do not pose any unreasonable risks to human health or the environment. TSCA section 8(b) provides the United States Environmental Protection Agency authority to "compile, keep current, and publish a list of each chemical substance that is manufactured or processed in the United States." This TSCA Chemical Substance Inventory contains non-confidential information on the production amount of toxic chemicals from each manufacturer and importer site.

**RCRAGR09** Resource Conservation & Recovery Act - Generator

VERSION DATE: 03/01/18

The Resource Conservation and Recovery Act (RCRA) gives EPA the authority to control hazardous waste from the "cradle-to-grave." This includes the generation, transportation, treatment, storage, and disposal of hazardous waste. RCRA also set forth a framework for the management of non-hazardous solid wastes. The 1986 amendments to RCRA enabled EPA to address environmental problems that could result from underground tanks storing petroleum and other hazardous substances. This listing refers to facilities currently generating hazardous waste. EPA Region 9 includes the following states: Arizona, California, Hawaii, Nevada, and the territories of Guam and American Samoa.

## ***Environmental Records Definitions - FEDERAL***

### **RCRANGR09**

Resource Conservation & Recovery Act - Non-Generator

VERSION DATE: 03/01/18

The Resource Conservation and Recovery Act (RCRA) gives EPA the authority to control hazardous waste from the "cradle-to-grave." This includes the generation, transportation, treatment, storage, and disposal of hazardous waste. RCRA also set forth a framework for the management of non-hazardous solid wastes. The 1986 amendments to RCRA enabled EPA to address environmental problems that could result from underground tanks storing petroleum and other hazardous substances. This listing refers to facilities classified as non-generators. Non-Generators do not presently generate hazardous waste. EPA Region 9 includes the following states: Arizona, California, Hawaii, Nevada, and the territories of Guam and American Samoa.

### **ALTFUELS**

Alternative Fueling Stations

VERSION DATE: 09/01/18

Nationwide list of alternative fueling stations made available by the US Department of Energy's Office of Energy Efficiency & Renewable Energy. Includes Biodiesel stations, Ethanol (E85) stations, Liquefied Petroleum Gas (Propane) stations, Ethanol (E85) stations, Natural Gas stations, Hydrogen stations, and Electric Vehicle Supply Equipment (EVSE).

### **FEMAUST**

FEMA Owned Storage Tanks

VERSION DATE: 12/01/16

This is a listing of FEMA owned underground and aboveground storage tank sites. For security reasons, address information is not released to the public according to the U.S. Department of Homeland Security.

### **HISTPST**

Historical Gas Stations

VERSION DATE: NR

This historic directory of service stations is provided by the Cities Service Company. The directory includes Cities Service filling stations that were located throughout the United States in 1930.

### **ICISCLEANERS**

Integrated Compliance Information System Drycleaners

VERSION DATE: 09/01/18

This is a listing of drycleaner facilities from the Integrated Compliance Information System (ICIS). The Environmental Protection Agency (EPA) tracks facilities that possess NAIC and SIC codes that classify businesses as drycleaner establishments.

### **MRDS**

Mineral Resource Data System

VERSION DATE: 03/15/16

## ***Environmental Records Definitions - FEDERAL***

MRDS (Mineral Resource Data System) is a collection of reports describing metallic and nonmetallic mineral resources throughout the world. Included are deposit name, location, commodity, deposit description, geologic characteristics, production, reserves, resources, and references. This database contains the records previously provided in the Mineral Resource Data System (MRDS) of USGS and the Mineral Availability System/Mineral Industry Locator System (MAS/MILS) originated in the U.S. Bureau of Mines, which is now part of USGS.

**MSHA** Mine Safety and Health Administration Master Index File

VERSION DATE: 08/31/18

The Mine dataset lists all Coal and Metal/Non-Metal mines under MSHA's jurisdiction since 1/1/1970. It includes such information as the current status of each mine (Active, Abandoned, NonProducing, etc.), the current owner and operating company, commodity codes and physical attributes of the mine. Mine ID is the unique key for this data. This information is provided by the United States Department of Labor - Mine Safety and Health Administration (MSHA).

**BF** Brownfields Management System

VERSION DATE: 10/01/18

Brownfields are real property, the expansion, redevelopment, or reuse of which may be complicated by the presence or potential presence of a hazardous substance, pollutant, or contaminant. Cleaning up and reinvesting in these properties takes development pressures off of undeveloped, open land, and both improves and protects the environment. The United States Environmental Protection Agency maintains this database to track activities in the various brown field grant programs including grantee assessment, site cleanup and site redevelopment. This database included tribal brownfield sites.

**DNPL** Delisted National Priorities List

VERSION DATE: 11/14/18

This database includes sites from the United States Environmental Protection Agency's Final National Priorities List (NPL) where remedies have proven to be satisfactory or sites where the original analyses were inaccurate, and the site is no longer appropriate for inclusion on the NPL, and final publication in the Federal Register has occurred.

**NLRRCRAT** No Longer Regulated RCRA Non-CORRACTS TSD Facilities

VERSION DATE: 03/01/18

This database includes RCRA Non-Corrective Action TSD facilities that are no longer regulated by the United States Environmental Protection Agency or do not meet other RCRA reporting requirements. This listing includes facilities that formerly treated, stored or disposed of hazardous waste.

**ODI** Open Dump Inventory

VERSION DATE: 06/01/85

## **Environmental Records Definitions - FEDERAL**

The open dump inventory was published by the United States Environmental Protection Agency. An "open dump" is defined as a facility or site where solid waste is disposed of which is not a sanitary landfill which meets the criteria promulgated under section 4004 of the Solid Waste Disposal Act (42 U.S.C. 6944) and which is not a facility for disposal of hazardous waste. This inventory has not been updated since June 1985.

**RCRAT** Resource Conservation & Recovery Act - Non-CORRACTS Treatment, Storage & Disposal Facilities

VERSION DATE: 03/01/18

The Resource Conservation and Recovery Act (RCRA) gives EPA the authority to control hazardous waste from the "cradle-to-grave." This includes the generation, transportation, treatment, storage, and disposal of hazardous waste. RCRA also set forth a framework for the management of non-hazardous solid wastes. The 1986 amendments to RCRA enabled EPA to address environmental problems that could result from underground tanks storing petroleum and other hazardous substances. This listing refers to facilities recognized as hazardous waste treatment, storage, and disposal sites (TSD).

**SEMS** Superfund Enterprise Management System

VERSION DATE: 08/13/18

The U.S. Environmental Protection Agency's (EPA) Office of Solid Waste and Emergency Response, Office of Superfund Remediation and Technology Innovation (OSRTI), has implemented The Superfund Enterprise Management System (SEMS), formerly known as CERCLIS (Comprehensive Environmental Response, Compensation and Liability Information System) to track and report on clean-up and enforcement activities taking place at Superfund sites. SEMS represents a joint development and ongoing collaboration between Superfund's Remedial, Removal, Federal Facilities, Enforcement and Emergency Response programs.

**SEMSARCH** Superfund Enterprise Management System Archived Site Inventory

VERSION DATE: 08/13/18

The Superfund Enterprise Management System Archive listing (SEMS-ARCHIVE) has replaced the CERCLIS NFRAP reporting system in 2015. This listing reflect sites that have been assessed and no further remediation is planned and is of no further interest under the Superfund program.

**SMCRA** Surface Mining Control and Reclamation Act Sites

VERSION DATE: 09/14/18

An inventory of land and water impacted by past mining (primarily coal mining) is maintained by OSMRE to provide information needed to implement the Surface Mining Control and Reclamation Act of 1977 (SMCRA). The inventory contains information on the location, type, and extent of AML impacts, as well as, information on the cost associated with the reclamation of those problems. The inventory is based upon field surveys by State, Tribal, and OSMRE program officials. It is dynamic to the extent that it is modified as new problems are identified and existing problems are reclaimed.

## ***Environmental Records Definitions - FEDERAL***

**USUMTRCA** Uranium Mill Tailings Radiation Control Act Sites

VERSION DATE: 03/04/17

The Legacy Management Office of the Department of Energy (DOE) manages radioactive and chemical waste, environmental contamination, and hazardous material at over 100 sites across the U.S. The L.M. Office manages this database of sites registered under the Uranium Mill Tailings Control Act (UMTRCA).

**DOD** Department of Defense Sites

VERSION DATE: 12/01/14

This information originates from the National Atlas of the United States Federal Lands data, which includes lands owned or administered by the Federal government. Army DOD, Army Corps of Engineers DOD, Air Force DOD, Navy DOD and Marine DOD areas of 640 acres or more are included.

**FUDS** Formerly Used Defense Sites

VERSION DATE: 06/01/15

The Formerly Used Defense Sites (FUDS) inventory includes properties previously owned by or leased to the United States and under Secretary of Defense Jurisdiction, as well as Munitions Response Areas (MRAs). The remediation of these properties is the responsibility of the Department of Defense. This data is provided by the U.S. Army Corps of Engineers (USACE), the boundaries/polygon data are based on preliminary findings and not all properties currently have polygon data available. **DISCLAIMER:** This data represents the results of data collection/processing for a specific USACE activity and is in no way to be considered comprehensive or to be used in any legal or official capacity as presented on this site. While the USACE has made a reasonable effort to insure the accuracy of the maps and associated data, it should be explicitly noted that USACE makes no warranty, representation or guaranty, either expressed or implied, as to the content, sequence, accuracy, timeliness or completeness of any of the data provided herein. For additional information on Formerly Used Defense Sites please contact the USACE Public Affairs Office at (202) 528-4285.

**FUSRAP** Formerly Utilized Sites Remedial Action Program

VERSION DATE: 03/04/17

The U.S. DOE established the Formerly Utilized Sites Remedial Action Program (FUSRAP) in 1974 to remediate sites where radioactive contamination remained from the Manhattan Project and early U.S. Atomic Energy Commission (AEC) operations. The DOE Office of Legacy Management (LM) established long-term surveillance and maintenance (LTS&M) requirements for remediated FUSRAP sites. DOE evaluates the final site conditions of a remediated site on the basis of risk for different future uses. DOE then confirms that LTS&M requirements will maintain protectiveness.

**NLRRCRAC** No Longer Regulated RCRA Corrective Action Facilities

VERSION DATE: 03/01/18

## ***Environmental Records Definitions - FEDERAL***

This database includes RCRA Corrective Action facilities that are no longer regulated by the United States Environmental Protection Agency or do not meet other RCRA reporting requirements.

**NMS** Former Military Nike Missile Sites

VERSION DATE: 12/01/84

This information was taken from report DRXTH-AS-IA-83A016 (Historical Overview of the Nike Missile System, 12/1984) which was performed by Environmental Science and Engineering, Inc. for the U.S. Army Toxic and Hazardous Materials Agency Assessment Division. The Nike system was deployed between 1954 and the mid-1970's. Among the substances used or stored on Nike sites were liquid missile fuel (JP-4); starter fluids (UDKH, aniline, and furfuryl alcohol); oxidizer (IRFNA); hydrocarbons (motor oil, hydraulic fluid, diesel fuel, gasoline, heating oil); solvents (carbon tetrachloride, trichloroethylene, trichloroethane, stoddard solvent); and battery electrolyte. The quantities of material a disposed of and procedures for disposal are not documented in published reports. Virtually all information concerning the potential for contamination at Nike sites is confined to personnel who were assigned to Nike sites.

During deactivation most hardware was shipped to depot-level supply points. There were reportedly instances where excess materials were disposed of on or near the site itself at closure. There was reportedly no routine site decontamination.

**NPL** National Priorities List

VERSION DATE: 11/14/18

This database includes United States Environmental Protection Agency (EPA) National Priorities List sites that fall under the EPA's Superfund program, established to fund the cleanup of the most serious uncontrolled or abandoned hazardous waste sites identified for possible long-term remedial action.

**PNPL** Proposed National Priorities List

VERSION DATE: 11/14/18

This database contains sites proposed to be included on the National Priorities List (NPL) in the Federal Register. The United States Environmental Protection Agency investigates these sites to determine if they may present long-term threats to public health or the environment.

**RCRAC** Resource Conservation & Recovery Act - Corrective Action Facilities

VERSION DATE: 03/01/18

The Resource Conservation and Recovery Act (RCRA) gives EPA the authority to control hazardous waste from the "cradle-to-grave." This includes the generation, transportation, treatment, storage, and disposal of hazardous waste. RCRA also set forth a framework for the management of non-hazardous solid wastes. The 1986 amendments to RCRA enabled EPA to address environmental problems that could result from underground tanks storing petroleum and other hazardous substances. This listing refers to facilities with corrective action activity.

**RCRASUBC**

Resource Conservation &amp; Recovery Act - Subject to Corrective Action Facilities

VERSION DATE: 03/01/18

The Resource Conservation and Recovery Act (RCRA) gives EPA the authority to control hazardous waste from the "cradle-to-grave." This includes the generation, transportation, treatment, storage, and disposal of hazardous waste. RCRA also set forth a framework for the management of non-hazardous solid wastes. The 1986 amendments to RCRA enabled EPA to address environmental problems that could result from underground tanks storing petroleum and other hazardous substances. This listing refers to facilities subject to corrective actions.

**RODS**

Record of Decision System

VERSION DATE: 08/13/18

These decision documents maintained by the United States Environmental Protection Agency describe the chosen remedy for NPL (Superfund) site remediation. They also include site history, site description, site characteristics, community participation, enforcement activities, past and present activities, contaminated media, the contaminants present, and scope and role of response action.

## **Environmental Records Definitions - STATE (CA)**

**CDL** Clandestine Drug Labs

VERSION DATE: 12/31/17

The California Department of Toxic Substance Control (DTSC) provides this listing of illegal drug laboratories. Pursuant to Section 25354.5 of the California Health and Safety Code, DTSC conducts emergency removal actions at clandestine drug labs at the request of State and local law enforcement agencies. DTSC's contractors typically remove hazardous substances that may pose an immediate threat to public health and the environment while the enforcement officials are on scene. During the emergency removal actions, contractors remove and properly dispose of contaminated lab equipment, chemicals used to make the illegal drugs (usually methamphetamine), lab chemical wastes, and other grossly contaminated materials. DTSC does not perform additional assessment work beyond standard emergency removal actions and makes no further determination regarding the need for future cleanup work at the emergency removal location. The reported location information may or may not include the actual location of the illegal drug lab. The DTSC does not guarantee the accuracy of the address or location information or the condition of the location listed.

**CHMIRS** California Hazardous Material Incident Report System

VERSION DATE: 10/24/18

The California Hazardous Material Incident Report System database is provided by the California Emergency Management Agency. This database contains accidental or spill release information from reported hazardous material incidents since 1993.

**DTSCDR** DTSC Deed Restrictions

VERSION DATE: 10/07/18

The California Department of Toxic Substances Control (DTSC) maintains this listing of sites with deed restrictions. According to the DTSC, restricted land use indicates whether the site or area within the site has an environmental restriction recorded and/or other institutional control preventing certain types of land use or activities. The land use restrictions listed under the site management requirements are only an abbreviated summary of the land use restrictions, and may not encompass all restrictions and notification requirements placed on a property. For complete land use restriction information please contact the DTSC to review associated Land Use Restriction documents.

**EMI** Emissions Inventory Data

VERSION DATE: 12/31/16

The Air Resources Board's Emissions Inventory Database contains criteria pollutant data and toxic data on facilities throughout the state of California for the 2012-2000 inventory years.

**HWTS** Hazardous Waste Tanner Summary

VERSION DATE: 12/31/17

## **Environmental Records Definitions - STATE (CA)**

This data is prepared from information extracted from copies of hazardous waste manifests received each year by the Department of Toxic Substances Control. The Hazardous Waste Summary Report (Tanner Report) currently includes manifest data from the 1993 through the 2016 reporting years.

**LDS** Land Disposal Sites

VERSION DATE: 10/09/18

Land Disposal sites (Landfills) included in GeoTracker. GeoTracker is the Water Boards data management system for sites that impact, or have the potential to impact, water quality in California, with emphasis on groundwater.

**LIENS** Recorded Environmental Cleanup Liens

VERSION DATE: 05/17/18

The California Department of Toxic Substance Control (DTSC) maintains this listing of liens placed upon real properties. A lien is utilized by the DTSC to obtain reimbursement from responsible parties for costs associated with the remediation of contaminated properties.

**MCS** Military Cleanup Sites

VERSION DATE: 07/09/18

Military sites (consisting of: Military UST sites; Military Privatized sites; and Military Cleanup sites [formerly known as DoD non UST]) included in GeoTracker. GeoTracker is the Water Boards data management system for sites that impact, or have the potential to impact, water quality in California, with emphasis on groundwater

**NPDES** National Pollutant Discharge Elimination System Facilities

VERSION DATE: 09/04/18

Authorized by the Clean Water Act, the National Pollutant Discharge Elimination System (NPDES) permit program controls water pollution by regulating point sources that discharge pollutants into waters of the United States.

**ABST** Above Ground Storage Tanks

VERSION DATE: 09/13/18

This database, provided by the California Environmental Protection Agency's (CalEPA) Regulated Site Portal, contains aboveground petroleum storage tank facilities originating from the California Environmental Reporting System (CERS). These facilities store petroleum in aboveground storage tanks with oversight by local agencies. As of January 1, 2008, Assembly Bill No. 1130 of the Aboveground Petroleum Storage Act (APSA) authorized the Certified Unified Program Agencies to implement and administer the requirements of the APSA. CalEPA Data Disclaimer: Information displayed in the portal is collected from separate agency databases and displayed unaltered. Information that is considered confidential, trade secret, or is otherwise protected by the agency that

## **Environmental Records Definitions - STATE (CA)**

manages the database is not loaded into the portal. For more detail about information displayed in the portal, please visit the data source sites. Please refer to AST2007 database for aboveground storage tank information obtained from the California State Water Resources Control Board prior to 2008 APSA requirements.

**AST2007** Aboveground Storage Tanks Prior to January 2008

VERSION DATE: 12/01/07

This database contains aboveground storage tank facilities registered with the California State Water Resources Control Board (SWRCB) between 2007 and 2003. Since 2006, tanks were required to contain a minimum (even as cumulative) of 1320 gallons to be in the program. As of January 1, 2008, the SWRCB no longer maintains a list of registered aboveground storage tanks, due to effective Assembly Bill No. 1130 (Laird) of the Aboveground Petroleum Storage Act (APSA). This Bill authorized the Certified Unified Program Agencies to implement and administer the requirements of the APSA. Please refer to ABST database as a current source for aboveground petroleum storage tank data.

**CLEANER** Dry Cleaner Facilities

VERSION DATE: 06/20/18

This database, created by accessing the California Department of Toxic Substances Control's (DTSC) Hazardous Waste Tracking System, includes dry cleaner facilities that have registered EPA identification numbers. These facilities are categorized with one of the following NAICS Codes: 81231 or 81232. This database may also include facilities other than dry cleaners who also register with these same NAICS Codes. Not all companies report their NAICS/SIC Codes to the DTSC and therefore this database may exclude registered dry cleaner facilities with incomplete classification information.

**DTSCHWT** DTSC Registered Hazardous Waste Transporters

VERSION DATE: 10/14/18

The Department of Toxic Substances Control provides this list of Registered Hazardous Waste Transporters.

**HISTUST** Historical Underground Storage Tanks

VERSION DATE: 12/31/87

The Hazardous Substance Storage Container Database is a historical list of Underground Storage Tank sites, compiled from tank survey and registration information collected at one time between 1984 and 1987 by the State Water Resources Control Board. The hazardous substances stored within these tanks includes, but not restricted to, petroleum products, industrial solvents, and other materials.

**MINES** Mines Listing

VERSION DATE: 07/31/18

This database includes mine site locations from the California Office of Mine Reclamation.

## **Environmental Records Definitions - STATE (CA)**

**MWMP** California Medical Waste Management Program Facility List

VERSION DATE: 06/29/18

To protect the public and the environment from potential infectious exposure to disease causing agents, the Medical Waste Management Program (MWMP), in the Environmental Management Branch of the California Department of Public Health, regulates the generation, handling, storage, treatment, and disposal of medical waste by providing oversight for the implementation of the Medical Waste Management Act (MWMA). The MWMP permits and inspects all medical waste off-site treatment facilities, medical waste transporters, and medical waste transfer stations.

**SLIC** Spills, Leaks, Investigation & Cleanup Recovery Listing

VERSION DATE: 06/16/08

These records are maintained by the California Regional Water Quality Control Board (RWQCB). This list includes contaminated sites that impact groundwater or have the potential to impact ground water. Please refer to CLEANUPSITES database as source of current data.

**SWEEPS** Statewide Environmental Evaluation and Planning System

VERSION DATE: 10/01/94

The Statewide Environmental Evaluation and Planning System (SWEEPS) contains a historical listing of active and inactive underground storage tank locations from the State Water Resources Control Board. The hazardous substances stored within these tanks includes, but not restricted to, petroleum products, industrial solvents, and other materials. Refer to CUPA listing for source of current data.

**USTCUPA** Underground Storage Tanks

VERSION DATE: 10/18/18

An underground storage tank is an individual tank or group of tanks that store hazardous substances. Underground storage tanks are completely or considerably below the ground surface. This database contains UST permit data submitted from the Certified Unified Program Agencies (CUPA) directly to the State Water Resources Control Board. CUPA's are local agencies that have been certified by the California EPA to implement state environmental programs within the local agency's jurisdiction.

**BF** Brownfield Sites

VERSION DATE: 09/03/18

This database includes Brownfield sites from the State Water Resources Control Board. These are sites that have gone through the Moratorium of Agreement (MOA) process.

## **Environmental Records Definitions - STATE (CA)**

**CALSITES**                      CALSITES Database

VERSION DATE: 05/01/04

This historical database was maintained by the Department of Toxic Substance Control for more than a decade. CALSITES contains information on Brownfield properties with confirmed or potential hazardous contamination. In 2006, DTSC introduced EnviroStor as the latest Brownfields site database.

**CLEANUPSITES**                      GeoTracker Cleanup Sites

VERSION DATE: 10/09/18

This GeoTracker Cleanup Sites database is maintained by the State Water Resources Control Board. The database contains contaminated sites that impact groundwater or have the potential to impact ground water, including sites that require cleanup, such as Leaking Underground Storage Tank Sites, Department of Defense Sites, and Cleanup Program Sites. GeoTracker also contains records for various unregulated projects as well as permitted facilities including: Irrigated Lands, Oil and Gas production, operating Permitted USTs, and Land Disposal Sites. GeoTracker portals retrieve records and view integrated data sets from multiple State Water Board programs and other agencies.

**CORTESE**                              Cortese List

VERSION DATE: 10/18/18

This active listing includes hazardous waste and substances sites designated by the State Water Resources Control Board, the Integrated Waste Board, and the Department of Toxic Substance Control. The Cortese List is utilized by the State, local agencies and developers to comply with the California Environmental Quality Act requirements in providing information about the location of hazardous materials release sites.

**DROP**                                      Listing of Certified Dropoff, Collection, and Community Service Programs

VERSION DATE: 10/14/18

Listing of Certified Dropoff, Collection, and Community Service Programs (non-buyback) operating under the state of California's Beverage Container Recycling Program. This list is maintained by the Department of Conservation.

**ERAP**                                      Expedited Removal Action Program Sites

VERSION DATE: 10/14/18

The Expedited Remedial Action Program is a pilot project administered by the Department of Toxic Substances Control's Site Mitigation and Brownfields Reuse Program to promote the cleanup of up to 30 hazardous substance release sites. ERAP provides significant incentives for redevelopment of contaminated properties by promoting cleanups based on the planned land use, by providing a covenant not to sue, and by outlining a fair and equitable liability scheme.

## **Environmental Records Definitions - STATE (CA)**

**HISTCORTESE** Historical Cortese List

VERSION DATE: 11/02/02

This historical listing includes hazardous waste and substances sites designated by the State Water Resources Control Board, the Integrated Waste Board, and the Department of Toxic Substance Control. The Cortese List was utilized by the State, local agencies and developers to comply with the California Environmental Quality Act requirements in providing information about the location of hazardous materials release sites. See CACORTESE for an updated version of this database.

**LUST** Leaking Underground Storage Tanks

VERSION DATE: 10/09/18

This database is maintained by the State Water Resources Control Board. LUST records contain an inventory of reported leaking underground storage tank incidents. Please refer to the CLEANUPSITES database as source of current data.

**NFA** No Further Action Determination

VERSION DATE: 09/16/18

The NFA listing contains properties at which the Department of Toxic Substance Control has made a clear determination that the property does not pose a problem to the environment or to public health.

**NFE** Sites Needing Further Evaluation

VERSION DATE: 06/20/18

The NFE listing contains properties that the Department of Toxic Substance Control suspects with possible contamination. These are unconfirmed contaminated properties that need further assessment.

**PROC** Listing of Certified Processors

VERSION DATE: 08/12/18

Listing of Certified Processors that are operating under the state of California's Beverage Container Recycling Program. This list is maintained by the Department of Conservation.

**REF** Referred to Another Local or State Agency

VERSION DATE: 06/21/18

The REF listing contains properties where contamination has not been confirmed and which were determined as not requiring direct Department of Toxic Substance Control Site Mitigation Program action or oversight. Accordingly, these sites have been referred to another state or local regulatory agency.

## **Environmental Records Definitions - STATE (CA)**

**SWIS** Solid Waste Information System Sites

VERSION DATE: 10/08/18

The Solid Waste Information System (SWIS) database includes information on solid waste facilities, operations, and disposal sites located in California. This database is maintained by the California Department of Resources Recycling and Recovery.

**SWRCY** Recycling Centers

VERSION DATE: 08/13/18

Listing of Certified Recycling Centers that are operating under the state of California's Beverage Container Recycling Program. This list is maintained by the Department of Conservation.

**VCP** Voluntary Cleanup Program

VERSION DATE: 10/14/18

Contains low threat level properties with either confirmed or unconfirmed releases and the project proponents have request that DTSC oversee investigation and/or cleanup activities and have agreed to provide coverage for DTSC's costs.

**WMUDS** Waste Management Unit Database

VERSION DATE: 01/01/00

The Waste Management Unit Database System tracks and inventories waste management units. CCR Title 27 contains criteria stating that Waste Management Units are classified according to their ability to contain wastes. Containment shall be determined by geology, hydrology, topography, climatology, and other factors relating to the ability of the Unit to protect water quality. Water Code Section 13273.1 requires that operators submit a water quality solid waste assessment test (SWAT) report to address leak status. The WMUDS was last updated by the State Water Resources control board in 2000.

**ENVIROSTOR** EnviroStor Cleanup Sites

VERSION DATE: 10/14/18

The Department of Toxic Substances Control (DTSC) has developed the EnviroStor database system to evaluate and track sites with confirmed or potential contamination and sites where further investigation may be necessary. This EnviroStor database of cleanup sites contains the following: Federal Superfund sites (National Priorities List (NPL)); State Response, including Military Facilities and State Superfund; Voluntary Cleanup; and School sites. Sites where DTSC has made a "No Action Required" determination are not included in this database, as these sites had assessments that revealed no evidence of recognized environmental conditions in connection with the property.

## ***Environmental Records Definitions - STATE (CA)***

### **ENVIORSTORPCA**

EnviroStor Permitted and Corrective Action Sites

VERSION DATE: 10/18/18

The Department of Toxic Substances Control (DTSC) has developed the EnviroStor database system to evaluate and track sites with confirmed or potential contamination and sites where further investigation may be necessary. This EnviroStor database contains detailed information on hazardous waste permitted and corrective action facilities. Investigation and cleanup activities at hazardous waste facilities (either Resource Conservation and Recovery Act (RCRA) or State-only) that either were eligible for a permit or received a permit are called "corrective action." These facilities treated stored, disposed and/or transferred hazardous waste.

### **TOXPITS**

Toxic Pits Cleanup Act Sites

VERSION DATE: 07/01/95

Toxic Pits are sites with possible contamination of hazardous substances where cleanup is necessary. This listing is no longer updated by the State Water Resources Control Board.

## ***Environmental Records Definitions - TRIBAL***

**USTR09**                      Underground Storage Tanks On Tribal Lands

VERSION DATE: 04/10/18

This database, provided by the United States Environmental Protection Agency (EPA), contains underground storage tanks on Tribal lands located in EPA Region 9. This region includes the following states: Arizona, California, Hawaii, Nevada, and the territories of Guam and American Samoa.

**LUSTR09**                      Leaking Underground Storage Tanks On Tribal Lands

VERSION DATE: 04/10/18

This database, provided by the United States Environmental Protection Agency (EPA), contains leaking underground storage tanks on Tribal lands located in EPA Region 9. This region includes the following states: Arizona, California, Hawaii, Nevada, and the territories of Guam and American Samoa.

**ODINDIAN**                      Open Dump Inventory on Tribal Lands

VERSION DATE: 11/08/06

This Indian Health Service database contains information about facilities and sites on tribal lands where solid waste is disposed of, which are not sanitary landfills or hazardous waste disposal facilities, and which meet the criteria promulgated under section 4004 of the Solid Waste Disposal Act (42 U.S.C. 6944).

**TORRESDUMPSITES**                      Illegal Dump Sites on the Torres Martinez Reservation

VERSION DATE: 10/29/07

This listing of illegal dump site locations on the Torres Martinez Reservation is maintained by the United States Environmental Protection Agency, Region IX. These dump sites contain unlawfully discarded household waste such as landscaping and wood wastes with no known soil or groundwater contamination. A majority of the sites have already been cleaned up through the collaborative efforts of the EPA, The California Integrated Waste Management Board and the Torres Martinez Tribe.

**INDIANRES**                      Indian Reservations

VERSION DATE: 01/01/00

The Department of Interior and Bureau of Indian Affairs maintains this database that includes American Indian Reservations, off-reservation trust lands, public domain allotments, Alaska Native Regional Corporations and Recognized State Reservations.

# FEMA Report

## FEMA - Federal Emergency Management Agency

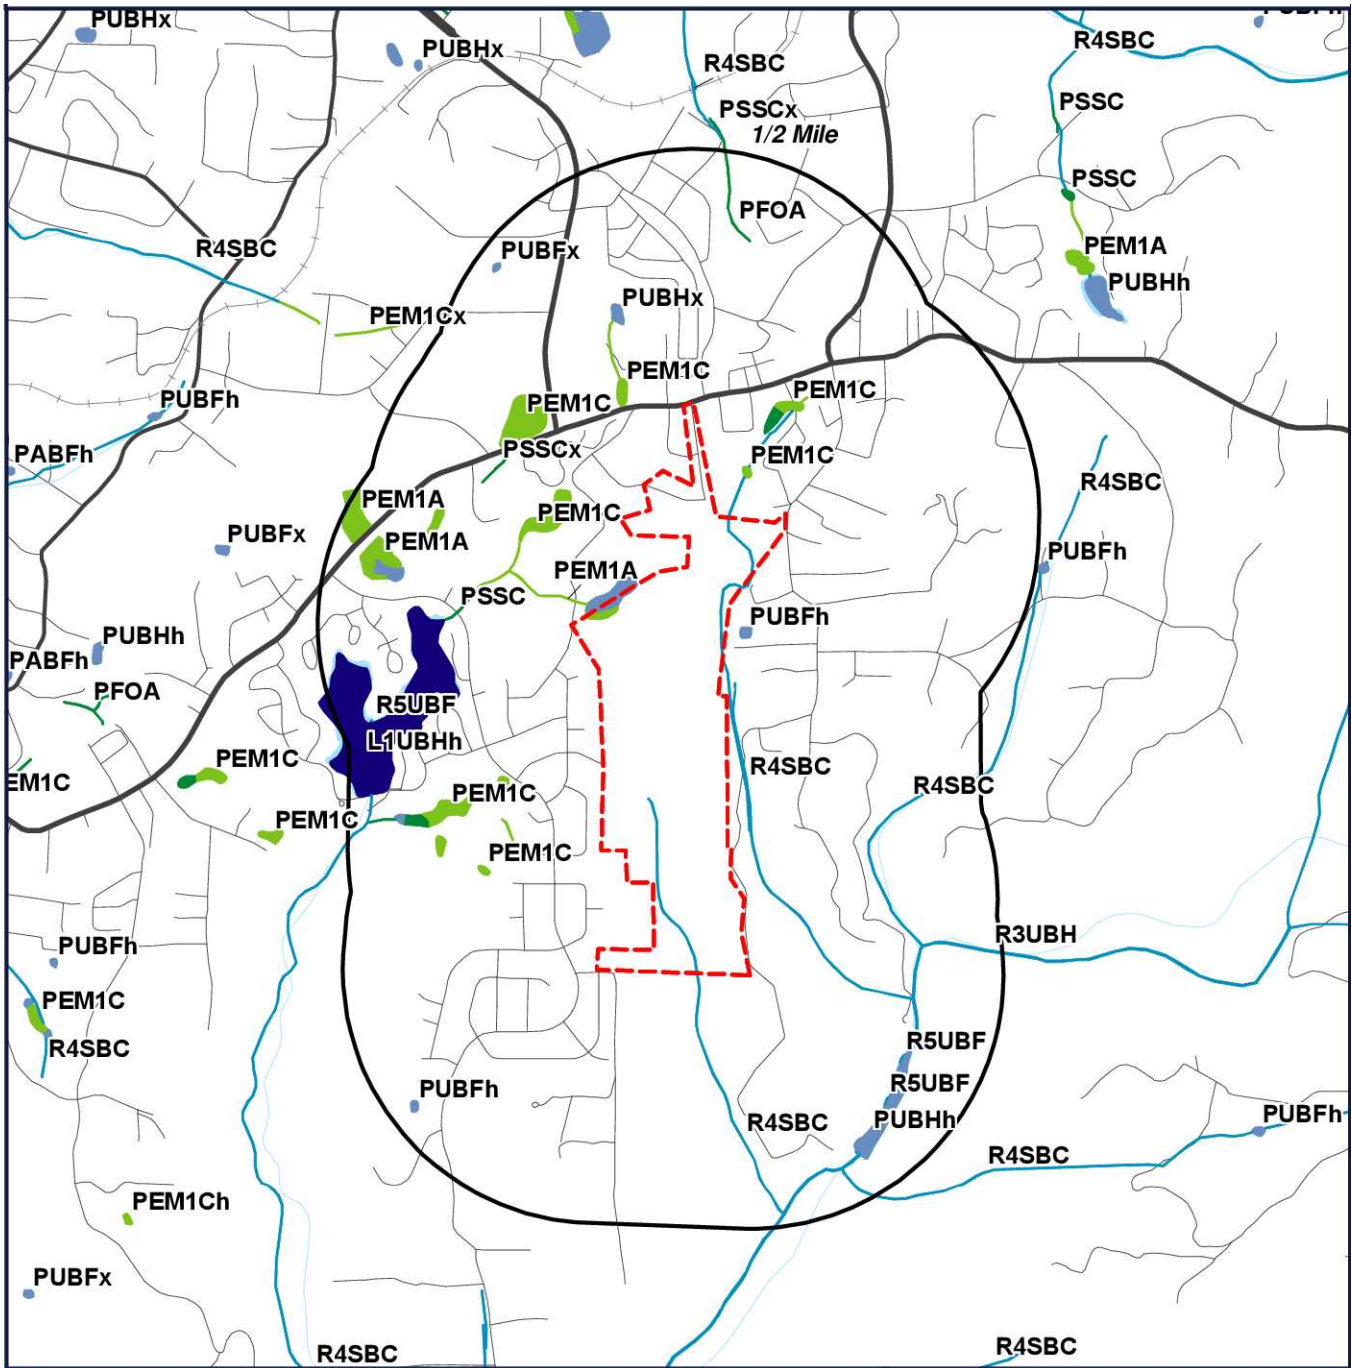

The National Flood Hazard Layer (NFHL) data used in this report is derived from the Federal Emergency Management Agency. The NFHL dataset is a compilation of effective Flood Insurance Rate Map (FIRM) databases (a collection of the digital data that are used in GIS systems for creating new Flood Insurance Rate Maps) and Letters of Map Change (Letters of Map Amendment and Letters of Map Revision only) that create a seamless GIS data layer for United States and its territories. The NFHL is updated as new study or LOMC data becomes effective. Note: Currently, not all areas have modernized FIRM database data available. As a result, users may need to refer to the effective Flood Insurance Rate Map for effective flood hazard information. This data was provided by the Federal Emergency Management Agency's Map Service Center in November of 2013.

# NWI Report

## NWI - National Wetlands Inventory

The US NWI digital data bundle is a set of records of wetlands location and classification as defined by the U.S. Fish & Wildlife Service. This dataset is one of a series available in 7.5 minute by 7.5 minute blocks containing ground planimetric coordinates of wetlands point, line, and area features and wetlands attributes. When completed, the series will provide coverage for all of the contiguous United States, Hawaii, Alaska, and U.S. protectorates in the Pacific and Caribbean. The digital data as well as the hardcopy maps that were used as the source for the digital data are produced and distributed by the U.S. Fish & Wildlife Service's National Wetlands Inventory project. Currently, this data is only available in select counties throughout the United States.

# SOIL Report

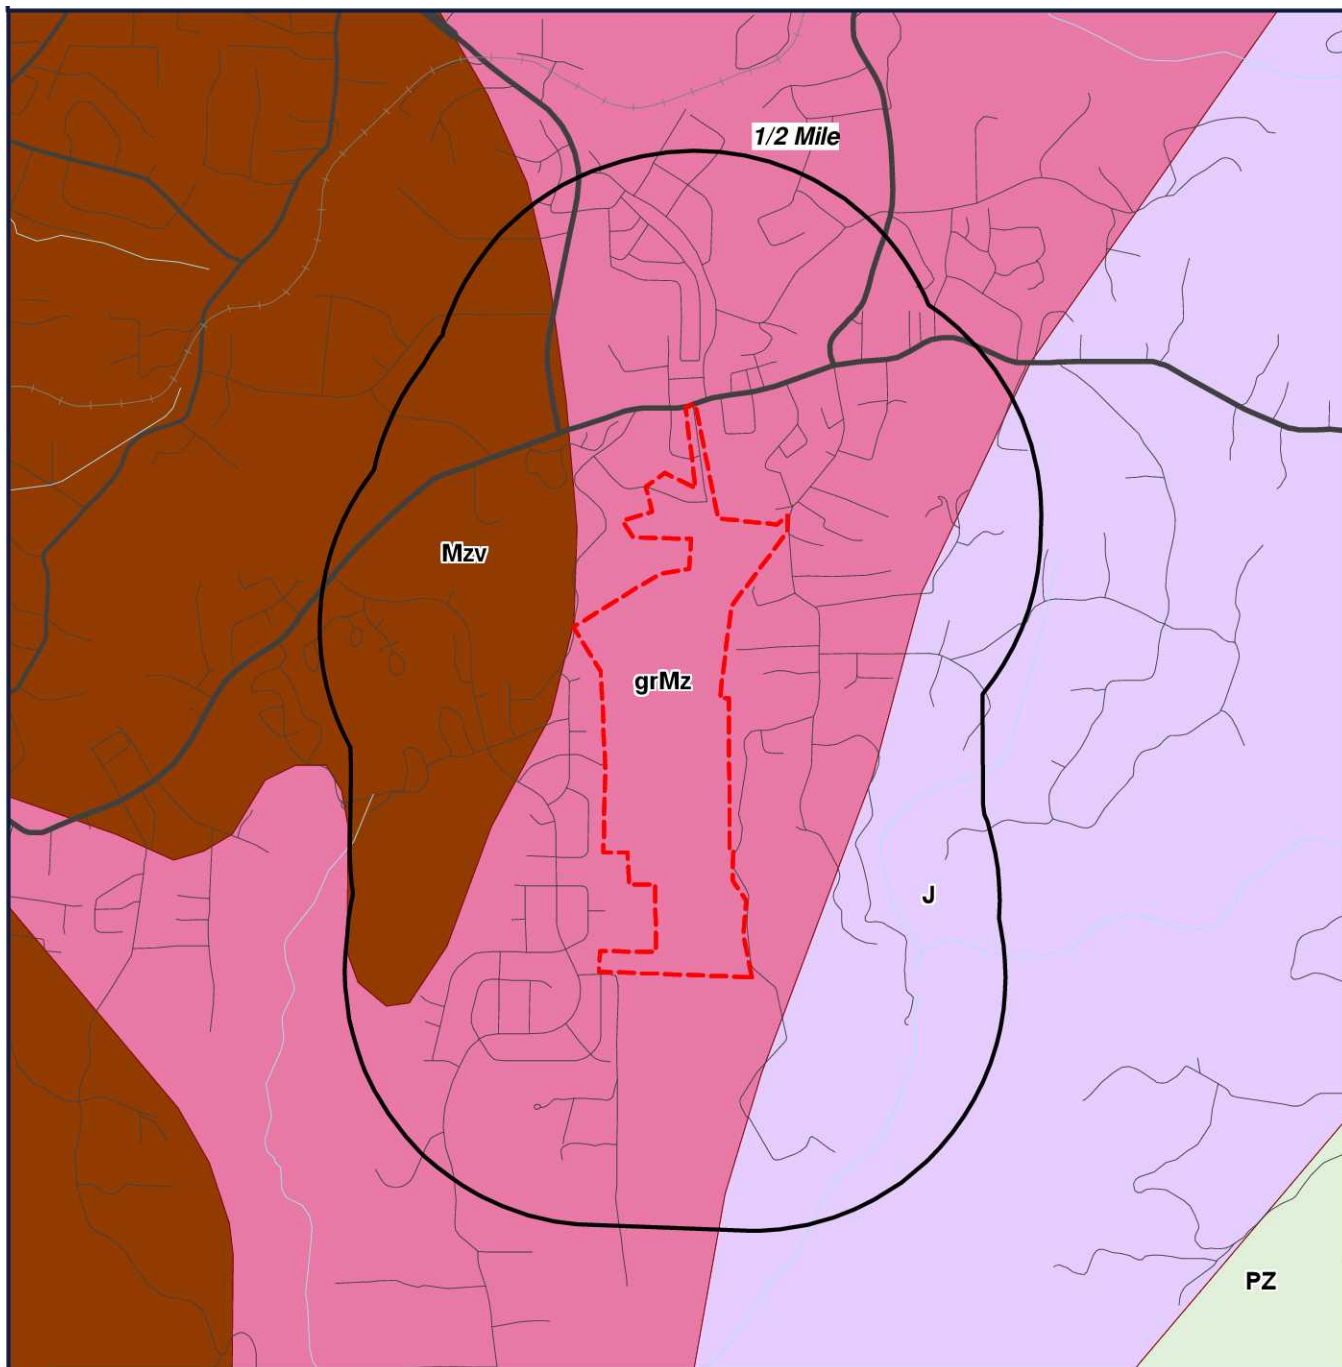

## Soil Surveys

The soil data used in this report is obtained from the Natural Resources Conservation Service (NRCS). The NRCS is the primary federal agency that works with private landowners to help them conserve, maintain and improve their natural resources. The soil survey contains information that can be applied in managing farms and ranches; in selecting sites for roads, ponds, buildings and other structures; and in determining the suitability of tracts of land for farming, industry and recreation. This data is available in select counties throughout the United States.

# GEOLOGY Report

## US GEOLOGY

THE GEOLOGY DATA USED IN THIS REPORT ORIGINATES FROM THE USGS. THE FIRST STAGE IN DEVELOPING STATE DATABASES FOR THE CONTERMINOUS UNITED STATES WAS TO ACQUIRE DIGITAL VERSIONS OF ALL EXISTING STATE GEOLOGIC MAPS. ALTHOUGH A SIGNIFICANT NUMBER OF DIGITAL STATE MAPS ALREADY EXISTED, A NUMBER OF STATES LACKED THEM. FOR THESE STATES NEW DIGITAL COMPILATIONS WERE PREPARED IN COOPERATION WITH STATE GEOLOGIC SURVEYS OR BY THE NSA (NATIONAL SURVEYS AND ANALYSIS) PROJECT. THESE NEW DIGITAL STATE GEOLOGIC MAPS AND DATABASES WERE CREATED BY DIGITIZING ALREADY EXISTING PRINTED MAPS, OR, IN A FEW CASES, BY MERGING EXISTING LARGER SCALE DIGITAL MAPS.

### GEOLOGY Definitions within Search Radius

GEOLOGY SYMBOL: **grMz**

UNIT NAME: **Mesozoic granitic rocks, unit 3 (Sierra Nevada, Death Valley area, Northern Mojave Desert and Transverse Ranges)**

UNIT AGE: **Permian to Tertiary; most Mesozoic**

UNIT DESCRIPTION:

**Mesozoic granite, quartz monzonite, granodiorite, and quartz diorite**

ADDITIONAL UNIT INFORMATION:

**Sierra Nevada, Death Valley area, Transverse Ranges and Mojave Desert. Primarily granodiorite, tonalite, quartz monzonite, and granite ranging in age from Late Triassic to Late Cretaceous. Includes some rocks as old as Permian and possibly a few as young as Tertiary. Three main periods of emplacement (Triassic, Jurassic, and Cretaceous); wide variety of rock types**

ROCKTYPE/S: **granodiorite; quartz monzonite; tonalite; quartz diorite; diorite; granite; monzodiorite; quartz syenite; quartz monzodiorite; gabbro; trondhjemite; alkali-granite (alaskite); pegmatite; monzonite; aplite**

GEOLOGY SYMBOL: **J**

UNIT NAME: **Jurassic marine rocks, unit 1 (Western Sierra Nevada and Western Klamath Mountains)**

UNIT AGE: **Triassic to Late Jurassic**

UNIT DESCRIPTION:

**Shale, sandstone, minor conglomerate, chert, slate, limestone; minor pyroclastic rocks**

ADDITIONAL UNIT INFORMATION:

**Western Klamath Mountains, western Sierra Nevada. Primarily slate and metamorphosed graywacke; minor siltstone, conglomerate, chert, and volcanic rocks. Mainly Late Jurassic in age, but also includes some Early Jurassic or older rocks**

ROCKTYPE/S: **slate; graywacke; siltstone; pyroclastic; conglomerate; chert; basalt**

GEOLOGY SYMBOL: **Mzv**

UNIT NAME: **Mesozoic volcanic rocks, unit 2 (Western Sierra Foothills and Western Klamath Mountains)**

UNIT AGE: **Jurassic**

UNIT DESCRIPTION:

**Undivided Mesozoic volcanic and metavolcanic rocks. Andesite and rhyolite flow rocks, greenstone, volcanic breccia and other pyroclastic rocks; in part strongly metamorphosed. Includes volcanic rocks of Franciscan Complex: basaltic pillow lava, diabase, greenstone, and minor pyroclastic rocks**

ADDITIONAL UNIT INFORMATION:

**Western Sierra Nevada and western Klamath Mountains. Mostly basaltic to andesitic breccias, flows, and tuffs, metamorphosed but with primary volcanic features generally recognizable. Minor associated sandstone and conglomerate. Largely or entirely of marine origin. Includes some rocks interpreted as ophiolites (Smartville complex)**

ROCKTYPE/S: **mafic volcanic rock; intermediate volcanic rock; felsic volcanic rock; chert; sandstone; conglomerate**

## Located Sites Summary

No Records Found.

## ***Environmental Records Definitions - FEDERAL***

**NWIS**

United States Geological Survey National Water Information System

VERSION DATE: 12/14/16

This USGS National Water Information System database only includes groundwater wells. The USGS defines this well type as: A hole or shaft constructed in the earth intended to be used to locate, sample, or develop groundwater, oil, gas, or some other subsurface material. The diameter of a well is typically much smaller than the depth. Wells are also used to artificially recharge groundwater or to pressurize oil and gas production zones. Additional information about specific kinds of wells should be recorded under the secondary site types or the Use of Site field. Underground waste-disposal wells should be classified as waste-injection wells.

## ***Environmental Records Definitions - STATE (CA)***

**DWRWELLS**

California Department of Water Resources Water Wells

VERSION DATE: 05/09/18

The California Department of Water Resources (DWR) maintains this database of water wells, including California Statewide Groundwater Elevation Monitoring (CASGEM) program wells and Voluntary wells. In Late 2009 the State Legislature amended the Water Code with SBx7-6, which mandates a statewide groundwater elevation monitoring program to track seasonal and long-term trends in groundwater elevations in California's groundwater basins. To achieve that goal, the amendment requires collaboration between local monitoring entities and DWR to collect groundwater elevation data. In accordance with this amendment to the Water Code, DWR developed the CASGEM program.

Please answer the following questions to the best of your knowledge.

1. Was the property or adjoining property ever used for industrial purposes (e.g. manufacturing) or as a gas station, dry cleaners, waste treatment, processing facility, motor repair facility, photo lab, commercial printing facility, junkyard/disposal/recycling/ landfill? If yes, please list the activity, hazardous substances used, and approximate dates when the activity occurred.

Prior land use, hazardous substances used, and dates:

**Some previous development efforts but none that proceeded to completion** \_\_\_\_\_  
\_\_\_\_\_  
\_\_\_\_\_

Prior owners, key site managers/operators, occupants and dates:

**Pre-dates Mr. Sweeney** \_\_\_\_\_  
\_\_\_\_\_  
\_\_\_\_\_

Existing or prior structures used for what purposes and duration:

**None known** \_\_\_\_\_  
\_\_\_\_\_  
\_\_\_\_\_  
\_\_\_\_\_

2. Do any of the following documents exist for the site or any portion of the site? If so, can you provide a copy? Leins? **No leins are known. The geotech report was provided.**

- Environmental site assessment reports
- Environmental compliance audit reports
- Environmental permits
- Underground Storage Tank registration
- Underground Injection System registration
- Material Safety Data Sheets
- Community Right-To-Know Plan
- Safety plans: preparedness and prevention plans; spill prevention; countermeasure; and control plans, etc.
- Reports regarding hydrogeologic conditions on the property or surrounding area;
- Correspondence from any government agency relating to past or current violations of environmental laws with regard to the property or relating to environmental liens encumbering the property
- Hazardous waste generator notices or reports
- X Geotechnical studies
- Risk assessments
- Recorded Activity and Use Limitations (AULs)

3. Have you ever observed evidence of or do you have prior knowledge of any of the following items being used, stored, discarded, dumped above grade, buried, or burned onsite? Circle all that apply and indicate amount and approximate dates.  
**NONE**

| MATERIAL   | QUANTITY | DATE(S) OBSERVED | COMMENTS                         |

\*Please provide records if available.

4. What method(s) is used to contain spills of hazardous waste?

**N/A** \_\_\_\_\_  
 \_\_\_\_\_  
 \_\_\_\_\_

5. What method(s) is used to dispose of hazardous waste?

**N/A** \_\_\_\_\_  
 \_\_\_\_\_  
 \_\_\_\_\_

6. Are there any permits for handling, use, storage, or disposal of hazardous waste?

**None** \_\_\_\_\_  
 \_\_\_\_\_  
 \_\_\_\_\_

7. Have you observed evidence of or have prior knowledge of the following onsite?

| MATERIAL   | QUANTITY | DATE(S) OBSERVED | COMMENTS |
|--|----------|------------------|----------|
| Equipment Maintenance Areas                                      | None     |                  |          |
| Accidental spills or releases of chemicals or petroleum products | None     |                  |          |

| MATERIAL   | QUANTITY | DATE(S) OBSERVED | COMMENTS                            |
|--|----------|------------------|-------------------------------------|
| Possible asbestos containing materials (e.g. pipe, building, etc.)   | None     |                  | Describe material:                  |
| Fill dirt originating from an unknown or contaminated site?  | None     |                  | Source:                             |
| Pits, ponds, or lagoons associated with waste treatment or waste disposal?                                       | None     |                  | Location:                           |
| Stained soil or odiferous soil? (e.g. oily black)  | None     |                  | Location:                           |
| Sumps or dry wells*  | None     |                  | Size :<br>Contents :<br>Condition : |
| Vent pipes, fill pipes, access ways to a fill pipe protruding from the ground or adjacent to a structure onsite? | None     |                  | Location:                           |
| Heating and cooling systems (include fuel source)  | None     |                  | Source:                             |
| Flooring, drains, walls that are stained or emitting a foul odor (do NOT include water damage)?                  | None     |                  | Location:                           |

\*Please provide records if available.

8. Is the property served by a private well or non-public water system? If so, please answer the following: **No**

a. Was the well used for domestic (D), agricultural irrigation (I), or monitoring (M) purposes? Are the wells currently operational and if not, when were they last used? When was the well drilled? How deep is the well? What is the approximate discharge rate?

| Well No. | Type | Operating? | Last Used | Date Drilled | Depth | Discharge Rate | Location |
|----------|------|------------|-----------|--------------|-------|----------------|----------|
| 1-       |      |            |           |              |       |                |          |
| 2-       |      |            |           |              |       |                |          |

- b. Have the wells been sampled for contaminants that exceed applicable requirements for the designated use (e.g. Drinking Water Standards)? If so, please provide the dates and copies of well records. **No**
- c. Has the well or water system been designated by any governmental environmental/health agency as contaminated? **None known**

9. Is there an oil/gas well or oil/gas vent located onsite? If so, please indicate the location. Please supply any documents available.

**No** \_\_\_\_\_  
 \_\_\_\_\_  
 \_\_\_\_\_

10. Is the property or has the property to your knowledge been previously served by a septic system? If so, please indicate the location of the tank and leach lines (if applicable) and list any hazardous materials disposed.

**Unknown** \_\_\_\_\_  
 \_\_\_\_\_  
 \_\_\_\_\_

11. Does the property discharge waste water into a storm water sewer system or a sanitary sewer system onto or adjacent to the property? If so, please describe location, piping flow, quantity discharged, and water quality.

**No** \_\_\_\_\_  
 \_\_\_\_\_  
 \_\_\_\_\_

12. Do you have knowledge of the following with respect to the property? Circle and explain all that apply.

- a. Environmental clean-up, ongoing or pending. **None**
- b. Environmental liens **None**
- c. Governmental notifications regarding any possible past or present violations of environmental laws. **None**
- d. Past, threatened, pending lawsuits or administrative proceedings relevant to a release of a hazardous substance or petroleum product, in, on, or from the property. **None**

- e. Prior environmental assessment that indicated the presence of hazardous substances, petroleum hydrocarbons, contaminants, or recommended further assessment. **None**
- f. Deed Restrictions - **None**
- g. Citizen complaints regarding activities onsite **None**

**AGRICULTURAL SITES: No**

13. What crops have been grown onsite, currently and in the past?

| CROP        | DATE | LOCATION |
|-------------|------|----------|
| <b>None</b> |      |          |
|             |      |          |
|             |      |          |
|             |      |          |
|             |      |          |
|             |      |          |

**If crops are present or have been grown, please answer questions 14 through 16 below:**

14. Have pesticides been applied to fields or other portions of the site? If so, please answer the following questions:

- a. List the names of pesticides (includes herbicides, fungicides, insecticides, rodenticide) used and dates applied.

| PESTICIDE AND BRAND NAME | DATE | CROP OR ANIMAL USE |
|--------------------------|------|--------------------|
|                          |      |                    |
|                          |      |                    |
|                          |      |                    |
|                          |      |                    |
|                          |      |                    |
|                          |      |                    |

b. Have you been notified of any violation of environmental law with respect to application or storage of pesticides?

---

---

---

c. Location of pesticide mixing areas, if any (past or present)?

---

---

---

d. Method of pesticide application?

---

---

---

15. Have fertilizers been applied to the site? What type and method of application?

---

---

---

16. Are there any buried pipelines for irrigation or other purposes onsite? If so, what materials is the piping constructed of? Asbestos containing material, PVC, other? Describe the location of buried piping.

---

---

---

## User Questionnaire

**Only the client (“user”) needs to respond to the following questions:**

17. Are you aware of any environmental cleanup liens against the property that are filed or recorded under federal, tribal, state, or local law?
18. Are you aware of any Activity and Use Limitations (AULs), such as engineering controls, land use restrictions or institutional controls that are in place at the site and/or have been filed or recorded in a registry under federal, tribal, state, or local law?
19. As the user of this Phase 1 ESA do you have any specialized knowledge or experience related to the property or nearby properties? For example, are you involved in the same line of business as the current or former occupants of the property or an adjoining property so that you would have specialized knowledge of the chemicals and processes used by this type of business?
20. Does the purchase price being paid for this property reasonably reflect the fair market value of the property? If you conclude that there is a difference, have you considered whether the lower purchase price is because contamination is known or believed to be present at the property?
21. Are you aware of commonly known or reasonably ascertainable information about the property that would help the environmental professional to identify conditions indicative of releases or threatened releases? For example, as user,
  - a) Do you know the past uses of the property?
  - b) Do you know of specific chemicals that are present or once were present at the property?
  - c) Do you know of spills or other chemical releases that have taken place at the property?
  - d) Do you know of any environmental cleanups that have taken place at the property?
22. As the user of this Phase 1 ESA, based on your knowledge and experience related to the property are there any obvious indicators that point to the presence or likely presence of contamination at the property?

DRAFT ENVIRONMENTAL IMPACT REPORT (DEIR)  
(STATE CLEARINGHOUSE #2019071041)**

**APPENDIX G**

**HYDROLOGY AND WATER QUALITY**

## TECHNICAL MEMORANDUM

**Date:** September 27, 2018  
**To:** El Dorado County  
**From:** Brian Hammer  
**CC:** Greg Stedfield  
**Subject:** Dorado Oaks Drainage and Storm Water Quality Technical Memo for Tentative Map

---

### Introduction

This Technical Memorandum (TM) is a technical drainage assessment for the Dorado Oaks proposed development and provides a tentative map level of analysis for the proposed storm drainage infrastructure and storm water quality facilities.

The contributory area analyzed herein is comprised of approximately 501 acres of which approximately 70 acres are developed with the remainder consisting of off-site and on-site contributory areas not developed for this project. See Appendix A for existing and developed watershed Maps.

The purpose of this technical memo is to:

- Present technical storm drainage and stormwater quality calculations for the proposed project development.
- Conclude that the proposed infrastructure is sufficient to serve the planned development.

The data, modeling, and exhibits herein are based upon the NGVD 29 datum. No previous studies were utilized in the preparation of this report.

**Figure 1. Project Location**

### Model Assumptions and Design Criteria

HEC-HMS was used to calculate runoff and to perform hydraulic calculations. The site discharges primarily to the south and east of the project with two small watersheds discharging to the West. There are two ridgelines in the project which results in a drainage path to the center of the project which continues south and a drainage path to the west of the project. There are five points of compliance for the project which can be seen on Figure 2. The path to the center and south is considered a single location in which the developed flow will be compared to the existing flows. The west slope of the project drains to compliance point 1 and 2. Compliance point 2 does not collect to a single point at the property line and therefore the flows leaving the site will be summed up and compared against the developed flows leaving the site to the west.

Due to the slope of the watershed it is assumed there will be no backwater condition placed on the swale outfalls.

**Figure 2. Compliance Point Locations**

The hydrologic input and criteria used for the development of this study are summarized below:

- The site consists of USGS Soil Type C Soils (See Figure 3 Below).
- The percent impervious rates used are as follows:
  - Roadway: 95%
  - Single Family Lots:
  - T-Court Lots:
  - Apartments or Condominiums:
  - Open Space or Existing: 2%

The hydraulic input and criteria used for the development of this study are summarized below:

- The following Manning's 'n' values were used:

- Pipes 0.015
- Gutters 0.015
- Asphalt Street Section 0.019
- Minimum pipe velocity of 2.0fps
- Minimum pipe diameter of 12"
- Data was input with information matching the tentative map grading plans.
- The 10-year hydraulic grade line shall stay at a minimum 1-foot below all manhole rims and inlet grates.
- The 100-year event shall be greater than 1 foot below adjacent finished pad elevations.
- 10-year and 100-year mitigation will be achieved for the development.
- Water Quality Swales and Basins will mitigate for the development impacts. No LID is assumed in the sizing of these facilities. If LID is proposed in the improvement plans these water quality features can be reduced in size.

Exhibit 1 displays the sheds, proposed pipe system, and pertinent results. The hydrologic data and parameters that were used to develop the runoff are included in Appendix A.

Figure 3. USGS Soil Map (Type C Soils)

### 10-Year Analysis and Results

The 10-year event for existing and proposed conditions was analyzed in HEC-HMS. Table 1 shows the resultant peak flows at each compliance point and the difference in flow leaving the site. The complete data and results are attached as Appendix B.

**Table 1. 10-Year Peak Flows**

| Point of Compliance | Existing (cfs) | Proposed (cfs) | Difference (cfs) |
|---------------------|----------------|----------------|------------------|
| 1                   | 347            | 330            | -17              |
| 2                   | 17             | 13.7           | -3.3             |
| 3                   | 48             | 16             | -32              |
| 4                   | 87             | 87             | 0                |
| 5                   | 4.4            | 12.4           | 8                |
| 6                   | 19             | 13.6           | -5.4             |
| Total               | 522.4          | 472.7          | -49.7            |

### 100-Year Analysis and Results

The 100-year event for existing and proposed conditions was analyzed in HEC-HMS. Table 2 shows the resultant peak flows at each compliance point and the difference in flow leaving the site. The complete data and results are attached as Appendix C.

**Table 2. 100-Year Peak Flows**

| Point of Compliance | Existing (cfs) | Proposed (cfs) | Difference (cfs) |
|---------------------|----------------|----------------|------------------|
| 1                   | 575            | 546            | -29              |
| 2                   | 28             | 21.9           | -6.1             |
| 3                   | 77.6           | 26             | -51.6            |
| 4                   | 141            | 142            | 1                |

### Storm Water Quality and Hydromodification

The Dorado Oaks proposed development projects create more than one acre of impervious surface. Due to this, it is required to provide storm water treatment for the 85th percentile event.

The first line of defense in maintaining storm water quality is to keep polluted water from commingling with clean water through the use of Source Controls. This can be done using structural and operational measures at the pollutant source. At this time in the development process source control measures are not yet implemented. It is anticipated that source control measures will be proposed for the apartment and T-lot development products. For the tentative map design, it is assumed no source control is proposed to show the largest size of water quality features.

Additionally, several Low Impact Development strategies are anticipated to reduce the post-development flows. These strategies remove pollutants from runoff, attenuate peak flows, and reduce runoff volume. The proposed LID measures include tree planting, disconnected impervious areas, bioretention facilities, and a vegetated swale. Similar to source controls, the LID features anticipated to be installed were not assumed to provide water quality or hydromodification reductions. This results in the greatest sized

facilities for purposes of land allocation. These facilities can be reduced at the improvement plan level analysis when LID feature locations and quantities are finalized.

No LID measures are proposed for off-site areas that contribute to the project's outfall nor for the interim graded pervious areas (future roadway).

The swale was sized to treat the entire stormwater quality flow without accounting for the tree planting, disconnected impervious areas, and bioretention facilities. Appendix D contains the calculations for sizing of the water quality swales which will adequately treat the development.

### Conclusion

The results of the analysis performed for this Technical Memorandum demonstrate that the proposed improvements can be satisfactorily treated and conveyed within the proposed drainage facilities without damage to structures or downstream receiving waters. Further detail on the storm drain system, swale grading, final basin grading, and culverts will be provided with the improvement plan submittal.

**DORADO OAKS TENTATIVE SUBDIVISION MAP  
DRAFT ENVIRONMENTAL IMPACT REPORT (DEIR)  
(STATE CLEARINGHOUSE #2019071041)**

**APPENDIX H  
TRANSPORTATION**

## TECHNICAL MEMORANDUM - DRAFT

**Date:** April 19, 2021

**To:** Mike Foote – Stonehenge Springs, LLC

**From:** David B. Robinson – Fehr & Peers

**Subject:** Dorado Oaks VMT Analysis

RS20-3992

---

This memorandum presents vehicle miles traveled (VMT) analysis of the proposed Dorado Oaks Tentative Subdivision Map Project in El Dorado County.

With the implementation of Senate Bill (SB) 743, local agencies such as El Dorado County may no longer rely on vehicular delay or capacity-based analyses for California Environmental Quality Act (CEQA) impact determination. Instead, agencies must analyze transportation impacts utilizing VMT, a measure of the total distance traveled by vehicles for trips beginning or ending in the County on a typical weekday. This memorandum covers the following topics:

- SB 743
- VMT Thresholds of Significance
- VMT Estimation Methodology
- Project Summary
- VMT for Dorado Oaks Tentative Subdivision Map Project

### **SB 743**

Passed in 2013, SB 743 changes the focus of transportation impact analysis in CEQA from measuring impacts to drivers, to measuring the impact of driving. The change is being made by replacing LOS with vehicle miles of travel (VMT). This shift in transportation impact focus is intended to better align transportation impact analysis and mitigation outcomes with the State's goals to reduce greenhouse gas (GHG) emissions, encourage infill development, and improve public health through more active transportation. Level of service or other delay metrics may still be used to evaluate the impact of projects on drivers as part of land use entitlement review and impact fee programs.

In January 2019, the Natural Resources Agency finalized updates to the CEQA Guidelines including the incorporation of SB 743 modifications. The Guidelines' changes were approved by the Office of

Administrative Law and are now in effect. Specific to SB 743, Section 15064.3(c) states, “A lead agency may elect to be governed by the provisions of this section immediately. The provisions apply statewide as of July 1, 2020.

To help aid lead agencies with SB 743 implementation, the Governor’s Office of Planning and Research (OPR) produced the *Technical Advisory on Evaluating Transportation Impacts in CEQA*<sup>1</sup> (December 2018) that provides guidance about the variety of implementation questions they face with respect to shifting to a VMT metric. Key guidance from this document includes:

- VMT is the most appropriate metric to evaluate a project’s transportation impact.
- OPR recommends tour- and trip-based travel models to estimate VMT, but ultimately defers to local agencies to determine the appropriate tools.
- OPR recommends measuring VMT for residential and office projects on a “per rate” basis.
- OPR recommends that a per capita or per employee VMT that is fifteen percent below that of existing development may be a reasonable threshold. In other words, an office project that generates VMT per employee that is more than 85 percent of the regional VMT per employee could result in a significant impact. OPR notes that this threshold is supported by evidence that connects this level of reduction to the State’s emissions goals.
- OPR recommends that where a project replaces existing VMT-generating land uses, if the replacement leads to a net overall decrease in VMT, the project would lead to a less-than-significant transportation impact. If the project leads to a net overall increase in VMT, then the thresholds described above should apply.
- Lead agencies have the discretion to set or apply their own significance thresholds.

### ***VMT Thresholds of Significance***

In 2019, the El Dorado County Transportation Commission completed the *El Dorado County and City of Placerville SB 743 Implementation Plan*<sup>2</sup> (July 19, 2019) to support El Dorado County and the City of Placerville with implementation of SB 743, including the selection of VMT analysis methodology, setting thresholds of significance, and potential mitigation.

---

<sup>2</sup> El Dorado County Transportation Commission. *El Dorado County and City of Placerville SB 743 Implementation Plan*. July 19, 2019. <https://www.edcgov.us/Government/dot/Documents/Transportation%20Planning/EDCTC%20SB743%20Implementation%20Plan.pdf>

With Resolution 141-2020<sup>3</sup> (October 6, 2020), the Board of Supervisors of the County of El Dorado adopted VMT thresholds of significance for purposes of analyzing transportation impacts under CEQA.

The County's VMT thresholds consider the VMT performance of residential and office components of a project separately, using the efficiency metrics of VMT per capita and VMT per employee, respectively. For retail components of a project, the county-wide VMT effect is analyzed. The El Dorado County VMT thresholds of significance are summarized below for each of these components:

- Residential – 15% below baseline unincorporated countywide VMT per Capita
- Commercial Office – 15% below baseline unincorporated countywide VMT per Employee
- Commercial Retail – No net increase in VMT

### ***VMT Estimation Methodology***

Consistent with Resolution 141-2020, VMT estimation was conducted using the El Dorado County Travel Demand Forecasting Model (EDCTDM). The VMT estimation process generates estimates in a manner that is consistent with OPRs Technical Advisory and the selected VMT significance thresholds outlined above.

The following section from the Technical Advisory suggests that lead agencies should use VMT estimation methodologies that account for the “full extent of vehicle travel”.

**Considerations for All Projects.** Lead agencies should not truncate any VMT analysis because of jurisdictional or other boundaries, for example, by failing to count the portion of a trip that falls outside the jurisdiction or by discounting the VMT from a trip that crosses a jurisdictional boundary. CEQA requires environmental analyses to reflect a “good faith effort at full disclosure.” (CEQA Guidelines, § 15151.) Thus, where methodologies exist that can estimate the full extent of vehicle travel from a project, the lead agency should apply them to do so. Where those VMT effects will grow over time, analyses should consider both a project’s short-term and long-term effects on VMT.

To provide a full accounting of vehicle travel, the EDCTDM provides VMT estimates that include the VMT from intrazonal vehicle trips and trip length adjustments for the trips that enter or exit the area covered by the EDCTDM.

### Intrazonal Trips and Trip Lengths

The VMT estimation process includes intrazonal trips in its estimates. Intrazonal trips are trips that have their origin and destination within the same traffic analysis zone (TAZ). Because these trips do not leave a TAZ, they are not assigned to the EDCTDM’s roadway network. Consequently, intrazonal trips cannot be

---

<sup>3</sup> Board of Supervisors of the County of El Dorado Resolution 141-2020.  
<https://www.edcgov.us/Government/dot/Documents/Transportation%20Planning/Executed%20Resolution%20141-2020.pdf>

directly derived from the EDCTDM's network and must be estimated to provide a more complete VMT analysis. The intrazonal trip lengths are estimated by calculating half of the shortest travel distance between a given TAZ and all the other TAZs, using the EDCTDM's midday assignment. The EDCTDM uses the following four assignment periods to develop a 24-hour travel assignment:

- AM3VS.NET – AM 3-Hour Assignment
- MDVS.NET – Midday 5-Hour Assignment
- P3V.NET – PM 3-Hour Assignment
- EVV.NET – Evening 13-Hour Assignment

The different assignment periods are used to account for the affect that congestion has on accessibility (i.e., the ability to travel between two locations). It typically takes longer to travel the same distance during peak periods than it does during other times of the day. The midday 5-hour assignment period is used to calculate intrazonal travel because there is generally less traffic and less congestion (i.e., compared to the AM or PM peak periods) and is more representative of average daily conditions.

#### Gateway Trip Length Adjustments

The EDCTDM includes a buffer area that extends along Highway 50 from El Dorado County into eastern Sacramento County, including the City of Folsom and City of Rancho Cordova. **Figure 1** shows the model area, including the TAZs that represent El Dorado County (purple), the buffer area (yellow), and the state highway system. The buffer area allows for more detailed modeling of travel interaction between El Dorado County and eastern Sacramento County. However, even with the buffer area, adjustments to the length of trips passing through the EDCTDM's gateway locations are necessary to account for the full length of trips throughout California.

**Table 1** summarizes the average trip lengths for trips entering (XI) and exiting (IX) the EDCTDM developed using the California Statewide Travel Demand Model (CSTDm). Although not as detailed as the EDCTDM, the CSTDm can summarize the general patterns of trips made by El Dorado County residents and employees entering and leaving the County throughout California. The CSTDm scale makes it a useful tool to generate trip length estimates for trips entering or leaving the EDCTDM coverage area.

Because of the sample size limitations with the California Household Travel Survey (CHTS) data (i.e., only 163 recorded trips), trip length adjustments from the CSTDm are used. The average additional travel distance from the CSTDm shown in **Table 1** indicate the additional lengths added to the trips that pass through the EDCTDM's gateway locations.

**Table 1: Average Trip Length Adjustments for Each Gateway Location**

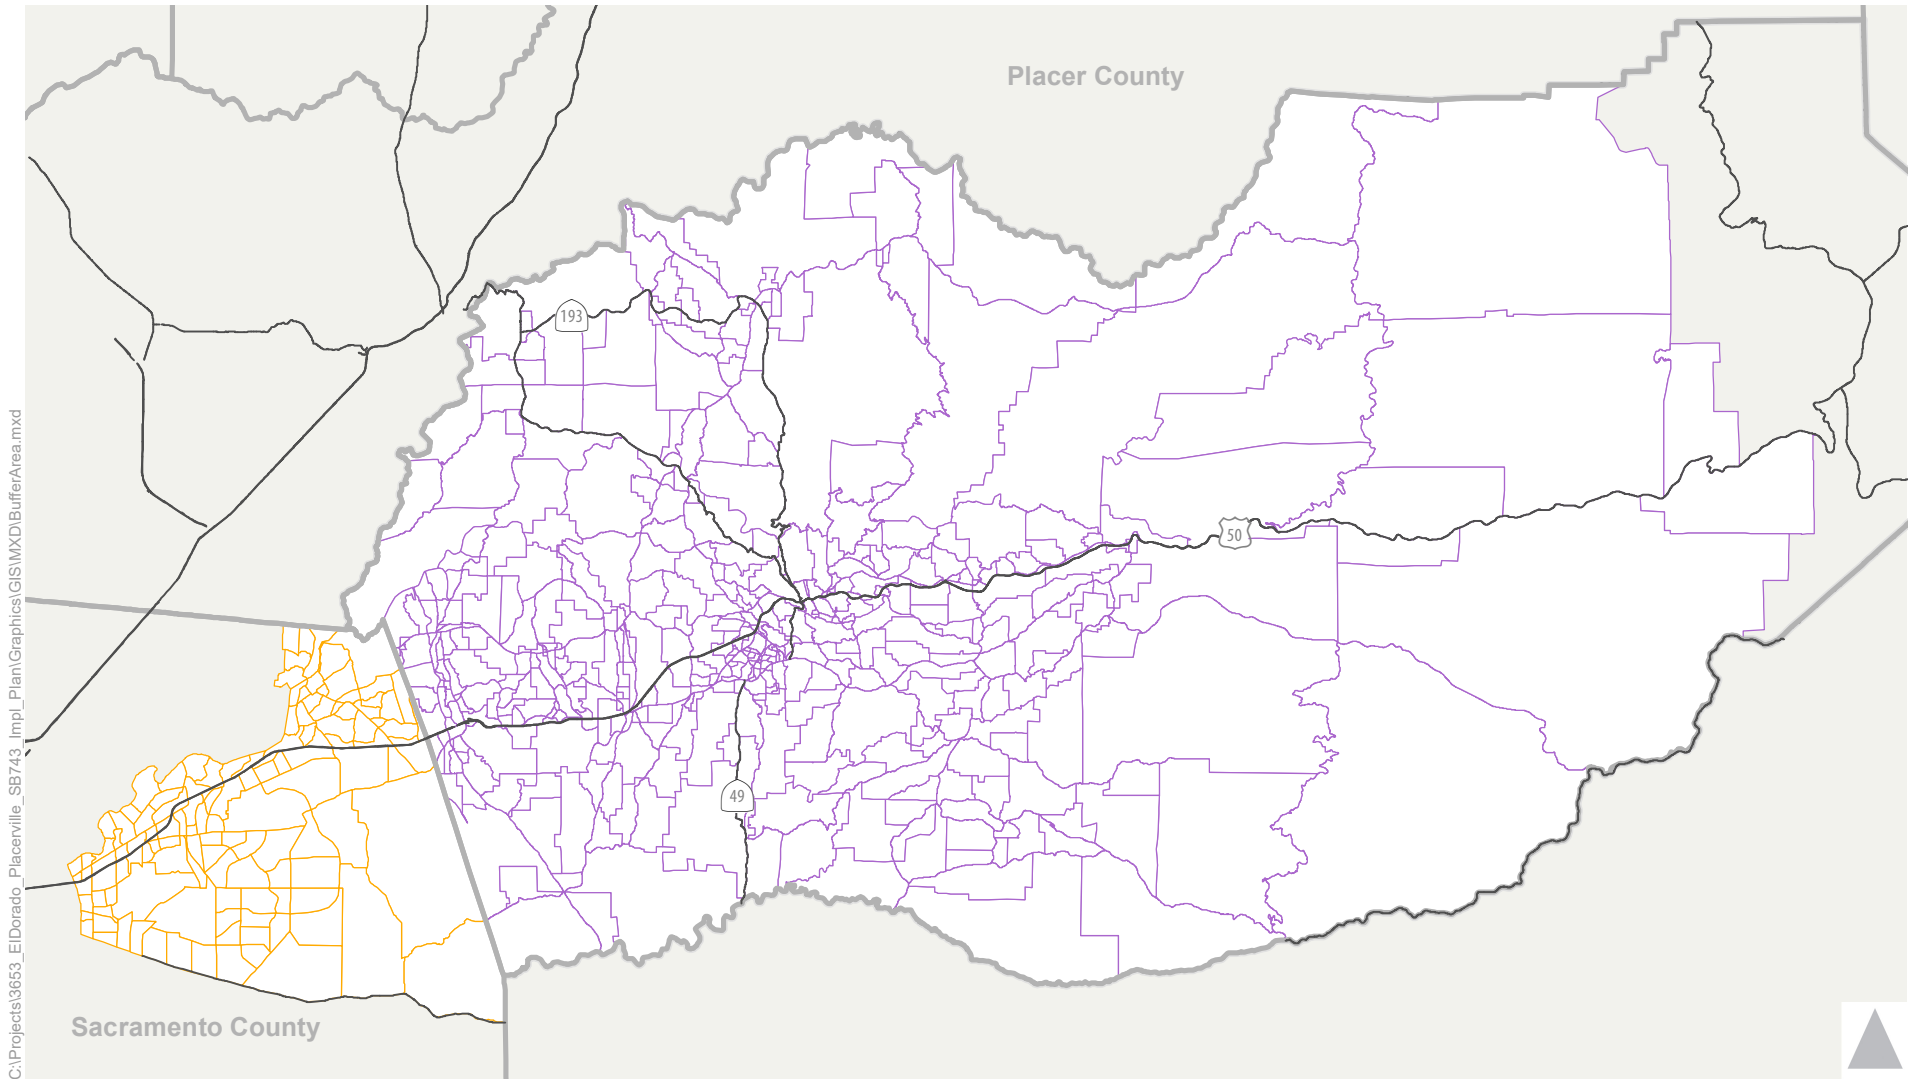

| Gateway Location                                      | Direction | Gateway Node ID | Average Additional Travel Distance (miles) |                                 |
|---|-----------|-----------------|--|---------------------------------|

Figure 1  
El Dorado County Model (2018)  
Traffic Analysis Zones within El Dorado County and the Buffer Area

## Network Refinements

The EDCTDM is a countywide model developed and maintained by the County for traffic analysis related to the General Plan and Traffic Impact Fee Program. Consistent with these applications, the model includes major transportation facilities, including County arterials like El Dorado Hills Boulevard and State facilities like US 50, and a TAZ system that is at a corresponding level of detail. The EDCTDM does not include local and collector roadways. Therefore, the EDCTDM may require refinement for different applications.

The 2017 California Regional Transportation Plan Guidelines (CTC, January 2017) provides guidance on the application of travel demand models. Specifically, that travel demand models should be at an appropriate scale relative to the analysis being conducted. Consistent with this guidance, additional roadway network and TAZ detail was added in El Dorado Hills north of US 50, south of Green Valley Road, east of Sophia Parkway, and west of El Dorado Hills Boulevard to better reflect actual travel time and distance between El Dorado Hills and the City of Folsom. **Figure 2** compares the traffic analysis zone and roadway network detail with and without modification.

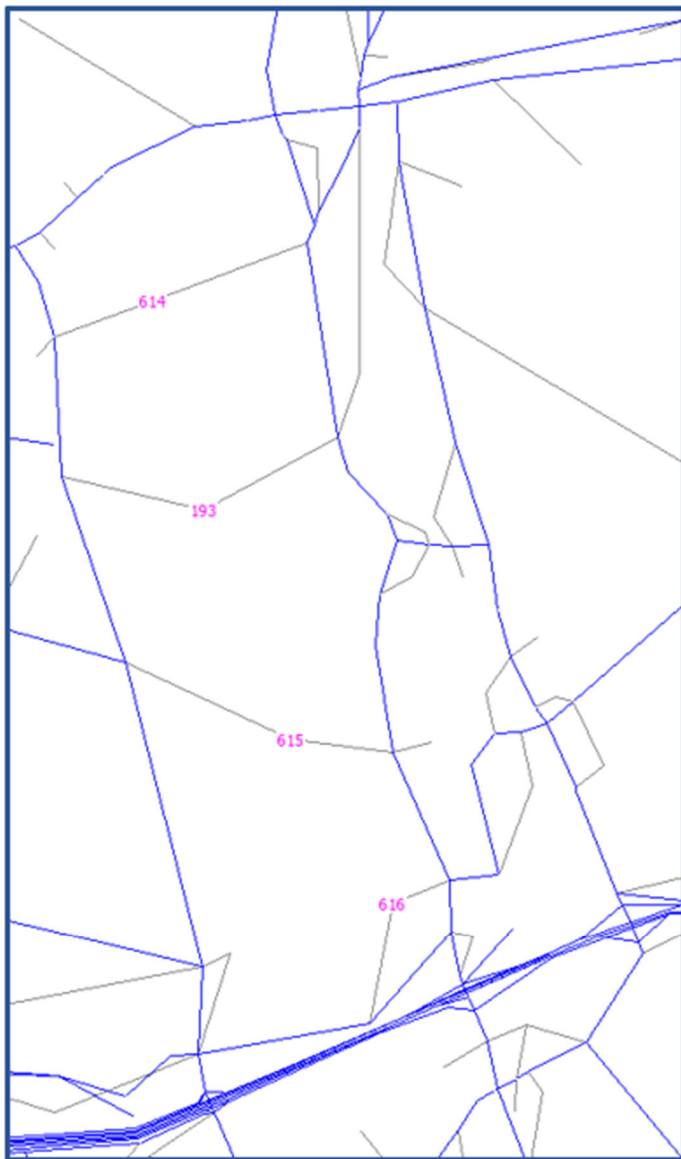

Without modification, the EDCTDM uses 4 TAZs to represent most of the land use in this area with local roadway access modeled using special model links, referred to as TAZ centroid connectors. TAZ centroid connectors provide access for the local development but not for other trips on the network. With this roadway network coding trip lengths are shorter for the land uses represented by the 4 TAZs.

The modified network increased the TAZ detail from 4 to 22 and added roadway links, instead of TAZ centroid connectors, for local access between El Dorado Hills and the City of Folsom in this area. The following public roadway connections were added between El Dorado Hills Boulevard and Sophia Parkway/Empire Ranch Road:

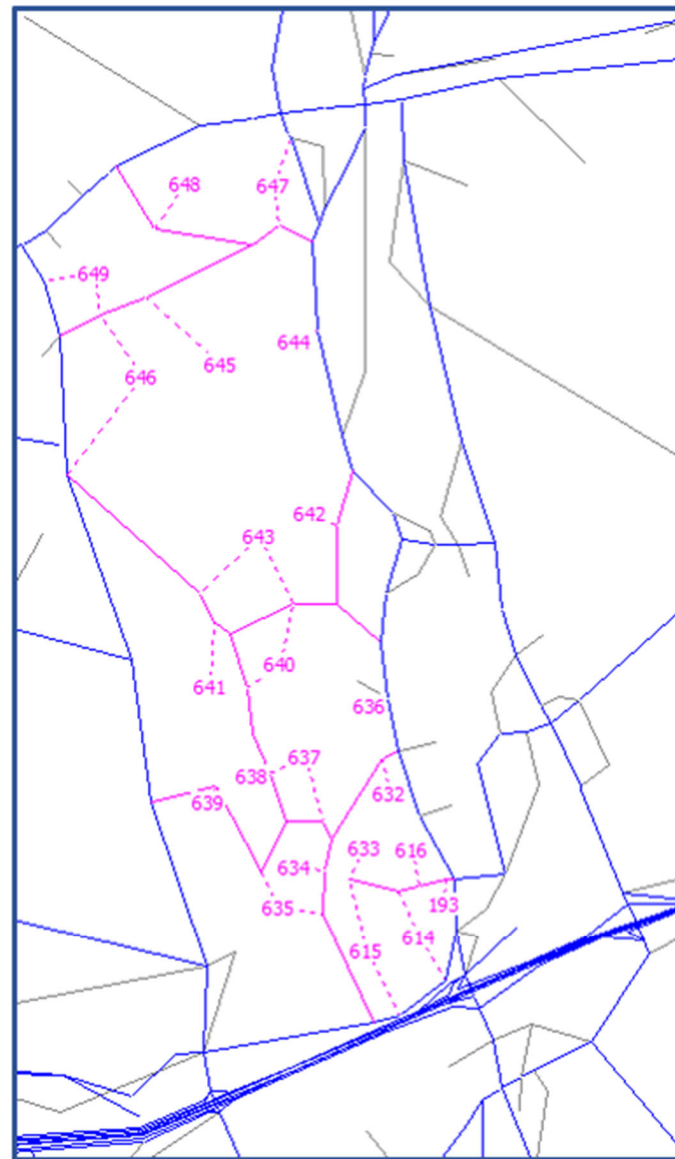

- North Connection: Brittany Way – Suffolk Way – Elmores Way
- North Central Connection: Olson Lane – Gillette Drive – Ridgeview Drive – Muse Drive – Mossridge Way – Powers Drive – Julie Ann Way – Beatty Drive – Alexandra Drive
- South Central Connection: Wilson Boulevard –Ridgeview Drive – Powers Drive – Montridge Way – Crestline Circle – Via Treviso – Via Barlogio – Hildebrand Circle – Woodhead Street
- South Connection: Wilson Boulevard (El Dorado Hills Boulevard to Saratoga Way)

Figure 2 – EDCTDM Model Network Refinements

**Without Modification**

**With Modification**

**Table 2** compares the estimated travel time from the EDCTDM after modification to field measured travel times. As shown, the model's estimated travel time is consistent with and comparable to field measurements. Therefore, the model is appropriate for application and is more representative of actual travel times and distance than the EDCTDM prior to modification since the model did not include these connections.

| <b>Table 2: Travel Time Comparison (Model Estimate vs Field Measurement)</b> |                              |                          |                                   |

| <b>Added Roadway Connection</b>  | <b>Travel Time (minutes)</b> |                          |                                   |
|  | <b>Model Estimate</b>        | <b>Field Measurement</b> | <b>Difference (Model – Field)</b> |
| North  | 3.3                          | 3.0                      | +0.3                              |
| North Central  | 5.2                          | 5.1                      | +0.1                              |
| South Central  | 4.4                          | 4.7                      | -0.3                              |
| South  | 2.5                          | 2.7                      | -0.2                              |

The TAZ and roadway network modifications shown in **Figure 2** were made to both the Base Year (2018) and Cumulative Year (2040) EDCTDMs. The modified models were used for the analysis of the proposed project to maintain analysis consistency.

**Table 3** compares the VMT efficiency metrics for residential and commercial office land uses in unincorporated El Dorado County with and without the roadway network refinements outlined above and on **Figure 2**. As shown, the VMT efficiency metrics for both residential and commercial office land use increased with the network refinement. The direction and magnitude of the change is reasonable and in the correct direction relative to the network refinements made.

Notes:

<sup>1</sup>85% of Unincorporated El Dorado County VMT per Capita (Residential) and VMT per Employee (Commercial Office)

### Study Area Network Refinements

In addition to the model-wide network edits discussed above, the study area required refinement of the TAZ system to better reflect the project land use and geography. In the study area, the EDCTDM did not include a TAZ that was a good representation of the proposed project area. One new TAZ was added in the project area. **Figure 3** shows the study area network with and without the network refinements.

Figure 3 – EDCTDM Study Area Network Refinements

Without Modification

With Modification

The following steps outline the method we used to forecast VMT under existing and cumulative conditions:

- Existing Conditions (2018) – For existing conditions (i.e., baseline conditions), the base year model land use and transportation network were used to estimate baseline (2018) average VMT per capita and average VMT per employee for unincorporated El Dorado County.

For existing plus project conditions, the project's land use was added to the model, increasing the base year population and employment. Project-generated average VMT per capita.

- Cumulative Conditions (2040) – For cumulative conditions, the future year model was used to estimate cumulative (2040) average VMT per capita.

For cumulative plus project conditions, the project's land use was added to the model, increasing the cumulative year population and employment. Project-generated average VMT per capita was calculated.

### VMT Calculation for Each TAZ

VMT is estimated using a three-step process. In the first step, travel distance between each pair of TAZs for using the loaded networks for the four model time periods (AM Peak Period, Midday Period, PM Peak Period, and Evening Period). Using the loaded network accounts for any increases in trip distance that may result from traffic congestion. In this process, the additional trip lengths associated with the model gateways are added to the trip length estimates. The distance of intrazonal trips is estimated as outlined above.

The second step of the process calculates the VMT for travel between each TAZ pair. The number of vehicle trips modeled between each TAZ pair is multiplied by the trip lengths to estimate the VMT associated with the travel between each TAZ pair for each time period. The VMT from the intrazonal trips is also included in the VMT estimates.

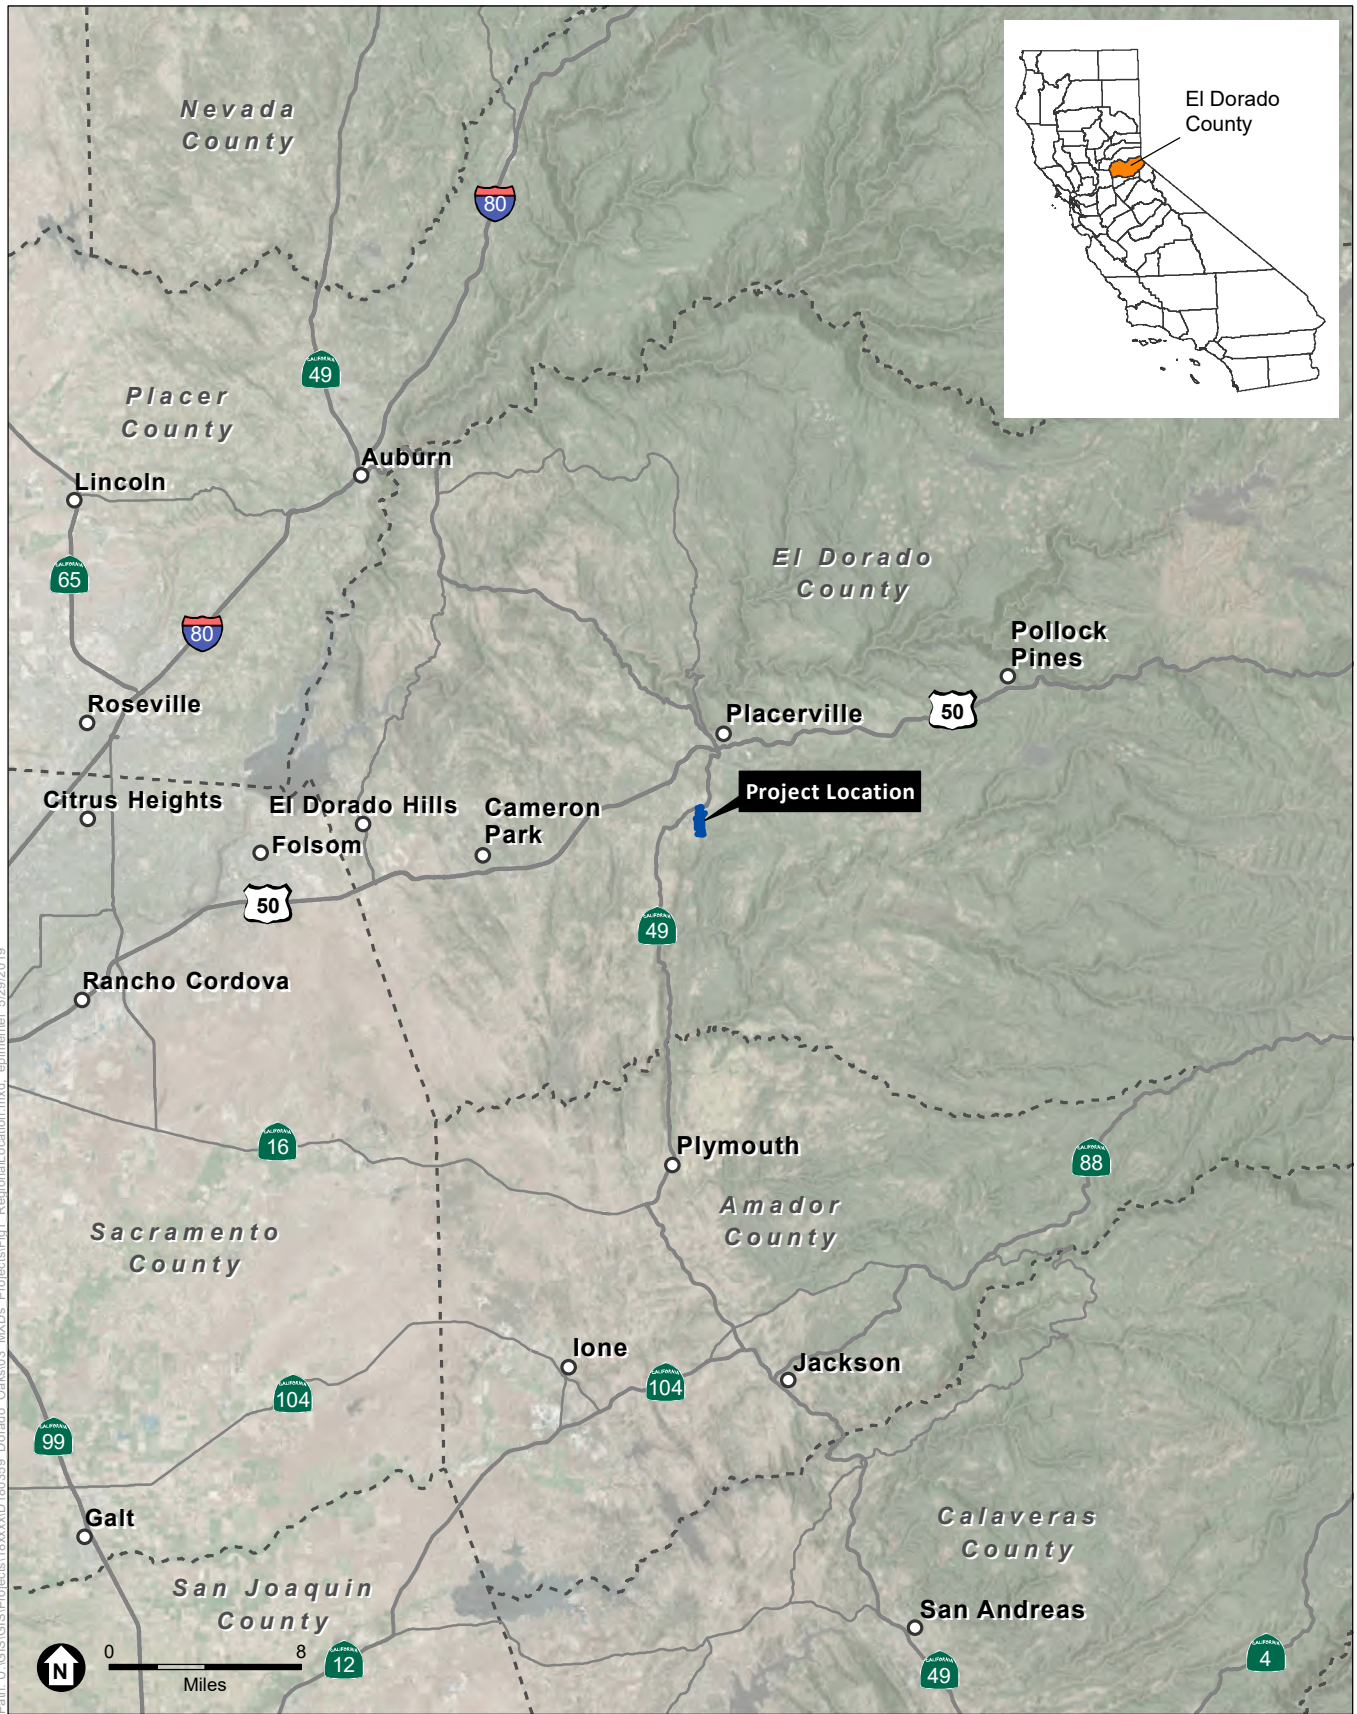

The third step estimates the home-based and home-based work VMT. These estimates are calculated by determining the percentage of vehicle productions and attractions by trip purpose and direction (departures and returns). These percentages are then applied to the total VMT estimates, to determine the VMT by trip purpose and direction. The home-based VMT summarizes VMT by the origin TAZ. The home-based work VMT summarizes VMT by the destination TAZ. The use of home-based and home-based work VMT allows independent analysis of residential and commercial project components.

### ***Project Summary***

The proposed Dorado Oaks Tentative Subdivision Map Project is in the unincorporated Diamond Springs Community Region in El Dorado County. **Figure 4** shows the location of the project. As proposed, the

project includes single family and multi-family residential land use. **Table 4** summarizes the project’s trip generating land uses.

| <b>Table 4: Dorado Oaks Tentative Subdivision Map Project</b> |               |           |                 |

Project Location

**VMT for Dorado Oaks Tentative Subdivision Map Project**

**Table 5** summarizes the VMT analysis for Dorado Oaks. The VMT calculations for all scenarios are included in **Attachment A**.

| <b>Table 5: Dorado Oaks Tentative Subdivision's VMT</b>                                       |                                 |           |                  |                |
|---|---------------------------------|-----------|------------------|----------------|
| Scenario  | Analysis Geography              | VMT       | Total Population | VMT per Capita |
| 2018 Baseline   | Unincorporated El Dorado County | 3,088,005 | 136,108          | 22.7           |
| 2018 Baseline Threshold (85% of Unincorporated El Dorado County Total Average VMT per Capita) |                                 |           |                  | 19.3           |
| 2018 Baseline Plus Project  | Project Area                    | 8,544     | 847              | 10.1           |
| <b>VMT Threshold Exceeded?</b>  |                                 |           |                  | <b>No</b>      |
| 2040 Baseline   | Unincorporated El Dorado County | 3,102,953 | 181,914          | 17.1           |
| 2040 Baseline Threshold (85% of Unincorporated El Dorado County Total Average VMT per Capita) |                                 |           |                  | 14.5           |
| 2040 Baseline Plus Project  | Project Area                    | 5,981     | 847              | 7.1            |
| <b>VMT Threshold Exceeded?</b>  |                                 |           |                  | <b>No</b>      |

As shown, the project's VMT per Capita would not exceed the VMT threshold under existing or cumulative conditions. Therefore, the project's impact on VMT would be less than significant.

## I. EXECUTIVE SUMMARY

This report analyzed short term and long term scenarios for the proposed Dorado Oaks residential development, consistent with the requirements found in El Dorado County Community Development Agency’s *Transportation Impact Study Guidelines*. The “with and without project” scenario analysis results are summarized in several tables and graphics in the body of this report, and duplicated in this section for convenience. The study area consisted primarily of the Missouri Flat corridor from Pleasant Valley Road to the US 50 freeway interchange, as well as Pleasant Valley Road at SR 49 (south) to Fowler Lane/SR 49 on the east. There is a total of nineteen (19) intersections analyzed in the study area, two of which are future intersections of the programmed Diamond Springs Parkway, which would connect Missouri Flat Road just north of China Garden Road easterly to SR 49 just south of Bradley Drive. Figure 2 in the next section shows where these study intersections are located.

### Year 2018 Existing Conditions, with and without the Project

The project’s trip generation is summarized in Table ES.1 which shows that in the pm peak hour there would be 274 trip ends, with 177 inbound to the project and 97 outbound from the project site.

**Table ES.1 Project Trip Generation**

Source: ITE Trip Generation Manual, 9th ed.

This trip generation was assigned to the surrounding roads. The existing Year 2018 level of service at all study intersections without the project is at an acceptable LOS E or better conditions, with a range of LOS A to LOS E conditions for the overall level of service at any intersection. The side street level of service at unsignalized intersections ranged from LOS C to LOS D, with LOS D side street conditions at the intersection of Missouri Flat Road and China Garden Road. Per El Dorado County Policy TC-Xa Missouri Flat Road is allowed to operate at LOS F provided ratios of volume to capacity do not exceed 1.12 from US Highway 50 to Motherlode Drive or 1.20 from Motherlode Drive to China Garden Road.

Table ES.2 summarizes the capacity analysis calculations for the Year 2018 scenarios, with and without the project. It can be seen from the table that when the project traffic is added in, the Pleasant Valley Road / Faith Lane (Intersection #11) goes from LOS E to LOS F conditions for the Faith Lane approach (side street). This is a significant impact requiring mitigation. The project did not significantly change the level of service at any of the other 14 existing study intersections, therefore, the project is required only to mitigate the one intersection for the Existing plus Project condition base on intersection level of service. Mitigation is done by payment of TIM fees, and construction of a roundabout at Faith Lane and SR 49.

**Table ES.2 Year 2018 Unmitigated Capacity Analysis Summary**

**Future Conditions (Year 2027 and Year 2035).**

The background traffic for these two future scenarios was increased by an average of 0.7% per year according to the growth rates obtained from the County’s travel demand models for Year 2010 and 2035 conditions (detailed description and table of this process is in the Analysis section of this report). On Missouri Flat Road this yearly growth rate was higher at about 1.6% per year. On the average in the study area, there would be an additional 13% growth on top of existing traffic yielding Year 2035 traffic levels consistent with the County’s travel demand model. The growth on Missouri Flat Road north and south of Forni Road, however, was much higher ranging from 25-28%. These differences were applied to various study area roadways as defined in Table 13 documented in Section V of this report. Table ES.3 shows the unmitigated Capacity Analysis Summary for the future condition, Year 2027. Table ES.3 shows the unmitigated Capacity Analysis Summary for the worst-case future condition, Year 2035.

Control: S=Signal, AW=All-Way Stop, TW=Stop Sign Side Street, NB=NB approach Stop

NOTE: Calculations based on HCM 2010 methodology for intersection level of service (signal, two-way, and all-way stop)

## Conclusions

There are three different significant criteria in the County’s Traffic Impact Study Guidelines, p.12 upon which conclusions in this report are based. These are: 1) LOS, 2) Queuing, and 3) SB 743 and 375. The first and foremost criteria is intersection level of service. Tables ES.2, Table ES.3, and Table ES.4 indicate that based on the outcome of an HCM 2010 level of service analysis for intersections, 17 out of 19 study intersection locations would be at acceptable levels of service for the year 2035. The exceptions are the following two intersections impacted by the project:

- 1) Pleasant Valley Road at Faith Lane: LOS A (8.3) / LOS F (142)
- 2) Pleasant Valley Road at SR 49 S: LOS F (76.1) / LOS F (78.8)

***The intersection of Pleasant Valley Road at Faith Lane*** goes to LOS F conditions for the Faith Lane approach after the project traffic is added in, and is therefore a significant impact requiring mitigation. The intersection of Pleasant Valley Road and Faith Lane is not anticipated in the County's CIP, so the project would need to mitigate this impact. Since this intersection is very close (100 feet away) to the intersection of China Garden Road, it is not possible to mitigate the intersection of Faith Lane without looking at the bigger picture. For example, it is not easy to install a signal at these existing intersection locations without the widening of Pleasant Valley Road to make room for left turn pockets to turn into Faith Lane or into China Garden Road. This would require the installation of two close signals designed to operate at one system, and left turn pocket storage would be too short to be back-to-back. In other words, there would need to be two median lanes for each left turn pocket which could then only be 100 feet long each. This means that Pleasant Valley Road would need to be widened to at least a four-lane cross section for at least two hundred feet west of Faith lane and 200 feet east of China Garden Road to accommodate tapering of lanes back to a two-lane cross section. There is not current right of way to accomplish this idea without impacting numerous buildings directly fronting Pleasant Valley Road on several different properties (possibly more than 10 properties).

***MITIGATION 1 -- China Garden Road and Faith Lane on Pleasant Valley Road with a Modern Roundabout:***

Figure ES.1 shows a concept roundabout that would fit within existing right of way for three of its four approaches, but needing the additional right-of-way from one piece of property on the southeast quadrant of the intersection of Pleasant Valley Road and Faith Lane, and Faith Lane would be realigned to meet the circle. In this roundabout intersection, China Garden Road and Faith Lane are combined into the same modern roundabout intersection as shown in Figure ES.1.

***MITIGATION 2 – Pleasant Valley Road at SR 49 South:*** This intersection goes to LOS F conditions without the project in the Year 2027 am peak hour scenario (also for Year 2035), and the project traffic only slightly increases delay by less than 3 seconds. This intersection is at LOS E conditions for the Year 2018 in the am peak hour (76.1 to 78.8 seconds). The project should pay its fair share towards signalization of this intersection as anticipated in the County's CIP, by paying into the County's traffic mitigation fee program based on trip generation of the project. A signal is warranted for existing conditions traffic without the project. Mitigation can be accomplished by lane widening resulting in satisfactory LOS D or better conditions, or by installing a traffic signal (LOS B conditions).

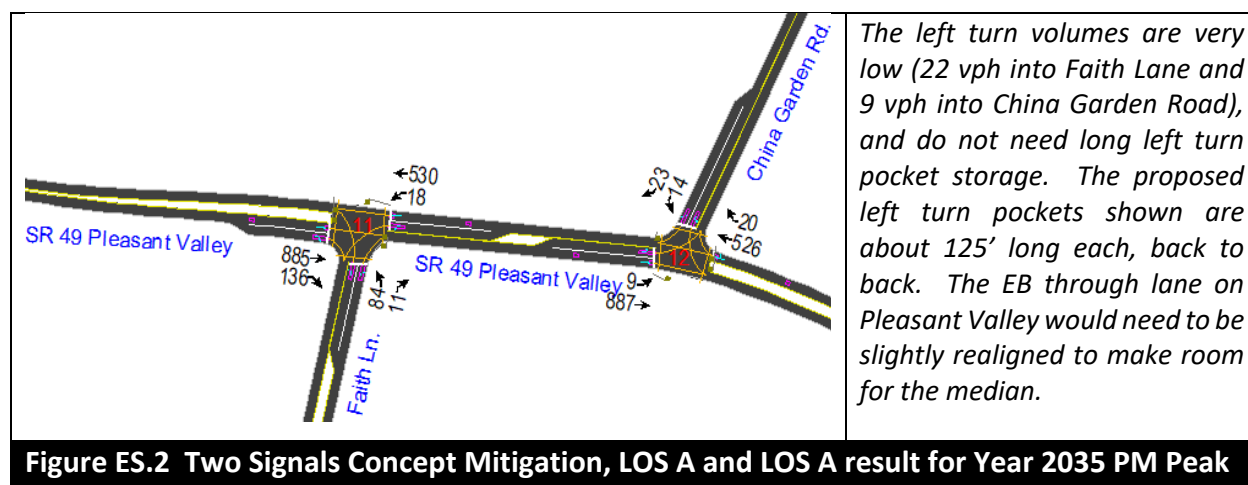

Figure ES.1 Roundabout Concept and Mitigation, Source: PRISM Engineering

This roundabout conceptual design has been analyzed as shown, and will operate at LOS C conditions ranging from 19-21 seconds of average delay for Year 2035 conditions (am or pm). This is a significant improvement over the existing conditions along Pleasant Valley Road in this vicinity, and also provides several safety factors (no left turn conflicts, slower yield on entry movements, traffic calming at 15-20 mph speeds). It is also compatible with Caltrans' vision of active transportation alternatives for the SR 49 corridor in this vicinity (from Patterson Drive to Faith Lane). The roundabout as shown with sidewalks and crosswalks is compatible with bike and pedestrian facilities, and significantly improves safety and access for pedestrians and bikes over the existing condition. Microsimulation analysis of this corridor with this

roundabout in place showed Year 2018-2035 traffic volumes passing through with no significant queues for roundabout approaches. Most of the simulation showed no queues at all. More specifics on roundabout analyses documentation can be found in the appendix.

**Alternative Mitigation: Two Signalized Intersections.** As an alternative intersection configuration to the proposed roundabout, a new signalized intersection and access could be developed for the existing Silver Drive intersection with Pleasant Valley Road. Faith Lane is only 150 feet away from China Garden Road. Silver Lane is 400 feet away from China Garden Road. By abandoning the existing Faith Lane intersection and realigning Faith Lane to become Silver Drive, a newer upgraded signalized intersection can be developed at Pleasant Valley Road and Silver Drive. The distance between intersections would allow for ample storage and would even make it possible for the intersections to operate independently as needed based on traffic demand (lessening delays), or coordinated if traffic flows are busy. This alternative would allow for left turn pocket storage of up to 150 feet for each intersection, making it possible to have longer signal cycles on Pleasant Valley Road through movements (longer phases) without spill over from the left turn pockets. However, the road-width right-of-way constraints along Pleasant Valley Road between Silver Drive and Faith Lane, are significant. There needs to be enough room for a three-lane cross-section of road, sidewalks, etc., plus distance for transitioning back to two lanes. This will be very difficult to accomplish east of China Garden Road where historical buildings now exist right up to the edge of the road, and widening of Pleasant Valley Road in this section is not very feasible. This alternative would also require acquisition of property to the west of Silver Drive to allow for transitioning of through lanes to make room for left turn pockets. This would require the acquisition of property to the east of existing Silver Drive all the way to China Garden Road to make room for the additional middle lane to accommodate the left turn pocket and eventual realignment of the EB through lane on Pleasant Valley Road to transition back to a two lane cross section. The intersection at Silver Drive is about 230 feet to the west of Faith Lane, and because of the 400 foot distance between Silver Drive and China Garden Road, would allow for sufficient left turn pocket storage to each of these intersections. The resulting level of service for these two new signalized intersections would be LOS B at Faith Lane / Pleasant Valley (realigned to the Silver Drive location), and LOS A at China Garden Road / Pleasant Valley. Figure ES.2 shows the dual traffic signal concept at this location. Signal cycle times would be approximately 70-90 seconds at peak times, or longer if longer phase times are given to Pleasant Valley Road through movements. Figure ES.2 shows the concept of this mitigation, along with Year 2035 plus project pm peak hour volumes and lane configurations.

**Figure ES.2 Two Signals Concept Mitigation, LOS A and LOS A result for Year 2035 PM Peak**

This mitigation concept would require acquisition of property on the south side of Pleasant Valley Road between Silver Drive (Faith Lane realigned) and China Garden Road. The main constraint of this alternative is the need for a significant length of right-of-way on the south side of Pleasant Valley Road just west of Silver Drive to China Garden Road. Making this work at China Garden Road is complex because of historical buildings and limited available right-of-way.

### **Mitigation Recommendations for Pleasant Valley Road**

*(based on Field Observations of LOS C to LOS D Free-flow Conditions)*

PRISM Engineering's observations of Pleasant Valley Road through traffic and subsequent observations of our video record of pm peak hour traffic flows including measuring of speeds, does not indicate that there is currently an LOS E or LOS F condition as shown by the Table 10 summary. This is true for side streets such as Faith Lane and China Garden Road, but for the through traffic on Pleasant Valley Road the flow appears to be at LOS C / LOS D conditions given the spacing in vehicle traffic (2-3 second headways), the speed of traffic, etc. Traffic is free flowing in both directions at or near the posted speed limit of 35 mph with some slowing to 25 mph in the eastbound direction after dark near Faith Lane. PRISM Engineering's view is that the traffic condition on Pleasant Valley Road does not warrant widening it to four lanes, but local traffic flows and access to and from side streets will benefit from making a modification to the existing traffic control situations at Faith Lane and China Garden Road. In the future Year 2035 condition with the project, the total volume on Pleasant Valley Road will be 1,655 vph. Year 2035 volumes without the project will be 1,435 vph. The microsimulation SimTraffic models of this corridor using these volumes do not show any significant queuing or slowing on SR 49. However, in order for the project traffic to adequately access Pleasant Valley Road /SR 49 at Faith Lane it will be necessary to mitigate these two intersections in the immediate vicinity of Faith Lane.

It has been recommended that a modern roundabout be installed on Pleasant Valley Road at China Garden Road (as shown in Figure ES.1), with Faith Lane being realigned to meet this same roundabout. A less desirable alternative would be to place the roundabout at Faith Lane, but it would have only three approaches to the roundabout. Existing development on the southwest corner would need to be removed. China Garden Road could not be a part of the roundabout (can't connect to the circle), and would need to be configured as a "right-in" / "right-out" street with no left turns in or out (a median would be needed). For this reason, this alternative is not recommended, but rather to modify the situation on the south side of the China Garden Road / Pleasant Valley Road intersection instead, by moving or modifying the historical buildings there to make sufficient room for the four legged roundabout. Even with traffic signals this same property would be impacted by a needed widening of Pleasant Valley Road on the south side to make room for an additional lane and median. The historical building at the intersection of China Garden Road and Pleasant Valley Road will be impacted no matter which alternative is selected in the future, unless China Garden Road is closed off to anything more than right in and right out movements.

The roundabout alternative shown in Figure ES.1 will result in LOS C conditions even for Year 2035 volumes with the full project, and will serve as a major mitigation to collector street access to and from Pleasant Valley Road, especially for fixing the projected LOS F conditions on Pleasant Valley Road between Silver Drive, Faith Lane, and China Garden Road. Note that the roundabout has a dedicated bypass lane for the EB right turn movement in to the project. This greatly improves the level of service and reduces any delays to through traffic on Pleasant Valley Road. With LOS C access for each of these side streets, the corridor will have been successfully mitigated from an LOS F condition to LOS C, for any of the analysis years once the roundabout is built.

### **Intersection Turn Pocket Queues**

The County's Traffic Impact Study Guidelines states that it is necessary to use the SimTraffic software to analyze traffic operations when the following conditions exist (or could exist in the future): "Over-capacity conditions (queues spill out of storage pockets)." PRISM Engineering used this software to analyze intersection queues and found that for Year 2035, traffic the project has no significant impacts to queue overflow conditions, and in nearly all cases, adds at the most, one car length to a queue over the 95<sup>th</sup> percentile. No mitigations based on queue length overages are recommended.

## II. BACKGROUND

### PROJECT DESCRIPTION

PRISM Engineering was retained to prepare a traffic study for the proposed Dorado Oaks residential development located in the heart of the Diamond Springs community, within El Dorado County, CA. Table 1 shows the project parcels, collectively known as Dorado Oaks, are located along Faith Lane south of Pleasant Valley Road.

**Table 1. Project Parcels and APN Information**

| Assessor’s Parcel Numbers | Location                      |
|---------------------------|-------------------------------|
| APN 054-402-18            | South of Pleasant Valley Road |
| APN 329-301-15            | South of Pleasant Valley Road |
| APN 329-301-20            | South of Pleasant Valley Road |
| APN 329-310-10            | South of Pleasant Valley Road |
| APN 329-310-11            | South of Pleasant Valley Road |
| APN 329-310-12            | South of Pleasant Valley Road |

Figure 1 shows the location of the project site on a vicinity map approximately 2.5 miles south of the US 50 freeway and within the Diamond Springs Community. Also shown are the 19 study intersections considered in this report on Figure 2. The project consists generally of 382 residential dwelling units and a small neighborhood park within a 142.3 acre site. The project’s 382 planned residential dwelling units are broken down as 156 single family residences, and 225 multi-family dwelling units (Condo / Townhouse) with two units per structure. The existing zoning for the project area consists of R1, R2, RE-10, C and RF as seen in Figure 3. The project remains consistent with the General Plan land use designations, being primarily residential in nature, and in providing open space areas and parks to net a number of residential dwelling units consistent with the existing zoning allowances. Table 2 details the Trip Generation of the Project.

#### **Project Site Parking Review and Assessment of Site Plan:**

The site plan map shown in Figure 3 shows varying widths of right-of-way for streets (according to the scale shown on the map) as being 60 feet of ROW for the Faith Lane corridor, 48 feet of ROW for streets “A Street” through “L Street”, and 24 feet of ROW designated for shared and unnamed driveway/access roads within the “RH” and “RM” attached multi-family DU lot areas. In the RH/RM areas, a paved shared driveway is proposed, with garage storage for vehicles on the lot itself. On-street parking on these shared driveways will not be allowed. In the cases of the normal roadways on site with sidewalks, there will be adequate pavement width for safe two-way vehicle travel, on-street parking on both sides, and on Faith Lane only, room for 6 foot exclusively striped bike lanes in each direction (located between parking and travel lanes). Based on the 60 foot ROW width proposed on the project site plan, Faith Lane is adequate to meet the parking and bike lane requirements in the County’s transportation policy elements, and as specifically defined in the following paragraph:

**Eldorado County Policy TC-1w:** New streets and improvements to existing rural roads necessitated by new development shall be designed to minimize visual impacts, preserve rural character, and ensure neighborhood quality to the maximum extent possible consistent with the needs of emergency access, on street parking, and vehicular and pedestrian safety.

Streets “A Street” through “L Street” shown in the plan have a 48 foot ROW and with parking and sidewalks there is not enough room to also stripe bike lanes, but these non-collector residential roads do not need specific striped bike lanes but can be facilities where bikes and cars share the road. Typical cross section for these streets would be 36 feet of pavement from curb to curb accommodating two 7 foot parking widths on each side, and 22 feet of two-way travel area for vehicles and bikes (sharing the road), for a total of 36 feet. The remaining 12 feet can accommodate 6 foot sidewalks on each side.

The Federal Highway Administration (FHWA) publishes various modified AASHTO examples for roadway cross-sections that include bike lanes and on-street parking<sup>1</sup> in their ***Road Diet Information Guide***, as shown in “Figure 20” of that FHWA document in the footnote below. This illustration shows that a 60 foot right of way (as shown in the site plan) allows for accommodating each cross-section element when the travel lane widths are 12 feet each, bike lanes are 6 feet each, parking width on each side is 7 feet, yielding a curb-to-curb width of 50 feet. With 10 feet left over, 5 foot wide sidewalk or walking paths can also be constructed on each side. If the lane widths for travel are narrowed to 10 feet each, to potentially slow speeds, then an additional 4 feet of cross-section width can go towards sidewalk width, yielding about 7 feet of walking width on each side of the road (behind curb face), even when there is on-street parking.

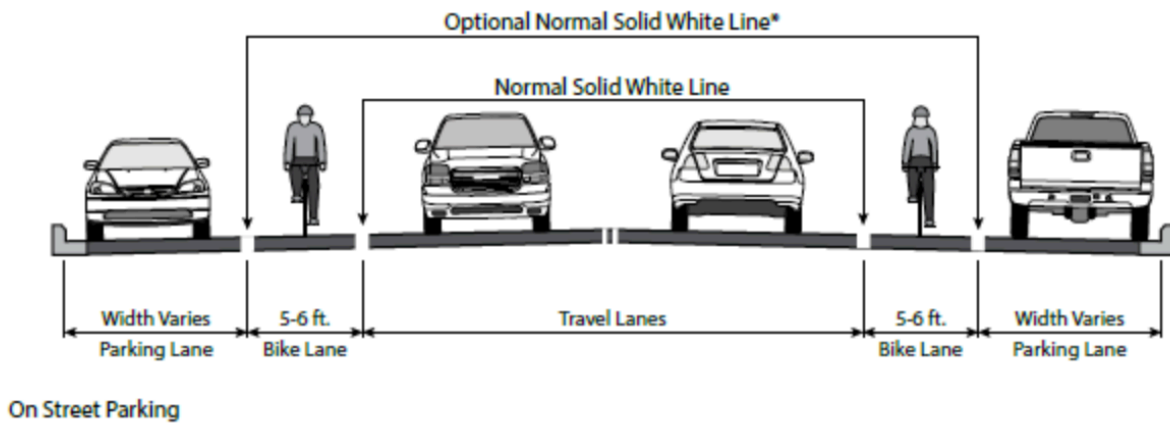

Based on these project site roadway facilities having room for bike lanes, on-street parking, and sidewalks for pedestrians, the parking, safety, and circulation needs for vehicles, bikes, and peds are adequately met in the project site plan as follows:

- On-street parking is possible on both sides of Faith Lane and streets “A Street” through “L Street”
- Bike lanes are possible on both sides of Faith Lane
- Sidewalks are possible on both sides of all residential and collector streets

The project site shown in Figure 3 has four primary access points as follows: 1) from Faith Lane south of Pleasant Valley Road, 2) to Argonaut/Patterson on the west, 3) to Tullis Mine Road via D Street, and 4) to Fowler Lane on the east via A Street.

Source: ITE Trip Generation Manual, 9th ed.

The Dorado Oaks project is expected to generate 217 am peak hour trip ends and 274 pm peak hour trip ends, with 177 inbound and 97 outbound in the pm peak hour as shown in the table above. This traffic was assigned to the surrounding roadway as defined later in this report.

The analysis of traffic in this report identifies intersections and road segments that are expected to have congestion and unsatisfactory traffic conditions in the future<sup>2</sup>, determine if the project has made a significant impact towards these problems, and to develop and discuss mitigation measures that would solve the potential future traffic problems.

This traffic study scope and methodology was approved by the El Dorado County Community Development Agency, and this report follows the methodology and procedures outlined in the 2014 version of the *Transportation Impact Study Guidelines* document prepared by the Community Development Agency, Long Range Planning division.

## STUDY AREA

PRISM Engineering received a scope of work from the County that defines the study area for the Project consisting of Missouri Flat Road starting at Plaza Drive on the north (just north of the US 50 freeway WB Ramps) to Pleasant Valley Road / SR 49 on the south terminus. In addition, Pleasant Valley Road was also studied beginning with its SR 49 (south) intersection on the west to its Fowler Lane / SR 49 (north) intersection on the east. The Missouri Flat Road study corridor is a 1.9 mile segment with 10 existing study

<sup>2</sup> Impacts are based upon the significance criteria set forth in the El Dorado County Traffic Study Guidelines.

intersections (and two future). The Pleasant Valley Road study corridor is a 2.2 mile segment with 7 additional existing study intersections. There was a total of 19 study intersections. 17 of these are existing and 2 are future study intersections as follows:

1. Missouri Flat Rd. at Plaza Dr.
2. Missouri Flat Rd. at US 50 WB Ramps
3. Missouri Flat Rd. at US 50 EB Ramps
4. Missouri Flat Rd. at Mother Lode Dr.
5. Missouri Flat Rd. at Forni Rd
6. Missouri Flat Rd. at Golden Center Dr.
7. Missouri Flat Rd. at China Garden Rd.
8. Missouri Flat Rd. at Industrial Dr.
9. Missouri Flat Rd. at Enterprise Dr.
10. Missouri Flat Rd. at Pleasant Valley Rd.
11. Pleasant Valley Rd. at Faith Ln.
12. Pleasant Valley Rd. at China Garden Rd.
13. Pleasant Valley Rd. at SR 49 N / Fowler
14. Pleasant Valley Rd. at Commerce Way
15. Pleasant Valley Rd. at Patterson Dr.
16. Pleasant Valley Rd. at Forni Rd.
17. Pleasant Valley Rd. at SR 49 South
18. Diamond Springs Parkway at SR 49 (future)
19. Diamond Springs Parkway at Missouri Flat Rd. (future)

These include all roads which are contiguous to the project site and which would connect the site into the local street system. For example, the project would connect on its west side into Argonaut which connects to Patterson Drive which connects to Pleasant Valley Road. The project would connect on its east side to Fowler Lane which connects to Pleasant Valley Road / SR 49. To the north of the site, it connects directly with Faith Lane which connects to Pleasant Valley Road just west of China Garden Road.

In addition, the US 50 mainline freeway operations were to be studied also in the vicinity where the Missouri Flat Road freeway on and off-ramps intersect the mainline freeway in order to determine the impact of the project on mainline freeway flows. The sections of US 50 freeway studied as a part of this report were from the El Dorado Road interchange on the west to the Forni Road interchange on the east, inclusive of the Missouri Flat Road interchange.

## **ANALYSIS METHODOLOGY**

This report evaluates the trip generation and resulting traffic impacts from the project site within the context of existing and future scenarios as follows:

- Existing (2018) conditions unmitigated (identify any existing deficiencies) – Based on current traffic counts in 2018 and existing roadway geometry and traffic control.
- Existing (2018) plus Project conditions unmitigated (identify any existing deficiencies) – Based on current traffic counts in 2018 and existing roadway geometry and traffic control.
- Year 2027 Near-Term Base Traffic Condition (10 years out), unmitigated – Based on anticipated growth in baseline traffic volumes determined by straight-line interpolation between Year 2018 existing counts and Year 2035 traffic projections.

- Year 2027 Near-Term Base plus Project Traffic Condition (10 years out), unmitigated – Based on anticipated growth in baseline traffic volumes determined by straight-line interpolation between Year 2018 existing counts and Year 2035 traffic projections.
- Future Buildout Year Cumulative Long-Term (2035) Conditions, unmitigated – Based on 2035 future year traffic forecasts from the El Dorado County Demand Forecast model. Future year will correspond with approximate buildout of County’s General Plan.
- Future Buildout Year Cumulative Long-Term (2035) Conditions, with Mitigation – Based on 2035 future year traffic forecasts from El Dorado County’s Travel Demand Forecast model plus project. Future year will correspond with approximate buildout of County’s General Plan.

The analysis of traffic in this report identifies intersections and road segments that are expected to have congestion and unsatisfactory traffic conditions in the future<sup>3</sup>, determine if the project has made a significant impact towards these problems, and to develop and discuss mitigation measures that would solve the potential future traffic problems.

This traffic study scope and methodology was approved by the El Dorado County Community Development Agency, and this report follows the methodology and procedures outlined in the 2014 version of the *Transportation Impact Study Guidelines* document prepared by the Community Development Agency, Long Range Planning division.

### **Operating Conditions and Criteria for Intersections**

Analysis of significant environmental impacts at intersections is based on the concept of Level of Service (LOS). The LOS of an intersection is a qualitative measure used to describe operational conditions, and ranges from LOS A (best, minimal delay), to LOS F (worst, heavy delays) where the intersection is operating at or near its functional capacity. Levels of Service for this study were determined using the *Highway Capacity Manual, 2010* (HCM) methodologies which are implemented in the *Synchro* (Version 9) traffic analysis software<sup>4</sup> including SimTraffic micro-simulation. Table 3 relates the operational characteristics associated with each LOS category for signalized and unsignalized intersections. In addition to using the HCM 2010 calculation methodology for unsignalized intersections in this study, PRISM Engineering utilized microsimulation level of service calculation for the four closely spaced signalized intersections along Missouri Flat Road in the immediate vicinity of the US 50 freeway (Plaza Drive, US 50 WB Ramps, US 50 EB Ramps, and Mother Lode Drive). Coordination of signals on Missouri Flat Road in the vicinity of the US 50 freeway was assumed and implemented in a SimTraffic microsimulation traffic model developed for this study. The HCM 2010 includes procedures for analyzing side-street two-way stop controlled (TWSC), all-way stop-controlled (AWSC), and signalized intersections. This ability to calculate LOS and delay is also built into the SimTraffic module of Synchro. The TWSC procedure defines LOS as a function of average control delay for each minor street approach movement. Conversely, the AWSC and signalized intersection procedures define LOS as a function of average control delay for the intersection as a whole,

---

<sup>3</sup> Impacts are based upon the significance criteria set forth in the El Dorado County Traffic Study Guidelines.

<sup>4</sup> The HCM 2010 methodology was used in this study for signalized and unsignalized intersections (TWSC and AWS). The HCM 2010 method only works under limited circumstances and will not calculate U-Turns for instance. PRISM Engineering used SimTraffic microsimulation for calculation of levels of service based on actual traffic operations because of the closely spaced intersections at the US 50 and Missouri Flat Road interchange (only 100-400’ separations). The SimTraffic methods account for queues between intersections that can block traffic or significantly affect a closely spaced intersection.

or for individual approaches or even separate turning movements. For the purposes of this study, only intersection averages were summarized for each study intersection. For TWSC intersections, level of service is reported for the worst approach as well as for the intersection as a whole.

**Table 3. Intersection Level of Service Definitions**

| Level of Service | Description   | Avg. delay per vehicle, sec/veh |               |
|------------------|---|---------------------------------|---------------|
|                  |   | Signalized                      | Un-Signalized |
| A                | Free flow with no delays. Users are virtually unaffected by others in the traffic stream  | ≤ 10                            | ≤ 10          |
| B                | Stable traffic. Traffic flows smoothly with few delays.   | > 10 – 20                       | > 10 – 15     |
| C                | Stable flow but the operation of individual users becomes affected by other vehicles. Modest delays.  | > 20 – 35                       | > 15 – 25     |
| D                | Approaching unstable flow. Operation of individual users becomes significantly affected by other vehicles. Delays may be more than one cycle during peak hours. | > 35 – 55                       | > 25 – 35     |
| E                | Unstable flow with operating conditions at or near the capacity level. Long delays and vehicle queuing.   | > 55 – 80                       | > 35 – 50     |
| F                | Forced or breakdown flow that causes reduced capacity. Stop and go traffic conditions. Excessive long delays and vehicle queuing.                               | > 80                            | > 50          |

### Thresholds of Significance for Intersections and Segments

General Plan Policy TC-Xd states that “*Level of Service (LOS) for County maintained roads and state highways within the unincorporated areas of the county shall not be worse than LOS E in the Community Regions, or LOS D in the Rural Centers and Rural Regions except as specified in Table TC-2.*” A project’s traffic impact at an intersection is considered to be significant under El Dorado County guidelines if the project causes an intersection to change from LOS E to LOS F. In other words, LOS E is considered acceptable by El Dorado County for roadways and state highways within the unincorporated areas of the County in the Community Regions and LOS D in the Rural Center and Rural Regions except as specified in the General Plan; the project is located within a Community Region. Worsening of conditions at facilities already operating at unacceptable levels of service is also considered a significant impact. The County’s General Plan Policy TCXe defines worsen as any of the following conditions:

- a 2% increase in traffic during the a.m. peak hour, p.m. peak hour or daily trips, or
- the addition of 100 or more daily trips, or
- the addition of 10 or more trips during the a.m. peak hour or the p.m. peak hour.

When a project identifies an impact on the County’s roadway network for a scenario with or without the project, a separate analysis must be done to identify what improvements are needed for mitigation and when the improvements must be in place. The timing of the proposed mitigation must be in compliance with General Plan Policy TC-Xf:

At the time of approval of the tentative map for a single family residential subdivision of five or more parcels that worsens (defined as a project that triggers Policy TC-Xe [A] or [B] or [C]) traffic on the County road system, the County shall do one of the following: (1) condition the project to construct all road improvements necessary to maintain or attain Level of Service standards as detailed in this Transportation and Circulation Element based on existing traffic plus traffic generated from the development plus forecasted traffic growth at 10-years from project submittal; or (2) ensure the commencement of construction of the necessary road improvements are included in the County’s 10-year CIP. For all other discretionary projects that worsen (defined as a project that triggers Policy TC-Xe [A] or [B] or [C]) traffic on the County road system, the County shall do one of the following:

- (1) condition the project to construct all road improvements necessary to maintain or attain Level of Service standards as detailed in this Transportation and Circulation Element; or
- (2) ensure the construction of the necessary road improvements are included in the County’s 20-year CIP.

Projects that have impacts to Caltrans facilities shall use Caltrans LOS standards and significance thresholds in conjunction with the requirements of El Dorado County General Plan Circulation Policy TC-Xd.

The effects of vehicle queuing were also analyzed and the 95<sup>th</sup> percentile queue is reported for all study intersections. The 95th percentile queue length represents a condition where 95 percent of the time during the peak period, traffic volumes and related queuing will be at, or less, than the queue length determined by the analysis. This is referred to as the “95th percentile queue.” Average queuing is generally less. Queuing is considered a potentially significant impact since queues that exceed turn pocket length can create potentially hazardous conditions by blocking or disrupting through traffic in adjacent travel lanes. However, these potentially hazardous queues are typically associated with left-turn movements.

Locations where the right turn pocket storage is exceeded is not considered potentially hazardous because the right turn movement will go at the same time as the through movement and the additional vehicles that spill out over the turn pocket will not be hindering or disrupting the adjacent through traffic as would be the case in most left turn pockets.<sup>5</sup> Thus, for purposes of this analysis, a queuing impact is considered to occur under conditions where project traffic causes the queue in a left turn pocket to extend beyond the turn pocket by 25 feet or more (i.e., the length of one vehicle) into adjacent traffic lanes that operate (i.e., move) separately from the left turn lane. Where the vehicle queue already exceeds that turn pocket length under pre-project conditions, a project impact would occur if project traffic lengthens the queue by 25 feet or more.

---

<sup>5</sup> If a left turn movement operates (i.e. moves) at the same time as the through movement such as with split signal phasing, then a left turn queue that exceeds the turn storage is not considered an impact.

### III. EXISTING CONDITIONS

#### Existing Street Network and Transportation Systems

Below is a description of the principal roadways and intersections included in this study.

##### **ARTERIAL: Missouri Flat Road, LOS Range: LOS A to LOS C**

This arterial roadway transitions from a three lane cross section to a six lane cross section and then back to a three lane cross section as follows: North of the Plaza Drive shopping centers Missouri Flat Road has a three lane cross section (center left turn lanes). Between Plaza Drive and Golden Center Drive Missouri Flat Road generally has a six lane cross section (two lanes in each direction with variations of left and right turn pockets, such as dual left turns at the freeway ramps). South of Golden Center Drive it transitions back to a three lane cross section generally with a two-way left turn lane in the center all the way past Enterprise Drive on the south. From this intersection, Missouri Flat transitions to its intersection configuration with Pleasant Valley Road (two southbound, a left and right turn pocket, and two northbound lanes from Pleasant Valley Road). In the future, this arterial roadway will see some relief from future traffic growth with the construction of the Diamond Springs Parkway planned to connect to Missouri Flat Road a few hundred feet north of China Garden Road. This future four lane parkway will carry about 1000 vph in the Year 2035 peak hour time period, traffic that may have had to otherwise travel on Pleasant Valley Road to Missouri Flat Road in order to access the US 50 freeway, etc.

##### **INTERSECTION #1: Missouri Flat Road / Plaza Drive, LOS C Operations**

This intersection has a coordinated traffic signal installation with the US 50 freeway ramps where its north and southbound movements coordinate with the north and southbound through movements of the WB Ramps intersection. The Missouri Flat Road approaches feature protected left turn phasing (dual left for SB approach), and a separate southbound right turn lane into Plaza Drive. There is split phasing between the east and westbound approaches of Plaza Drive.

##### **INTERSECTION #2: Missouri Flat Road / Westbound US 50 ramps, LOS B Operations**

This intersection has a coordinated traffic signal installation. The Missouri Flat Road approaches feature dual northbound left turn lanes and a separate southbound right turn lane. The four lane exit from US 50 is configured with a dual left turn lane and dual right turn lanes.

##### **INTERSECTION #3: Missouri Flat Road / Eastbound US 50 ramps, LOS C Operations**

This intersection has a coordinated traffic signal installation. The Missouri Flat Road approaches feature dual southbound left turn lanes and a separate northbound right turn lane. The three lane exit from US 50 is configured with a separate left turn lane and right turn lanes, as well as a combined left, thru and right turn lane.

##### **INTERSECTION #4: Missouri Flat Road / Mother Lode Drive, LOS C Operations**

This intersection is signalized and located roughly 250 feet from the Eastbound US 50 ramps intersection. The Missouri Flat Road approaches have separate left turn and right turn lanes. The eastbound Mother Lode Drive approach has three lanes configured as dual left turns and a separate right turn lane.

##### **INTERSECTION #5: Missouri Flat Road / Forni Road, LOS C Operations**

This intersection is also signalized and located roughly ½ mile south of the Mother Lode Drive intersection. The Missouri Flat Road approaches each include separate left turn and right turn lanes. The Forni Road

approaches have separate left turn, through and right turn lanes, and a second left turn lane has been provided on the eastbound approach.

**INTERSECTION #6: Missouri Flat Road / Golden Center Drive, LOS C Operations**

This intersection is located about 1,100 feet south of Forni Road. This signalized intersection includes separate left turn lanes on the Missouri Flat Road approaches and a separate right turn lane on the southbound approach. The Golden Center Drive approaches are single lanes which operate with permitted phasing.

**INTERSECTION #7: Missouri Flat Road / China Garden Road, LOS A/D Operations**

This intersection is located about 2,100 feet south of Golden Center Drive. This unsignalized intersection includes single lanes along Missouri Flat Road with a separate left turn lane on the southbound approach. A TWLTL is present on the northbound approach of Missouri Flat Road and north of the southbound left turn lane. The China Garden Road approach consists of a single lane which is stop controlled.

**INTERSECTION #8: Missouri Flat Road / Industrial Drive, LOS B Operations**

This intersection is located about 600 feet south of China Garden Road. In the Year 2020, this intersection is controlled by a traffic signal. The two-way left turn lane on Missouri Flat Road approaches are converted to a short left turn pocket at the intersection.

**INTERSECTION #9: Missouri Flat Road / Enterprise Drive, LOS B Operations**

This intersection is located about 850 feet south of China Garden Road. In the Year 2020, this intersection is controlled by a traffic signal. The two-way left turn lane on Missouri Flat Road approaches are converted to a short left turn pocket at the intersection.

**INTERSECTION #10: Missouri Flat Road / Pleasant Valley Road, LOS C Operations**

This intersection is signalized and operates at LOS B in the am and LOS C in the pm peak hour. The EB approach of Pleasant Valley Road has a dual left turn pocket and one EB through lane. The SB approach has a single left turn and a single right turn pocket. The WB approach has a single right turn pocket and a single WB through lane. This intersection will continue to operate at LOS C or better conditions beyond the Year 2035.

**INTERSECTION #11: Pleasant Valley Road / Faith Lane, LOS A/E Operations**

This three-approach intersection is unsignalized with stop sign control only for Faith Lane northbound approach, and no control for the EB and WB Pleasant Valley Road approaches. Faith Lane is at LOS C in the am peak hour and LOS E in the pm peak hour. When the project traffic is added in Faith Lane goes to LOS F in the am or pm peak hour, and Pleasant Valley climbs to LOS C. This intersection is only 150 feet away from China Garden Road, centerline to centerline.

**INTERSECTION #12: Pleasant Valley Road / China Garden Road, LOS A/D Operations**

This three-approach intersection is unsignalized with stop sign control only for China Garden Road southbound approach, and no control for the EB and WB Pleasant Valley Road approaches. China Garden Road is at LOS C in the am and LOS D in the pm peak hour. When the project traffic is added in the level of service remains the same. This intersection is only 150 feet away from Faith Lane, centerline to centerline.

**INTERSECTION #13: Pleasant Valley Road / Fowler Lane (SR 49), LOS E Operations**

This signalized intersection is operating at LOS E in the am peak hour and LOS D in the pm peak hour. It is flared locally to accommodate three lane approaches on Pleasant Valley Road in the east and westbound directions, but quickly tapers back to a two-lane road west and south of the intersection, and to a two-lane road with a two-way left turn lane in the median north and east of the intersection.

**INTERSECTION #14: Pleasant Valley Road / Commerce Way, LOS A/C Operations**

This unsignalized intersection is operating at LOS A overall, but LOS C for the southbound stop sign controlled approach. It is a three-way intersection, with a right turn pocket for the westbound approach only. The other southbound and eastbound approaches are single lane only.

**INTERSECTION #15: Pleasant Valley Road / Patterson Drive, LOS A Operations**

This signalized intersection is operating at LOS A conditions for the am and pm peak hour. The intersection has separate turn pockets for each of the northbound, westbound, and eastbound approaches, consisting of two total approach lanes for each approach. There are also eastbound and westbound bike lanes striped at this intersection for only the Pleasant Valley Road approaches. These bike lanes taper and disappear at approximately 600 feet west and east of this intersection.

**INTERSECTION #16: Pleasant Valley Road / Forni Road, LOS A/C Operations**

This unsignalized intersection is operating at LOS A overall, but LOS C for the southbound stop sign controlled approach. It is a three-way intersection, with signal lane approaches all around. Forni Road is the stop sign controlled approach and is at a sharp skewed angle approximately 45 degrees from Pleasant Valley Road. Making a left turn from Forni Road to Pleasant Valley Road is therefore difficult because of the angle.

**INTERSECTION #17: Pleasant Valley Road / SR 49 (south), LOS E/F Operations**

This unsignalized intersection is a three-way stop sign controlled location. A traffic signal is warranted here for existing conditions traffic. It operates at LOS E/F in the am and LOS C in the pm peak hour. However, the eastbound approach has enough room to stripe a separate right turn pocket without any road widening. The northbound approach of SR 49 does not have enough room for any additional lanes without capital improvement widening of the approach. The westbound approach of this intersection has two striped lanes, a WB through and a WB left turn pocket. All other approaches are currently configured as a single shared lane, however, vehicles are using the eastbound approach as two lanes, because there is a 20' approach width, more than enough room for two vehicles side by side.

**Existing Bicycle and Pedestrian Facilities**

Sidewalks currently provide walking facilities along Missouri Flat Road in the vicinity of the US 50 freeway and towards the south just past Golden Center (south of the Walmart shopping center). After this point there are no sidewalks all the way down to Pleasant Valley Road. Pleasant Valley Road is without sidewalks in both east and westbound directions with few exceptions such as at the immediate vicinity of the signalized intersections at SR 49 / Fowler, as well as at Patterson Drive. Bike lanes, however, are striped throughout the study area along Missouri Flat Road north of Golden Center Drive, but generally not to the south of the location, or on Pleasant Valley Road (except in the immediate vicinity of Patterson Drive). The pavement width of Pleasant Valley Road is generally 24 feet from edge to edge.

### **Existing Transit Facilities**

El Dorado Transit serves the Diamond Springs community south of Golden Center Drive via Bus Routes 30 and 35. At the Missouri Flat Transfer Center (located in front of the Walmart shopping center along Missouri Flat Road), there are six Bus Routes that interact at this location including 60 to Pollock Pines, 20 to Placerville, 30 to Diamond Springs, 50 to US 50, 25 for Saturday, and 35 for Diamond Springs on Saturday. Weekday and Saturday schedules to Diamond Springs are generally 1-hour headways between buses, running from 6 am to 6 pm.

### **Traffic Counts and Data Collection, Saturation Flow Rates**

PRISM Engineering conducted am and pm peak hour turning movement counts at 16 existing study intersections, as well as 24 hour roadway counts in 15 minute intervals, explained in detail in Appendix Section A.3 of this report. All intersection turning movement counts were updated in 2018 with new traffic count data as explained in the appendix. Generally, the ADT traffic counts are approximately 10 times the peak hour value, typical in the study area.

## Arterial Roadway Segment Analyses and Methodology

PRISM Engineering explored several methods to calculate the appropriate level of service for roadway segments (not intersections). These included HCM 2010 compatible methods built in to the:

1. SimTraffic microsimulation model (*incorporates all roadway cross-section details including Two-way Left Turn Lane (TWLTL) medians, posted speeds, lane capacities, all details of lane geometry and vehicle types in microsimulation, etc, which includes the effects on delay to a roadway segment from adjacent intersections, signal timings, etc. It looks at the bigger picture of a system of traffic intersections and segments*)
2. the HCS 7 two-lane/multilane highways modules (*cannot handle TWLTL for two lane highways which is critical to accurately analyze much of Missouri Flat Road; It is not a microsimulation model and cannot take into account a longer corridor of potential delays at adjacent intersections, etc It can simply incorporate directionality, speed limits, truck percentages, lane widths, etc*) This method was ruled out because of inability to calculate level of service for the specific cross-section on much of Missouri Flat Road where TWLTL is present (see Appendix A.5).
3. the County's generic "planning level" method (*where the only variables are total two-way volume and number of lanes in the cross-section; this limited method does not consider lane widths, vehicle speeds, or whether there are two-way left turn lanes (TWLTL), etc*).

The County has indicated that the most accurate software methods should be used to calculate the street segment level of service for Missouri Flat Road or Pleasant Valley Road, whether it be the HCM 2010 analysis methods found in the SimTraffic microsimulation model or whether it is the County's proprietary "planning level thresholds" method. The criteria would be whichever method best reflects real world conditions, in other words, whether the calculated levels of service comport to what is happening in the field by verification. As a result, PRISM Engineering conducted two analyses for all roadway segments, to illustrate and show the differing results, but also offer an explanation as to why there are differences. PRISM Engineering also observed traffic conditions and speeds in the field, along Missouri Flat Road and Pleasant Valley Road, and found that the SimTraffic microsimulation HCM 2010 analysis tool best represented existing conditions. The planning level analyses did not seem to be sensitive to overall conditions, but correlated with side street conditions, even if there were only a few cars at LOS F conditions on the side street. These kinds of results did not represent the main volumes along Missouri Flat Road which were at LOS B or better conditions (over 95% of the total traffic volume being analyzed).

The County's planning-level segment analyses has been included as an appendix<sup>6</sup> for reference purposes only, since the results were limited to only a few variables of traffic conditions, whereas the SimTraffic microsimulation traffic models assembled for this study are more accurate and are based on measured roadway speeds, intersection signal timings and operations, specific median configurations and turn lanes, as well as variables such as closely spaced and complex intersections such as exist at the Missouri Flat Road / US 50 freeway interchange ramps and adjacent intersections.

LOS A/B conditions exists on Missouri Flat Road for the main "thru" traffic (as can be seen in Table ES.2 and ES.3). This through traffic is primarily moving at or near posted speed limits, indicating a lack of congestion. However, there are fewer gaps in this "thru" traffic due to the high volume of "thru" traffic, resulting in higher delays for side street traffic (much smaller volumes), trying to enter the road. Table 4

---

<sup>6</sup> See Appendix A.6: Planning Level Segment Analysis

summarizes the segment levels of service for Missouri Flat and Pleasant Valley Roads, using the SimTraffic microsimulation methodology. The SimTraffic HCM 2010 microsimulation method takes into consideration all adjacent intersections, signal timings, delays, turning movements, and medians which may be a two-way left turn lane (TWLTL) or a left turn pocket, or even a stop sign or signal. It also considers the specific speed limits and saturation flow rates determined from field data measurements. The results shown in Table 4 are summarized as an average vehicle delay for each roadway segment as well as the corresponding level of service (based on HCM 2010), and the resulting speeds of traffic. The level of service is based on the calculated delay, which is based on numerous factors built into the microsimulation model. The microsimulation method is calculating the delay for the segment and not the side streets.

**Table 4. Existing Year 2018 Link Segment Roadway Level of Service Summary**

| ARTERIAL SEGMENT LOCATION |   | Road Type | SIMTRAFFIC ARTERIAL SEGMENT ANALYSIS, HCM 2010 |           |           |                   |           |           |
|---------------------------|---|-----------|--|-----------|-----------|-------------------|-----------|-----------|
|                           |   |           | Year 2018 AM Peak                              |           |           | Year 2018 PM Peak |           |           |
|                           |   |           | LOS  | AVG DELAY | AVG SPEED | LOS               | AVG DELAY | AVG SPEED |

### Year 2018 Roadway Segment Analyses Results

Table 4 shows that there are satisfactory levels of service for roadway segments in the study area based on the microsimulation HCM 2010 analysis, and these results correlate well with the levels of service calculated for intersections (compare with Table ES.2), also using HCM 2010 methods for intersection level of service.

As per Policy TC-Xa (Table TC-2), Missouri Flat Road is allowed to operate at LOS F, provided the V/C ratio does not exceed 1.12 from U.S. Highway 50 to Mother Lode Drive, or 1.20 from Mother Lode Drive to China Garden Road.

### Saturation Flow Rates in Study Area

PRISM Engineering conducted extensive saturation flow rate data collection and analyses of existing traffic operations along the Missouri Flat corridor, in order to help ascertain the proper operating traffic flow

capacity of actual traffic in this area. Table A.1 in the appendix shows the summary of this saturation flow rate survey information and how it was applied in this study to properly calibrate and validate the micro-simulation models used with Synchro and SimTraffic along the Missouri Flat Road corridor and at the US 50 freeway interchange.

Section A.2 in the Appendix explains the details pertaining to the calibration and validation of the SimTraffic microsimulation traffic model. In summary, the Saturation Flow Rate (SFR) calculated for THRU movements in the study area was found to be 1825 vph, and LEFT TURN movements were 1730 vph. The average SFR near this interchange calculates to 1798 vph or about 1800 vph... which correlates with the values used by PRISM Engineering in the Synchro HCM 2010 software as a part of this study's capacity analyses.

Saturation Flow Rate may be derived from the steady state headway, which is defined as the average elapsed time between the passage of successive vehicles over the stop line in the same lane. The Highway Capacity Manual suggests recording the time of passage of the fourth and 10 vehicles over several cycles to determine this time value for 6 vehicles. This assumes that the initial queue at the start of green is at least 10 vehicles long. The first three vehicles in the queue of 10 are omitted because of startup speeds.

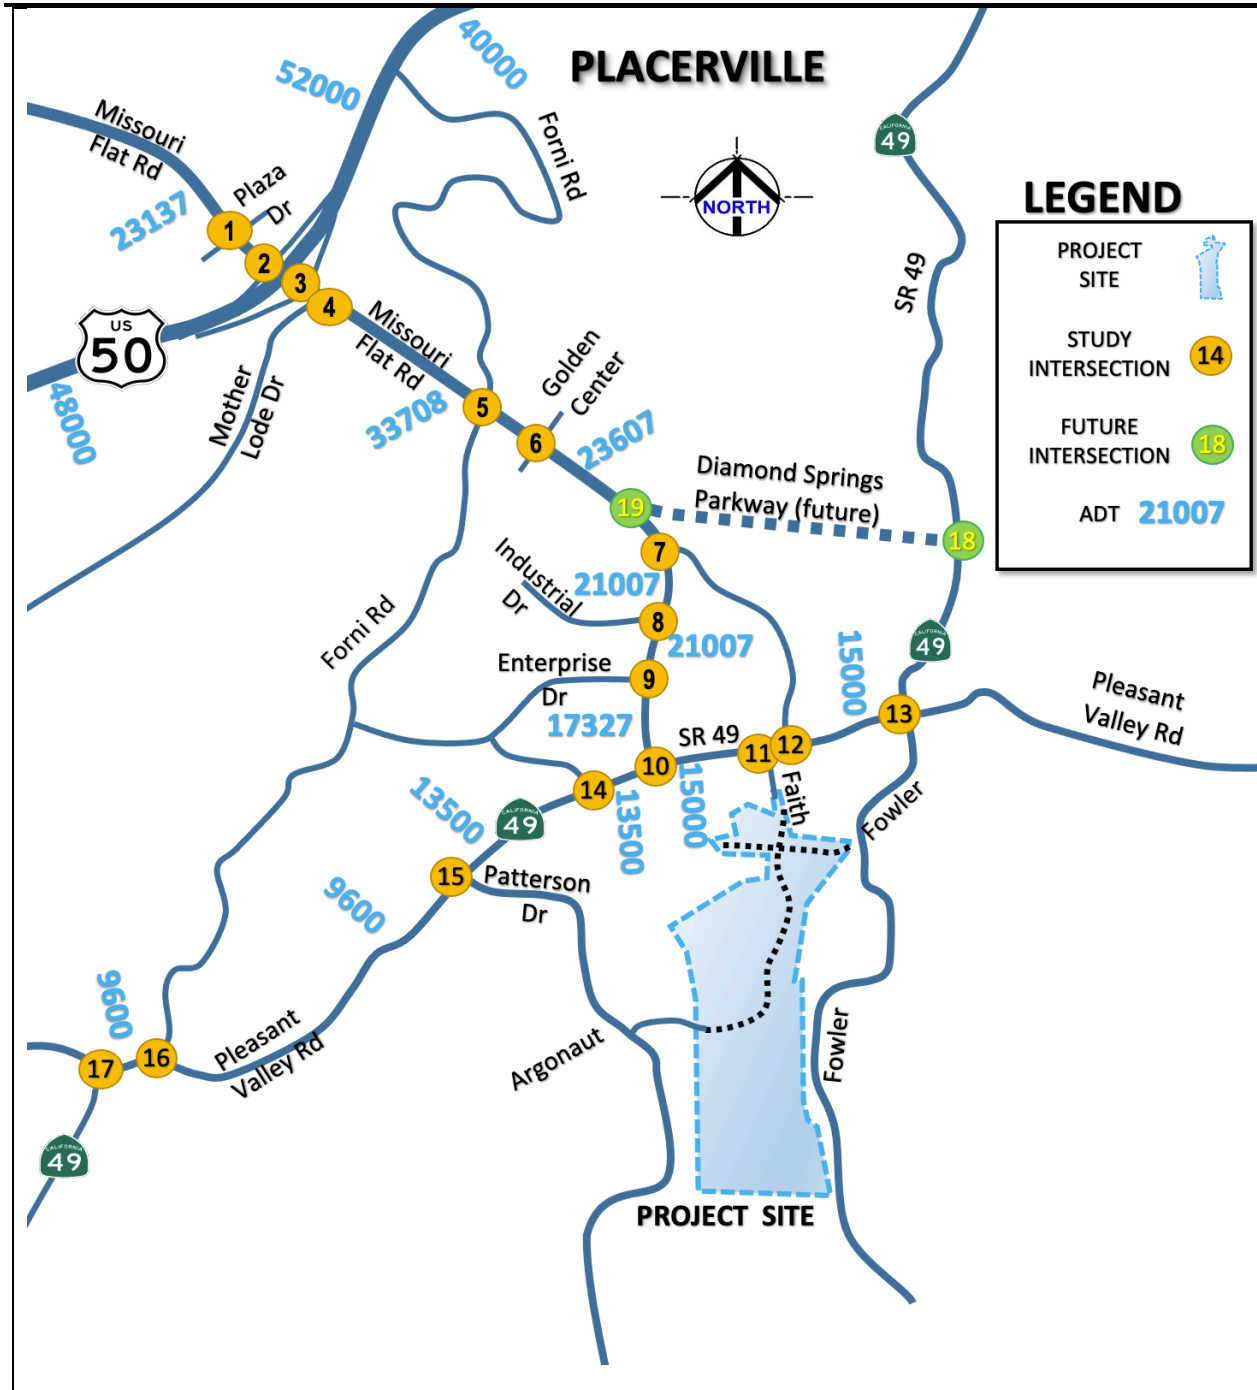

Saturation Flow is calculated as: **SFR= 3600 / [(t(10) – t(4)) / 6], OR SFR= 3600 / [(t(N) – t(4)) / (N-4)]**

Figure 4A shows the existing ADT and pm peak hour link segment vph on a map that has been derived from recent Year 2018 hose counts taken by PRISM Engineering, as well as Caltrans 2015 counts updated as needed to correspond with Year 2018 totals.

Figure 4B shows the projected Year 2027 ADT volumes using growth rates derived from the intersection turning movement counts for pm peak hour, and projected up or down in the same percent ratio as the peak hour SimTraffic model volumes. It should be noted that with the advent of the Diamond Springs Parkway, the County's traffic model showed volumes on SR 49 and parts of Missouri Flat Road going down in the future as some traffic reassigns in the region to take advantage of the shorter route. This is especially true for traffic going and coming from Pleasant Valley east of SR 49. A detailed discussion of this is found in the Trip Distribution section after Figure 9 under "Diamond Springs Parkway Effect."

Figure 4C shows the projected Year 2035 ADT volumes.

Figure 5 shows the existing am peak hour intersection turning movements, and Figure 6 shows the existing pm peak hour traffic volumes for each of 17 existing study intersections where existing data taken by PRISM Engineering is summarized.

**Figure 4A. Existing Year 2018 ADT Volumes on Study Roadways**

Note: Data is from new traffic counts taken in 2018 along study street segments

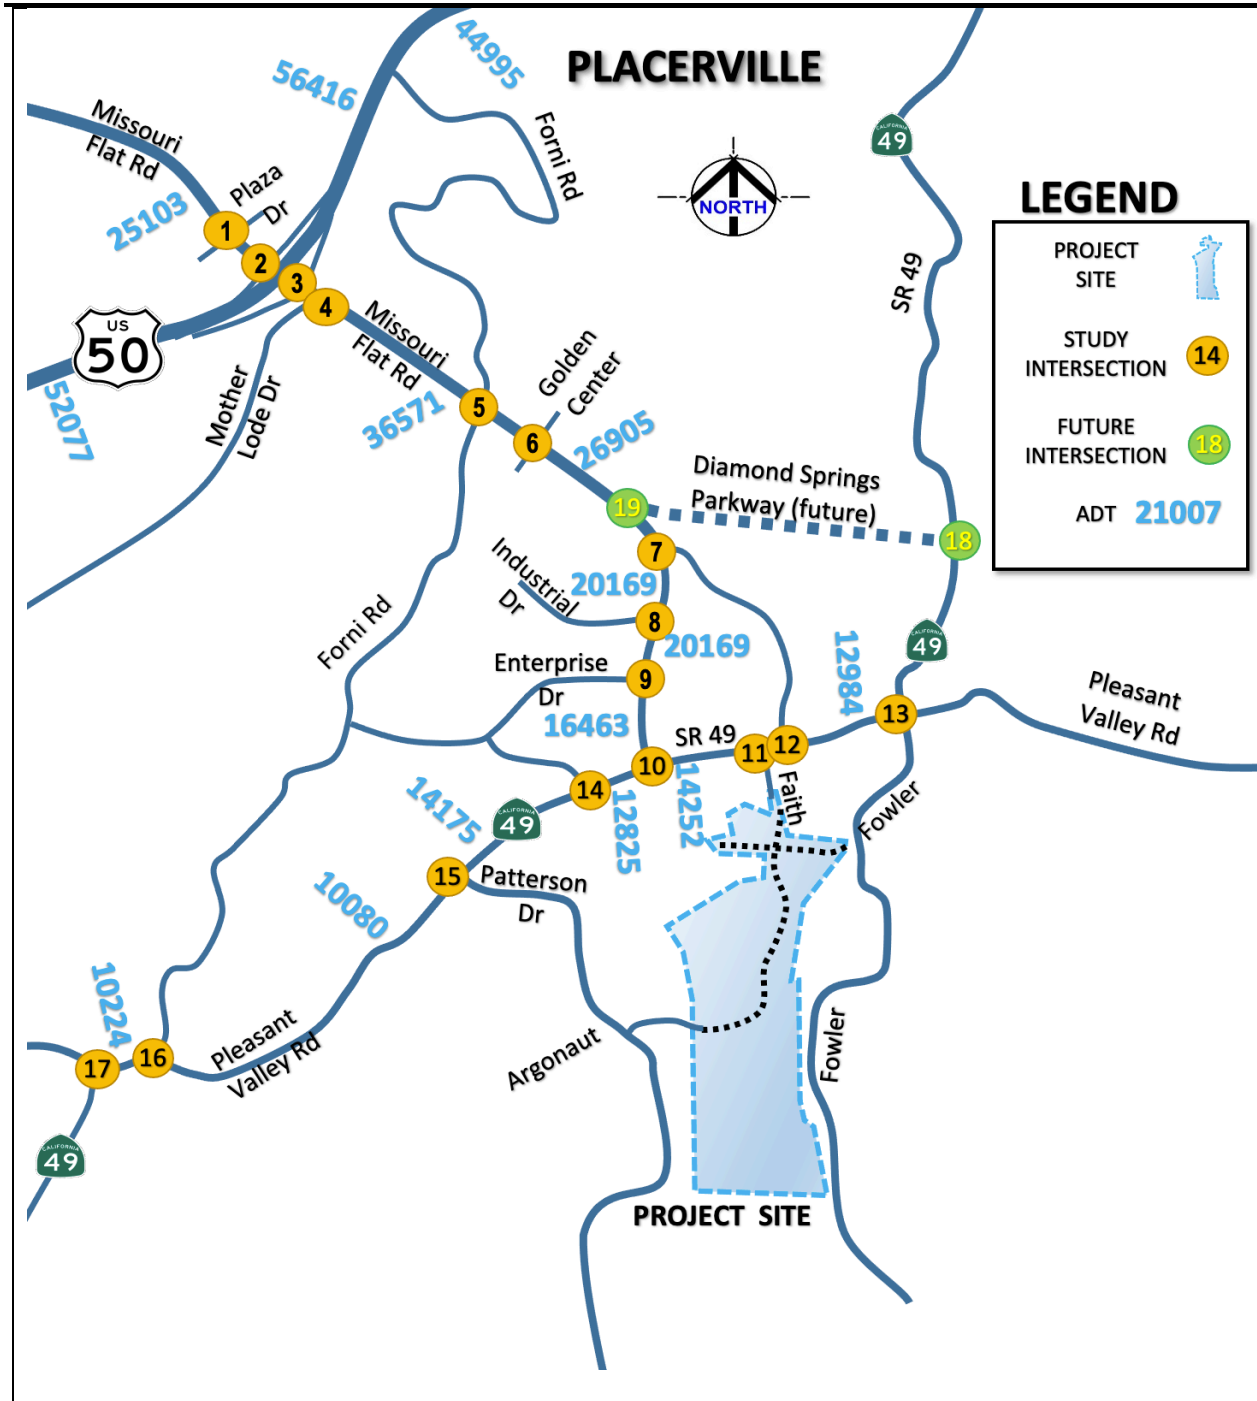

Figure 4B. Year 2027 Projected ADT Volumes on Study Roadways

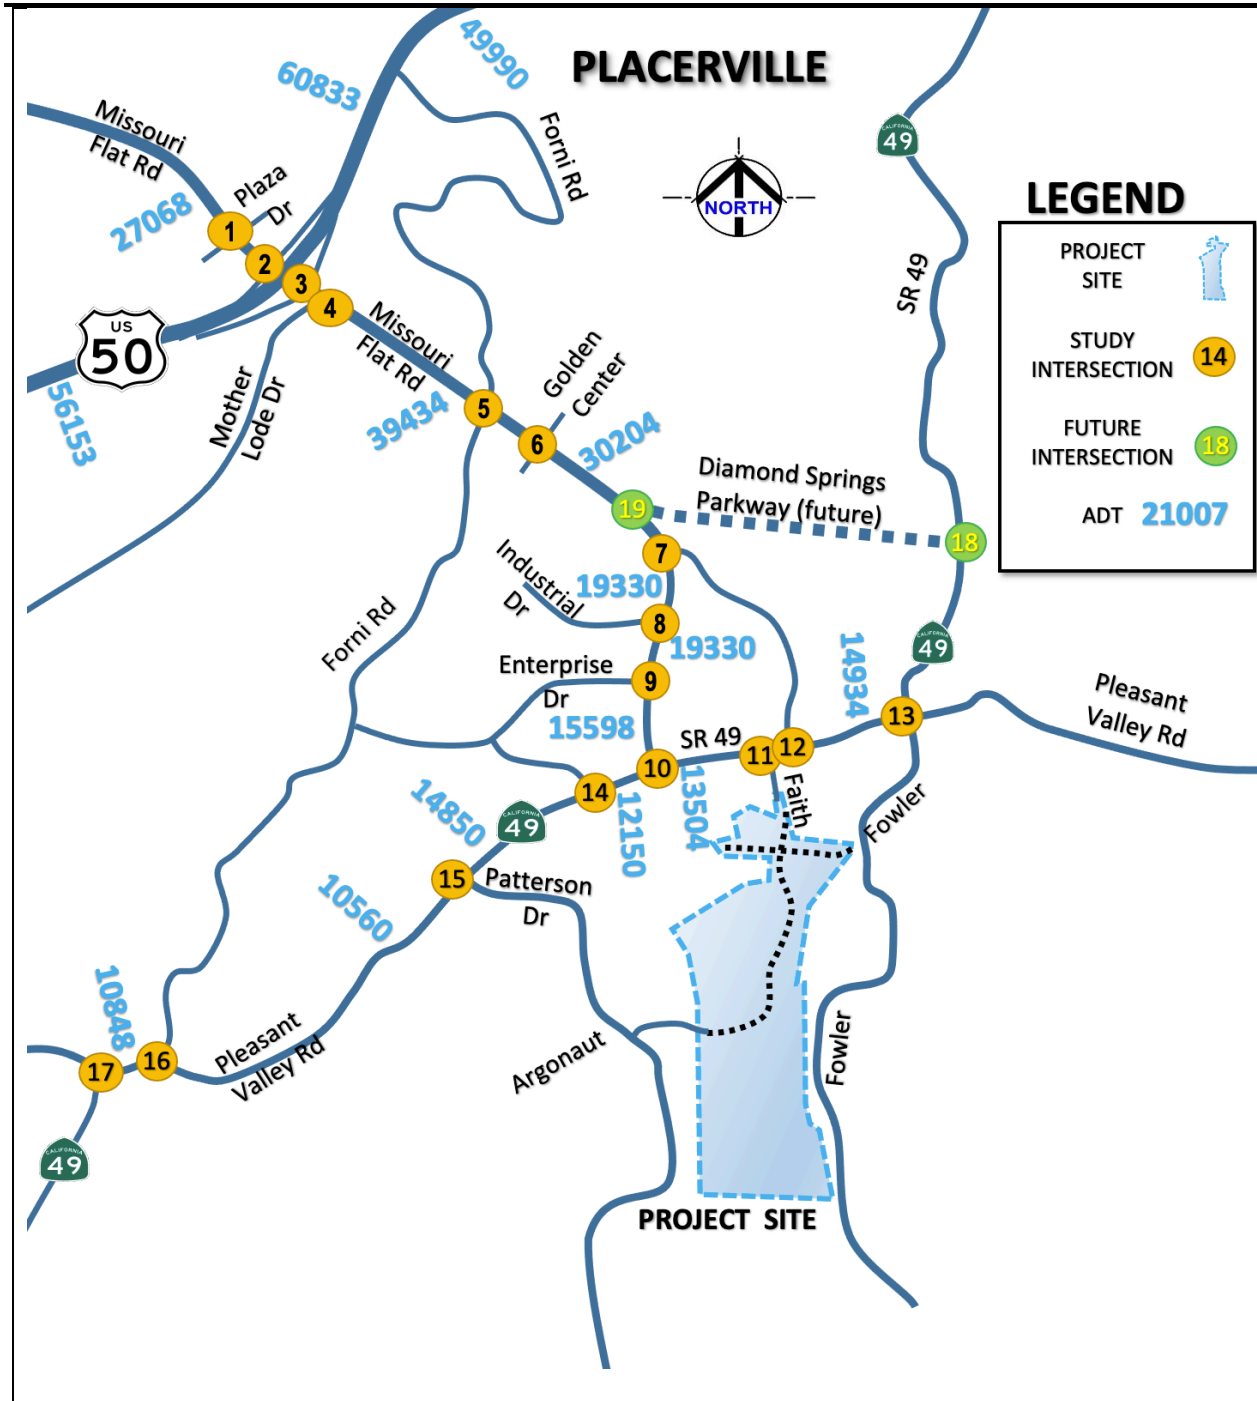

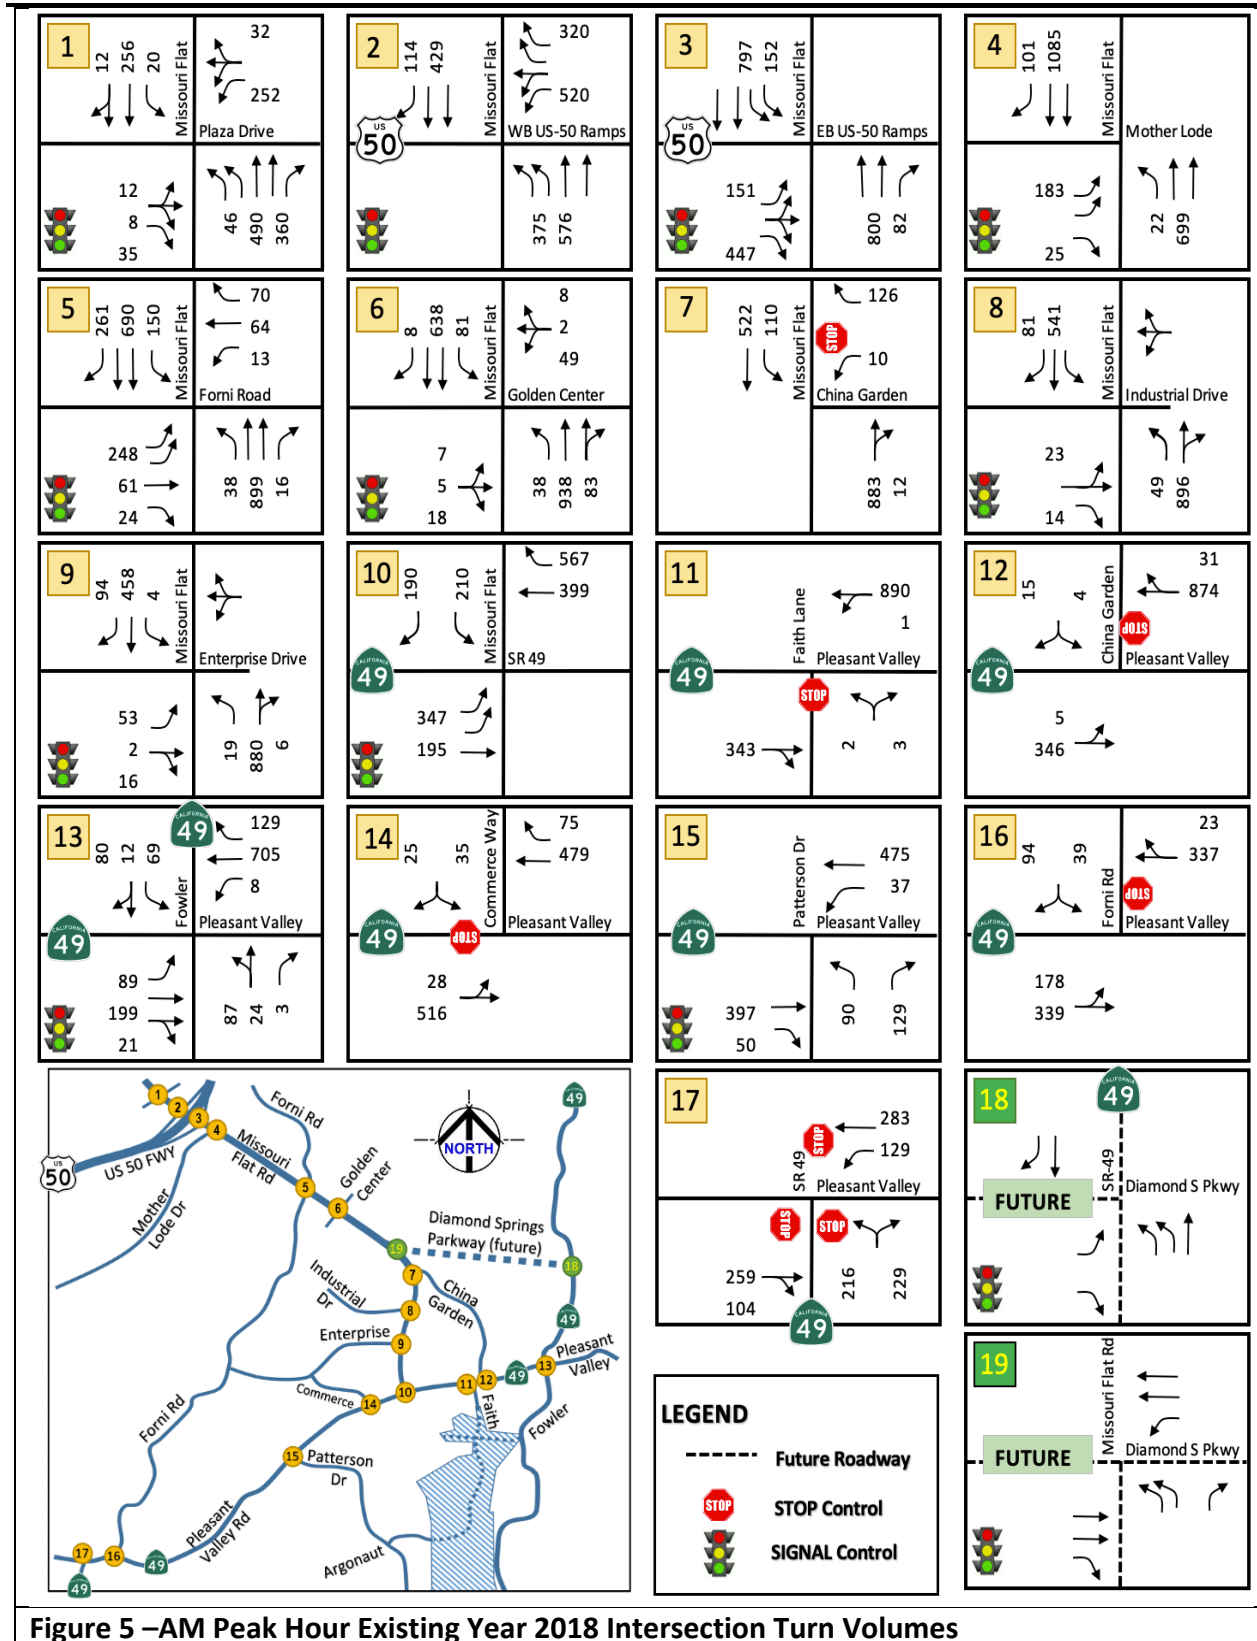

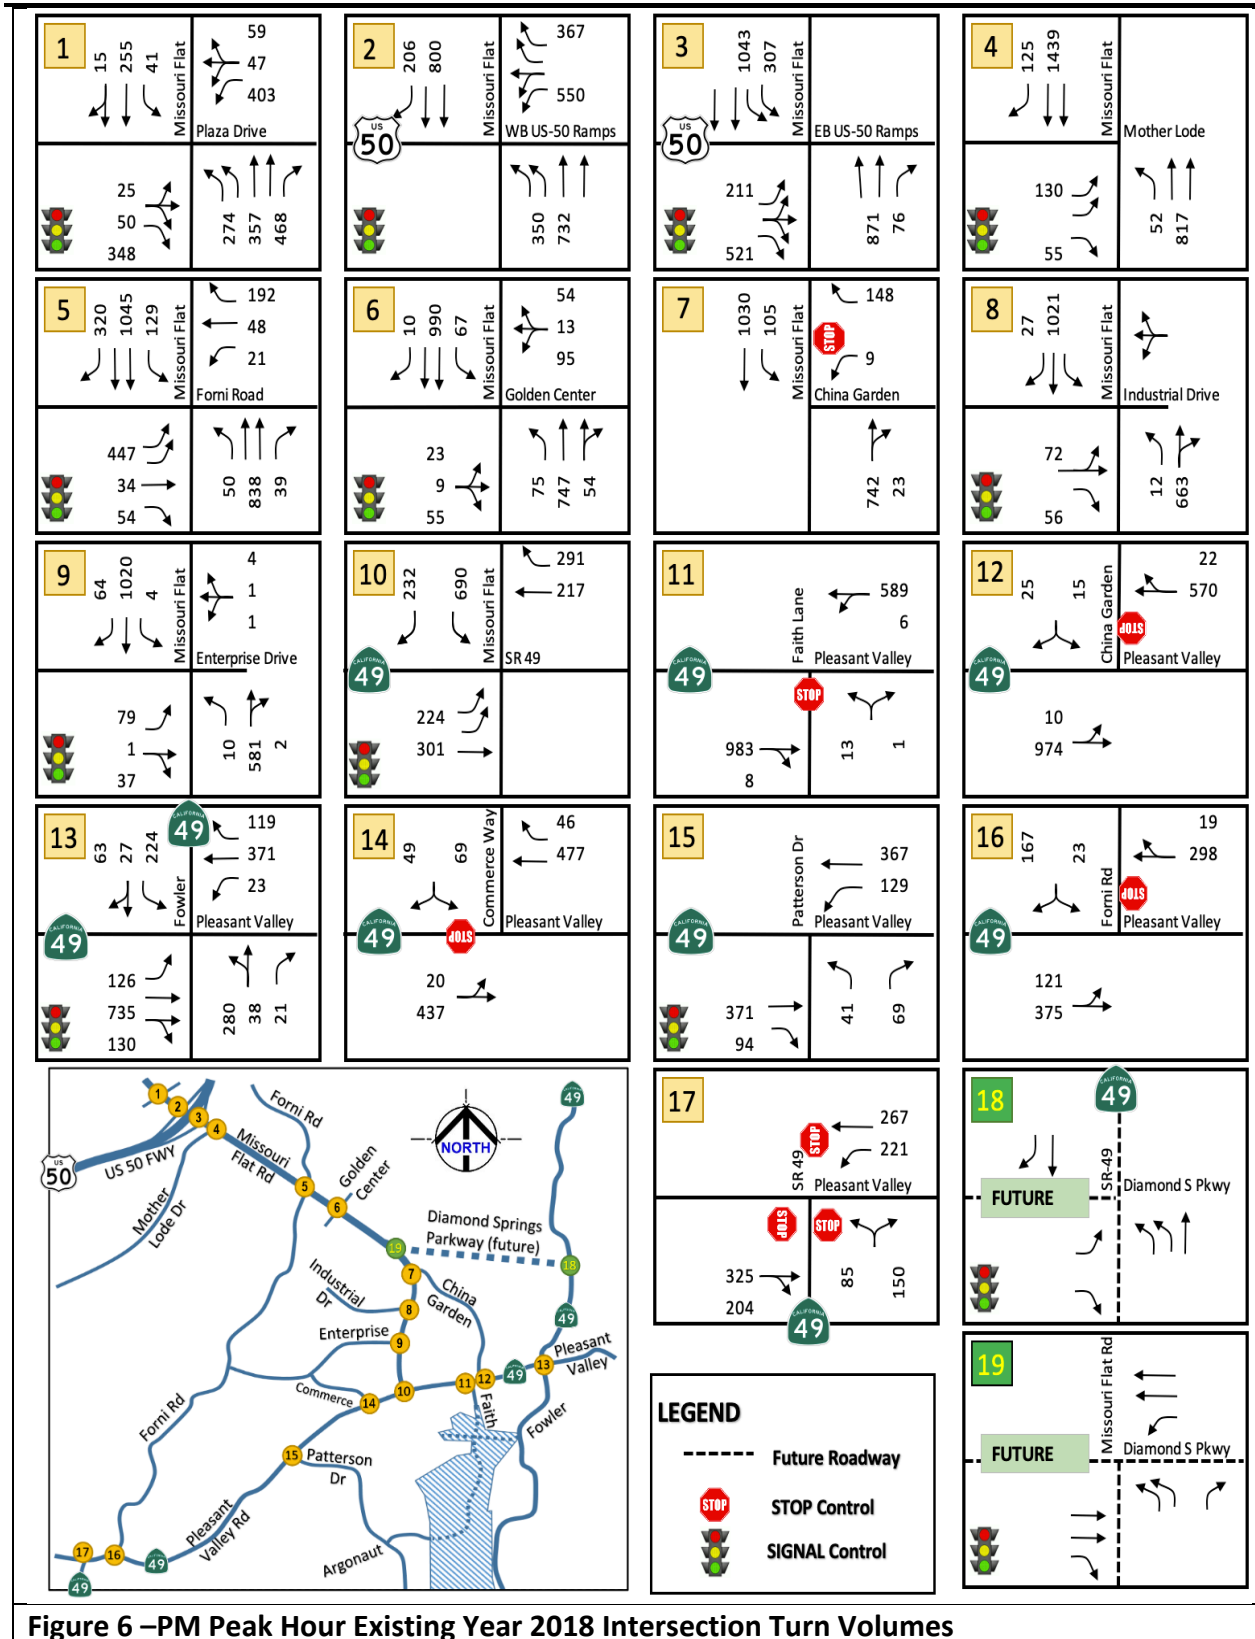

Figure 4C. Year 2035 Projected ADT Volumes on Study Roadways

## Existing Bicycle and Pedestrian Facilities

Bicycle and Pedestrian facilities are limited in the study. On Missouri Flat Road south of Golden Center Drive these facilities are very poor or non-existent because Missouri Flat Road transitions from a four-lane arterial to a two lane arterial. Figure 7 depicts the County's Bike Plan Map and shows the only Class 1 dedicated bike lane corridor, the El Dorado Trail, that intersects with Missouri Flat Road about 500 feet south of Golden Center Drive. There are Class II bikes lanes and sidewalks to the north of this location all the way to the US 50 freeway.

There are Class II bike facilities (striped bike lanes) on Missouri Flat Road from The El Dorado Trail just 500 feet south of Golden Center Drive, to the US 50 freeway WB ramp on the north, and then only sidewalks are available to Plaza Drive. North of Plaza Drive Class II bike lanes are again found on Missouri Flat Road. The map in Figure 7 also shows planned Class II bike lanes for Missouri Flat Road south of Golden Center Drive to Pleasant Valley Road, and for Pleasant Valley Road throughout the entire study area.

Sidewalks exist along Missouri Flat Road from the El Dorado Trail on the south to beyond Plaza Drive shopping center on the north, and then disappear to the north of the shopping center. South of the El Dorado Trail Class I bike lane parking lot there are no sidewalks on Missouri Flat Road all the way to its terminus at Pleasant Valley Road on the south. Sidewalks on Pleasant Valley Road do not exist except in a few instances in the immediate vicinity at the following intersections: 1) Fowler Lane/SR 49, 2) Patterson Drive, 3) and Koki Lane.

In the vicinity of the project on Pleasant Valley Road near Faith Lane there are no sidewalks along Pleasant Valley Road, and no Class II bike lanes for the one mile section of Pleasant Valley Road between Patterson Drive to Fowler Lane. The County has plans for Class II bikes lanes on Pleasant Valley Road throughout the entire study area, but this will take widening of the road to make this possible as the pavement width is only 24 feet in many locations.

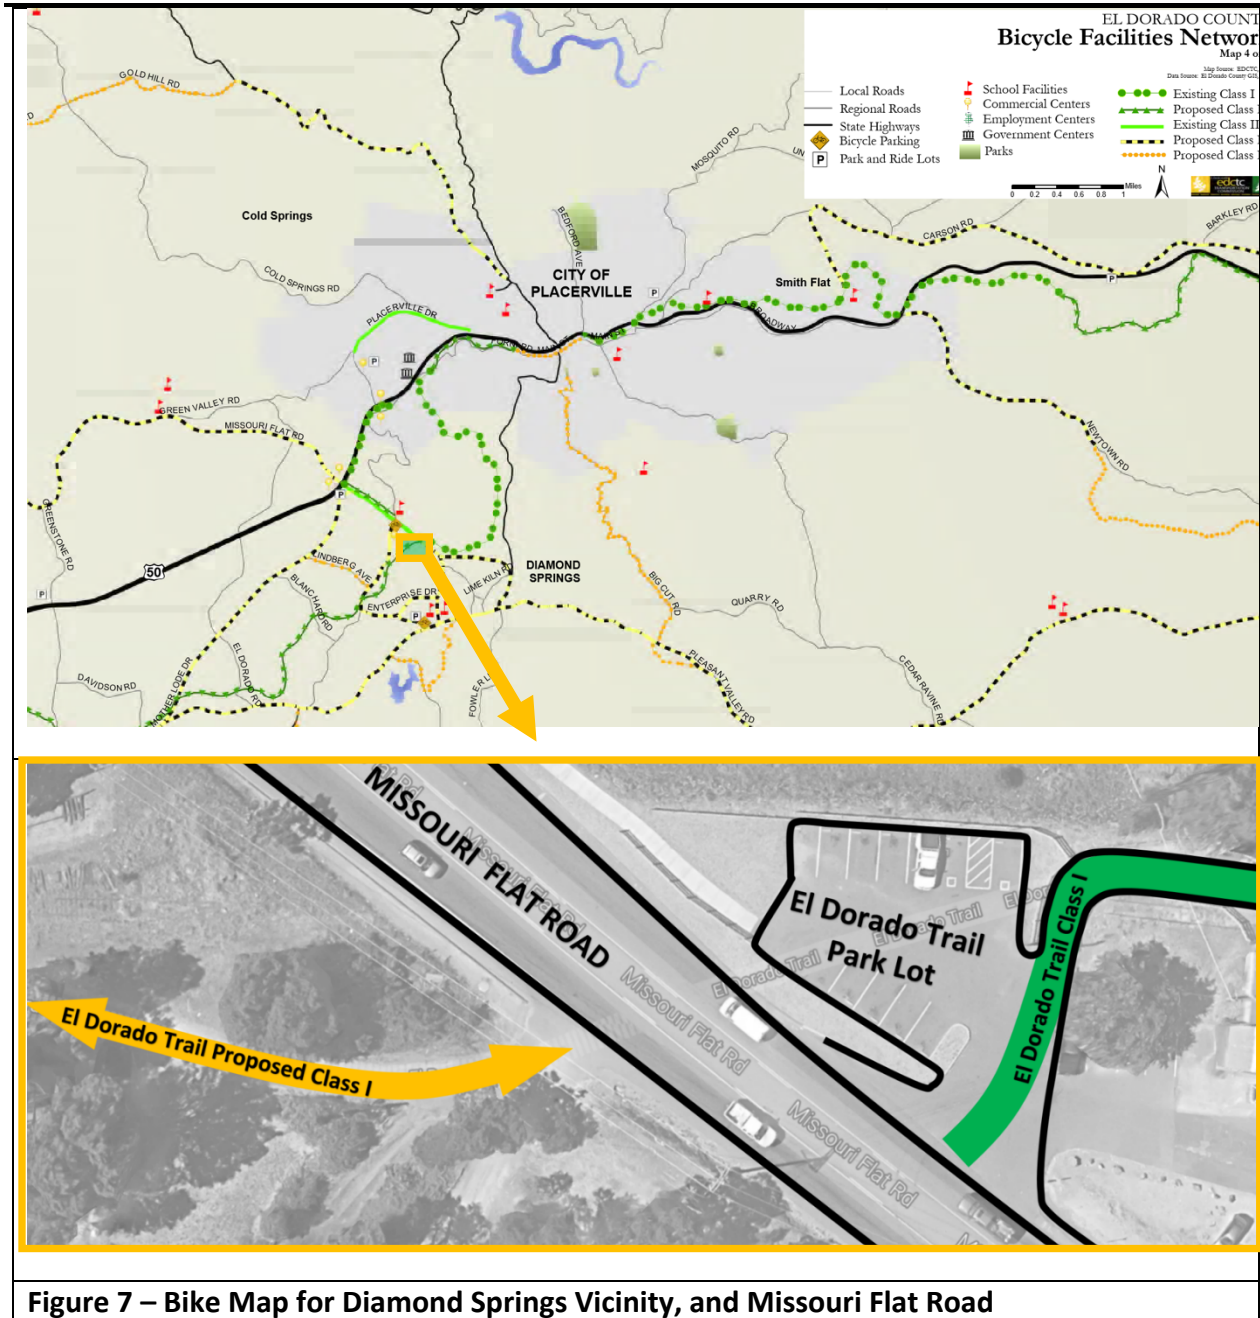

## Existing Transit Facilities

El Dorado Transit has several facilities that directly serve Missouri Flat Road in the study area. Figure 8 shows several bus stops in the study area where there is also a transfer center (Missouri Flat Road Transfer Center) along the frontage the Walmart shopping center just south of Forni Road.

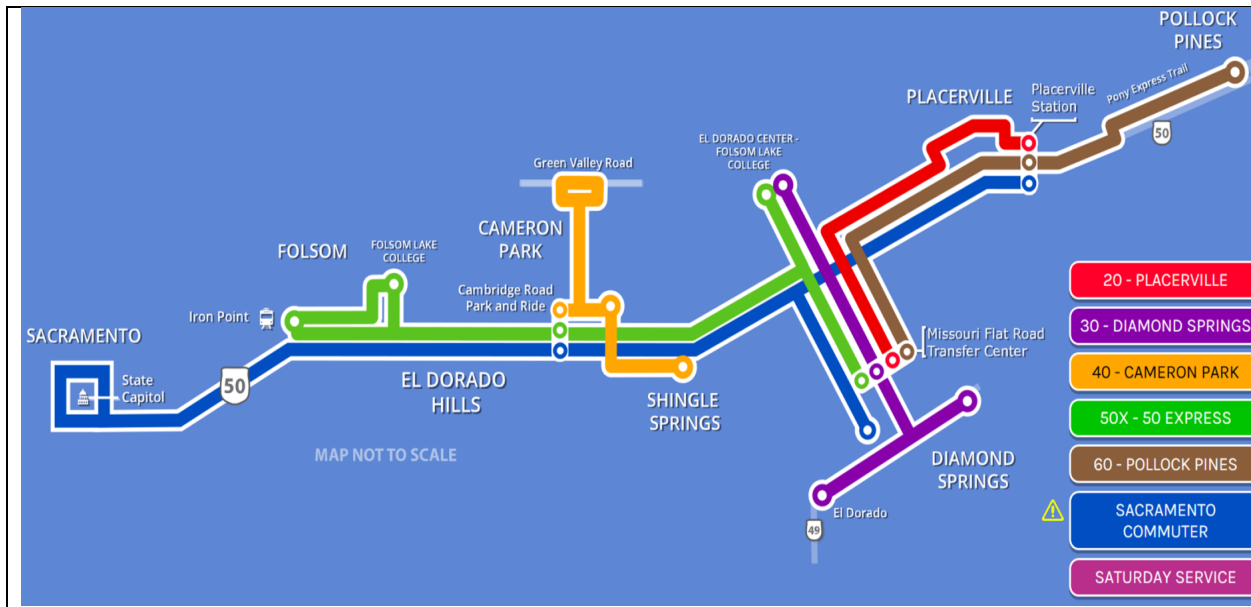

The lines that provide service to Missouri Flat Road and Pleasant Valley Road in the project study area are:

- LINE 30 which serves Missouri Flat Road from the El Dorado Center of Folsom Lake College on the north, to Diamond Springs Community (Pleasant Valley Road) on the south.

LINE 50X – 50 Express which serves the El Dorado Center of Folsom Lake College on the north and Missouri Flat Road Transfer Center at Forni Road on the south. It also enters the US 50 freeway to the western regions west of Missouri Flat Road as shown in Figure 8.

## IV. Existing (Year 2018) Plus Project Conditions

### Project Trip Generation and Distribution

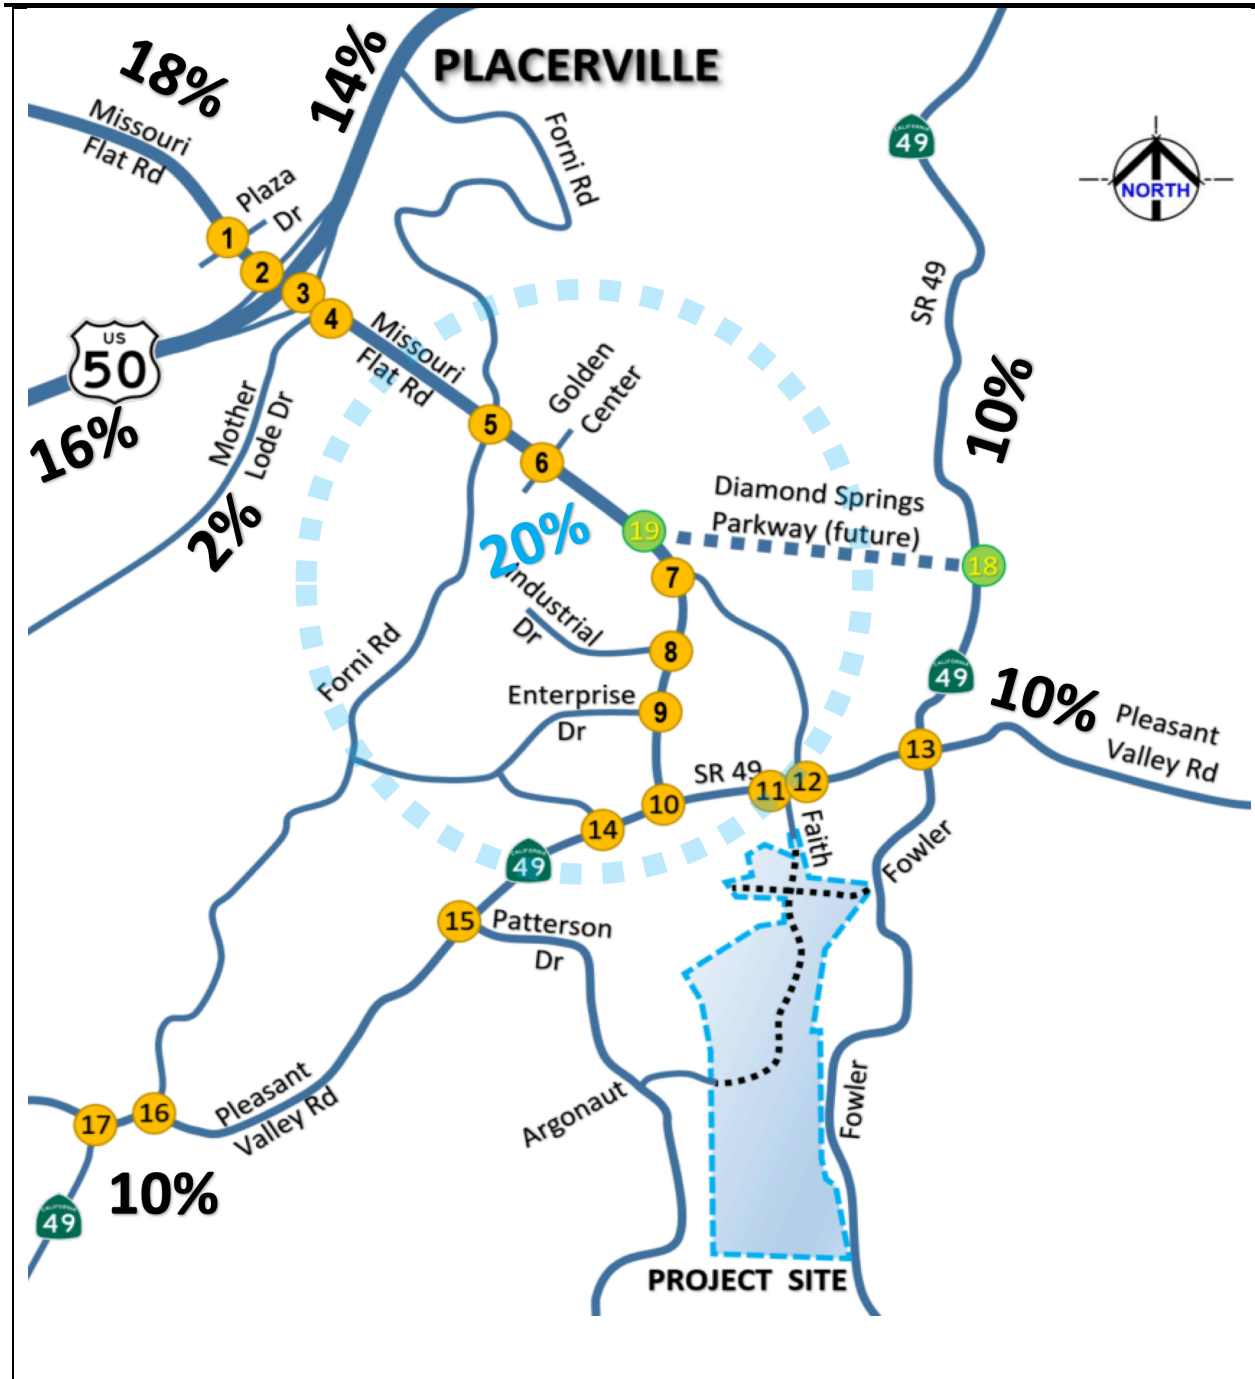

The project is currently zoned CC and RM. The project is to be developed as 157 single family residential units with 225 multi-family uses on 142.3 acres. Table 5 documents the trip generation summary by residential type for the am and pm peak hour time periods, as well as the daily total. Tables 6 and 7 document the trip distribution percentages used to assign traffic to the surrounding roadways for the am and pm peak hours, respectively. Figure 9 shows the graphical representation of the trip distribution information in Tables 6 and 7. These tables document specific project trip generation totals to and from various destinations for the am and pm peak hours, respectively. It should be noted that the trip distribution analysis has been updated from previous reports based on input from Caltrans, and 10% of the project traffic was reassigned to use SR 49 to the north towards Placerville. This partial shift in project only traffic lowered project traffic volumes on Missouri Flat Road and through the US 50 interchange. Tables 6 and 7 document these totals and how they were assigned.

**Table 5. Trip Generation Summary for AM, PM, and Daily**

**Figure 9 – Trip Distribution Pattern for Project Traffic**

Source: County’s Traffic Model Output, Local Traffic Patterns, and PRISM Engineering

Trip generation for development projects is typically calculated based on rates contained in the Institute of Transportation Engineer’s publication, *Trip Generation 9th Edition*<sup>7</sup>. *Trip Generation* is a standard reference used by jurisdictions throughout the United States for the estimation of trip generation potential of proposed developments. PRISM Engineering utilized the ITE Trip Generation Rates for

<sup>7</sup> *Trip Generation, 9th Edition*, Institute of Transportation Engineers, 2012.

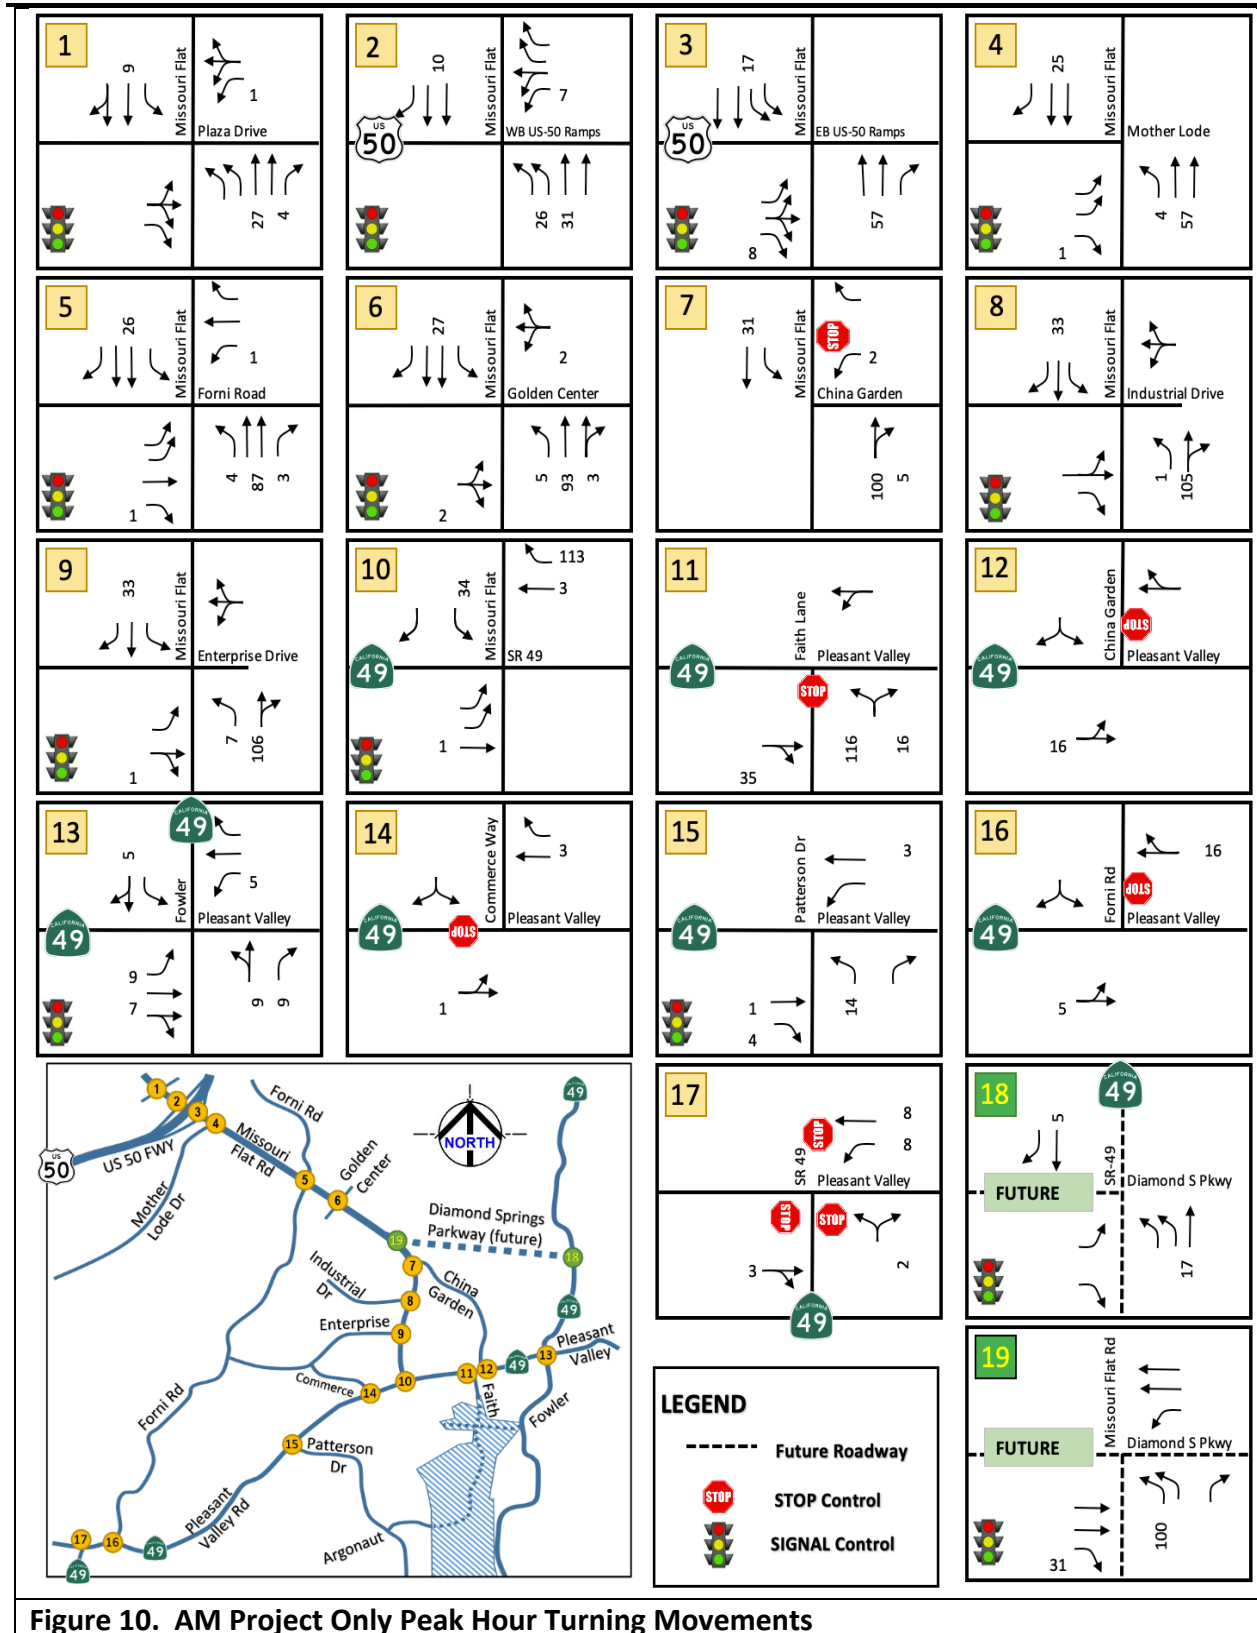

residential developments in this study to quantify and predict the future traffic for the Dorado Oaks project. Figures 10 and 11 are project only traffic for am and pm peak hours, respectively. Figures 12 and 13 show the turning movement diagrams for am and pm peak Year 2018 plus Project scenarios.

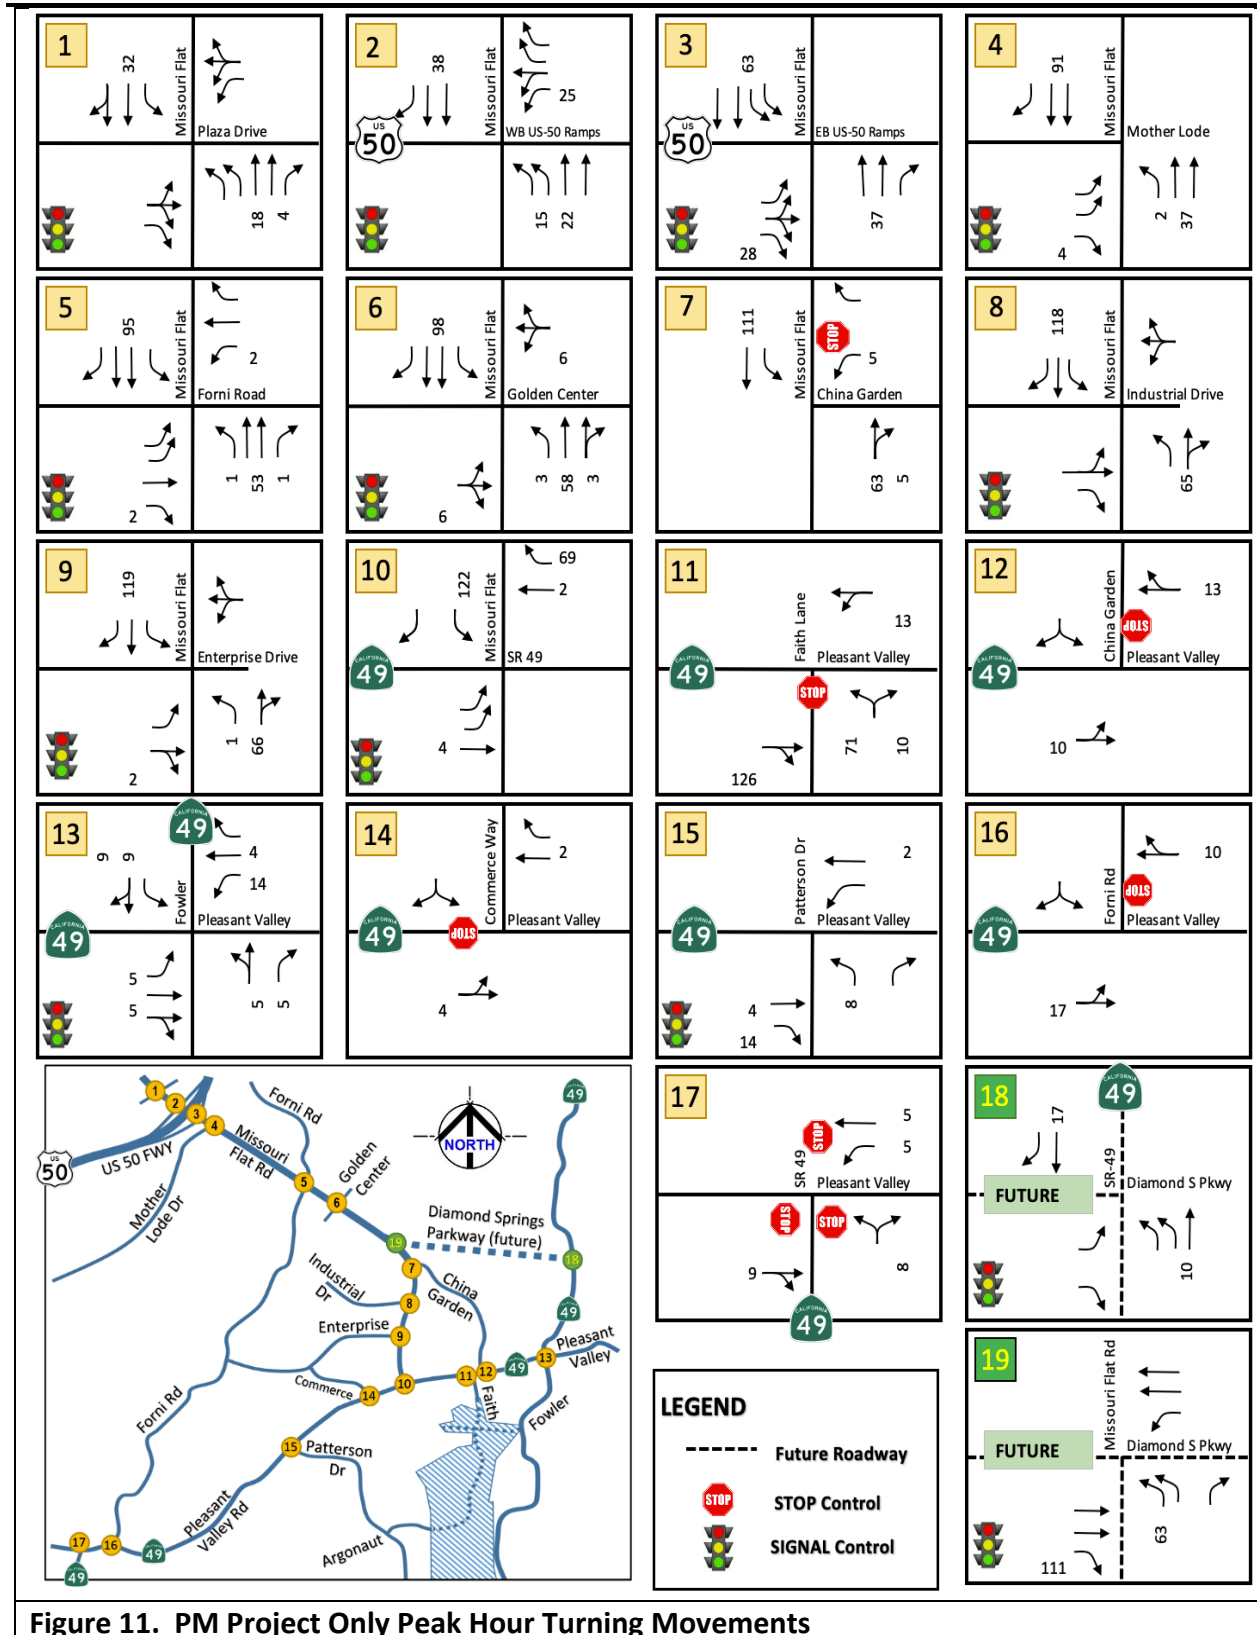

**Diamond Springs Parkway Effect.** The trip distribution of the project traffic was developed by PRISM Engineering using engineering judgment in interpreting the traffic model output volumes with and without the project. In addition, PRISM Engineering reviewed the Existing Conditions model outputs and compared these to future Cumulative Conditions traffic model outputs which also had the Diamond Springs Parkway connector road in the model which shifted traffic patterns. The Diamond Springs Parkway connector road would connect from SR 49 over to the Missouri Flat Road corridor just north of China Garden Road. The traffic model outputs with the Diamond Springs Parkway connector road in it, lowered future year 2035 traffic volumes along Pleasant Valley Road between SR 49 on the east and Missouri Flat Road on the west to a level about 90% of existing levels for the am peak hour (1,569 vph for Year 2035 and 1,736 vph for Year 2010 model). In other words, the Diamond Springs Parkway had the effect to lower traffic on Pleasant Valley Road as well as Missouri Flat Road from Pleasant Valley Road on the south to China Garden Road on the north.

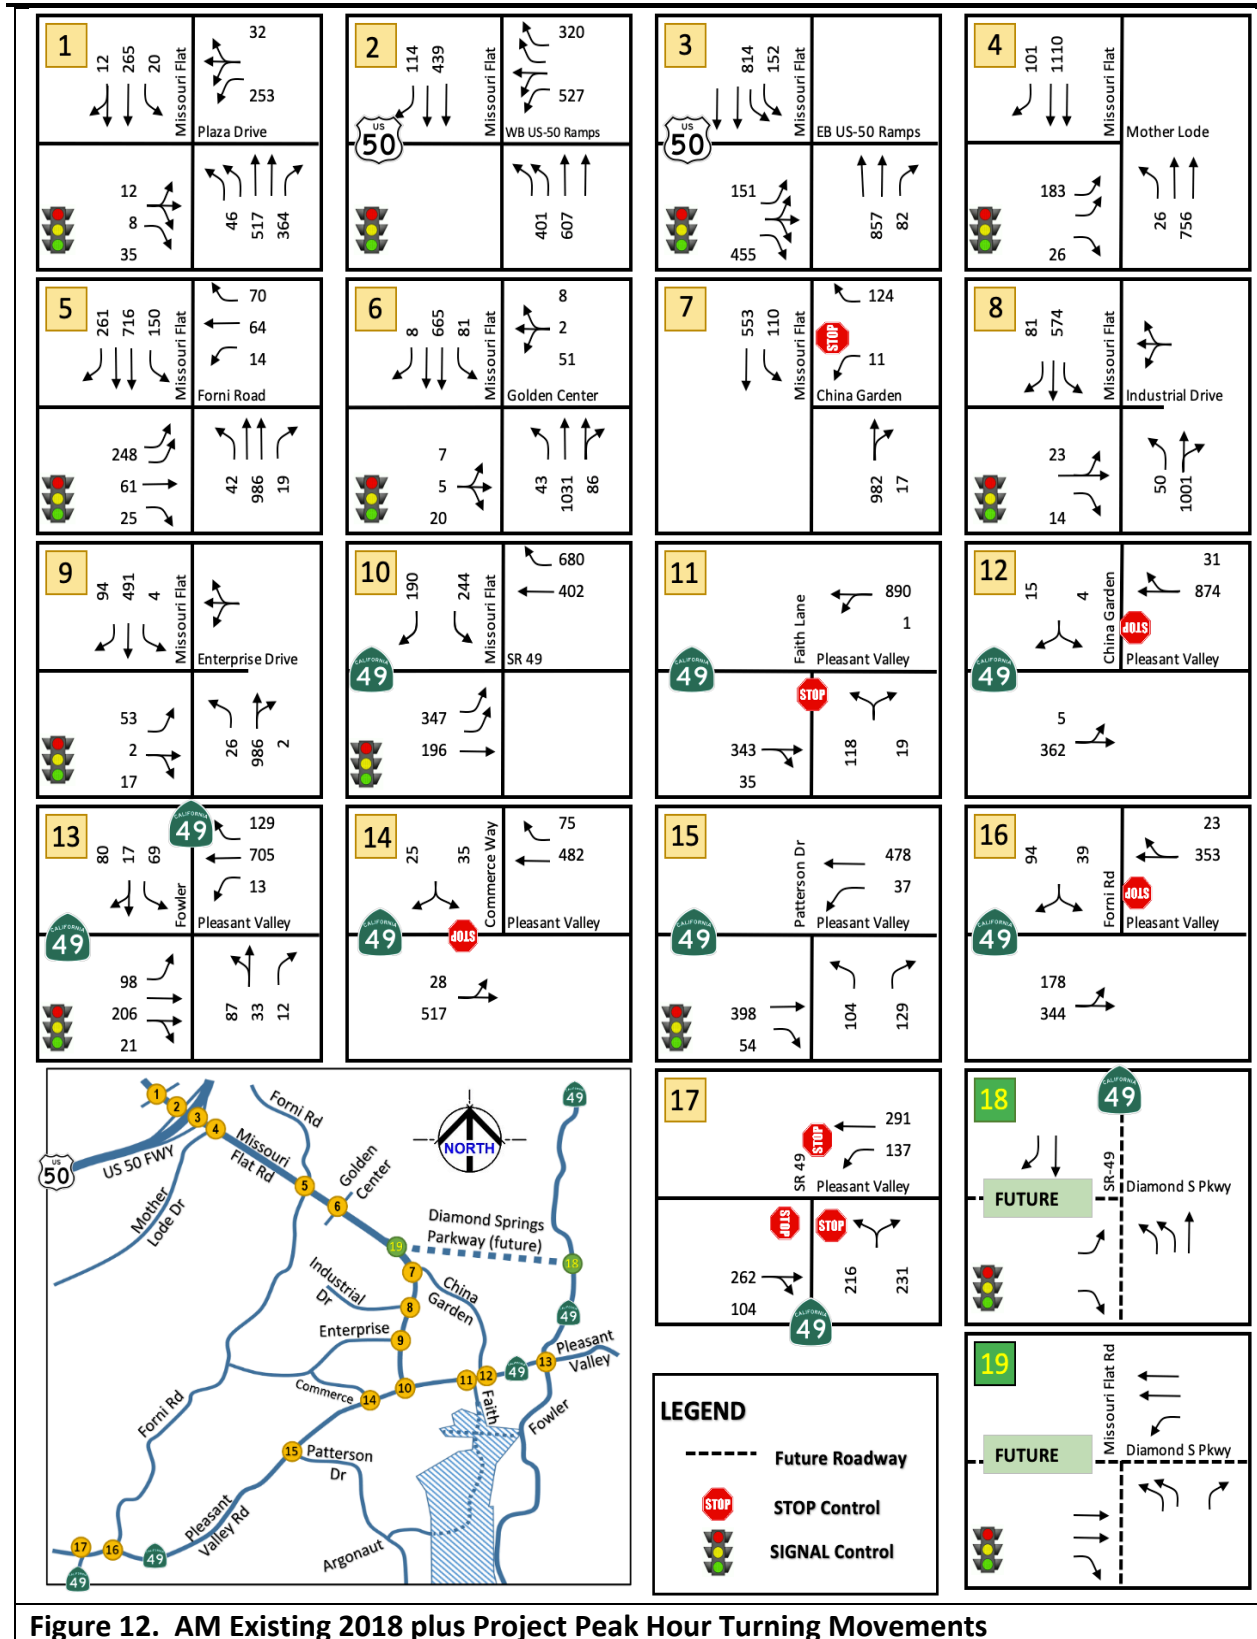

PRISM Engineering used the growth rates from existing to future and modified the existing traffic counts taken in the field to determine Year 2035 levels. This growth rate was calculated using straight line interpolation and coming up with a yearly growth rate, and applying this rate to year 2018 traffic counts to develop a year 2035 turning movement count database for all 18 study intersections. The intersection affected by the shift in traffic due to the Diamond Springs Parkway (intersections 13, 18, and 19) were further adjusted to shift future traffic to use the Diamond Springs Parkway corridor similar to the pattern that shifted in the County's travel demand model outputs. For example, if Pleasant Valley Road volumes for Year 2035 in the model were 10% lower than the year 2010 model because of the Diamond Springs Parkway connector, it was assumed that traffic obviously shifted with the faster more direct and less congested route in the model. This shift was reflected and adjusted in the Year 2035 turning movement counts used in the analyses of this traffic study. Through traffic on SR 49 to and from Pleasant Valley regions that would have normally used the SR 49/Pleasant Valley Road to make a right turn onto Missouri Flat Road and on to the US 50 freeway, were reassigned to use SR 49 to the north from the Fowler Road intersection and make a left turn onto the Diamond Springs Parkway which then connects up to and becomes Missouri Flat Road in the future.

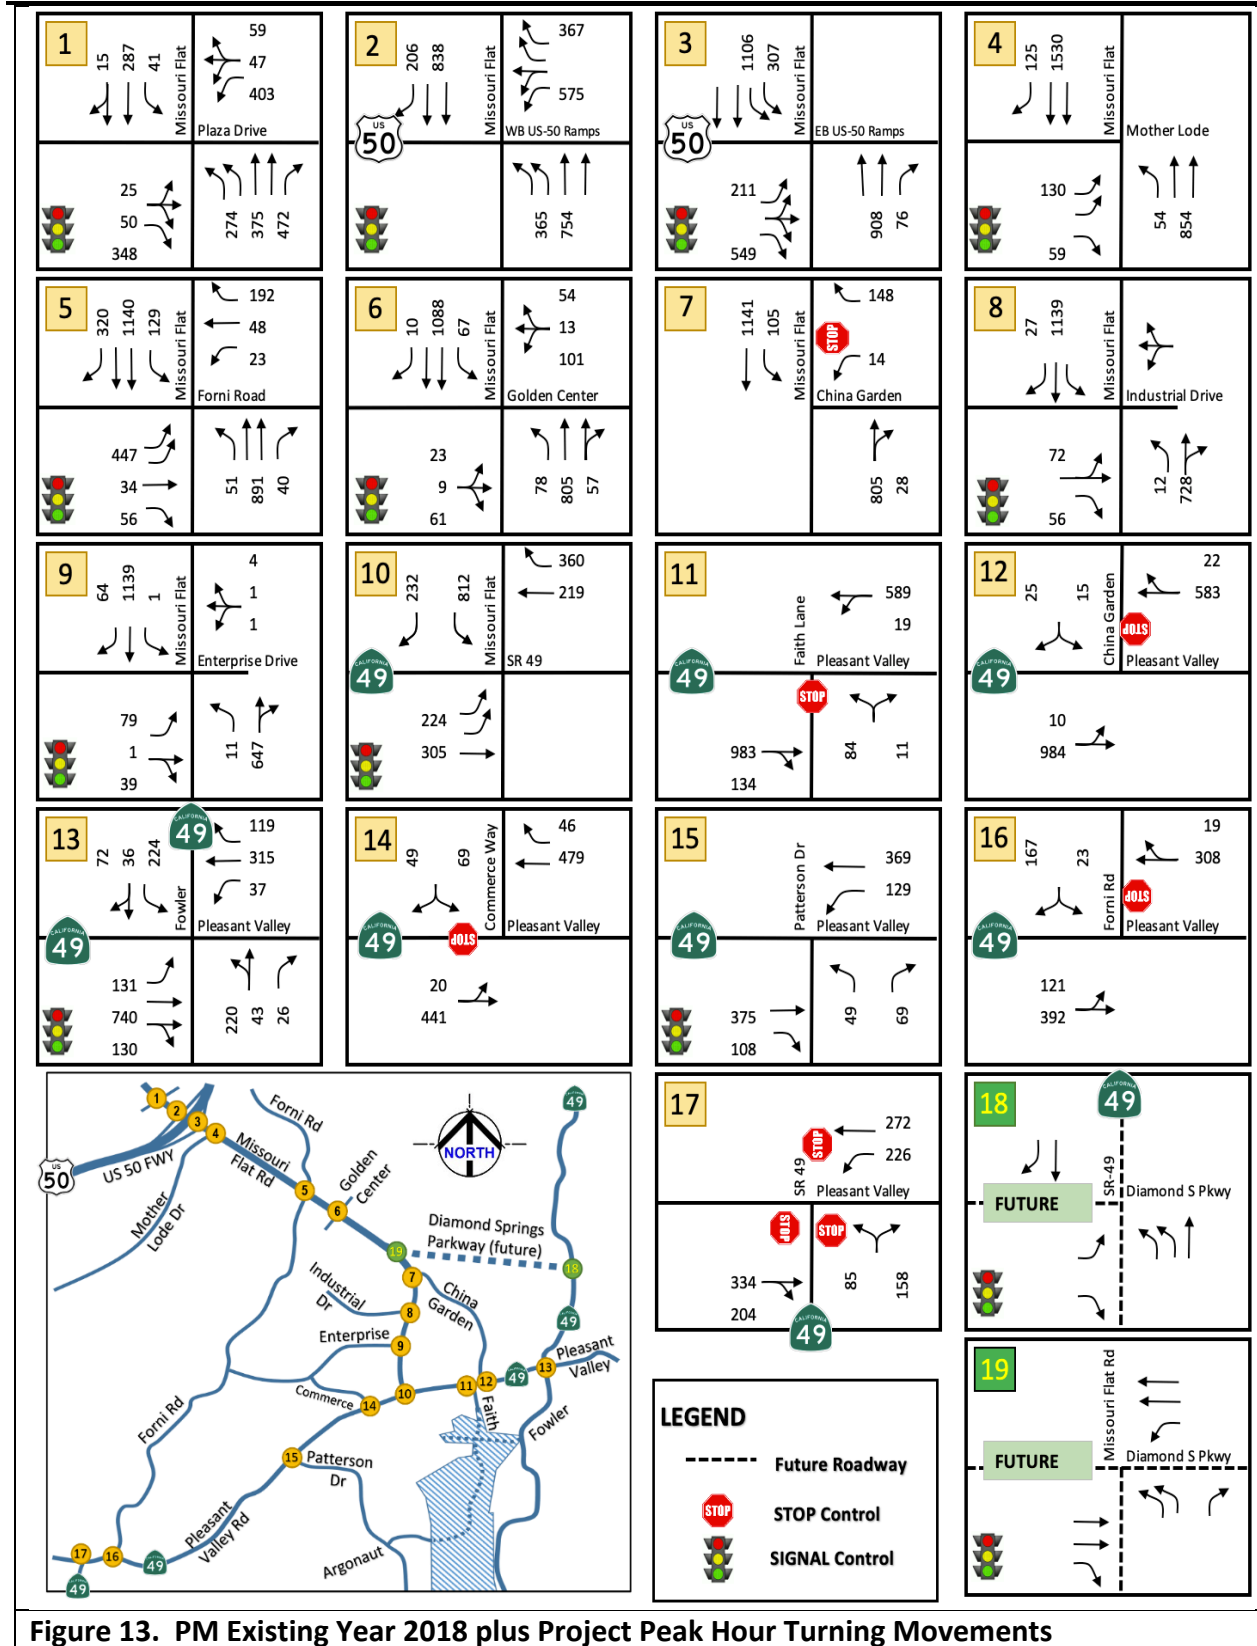

The project traffic was assigned to destinations for shopping and work, etc., in the peak hour time periods, consistent with the County's traffic model. A portion of the project traffic would "sink" to the commercial areas along Missouri Flat Road near Forni Road as a destination, and other portions of project traffic would seek regional destinations via the US 50 freeway, and other pathways to destinations east or west along the Pleasant Valley Road corridor. Some of the traffic that would go to Placerville was manually assigned to the SR 49 connection between Pleasant Valley Road and the City of Placerville (10%) as suggested by Caltrans, because the traffic model did not assign traffic via this route. This 10% was taken from the 24% assigned by the model to go east on US 50, to Placerville or beyond, and the resulting remainder was 14% of the project's total traffic using US 50 to get to Placerville, as shown in Figure 9. This trip distribution adjustment takes care of project traffic utilizing all possible routes (incl. SR 49) to and from Placerville, and not just Missouri Flat Road / US 50.

Tables 8 and 9 summarize the intersection capacity analysis results and link segment capacity analysis results for the Year 2018 scenarios, respectively. One location would be at LOS F with the addition of project traffic (Pleasant Valley Rd. at Faith Lane). Tables 10 and 11 summarize the signalized intersection queue analysis for this same scenario, for the am and pm peak hour time periods.

Control: S=Signal, AW=All-Way Stop, TW=Stop Sign Side Street, NB=NB approach Stop

NOTE: Calculations based on HCM 2010 methodology for intersection level of service (signal, two-way, and all-way stop)

Source: PRISM Engineering and HCM 2010 calculation in Synchro and/or Sim Traffic

It can be seen from Table 8 that the intersection of Pleasant Valley Road at Faith Lane goes from an acceptable LOS E condition in the pm peak hour to an unacceptable LOS F condition when the project traffic is added in. This intersection would provide primary access to the project site, and the change in level of service is due to addition of the project traffic to the Faith Lane approach.

### Year 2018 Roadway Segment Analyses Results

Table 9 shows that all locations for roadway segments calculate to LOS C or better conditions based on the HCM 2010 microsimulation model SimTraffic (for Missouri Flat Road and Pleasant Valley Road segments). These are satisfactory levels of service for roadway segments, less than the allowable LOS F conditions for roadway segments as per Policy TC-Xa<sup>8</sup>. These results closely correspond to the levels of service calculated for intersections (see Table 8). The results in Table 9 indicate that LOS C or better conditions prevails on Missouri Flat Road and Pleasant Valley Road. The project, therefore, does not create a significant impact to levels of service on the Missouri Flat Road arterial road segments (LOS C is OK), nor does the project create any significant impact to any of the Pleasant Valley Road arterial road segments (all LOS C or better). No roadway segment widening mitigations are recommended for this scenario. In the queue analysis summary tables that follow, the signalized intersections were analyzed for queue lengths on left turn pockets for all approaches to determine if the estimated queues would exceed the existing storage length of these turn pockets. If so, the table reports this problem as a YES in a red highlighted cell in Table 10 or Table 11. Note that intersections #18 and #19 are marked as “N/A” because they are a future intersection that would be constructed with the Diamond Springs Parkway connecting Missouri Flat Road on its west end with SR 49 on the east end.

<sup>8</sup> As per Policy TC-Xa (Table TC-2), Missouri Flat Road is allowed to operate at LOS F, provided the V/C ratio does not exceed 1.12 from U.S. Highway 50 to Mother Lode Drive, or 1.20 from Mother Lode Drive to China Garden Road.

Source: PRISM Engineering and Synchro 9.0 HCM 2010 methods

Four of the intersections had pm peak hour turn pocket overflow issues for the 95<sup>th</sup> percentile calculations in the HCM 2010 methodology. These intersections had the overflow problem with and without the project traffic. The intersections with overflows are identified in the tables with red highlighted cells for both the am and pm peak hour time periods.

Sometimes when a right turn pocket overflows, it stops progress of through lane traffic, and the same is true for left turn pockets that have overflow and exceed the capacity of their length. Tables 10 and 11 for the am peak hour and pm peak hour traffic patterns respectively, show the critical overflow areas highlighted in red with “YES” to show 95% queue lengths greater than the turn bay length.

### **Traffic Signal Warrants, Year 2018 Scenarios**

Table 12 reports the signal warrant analysis results for the Year 2018 am and pm peak hour scenarios (with and without project). Signals are warranted at four (4) out of the six (6) unsignalized study intersections. These are shown as “YES” in Table 12.

The California MUTCD stipulates thresholds for traffic conditions when a signal may be warranted based on the traffic volumes. The warrant for peak hour volumes was used in this report (Section 4C.04 Warrant 3, Peak Hour<sup>9</sup>). Based on this warrant, signals are currently warranted at five of the eight unsignalized study area intersections, even without the project, as shown in Table 12.

---

<sup>9</sup>The Peak Hour signal warrant is intended for use at a location where traffic conditions are such that for a minimum of 1 hour of an average day, the minor-street traffic suffers undue delay when entering or crossing the major street.

Guidance: 06 If this warrant is the only warrant met and a traffic control signal is justified by an engineering study, the traffic control signal should be traffic-actuated.

**Table 12. Signal Warrants for Year 2018 AM & PM Peak Hour Scenarios**

| <b>Intersection</b>                          | <b>AM for YEAR 2018</b> | <b>AM+PROJ for YEAR 2018</b> | <b>PM for YEAR 2018</b> | <b>PM+PROJ for YEAR 2018</b> |

| <b>Pleasant Valley Rd at Commerce Way</b>    | NO                      | NO                           | YES                     | YES                          |
| <b>Pleasant Valley Rd at Forni Rd</b>        | YES                     | YES                          | YES                     | YES                          |
| <b>Pleasant Valley Rd at SR 49 South</b>     | YES                     | YES                          | YES                     | YES                          |

*Source: PRISM Engineering traffic counts and CA MUTCD Warrants analysis (see Appendix A.11 for details on specific volumes used in the signal warrant analysis, as well as various criteria for warrants depending on two lane road, four lane road, six or more lane roads, etc).*

### **Project Impacts for this Year 2018 plus Project Scenario**

- Intersection Level of Service: Within acceptable County thresholds with the exception of two unsignalized intersections shown in Table 8:
  - Pleasant Valley Road and Faith Lane would operate at LOS B overall for Year 2018 pm peak hour plus project, but LOS F for the side street. This changes from LOS E for the side street without the project.
  - Pleasant Valley Road and SR 49 S is currently at LOS E for existing am peak hour, a signal is warranted at this intersection, and remains at LOS E with the project.
- SIMTRAFFIC Arterial Segment Level of Service: All locations are at LOS D or better conditions using this microsimulation methodology. No further mitigations are necessary based on segment analysis.
- Signalized Intersection Queues: The project adds to the 95<sup>th</sup> percentile queue overflows. See Tables 10 and 11 for red cells where a problem exists and would also be slightly additionally impacted by the project, lengthening the queues by as much as one additional vehicle length (not significant increase).
- Signal Warrants: Significant. Warrants met at four of the six unsignalized intersections as shown in the green highlighted cells of Table 12.

## V. Near Term Future Year 2027 Conditions

### Nearby Roadway Development Projects

Certain improvements to the study area roadway network were assumed to be in place in the Year 2027 and beyond scenarios. These include the proposed Diamond Springs Parkway (DSP) connection of Missouri Flat Road to SR 49. This capital improvement was included in the County's traffic model, reassigning traffic in the study area and lessening traffic volumes on Missouri Flat Road south of the parkway. Pleasant Valley Road volumes were also relieved with the parkway because of reassignment of traffic to use the new and more efficient corridor pathway of Pleasant Valley Road to SR 49 to Diamond Springs Parkway to Missouri Flat Road to the US 50 freeway. In addition, China Garden Road at Missouri Flat Road will no longer have a left turn out onto Missouri Flat Road. We reassigned this movement to the through volumes on DSP.

In order to develop the Year 2027 volumes, PRISM Engineering utilized linear interpolation methods to find the appropriate growth rates to determine the Year 2027 volumes from existing Year 2018 counts. These same volumes were adjusted accordingly based on traffic reassignment patterns found in the differences between the year 2010 County traffic model and the year 2035 traffic model which had the Diamond Springs Parkway in it. We were able to determine the percent differences, by year, for each of the link segments in the model along Missouri Flat Road and Pleasant Valley Road in the study area, whether it be a net increase or a net decrease (negative growth) on account of traffic shifts away from Missouri Flat Road south of the Diamond Springs Parkway corridor. The near-term conditions (10 years out from project, or Year 2027) anticipated the growth assumptions in the County's travel demand model, or in other words, the County's travel demand model contains the assumed background growth.

### Calculation of Future Growth for Background Traffic.

PRISM Engineering obtained detailed output plots from the El Dorado County Department of Transportation staff<sup>10</sup> from their Travel Demand Forecast Model. The model anticipates future development within the County for the am and pm peak hour, Year 2010 and 2035 projections. The model output was used in linear interpolation to develop the Year 2027 traffic projection. Yearly growth rates for roads within the project study area were used to develop interim Year 2027 scenario background volumes for the analysis of the project. However, because of the shifts in traffic that would take place with the installation of the Diamond Springs Parkway, volumes on Missouri Flat Road would correspondingly go down. Also, Pleasant Valley Road between Missouri Flat Road and Fowler Lane would be reduced (by about 10%). Table 13 shows the growth rate calculations used. The difference in volume between the Year 2035 and Year 2010 models was used to get the 25 year increase, but only 18 years were used between 2018 and 2035. Specific roadway segment growth rates were used and not a global growth rate at all intersections. Volumes were balanced between intersections using the Volume Balance (VB) feature in the Synchro software. The Year 2027 and 2035 scenarios for both the am and pm peak hour and where all base volumes are balanced. Figures 14 and 15 show turning movements for the Year 2018 traffic projections only (no project traffic). Figures 16 and 17 show the turning movement diagrams for am and pm peak when the Project traffic is added in.

---

<sup>10</sup> Model plots received from DOT via Senior Civil Engineer Natalie Porter via email. Summarized in Appendix.

Source: El Dorado County Traffic Model and PRISM Engineering

Using the annual growth rate calculated from the model, this was applied for 18 years growth over the existing condition to get the factor to multiply by the existing traffic count data collected in Year 2018, to convert to Year 2035 volumes. The average growth rate per year was 0.7% for either the am or pm peak hour in the study area. The average increase on study area roadways was 13.2% for the am peak, and 13% for the pm peak, as shown in Table 14. Even still, PRISM Engineering utilized specific growth rates for different parts of the Missouri Flat Road and Pleasant Valley Road corridors as shown in the table, so that the benefit of the Diamond Springs Parkway installation would be realized with lowered volumes on these roadway sections (due to reassignment of traffic as reflected in the County’s traffic model).

Control: S=Signal, AW=All-Way Stop, TW=Stop Sign Side Street, NB=NB approach Stop

NOTE: Calculations based on HCM 2010 methodology for intersection level of service (signal, two-way, and all-way stop)

Source: PRISM Engineering and HCM 2010 calculation in Synchro and/or SimTraffic

It can be seen from Table 14 that there is only one intersection in the Year 2027 pm peak hour with a side street level of service at LOS F conditions when the project traffic is added in: Pleasant Valley Road at Faith Lane, which provides primary access to the project site.

For this Year 2027 scenario, one intersection (#11) had LOS F side street delay for the pm peak hour plus project scenario. There was a slight lowering of volumes on Missouri Flat Road after installation of the Diamond Springs Parkway, which results in some rerouting of through traffic to the new parkway, away from Missouri Flat Road and Pleasant Valley Road. Intersection #18 had LOS F conditions for the am peak hour.

Source: Year 2018 traffic counts taken by PRISM Engineering, mid-block totals, am, pm peak hour, plus Project

Table 15 shows the capacity analysis results for link segments, which are at an acceptable LOS C or better condition without the project, and LOS D or better with the project. The values in Table 15 are the street segment level of service in the study area for the Year 2027 scenarios.

In the tables that follow, the signalized intersections were analyzed for queue lengths on left turn pockets for all approaches to determine if the estimated queues would exceed the existing storage length of these turn pockets. If so, the table reports this problem as a YES in a red highlighted cell in Table 16 or Table 17.

**Table 16. Year 2027 AM Peak Signalized Intersection Queues Summary**

| INTERSECTION LOCATION |  | AM Year 2027 |        |           |       | AM Year 2027+Project |        |           |       |

Source: PRISM Engineering and Synchro 9.0 HCM 2010 methods

Intersections #18 and #19 are now operative in this scenario because they are the future intersections that would connect the future Diamond Springs Parkway between Missouri Flat Road on its west end with

SR 49 on the east end. Three of the intersections had turn pocket overflow issues without the project for the 95<sup>th</sup> percentile calculations in the HCM 2010 methodology (Missouri Flat Road at US 50 WB Ramp NBL, Missouri Flat Road at US 50 EB Ramp SBL, and at Forni Road EBL). These overflows are identified in the tables with red highlighted cells for both the am and pm peak hour time periods. When the pm peak hour project traffic is added in, there are no changes to the overflow status.

### **Traffic Signal Warrants, Year 2027 Scenarios**

Table 18 reports the signal warrant analysis results for the Year 2027 am and pm peak hour scenarios (with and without project). Table 18 shows that signal warrants are met for four out of the six intersections in the Year 2027 scenarios. The California MUTCD stipulates thresholds for traffic conditions when a signal may be warranted based on the traffic volumes. The warrant for peak hour volumes was used in this report (Section 4C.04 Warrant 3, Peak Hour<sup>11</sup>). Based on this warrant, and in the Year 2027 scenarios, signals are currently warranted at five of the eight unsignalized study area intersections, even without the project, as shown in Table 18.

### **Project Impacts for the Year 2027 plus Project Scenario**

- Intersection Level of Service: Within acceptable County thresholds with the exception of two unsignalized intersections shown in Table 14 with red highlighted cells including:
  - Pleasant Valley Road and Faith Lane at LOS B overall for Year 2027 pm peak hour plus project, but LOS F for side street (191 secs of average delay) with the full project impact.
  - Pleasant Valley Road and SR 49 S is at LOS F for Year 2027 am peak hour plus project, and a signal is warranted at this intersection. The intersection level of service remains at LOS F with the project with a slightly higher delay (58.9 secs of average delay compared to 56.7 without the project).
- SIMTRAFFIC Arterial Segment Level of Service: All locations are at LOS D or better conditions with this microsimulation methodology. No further mitigations necessary.
- Signalized Intersection Queues: The project adds to the 95% queue overflows. See Tables 16 and 17 for red cells where a problem exists and would also be slightly additionally impacted by the project, lengthening the queues by just a few feet (not significant increase). The queues clear quickly enough without significantly impacting LOS at adjacent intersections.
- Signal Warrants: Significant. Warrants met at four of the six unsignalized intersections as shown in Table 18.

---

<sup>11</sup>The Peak Hour signal warrant is intended for use at a location where traffic conditions are such that for a minimum of 1 hour of an average day, the minor-street traffic suffers undue delay when entering or crossing the major street.

Guidance: 06 If this warrant is the only warrant met and a traffic control signal is justified by an engineering study, the traffic control signal should be traffic-actuated.

## VI. Cumulative 2035, Plus Project Conditions

### Nearby Roadway and Development Projects

The same CIP improvements assumed to be in place for the Year 2027 study area roadway network were assumed to be in place in these Year 2035 scenarios. These include the Diamond Springs Parkway. The Year 2035 growth assumptions in the County's travel demand model were applied here, along with the full 100% of the project's trip generation. Traffic growth rates applied to existing counts were adjusted based on the specific percentage increase or decrease for link segments in the County's traffic model output results between the Year 2010 model and the Year 2035 model, as explained in the next paragraphs.

### Calculation of Future Growth for Background Traffic.

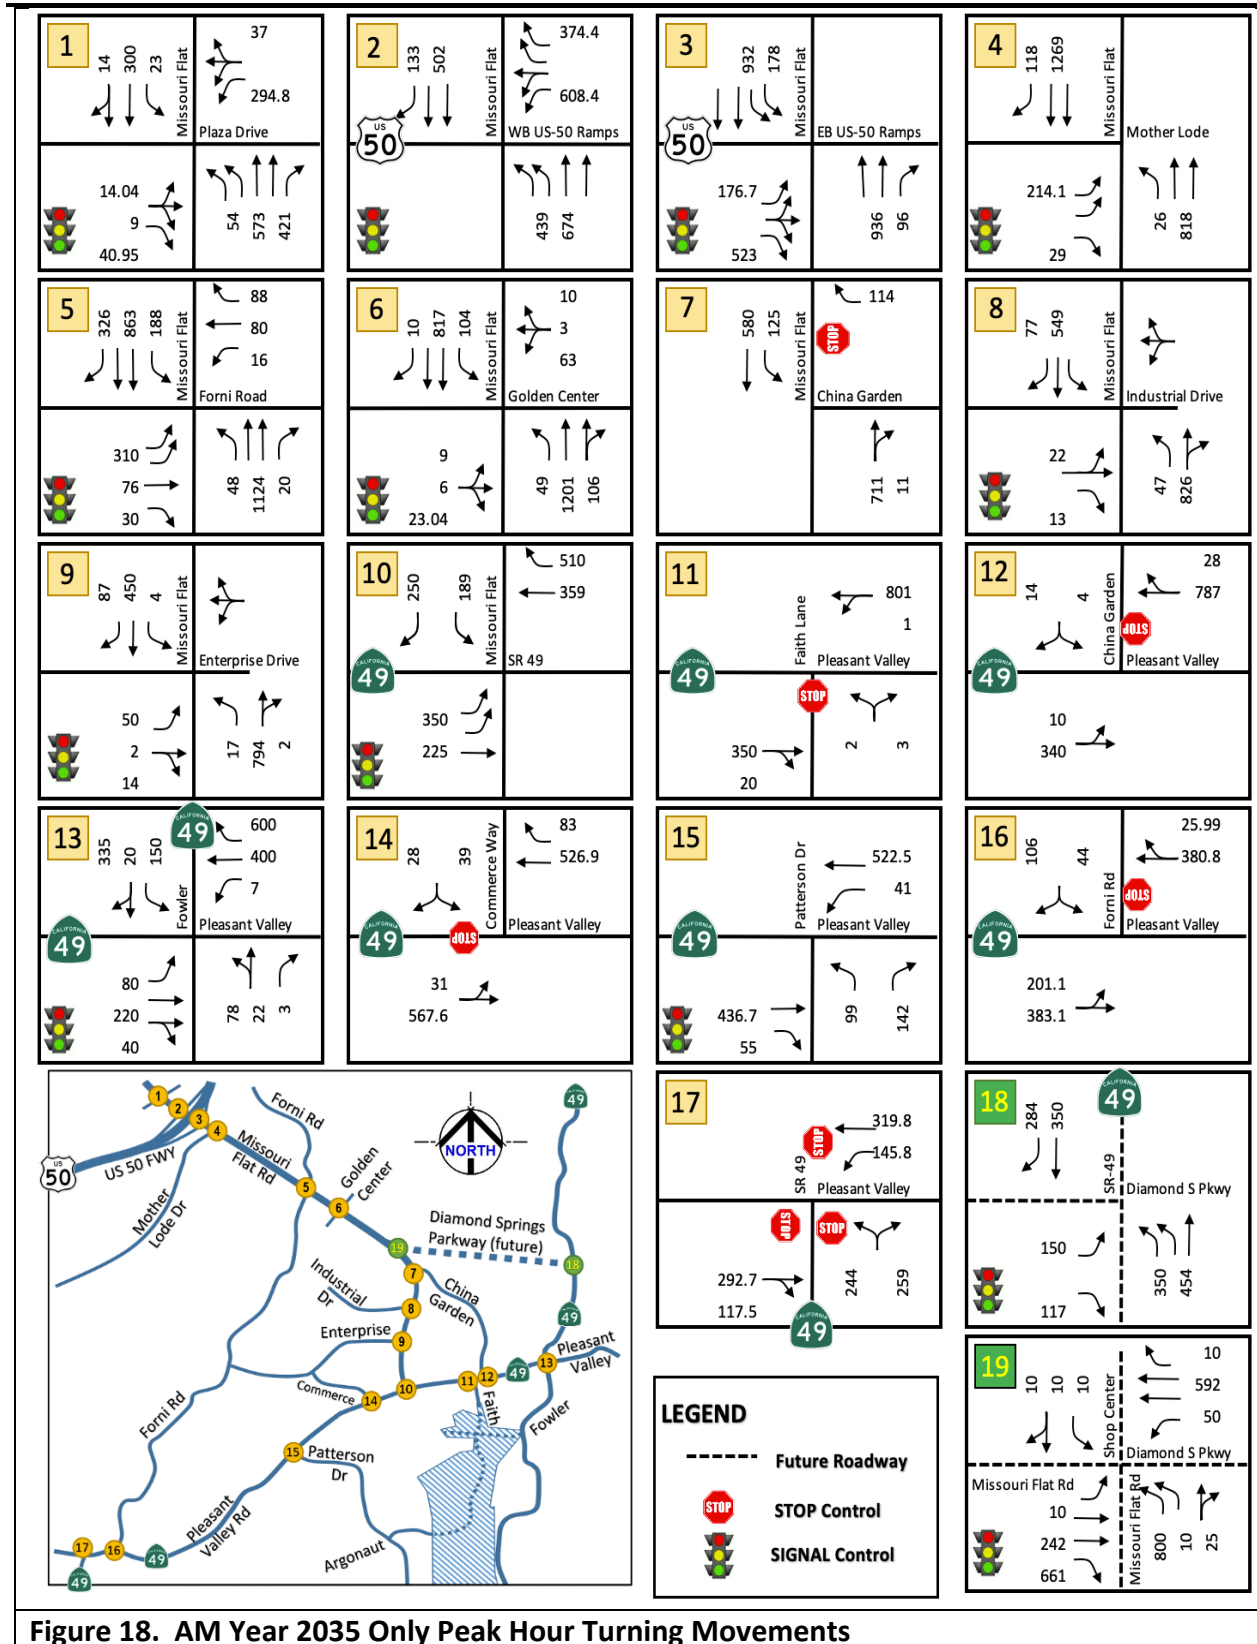

The calculation of the Year 2035 background traffic was explained in detail previously in the Year 2027 scenarios section (see *Section V. Near Term Future Year 2027 Conditions* of this report for a detailed discussion on this, as well as *Table 13 Growth Rate Calculations for Study Area Roadways* which documents the roadway volumes and growth rates calculated for all scenario years to determine specific growth rates by link segment).

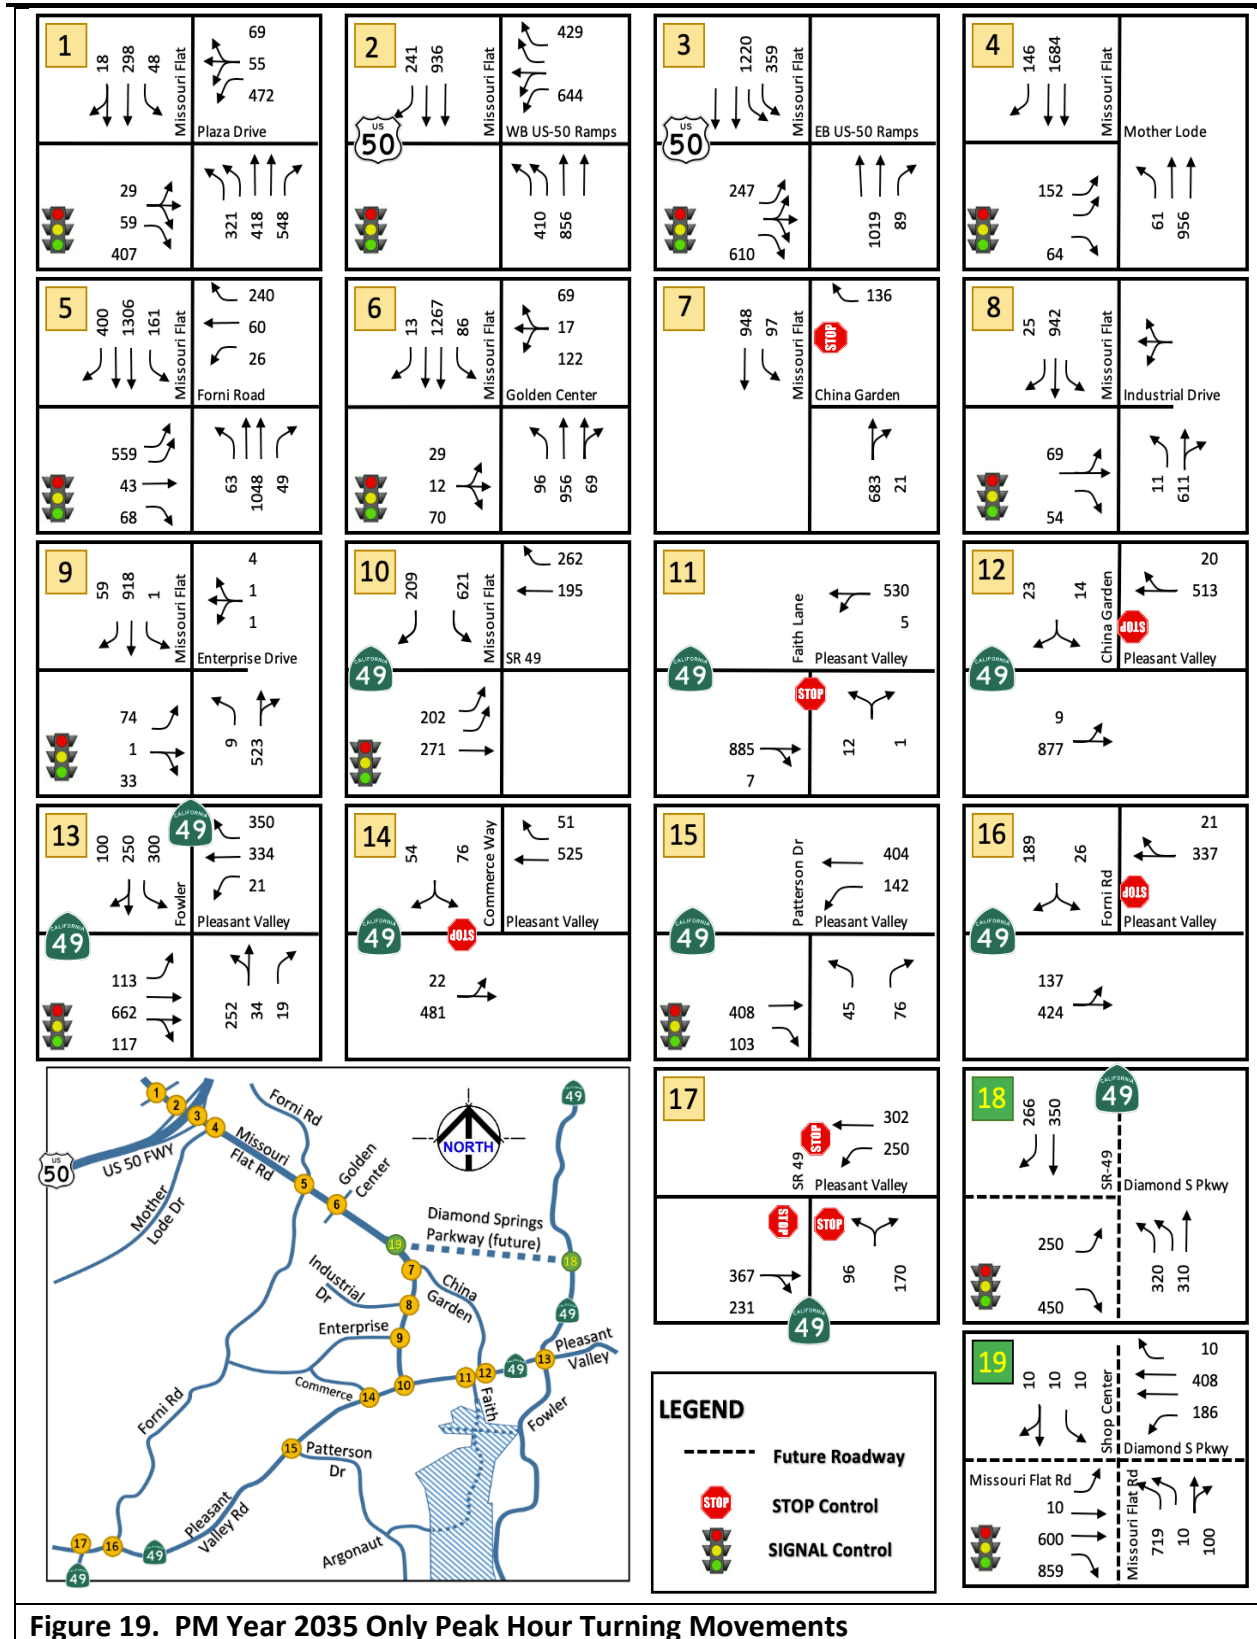

PRISM Engineering obtained detailed output plots from the El Dorado County Department of Transportation staff<sup>12</sup> from their Travel Demand Forecast Model. The average overall growth rate per year was 0.7% for either the am or pm peak hour in the study area. The average increase on study area roadways was 13.2% for the am peak, and 13% for the pm peak, as shown in Table 13, but PRISM Engineering used the specific growth rates for each specific roadway segment or intersection to calculate future growth locally and not globally. By doing this, the changes in traffic patterns after the installation of the Diamond Springs Parkway could be realized, as the County's traffic model did show Year 2035 traffic volumes on Missouri Flat Road south of China Garden Road to be slightly less than the Year 2010 model output, reflecting a shifting of traffic from this route over to the Diamond Springs Parkway, as expected.

The turning movement volumes for each of the nineteen study intersections are detailed in the following four figures for this Year 2035 scenario. Figures 18 and 19 show the Year 2035 traffic projections only, and 20 and 21 show the Year 2035 plus Project turning movement volumes.

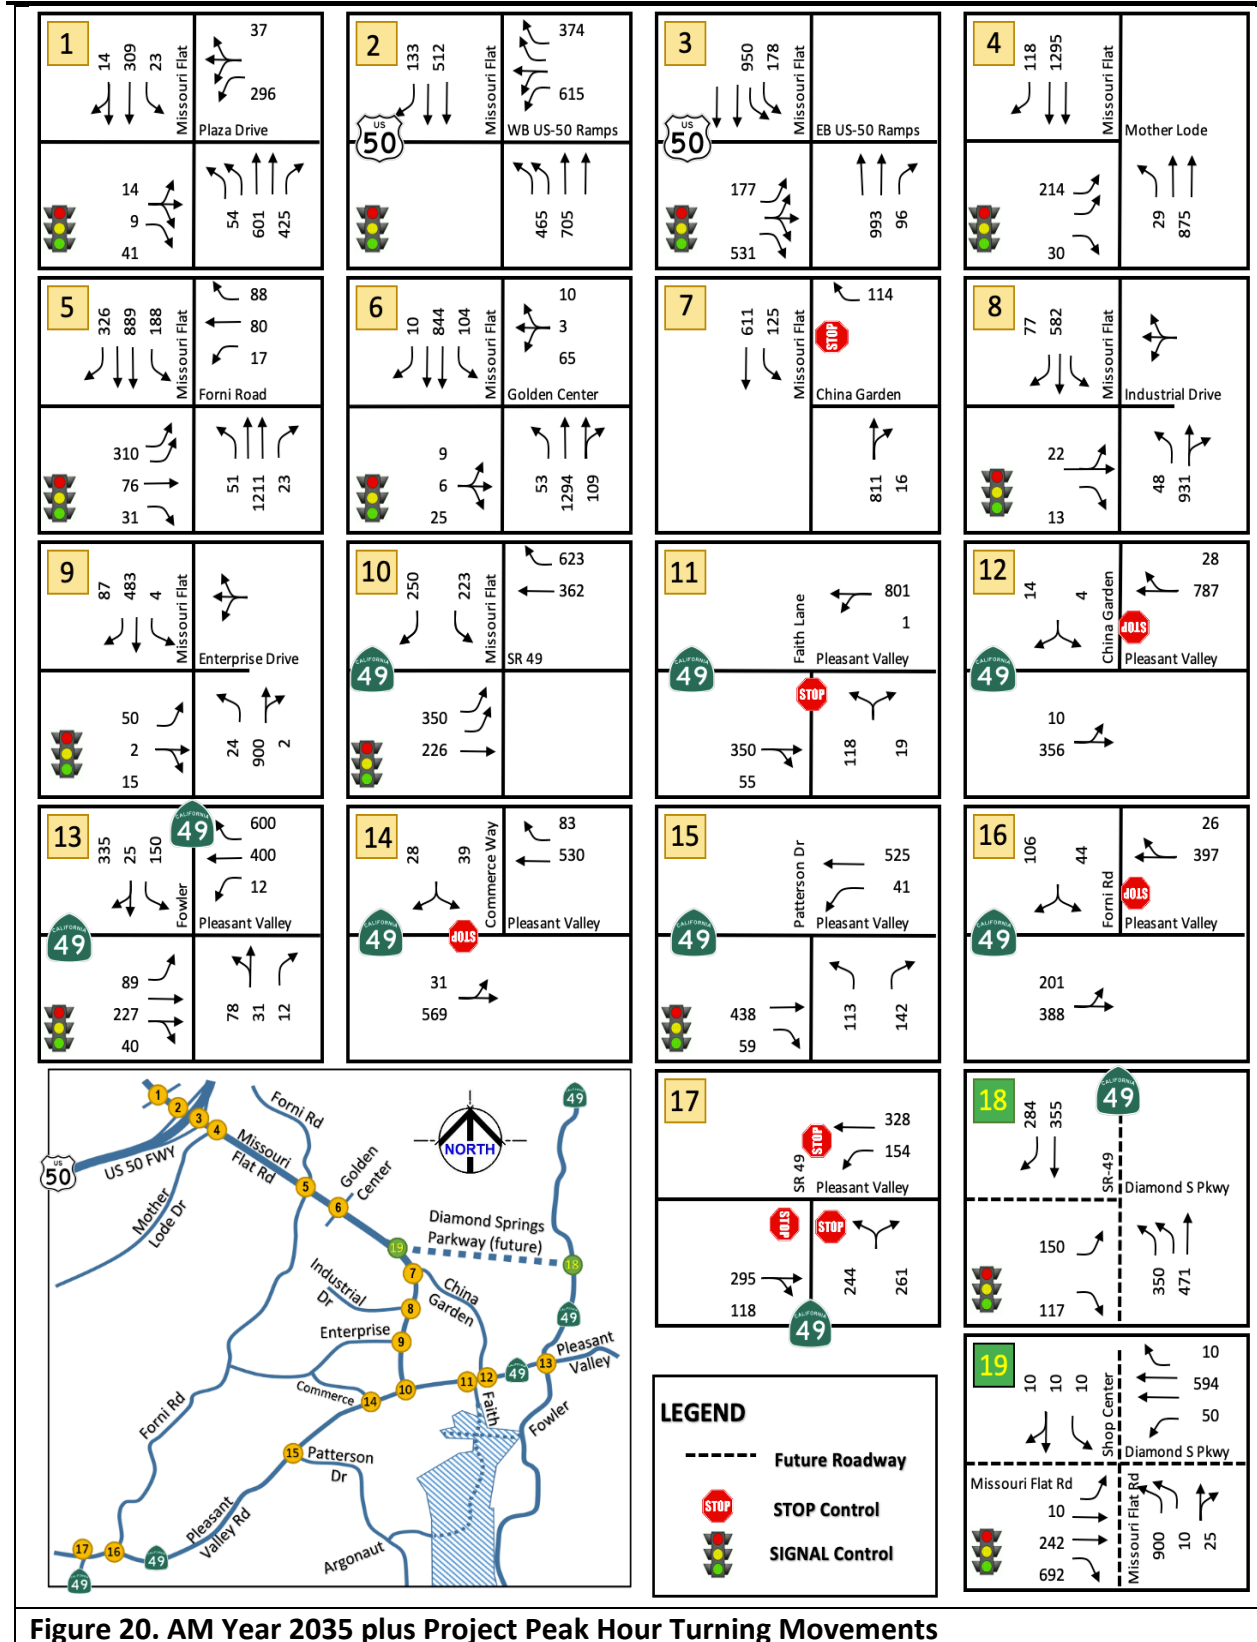

---

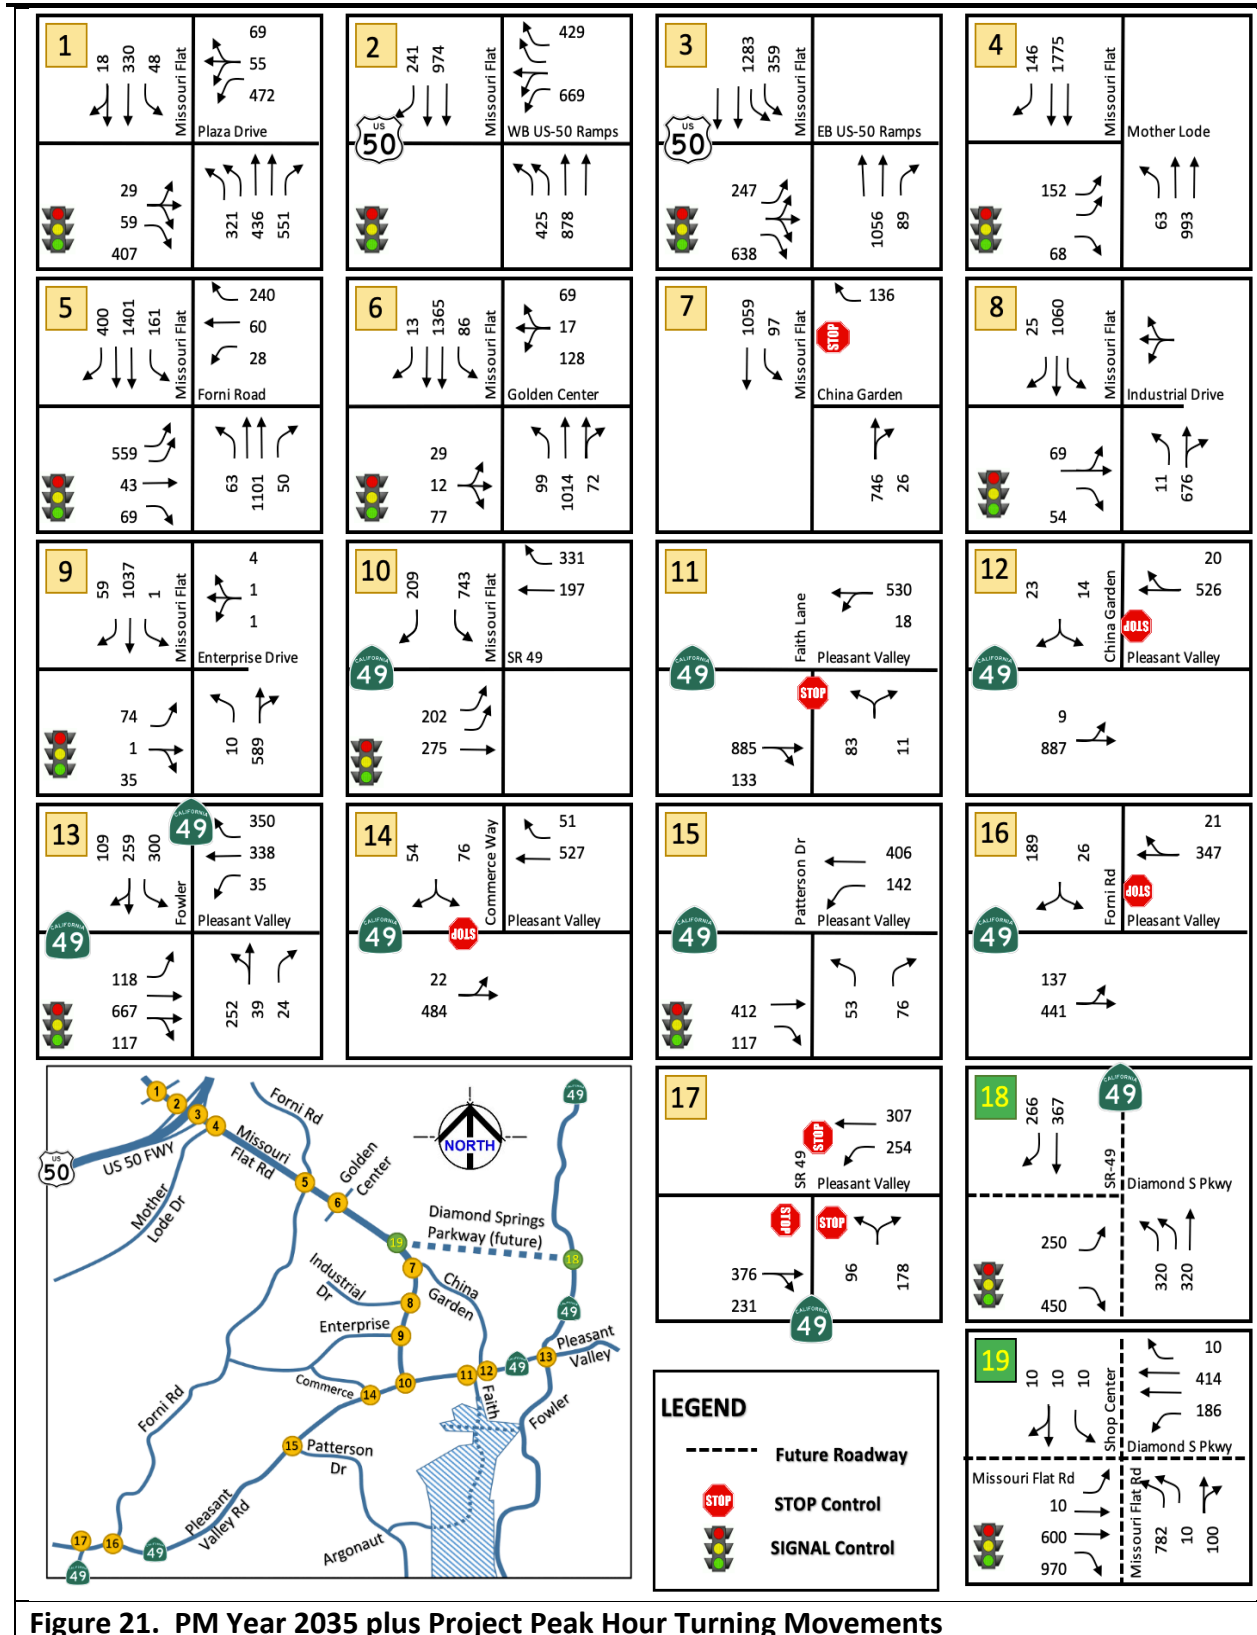

<sup>12</sup> Model plots received from DOT via Senior Civil Engineer Natalie Porter via email. Summarized in Appendix.

NOTE: Calculations based on HCM 2010 methodology for intersection level of service (signal, two-way, and all-way stop)

Source: PRISM Engineering and HCM 2010 calculation in Synchro and/or SimTraffic

For this Year 2035 scenario, there was a slight lowering of volumes on Missouri Flat Road after installation of the Diamond Springs Parkway, resulting in some rerouting of through traffic to the new parkway. It can be seen from Table 19 that when the project traffic is added in, Pleasant Valley Road at Faith Lane goes from an acceptable LOS E condition to an unacceptable LOS F condition. This is the intersection that would provide primary access to the project site.

Table 20 shows the Year 2035 capacity analysis results for *link segments* using the microsimulation method (using the SimTraffic software) as defined in the appendix. Missouri Flat Road was assumed to be widened from 2A to 4AD (four lanes as shown in Table 20) and capacity therefore increased. Also, there was a lowering of volumes on Missouri Flat Road and Pleasant Valley Road on account of the Diamond Springs Parkway diverting some regional through traffic away from these sections of these roads. The Diamond Springs Parkway will connect Missouri Flat Road on the west to SR 49 on the east. In addition, there are some roads which will interface with Diamond Springs Parkway (DSP) between these two intersections (Intersections #18 and #19 in this study), such as Throwita Way on the south side and another street on the north side of DSP at the same location. It was assumed that a small portion of traffic

would enter and leave at these locations in the analyses. For this reason, volumes between intersections #18 and #19 will not exactly match up because of this condition.

Source: Year 2018 traffic counts taken by PRISM Engineering, mid-block totals, am, pm peak hour, plus Project

In the tables that follow, the signalized intersections were analyzed for queue lengths on left turn pockets for all approaches to determine if the estimated queues would exceed the existing storage length of these turn pockets. If so, the table reports this problem as a YES in a red highlighted cell in Table 21 or Table 22. Intersections #18 and #19 are operative in this scenario because they are the future intersections connecting the Diamond Springs Parkway into the existing street network from Missouri Flat Road on its west end to SR 49 on the east end. Five of the intersections had turn pocket overflow issues in the pm peak hour without the project for the 95<sup>th</sup> percentile calculations in the HCM 2010 methodology (Missouri Flat Road at: US 50 WB Ramp NBL, US 50 EB Ramp SBL, Forni Road EBL, Golden Center Drive NBL, and Pleasant Valley Road at: SR49/Fowler EBL). These overflows are identified in the tables with red highlighted cells for both the am and pm peak hour time periods. These five intersections are expected to have some turn pocket overflow with or without the project.

**Traffic Signal Warrants, Year 2035 Scenarios**

Table 23 reports the signal warrant analysis results for the Year 2035 am and pm peak hour scenarios (with and without project). Table 23 shows that signal warrants are met for each of the four Year 2035 scenarios, primarily for pm peak hour.

Source: PRISM Engineering traffic counts and CA MUTCD Warrants analysis (see Appendix A.11 for details on specific volumes used in the signal warrant analysis, as well as various criteria for warrants depending on two lane road, four lane road, six or more lane roads, etc).

### Project Impacts for this scenario

- Intersection Level of Service: Within acceptable County thresholds with the exception of two unsignalized intersections shown in Table 19 with red highlighted cells including:
  - Pleasant Valley Road and Faith Lane at LOS A overall for Year 2035 pm peak hour plus project, but LOS F for side street (142 secs of average delay) with the full project impact. Mitigation is achieved by construction of a roundabout.
  - Pleasant Valley Road and SR 49 S is at LOS F for Year 2035 am peak hour without the project (delay=76.1). A signal is warranted at this intersection. When the project traffic is added in the delay increases to 78.8 seconds.
- SIMTRAFFIC Arterial Segment Level of Service: All locations are at LOS D or better conditions with this microsimulation methodology. No further mitigations necessary.
- Signalized Intersection Queues: The project adds to the 95% queue overflows. See Tables 21 and 22 for red cells where a problem exists and would also be slightly additionally impacted by the project, lengthening the queues by as much as one additional vehicle length (not significant increase). However, in the pm peak hour additional locations are impacted as shown at the bridge left turn pockets entering the US 50 freeway. However, the intersection level of service as calculated by micro-simulation (see Table 19) shows a satisfactory levels of service overall (LOS B to LOS D), and these queues clear quickly enough in the microsimulation model without significantly impacting LOS at adjacent intersections.
- Signal Warrants: Significant. Warrants met at four of the six unsignalized intersections as shown in Table 23.

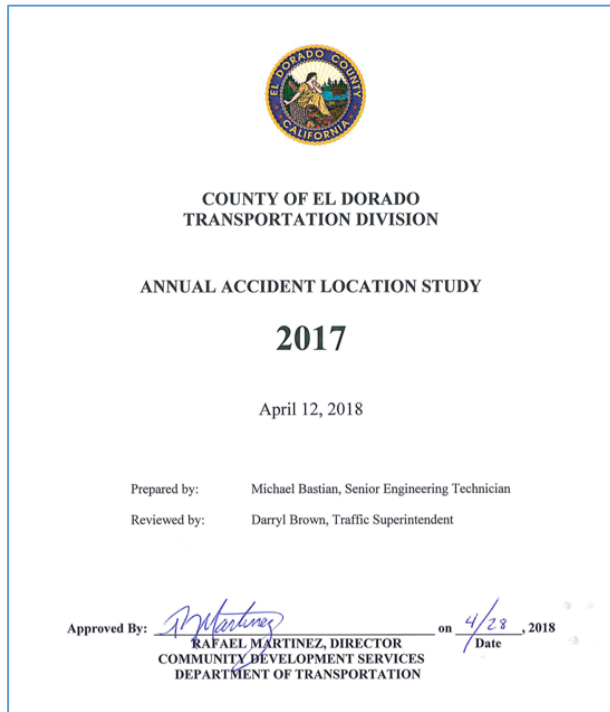

The California MUTCD stipulates thresholds *for* traffic conditions when a signal may be warranted based on the traffic volumes. The warrant for peak hour volumes was used in this report (Section 4C.04 Warrant 3, Peak Hour<sup>13</sup>). Based on this warrant, and in the Year 2035 scenarios, signals are currently warranted at five of the eight unsignalized study area intersections, even without the project, as shown in Table 23. With the project an additional signal is warranted at Faith Lane and Pleasant Valley Road.

---

<sup>13</sup>The Peak Hour signal warrant is intended for use at a location where traffic conditions are such that for a minimum of 1 hour of an average day, the minor-street traffic suffers undue delay when entering or crossing the major street.

Guidance: 06 If this warrant is the only warrant met and a traffic control signal is justified by an engineering study, the traffic control signal should be traffic-actuated.

## VII. Other Considerations

### Accidents.

PRISM Engineering referenced the *County of El Dorado Transportation Division, Annual Accident Location Study 2017, APRIL 12, 2018* (see left) in developing the accident summary information for the study area roadways. Missouri Flat Road was identified for preliminary review in the County's Annual Accident Location Study (Chapters 1), but because the accident rate does not meet the threshold criteria as defined in the above document, or is less than 1.00 Acc/MEV for an intersection, etc., further review was deemed unnecessary. Table 24 below summarizes the accidents that did take place on Missouri Flat Road, but which overall did not meet the minimum thresholds to be a "Location Requiring Further Investigation."

In order to be considered as a "preliminary site selection" the following criteria must be met:

- Must be a site with 3 or more accidents in 2017
- Two or more accidents, one being fatal in 2017
- Sites with two or more in 2017, two or more with motorcycles within 0.25 mile section
- Sites with two or more in 2017, two or more with bicycles within 0.25 mile section
- Sites with two or more in 2017, two or more with pedestrians within 0.25 mile section
- Sections of homogeneous roadway with five (5) or more accidents of a similar type occurring within a quarter-mile section during 2017.

The list in Table 24 for Missouri Flat Road 2017 accidents shows 28 different accidents, 6 which involved injuries (total of 10 people injured); however, none were fatal. This list does not meet these set of criteria listed above, as there are no motorcycle accidents, no bike accidents, no pedestrian accidents, and no repeating patterns of accidents at the same location. The accident rate for Missouri Flat Road as reported in the document and shown in Table 24 was less than 1.0 ranging from 0.26 to 0.61.

There were no accidents on Pleasant Valley Road reported in the AALS that were also within the scope or study area of this traffic study, and were not included in Table 24.

**Table 24. 2017 Accidents on Study Roadways**

**Freeway Analysis, All Scenarios.**

A freeway analysis was also conducted for the mainline US 50 freeway in the vicinity of the project site. Table 25 shows the level of service at each of these eight locations (identified graphically on map legend below), for each of the 12 scenarios examined in this report.

**Table 25. Freeway Capacity Analysis Summary**

## VIII. Mitigations

This section of the report provides more detail pertaining to recommended improvements being called for in this report. Generally, when intersections are at LOS A-E conditions in the study area, this is an acceptable condition. When LOS F conditions exist at an intersection, and when the project adds more than 10 peak hour trips to one of these intersections with LOS F conditions, the impact is considered significant by the County's standards.

### Measure E Considerations

Under Measure E the project is responsible to fully mitigate the impacts triggered under Existing Plus Project conditions<sup>14</sup> if the impacts are not mitigated by the County's CIP. Otherwise, the project merely has to pay its fair share TIM fee to mitigate impacts. Since the project falls under the category of being a residential project with five or more dwelling units, any capital improvement to be covered by the TIM fee payment must be in the County's 10 year CIP. The capital improvement projects in place that will mitigate impacts from the project are included in the County's 10 year CIP. Based on this report's analyses results using SimTraffic microsimulation calculations for Missouri Flat Road corridor sections where there are TWLTL medians, the overall level of service for Missouri Flat Road is LOS B or better conditions. The project does not trigger any need for immediate widening of Missouri Flat Road (to expand from two lanes to four lanes). Two new signal installations on Missouri Flat Road at Enterprise Drive and at Industrial Drive are either installed or currently under construction in the year 2020 as a part of the County's 10-year CIP. These are Project No: 73365 / 36105052 for Enterprise Drive, and Project No: 73366 / 36105053 for Industrial Drive.

**Planned Roadway Improvements.** The Cumulative analyses includes the planned roadway improvements anticipated in the County's CIP (such as the Diamond Springs Parkway, etc.), along with growth consistent with the 2004 General Plan, and with approved and reasonably foreseeable projects within the study area. Missouri Flat Road widening from Pleasant Valley Road on the south to China Garden Road on the north is not planned within the County's 10 year CIP, but is within the County's 20 year CIP. However, the project does not trigger the need for Missouri Flat Road to be widened from two lanes to four lanes in order to achieve or maintain satisfactory levels of service on the corridor. The two signal installations already installed or underway enable Missouri Flat Road to maintain at satisfactory levels of service at LOS B conditions at the two new signalized intersections. The County's traffic impact mitigation fee program provides a mechanism for collecting fair share contributions for improvements in the CIP, and in the case of the project being a residential project with more than 5 dwelling units planned, only roadway mitigations included in the County's 10 year CIP are applicable for the TIM fee as a mitigation measure for the project. If the needed mitigation is not included in the 10 year CIP, then the project is obligated to mitigate the impact directly. No roadway widening improvements are planned for Pleasant Valley Road

---

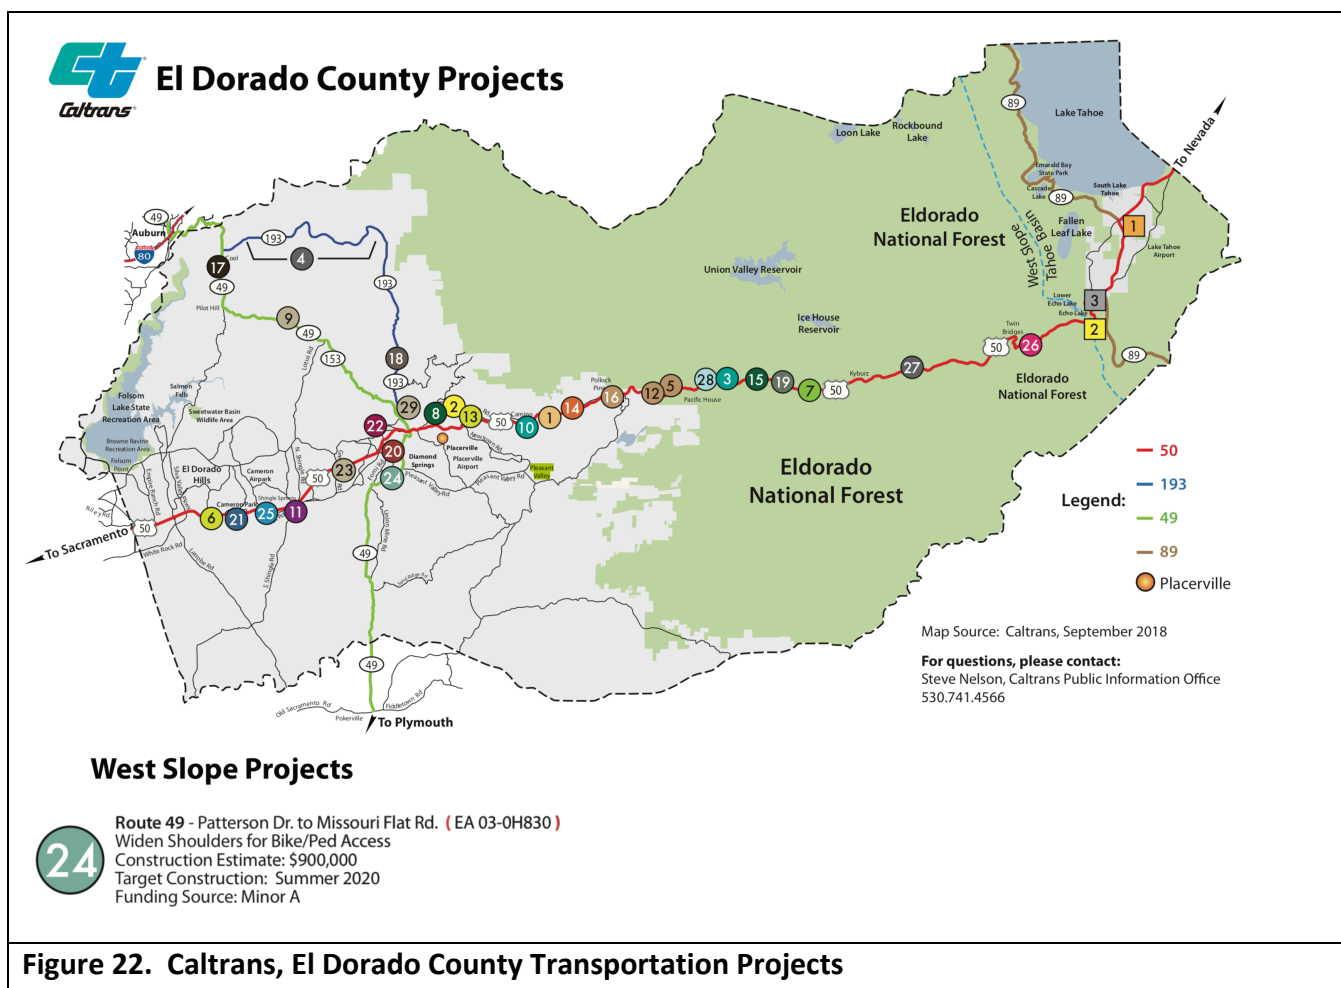

<sup>14</sup> This was previously a correct statement, until a court ruling this summer declaring portions of Measure E to be unconstitutional. The court ruled that the previous language contained in Measure Y was still valid as detailed below:

"For all other discretionary projects that worsen (defined as a project that triggers Policy TC-Xe [A] or [B] or [C] traffic on the County road system, the County shall do one of the following:

- (1) condition the project to construct all road improvements necessary to maintain or attain Level of Service standards as detailed in this Transportation and Circulation Element; or
- (2) ensure the construction of the necessary road improvements are included in the County's 20-year CIP."

from Missouri Flat Road to Fowler Lane, but the level of service analysis results for roadway segments places the level of service at LOS D or better conditions for the Year 2018, 2028, and 2035 scenarios, with or without the project. No mitigations are recommended to widen Pleasant Valley Road from Missouri Flat Road to Fowler Lane based on the roadway segment analyses using SimTraffic microsimulation for all scenarios (microsimulation shows the maintaining of speeds in the general range of the posted speed limit of 35 mph, indicating minimal congestion).

In addition to County CIP improvements, Caltrans has several projects planned for their facilities in El Dorado County including some within the study area of this traffic study. Based on information in Caltrans’ PROJECT MONITORING REPORT, September 2018, there is a transportation project (#24) slated for construction in the summer of 2020. The project is to widen shoulders on SR 49 between Patterson Drive to Missouri Flat Road (a distance of 2,800 feet). The purpose of the shoulder widening is to allow for improved bike and pedestrian access along SR 49, and to encourage active transportation in the area. Funding source for this project is Minor A funds, and the construction estimate is \$900,000. Figure 22 shows the location of Caltrans El Dorado County projects including #24 on SR 49 between Patterson Drive and Missouri Flat Road.

**Figure 22. Caltrans, El Dorado County Transportation Projects**

Source: Caltrans PROJECT MONITORING REPORT, September 2018, p. 29

The design of the modern roundabout built as a mitigation in part for the Dorado Oaks Project needs to be compatible with Caltrans’ transportation plan, which has slated SR 49 (Pleasant Valley Road) between

Patterson Drive and Missouri Flat Road to be improved with bike and pedestrian facilities to make possible an “active transportation” plan in the study area. With the roundabout at Faith Lane being constructed with adequate pedestrian sidewalks and crosswalks, this active transportation plan can continue to expand contiguously along the Pleasant Valley Road corridor.

**Intersection Needs Prioritization Process.** The CIP includes a line item for unprogrammed traffic signal installation and operational and safety improvements at intersections, including improvements like construction of new traffic signals, construction of turn pockets, and the upgrade of existing traffic signal systems. The County annually monitors intersections with potential need for improvement through the Intersection Needs Prioritization Process. The Intersection Needs Prioritization Process is then used to inform the annual update to the CIP, and potential intersection improvements can be added, by the Board of Supervisors, to the CIP as funding becomes available.

**Payment of Traffic Impact Fees.** Therefore, appropriate mitigation, as determined by the CDS, would include payment of traffic impact mitigation fees to satisfy the project’s fair share obligation towards the improvements identified in this report, or construction of the improvement with reimbursement or fee credit for costs that exceed the project’s proportional share if the improvement is needed but not included in future updates to the CIP or constructed by others.”

### **Year 2018 Existing Conditions**

Table 8 for Year 2018 existing conditions at the beginning of this report shows all intersections at satisfactory levels of service for the existing condition.

Table 9 of this report shows the Missouri Flat Road link segment volumes and corresponding levels of service to be at LOS C or better conditions.

Traffic signals are warranted at four of the study intersections as shown in Table 12 for existing pm peak hour conditions. A signal warrant being met does not automatically require that a signal be installed, but is an indicator of needing further review based on safety, accident history, and level of service needs. These warranted intersections for existing pm peak hour traffic include:

- Missouri Flat Road at China Garden Road (warranted for CAMUTCD Peak Hour Warrant #4)
- Missouri Flat Road at Commerce way (warranted for CAMUTCD Peak Hour Warrant #4)
- Pleasant Valley Road at Forni Road (warranted for CAMUTCD Peak Hour Warrant #4)
- Pleasant Valley Road at SR 49 (south) (warranted for CAMUTCD Peak Hour Warrant #4)

### **Year 2018 Mitigation Recommendations Corresponding with this scenario**

Since the levels of service are satisfactory at 4 out of the 4 intersections above where a signal warrant is met (side street LOS D or better), no signal installations are recommended for these intersections for the 2018 without project scenario.

### **Year 2018 Plus Project Mitigation Recommendations for this scenario**

Table 8 shows LOS F conditions at one of the study intersections with project traffic, which is currently unsignalized and has one stop sign on the side street. This intersection is Pleasant Valley Road at Faith Lane. The mitigation may be installation of a traffic signal or roundabout:

- **Install Roundabout at Pleasant Valley / Faith Lane** (needed because of project)
  - **Alternative Option: Install Two Signals instead of Roundabout at Pleasant Valley Road at Faith Lane** realigned (to coincide with Silver Drive), and also at China Garden Road. These intersections would need to have coordinated signals to help keep traffic moving on Pleasant Valley Road (SR 49), and Pleasant Valley Road would need to be widened to three lanes to accommodate left turn pockets for the newly signalized intersections at Faith Lane (realigned to Silver Drive), and China Garden.

**Roundabout Installation.** The roundabout mitigation at Pleasant Valley Road at Faith Lane was not anticipated in the County's CIP, but a mitigation is needed to offset the project traffic impacts (causing existing Faith Lane LOS E conditions to go to LOS F conditions with the project). The project will need to mitigate this intersection with a modern roundabout to bring overall intersection traffic conditions to LOS D or better conditions in the Year 2018 plus Project scenario (an improvement over existing conditions), or as an alternative, install two signals as detailed below.

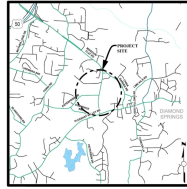

**Two Traffic Signals Installation.** It is also possible to mitigate this location with a set of two signals if Faith Lane is realigned to Silver Drive instead of its existing location. The three-way existing intersection of Pleasant Valley Road and Faith lane is almost immediately adjacent to the existing three-way intersection of Pleasant Valley Road and China Garden Road. Realigning Faith Lane to the Silver Drive location will provide 400 feet of separation between intersections, allowing for back to back left turn pocket storage (150' each) for each intersection. This is sufficient to prevent any left turn pocket overflow into Pleasant Valley Road through traffic, otherwise with the existing location of Faith Lane being only 110 feet away from China Garden Road, that situation would not allow sufficient left turn pocket lengths. It is not possible to install a single signal at China Garden Road (with Faith Lane realigned to meet it) because there would be no room for installing a left turn pocket on the WB approach without additional right of way takes and disruption of historical buildings. There is currently only room for a two lane cross section of pavement on Pleasant Valley Road to the east of China Garden Road, which is not an issue for the modern roundabout option. However, it would be an issue if the intersection was signalized. This is because there needs to be a left turn pocket turning in to China Garden Road from Pleasant Valley Road. This means that the through lane for eastbound traffic of Pleasant Valley Road will need to be shifted at least 12 feet to the south. There is some varying widths of paved shoulder which could be used, but a detailed civil engineering plan including sidewalks, curbs, and gutters would need to be completed to determine the feasibility of adding an additional lane on Pleasant Valley Road just east of China Garden Road, for the purpose of transitioning back in to a two lane road. Some telephone pole and utilities will also need to be moved to make such an improvement possible.

The County's CIP for Missouri Flat Road Widening (China Garden to Pleasant Valley Road/SR49) are scheduled for FY 28/29 – 37/38. County Long Range Planning annually monitors intersections with the potential need for improvements. The County's current Year 2018 CIP schedule and location is shown below.

**Missouri Flat Road Widening - China Garden to Pleasant Valley Road/SR49**

**Financing Plan & Tentative Schedule**

**Right of Way Acquisitions.** It is important to note that this intersection cannot be satisfactorily mitigated without some impact to existing development on Pleasant Valley Road. Additional right of way, whether an extra wide intersection at China Garden for a roundabout, or an extra wide and much longer street segment on Pleasant Valley Road from west of Silver Drive to east of China Garden Road to accommodate signals and sidewalks, and long left turn pockets. Significant right of way acquisition over numerous parcels on the south side of Pleasant Valley Road is necessary to install signals. The signal option is not as feasible as roundabout construction, and is not recommended as the first alternative.

Figure 23 shows the proposed modern roundabout option which would operate at LOS C for Year 2035 plus Project in the pm peak hour, which is satisfactory for the Pleasant Valley Road corridor. In the future after the Diamond Springs Parkway is constructed, traffic volumes on Pleasant Valley Road will shift

partially to that new corridor, and volumes on Pleasant Valley Road between Fowler and Missouri Flat Road will decrease about 10%. This will result in LOS C conditions for this roundabout as shown in Figure 23. Through some right-of-way acquisition, it is possible to combine Faith Lane and China Garden Road into a modern roundabout by realigning Faith Lane to meet with China Garden Road as shown.

**Recommended Mitigation.** It is recommended that the modern roundabout as shown in Figure 23 be adopted as the mitigation of choice, since it will have the least impact overall to existing historical developments along Pleasant Valley Road, and Pleasant Valley Road can easily remain a two-lane cross section east of China Garden Road as well as west of Faith Lane all the way to transitioning with Missouri Flat Road. Roundabouts are known for “wide nodes” and “narrow roads” as a benefit to the surrounding road system. The right turn pocket for the eastbound approach acts as a roundabout bypass lane, and is helpful to the overall level of service, taking the project inbound volume out of the impact. It is necessary to achieve the LOS C condition, otherwise LOS D conditions would exist. The roundabout intersection will operate at LOS C conditions even beyond the Year 2035 including the full project traffic. It will also help to calm traffic and enhance the Pleasant Valley corridor in this area. There is a historical building on the south side of the China Garden Road intersection which could be moved to another location on the same parcel there, if it is determined that it has historical significance and must remain.

**Roundabout Analysis Methodology.** Current transportation plans indicate a historical nature of the Pleasant Valley Road corridor in the vicinity of the project. Pleasant Valley Road near Faith Lane is currently two lanes wide, and because of historical considerations with existing buildings to the east of Faith Lane, this road will never be more than two lanes without directly impacting the ability to have sidewalks or bike lanes. It is better to keep it at two lanes so that an active transportation plan can take place in the future including bikes and pedestrian walkways or sidewalks. For this reason, the roundabout improvement alternative provides the best solution that avoids the need to widen Pleasant Valley Road to the east of Faith Lane. For the purposes of this analysis, PRISM Engineering explored several ways to analyze traffic flows through the proposed roundabout solution, and after some deliberation determined that the most appropriate software for calculation of level of service for the single lane roundabout proposed at Faith Lane is the Synchro and SimTraffic software and analysis method<sup>15</sup>. This is because the roundabout will of necessity be small (single lane inside the circle), and many software programs over-estimate the capacity of these smaller roundabout, SIDRA being at the top of the list, especially if inside turning conflicts are low, which in this case, they are.

---

<sup>15</sup> See Appendix A.4 Roundabout Analysis Considerations and Factors

**Figure 23. Roundabout Concept and Mitigation, LOS C**

Source: PRISM Engineering

**Roundabout size limitations.** There is not sufficient room for the diameter of the roundabout to expand to allow for two lanes per approach without direct impact to historical buildings (Pleasant Valley Road would need to be four lanes wide to accomplish this). Therefore, the size of this roundabout would be limited to a single internal circulatory lane, and the appropriate analysis tool for this is Synchro/SimTraffic, based on HCM 2010 methods using relevant US empirical data, and offering a conservative result in the level of service calculation. Other programs far over-estimated entry capacity for a single lane roundabout (such as Sidra software being 80% higher compared to Synchro software for the volume and lanes in the Pleasant Valley / Faith Lane intersection scenario). The traffic volumes at Faith Lane and Pleasant Valley Road / SR 49 are currently 980 vph in the EB direction and 589 in the WB direction during the Year 2018

pm peak hour, and only 28 cars going to or from Faith Lane (just 2%). In the Year 2035 these volumes will drop about 10% to 885 EB and 530 WB, based on the traffic shift that will take place from the Pleasant Valley Road / Missouri Flat Road pathway, to the SR 49 / Diamond Springs Parkway pathway once the Diamond Springs Parkway is constructed. The existing Year 2018 volumes to and from Faith Lane are only 28 vph in the pm peak hour, and this turn movement represents what is called the “Conflicting Flow” in a roundabout at Faith Lane. It directly affects the capacity calculation for roundabouts. Since this volume is very low, most other software programs would over-estimate the capacity of the roundabout based upon their specific methods (see Appendix A.4 for more information and a comparative chart). For this reason, Synchro/SimTraffic was used in this analysis, to be conservative, and not over-estimate the capacity of the roundabout. Even with using the conservative Synchro HCM 2010 method, the level of service would be LOS C, indicating that this improvement would be successful at moving traffic long into the future.

**Analysis Validation.** PRISM Engineering validated by analysis and research the decision to use the most appropriate and conservative method for calculating roundabout level of service at the Faith Lane location. This was ultimately done by using Synchro and SimTraffic, both of which are based upon the HCM 2010 methodology contained in Chapters 21 and 33, and implemented in Synchro 9 and beyond. These HCM 2010 chapters inform that the method is robust and well developed, based on empirical data gathered from the US roundabout installations, and not based on traffic conditions in other countries such as the UK or Australia. The Synchro and SimTraffic tools are shown by detailed research to be much more conservative for analyzing smaller roundabouts, in that these yield lower roundabout capacities for small diameter, single lane roundabouts with low turn conflicts. This is exactly the kind of roundabout that will be installed on Pleasant Valley Road at Faith Lane, a single lane entry, single lane circulation inside circle, very low (2%) turning movement conflict, and a small diameter. Our calculations level of service came out to be LOS C conditions, but when compared to other software programs like SIDRA (which calculate capacities based on empirical data from other countries and is 80% higher than Synchro in overestimating capacity), or RODEL being based on UK traffic flows and specific geometry assumptions... Rodel tends to be 15-20% higher in capacity primarily because of UK driver familiarity with numerous roundabouts. SIDRA being based on conditions in Australia, has an “environment factor” for use in the US to change operation from standard defaults, but this method is guesswork. Synchro 9 handles even multi lane roundabouts which previous versions could not. SimTraffic is a simulation method based on Synchro inputs, and can also effectively calculate level of service for roundabouts. Some calibration is needed for all methods used, and PRISM Engineering utilized location specific data to enhance results for Synchro and SimTraffic. These included extensively measuring Saturation Flow Rates in the study area to determine how “aggressive” drivers are in the area based on vehicle headways.

### **Year 2027 Conditions Mitigation Recommendations for this scenario**

Table 14 shows LOS F conditions for the Year 2027 conditions at only one of the study intersections without the project. This intersection is Pleasant Valley Road at SR 49 S (Int. #17), which has LOS F conditions without the project. This locations needs mitigation such as installation of a traffic signal:

- **Install Signal** at Pleasant Valley Road and SR 49 S (needed without project)

The arterial roadway segment analyses using microsimulation for this scenario puts the level of service for all analysis roadways on Missouri Flat Road and Pleasant Valley Road at LOS D or better conditions, requiring no mitigation with or without the project. This is assuming that the County’s CIP improvements for signalization are in place, the new roundabout at Pleasant Valley Road and Faith Lane are in place, and

the Diamond Springs Parkway is in place which will mitigate future traffic (the volumes on Pleasant Valley Road will also slightly reduce in the future because of a rerouting of some regional traffic to use the Diamond Springs Parkway instead). The project has an impact at these intersections (based on the assumption of side-street stop-control), and the mitigation is signalization. The project would satisfy its obligation through payment of TIM fees

### **Year 2027 Plus Project Conditions Mitigation Recommendations for this scenario**

When the project traffic is added in, two intersections are adversely impacted, and would require mitigation for this scenario. The arterial roadway segment analyses using microsimulation for this scenario puts the level of service for all analysis roadways on Missouri Flat Road and Pleasant Valley Road at LOS D or better conditions, requiring no mitigation with or without the project. This is assuming that the County's CIP improvements for signalization are in place, and the Diamond Springs Parkway is in place which will mitigate future traffic (the volumes on Pleasant Valley Road will also slightly reduce in the future because of a rerouting of some regional traffic to use the Diamond Springs Parkway instead).

- **Install Roundabout at Pleasant Valley / Faith Lane** (needed because of project)
  - **Alternative Option: Install Two Signals instead of Roundabout at Pleasant Valley Road at Faith Lane and also at China Garden Road** (needed because of project). These intersections would need to have coordinated signals to help keep traffic moving on Pleasant Valley Road (SR 49), and Pleasant Valley Road would need to be widened to three lanes to accommodate left turn pockets for the newly signalized intersections at Faith and China Garden.
- **Install Signal at Pleasant Valley Road and SR 49 S** (needed without project)

### **Year 2035 Conditions Mitigation Recommendations for this scenario**

Table 19 shows LOS F conditions at only one of the study intersections, similar to the Year 2027 scenario. These intersection needs mitigation such as installation of a traffic signal:

- **Install Signal at Pleasant Valley Road and SR 49 S** (needed without project)

### **Year 2035 Plus Project Conditions Mitigation Recommendations for this scenario**

Table 19 shows LOS F conditions at two of the study intersections when the project traffic is added in, the same locations identified in the Year 2027 scenario. These include the following intersections which need mitigation such as installation of a traffic signal or roundabout:

- **1) Install Roundabout at Pleasant Valley / Faith Lane** (needed because of project)
  - **Alternative Option: Install Two Signals instead of Roundabout at Pleasant Valley Road at Faith Lane and also at China Garden Road** (needed because of project). These intersections would need to have coordinated signals to help keep traffic moving on Pleasant Valley Road (SR 49), and Pleasant Valley Road would need to be widened to three lanes to accommodate left turn pockets for the newly signalized intersections at Faith and China Garden.
- **2) Install Signal at Pleasant Valley Road and SR 49 S** (needed without project)

\*Total time of sample in seconds starting with 4th vehicle at stop line

SimTraffic uses 2.2 second headways for higher speed roads (50 mph+) and 1.8 secs for 20 mph, which is even more conservative than the 2.0 average PRISM used at the ramp intersections. This means that the SimTraffic is going to be showing a more worst case situation than actual, which means the analysis is conservative if SimTraffic DEFAULTS are used, which they were.

Data collected by PRISM Engineering in the field using video cameras, stop watches, and personal observations by Traffic Engineer during entire study.

## **Section A.2. Microsimulation Model Calibration: Synchro/SimTraffic Software**

PRISM Engineering utilized both Synchro and SimTraffic models in the development of analysis to determine macro level Level of Service and corresponding delay times. The SimTraffic model used all inputs from the Synchro model to animate traffic in a simulation that closely represents the real-world conditions. PRISM Engineering took video of all traffic flows at major intersections along Missouri Flat Road to document and have for a reference, the actual flows of traffic during am and pm peak hour time periods. This visual video reference of peak hour traffic, along with showing the number of cars in the queues, etc., provided a visual validation of animated traffic flows that were taking place in the SimTraffic model for peak hour traffic counts. Where the model needed slight adjustments due to a non-match in verifying animation, we adjusted speeds of the road, made any needed corrections to signal timing to more closely represent timing and signal cycle lengths in the field, as well as utilizing the saturation flow rate data in **Table A1** to represent what was included in the model for accuracy in acceleration and other traffic dynamics (the higher the saturation flow rate, the higher the aggressive factor in SimTraffic, and the headways are affected with this data increasing capacity, etc.).

Caltrans Guide for the Preparation of Traffic Impact Studies states on p.5 that the HCM method (used in Synchro) is not capable or sensitive to the dynamics of closely spaced intersections (and this is why a microsimulation model like SimTraffic is more appropriate):

"The procedures in the Highway Capacity Manual "do not explicitly address operations of closely spaced signalized intersections. Under such conditions, several unique characteristics must be considered, including spill-back potential from the downstream intersection to the upstream intersection, effects of downstream queues on upstream saturation flow rate, and unusual platoon dispersion or compression between intersections. An example of such closely spaced operations is signalized ramp terminals at urban interchanges. Queue interactions between closely spaced intersections may seriously distort the procedures in" the HCM.

For these reasons, PRISM Engineering used SimTraffic as the microsimulation analysis tool calibrated with specific saturation flow rates, video verification of traffic flows compared to animation, and adjustments of speeds for real world traffic flows for all five intersections at the Missouri Flat / US 50 interchange area where all intersections are closely spaced from 100 feet to 400 feet apart. We used SimTraffic to generate delay reports as required by El Dorado County and correlated this delay to level of service in the report tables. In our calibration we matched real-world conditions. We used multiple runs (20), averaged together the middle 10 runs to reduce the variability in results. We used a 10 minute seed time and 60 minute record time for analysis purposes.

## **Section A.3. Traffic Counts and Update Methodology**

PRISM Engineering originally conducted new two-hour am and pm peak hour traffic counts on Wednesday October 26, 2016 and also on Thursday December 8, 2016. We used HD video camera technology mounted at high locations on poles or signs to capture all turning movements at major intersections. These videos were counted later in the office on a computer, watching each video several times to count large volume approaches separately for higher accuracy, since some intersections were of extremely high volumes and difficult to fully count in the field, as well as be able to see all turning movements at street level). We counted smaller volume intersections in the field using electronic traffic counting software (TurnCount) on computer tablets, then converted into Microsoft Excel spreadsheets for each count, for both the am and pm peak hour traffic counts taken. Traffic counts were taken at all 16 existing intersections in the study, and this turning movement data was entered into the Synchro model software for intersection analysis, for each of the intersections, for both the am peak hour and pm peak hour time periods. PRISM Engineering balanced all volumes using the Synchro balancing feature, between intersections where intersections were closely spaced, and all volumes should match, and where there were no significant driveways or side streets where traffic could enter or leave the specific corridors like Missouri Flat Road, or SR 49. Engineering judgment was used to ensure the higher volumes of adjacent intersections were used in making the balance of traffic volumes.

For road segments, PRISM Engineering originally utilized the County's data from their 2015 Annual Traffic Count Summary document, as well as specific hourly totals from the same source along the Missouri Flat corridor which could be easily correlated with the peak hour intersection counts PRISM Engineering had taken in late 2016. Segment volumes from County counts between intersections could be compared to PRISM Engineering intersection count approach volumes or exit volumes to see if all traffic counts were within reasonable magnitudes of each other. If any anomalies arose, other adjacent counts were examined to determine where an adjustment might be needed so that traffic volumes between intersections were properly balanced according to engineering judgment.

On February 21, 2018, Traffic Counts Plus (whom PRISM Engineering hired) used roadway hose counters to gather new hourly directional roadway data for a 24 hour period on a Wednesday at 10 key locations so that any increases in traffic volumes observed on study roadways could be compared to the original existing 2016/2017 counts, and PRISM Engineering would make any needed adjustments upward to reflect growth, if any, updating all counts to current conditions. The methodology used was to take the corresponding hourly peak hour directional volumes (such as 5:00 to 6:00 pm) and compare these to the approach or departing totals from the adjacent intersection counts, and after noting any differences, update the intersection counts to reflect increases in traffic volume. Our method was to only increase the volumes of intersection counts and not decrease, to be conservative. The following new Feb 21, 2018 roadway segment 24 hour counts were taken for this purpose:

1. Forni Road north of SR 49,
2. Missouri Flat Road north of Plaza Drive,
3. Missouri Flat Road north of US 50 WB Ramps,
4. Missouri Flat Road north of Forni Road,
5. Missouri Flat Road south of Forni Road,
6. Missouri Flat Road south of China Garden Road,
7. Missouri Flat Road north of SR 49 / Pleasant Valley Road,
8. SR 49 / Pleasant Valley Road west of Faith Lane,
9. SR 49 / Pleasant Valley Road east of China Garden Road,
10. SR 49 / Pleasant Valley Road west of Missouri Flat Road.

This traffic data collected by Traffic Counts Plus is included here for each of the 10 locations (follows next page). The counts report the directional volumes on the road segment in 15 minute consecutive intervals for a 24 time period. The count summary shows hourly totals as well, and identifies the actual am and pm peak hours. It shows the two way total, for both the am hours and the pm hours. PRISM Engineering used this data to fully update all original am and pm peak hour turning movement counts for the 16 study intersections, combined with the standard balancing technique in Synchro, and using engineering judgment to ensure a conservative adjustment is made (no decreasing of volumes, but increasing where needed to match new counts).

#### **Section A.4. Roundabout Analysis Considerations and Factors**

Analysis of roundabouts using the HCM 2010 methodology contained in Chapters 21 and 33, and implemented in Synchro 9 and beyond, was used in this study. SIDRA was considered, and outputs compared to Synchro and SimTraffic, but found to be inadequate by comparison for this particular roundabout problem. The proposed roundabout at Pleasant Valley Road and Faith Lane is small, with single lane entries, and has a very small conflicting flow. This is precisely the type of roundabout that calculations with SIDRA are in the outlier category. We carefully considered the outputs and limitations and decided to not use SIDRA because of its limitations in projecting extremely high capacities for entry traffic flows into single lane roundabouts when the inside circulating/conflicting volume is low. It is very low at this location. In fact, the capacity of the SIDRA software came out to be nearly DOUBLE the value in the Synchro/SimTraffic model (1600 vph maximum entry capacity versus 980 vph in the Synchro/SimTraffic model). This is not acceptable, or believable. In the case of the Faith Lane single lane roundabout, most all of the volume in the roundabout is pass through, and does not make a turning movement, which means that the "Conflicting Flow" in the roundabout is very small (actually only 28 vph today) . Since the proposed roundabout in this study is a single lane roundabout, with a single circulation lane internal,

SIDRA was not used because of this significant limitation. Instead, the Synchro and SimTraffic software combo was used, because Synchro 9, based on the HCM 2010 methods and empirical US data for roundabouts, takes into consideration more relevant and appropriate roundabout parameters. Also, the SimTraffic model is a more advanced tool, a microsimulation model that can be calibrated, and simulating traffic flows on screen while calculating any delays by virtue of direct conflicts of vehicles in the roundabout or approaches (level of service can be directly determined from delays). These HCM 2010 chapters 21 and 33 inform that the method is robust and is based on empirical Data within the US and not based on traffic conditions in other countries. The Synchro 9 and companion SimTraffic tools, based on the HCM 2010 methods, are more conservative, in that they yield lower roundabout capacities than in other software based on other countries (such as RODEL being based on UK traffic flows and specific geometry which tend to be 15-20% higher in capacity because of driver familiarity there, and SIDRA based on conditions in Australia but has an “environment factor” for use in the US to change operation from standard defaults, but is not based on US data directly). Synchro 9 can handle even multi lane roundabouts which previous versions could not. SimTraffic is a simulation method based on Synchro inputs, and can also effectively calculate level of service for roundabouts. Some calibration is needed for all methods used, and PRISM Engineering utilized location specific data to enhance results for Synchro and SimTraffic and these included measuring Saturation Flow Rate to determine how “aggressive” drivers are in the area based on vehicle headways.

Studies show that for the situation on Pleasant Valley Road, a road that is two lanes and because of historical considerations with existing buildings will never be more than two lanes, the roundabout at Faith Lane will need to be a single lane roundabout, with a single lane approach for all approaches. There is not sufficient room for the diameter of the roundabout to expand to two lanes without impact to historical buildings. The Synchro 9 and SimTraffic microsimulation model are the most appropriate tool to calculate the best capacity and level of service calculation for this location because of its conservative calculation for entry capacity as shown in the following “Figure 7” from software comparison research, where several software programs are compared for how they treat “Maximum Entry Flow” capacity for a single lane roundabout. It can be seen that the SimTraffic model (green line) had the lowest and most conservative result for single lane roundabouts where the internal circulating volume is very low. This condition matches closely the condition in the field at Faith Lane and Pleasant Valley Road / SR 49, where the primary existing volumes are through lane volumes on Pleasant Valley Road (Year 2018 983 EB+589WB=1572 and 28 vph turning, or only 2%, so that 98% of traffic going through the roundabout does not circulate. This places the “Conflicting Flow” at the left side of Figure 7 chart where the SimTraffic Maximum Entry Flow is around 980 vph). In the future Year 2035 condition, this EB entry volume is reduced based on reassignment of traffic with the bypass, and the EB volume is projected to be only 885 vph).

## Section A.5 Missouri Flat Road Corridor Arterial Segment Analyses

Missouri Flat Road between Pleasant Valley Road on the south and Plaza Drive on the north, takes on *many different forms of cross-section and traffic control* such as large intersections with full signal control, small intersections with a side street stop control, two-way left turn lane medians, left turn pockets unsignalized at intersections, or no median at all (just double yellow centerline striping). Transitions between these type of cross sections are also complex, making it difficult to analyze Missouri Flat Road in a consistent and appropriate way, using an appropriate analysis tool. Most analysis tools such as HCS 7 based on the HCM 2010 methods and procedures, do not have a capability for instance, to analyze a two lane arterial if it has a TWLTL median. It can only analyze an arterial with four or more lanes. This is probably because of the hidden complexity of the two lane arterial. It is complex because cars cannot pass each other, and delays are governed by the slowest moving car or truck. Certain aggressions in driver behavior may be present such as tail-gating, etc., and gaps in traffic may be rare, making it very difficult for side street traffic to safely enter the main arterial.

*HCS is software that generally analyzes only a single transportation element*, such as an intersection or a roadway segment, or a freeway ramp. It cannot analyze the bigger picture transportation problem, and it certainly can't account for changes or transitions in the system such as when a four lane road transitions into a two lane road, and the traffic dynamics that go along with those kinds of changes. It can't account for severe delays that may occur at a nearby adjacent intersection, where traffic is blocked and this traffic blockage extends back into another intersection but the HCS software calculates a satisfactory level of service based on the local volumes and turning movements only.

*This limitation can yield false results in some cases*, and is the main reason that in this report PRISM Engineering used the HCM 2010 compatible **Synchro** and **SimTraffic** models to analyze traffic, especially on Missouri Flat Road. Even though Synchro, being a macro model with lots of detail for road geometry and traffic profiles and signal timing / phasing control,

its companion software SimTraffic reads and utilizes all of this same information and takes the analysis much further. SimTraffic can actually place each car in its system individually, and animate the combined traffic in a realistic model that actually shows traffic moving at speed limits if possible, and slowing when there are real-world type physical limitations in capacity in getting traffic through an intersection or road segment. Cars moving are bound by physical limitations, if they can't proceed (cars ahead, or light is red, etc), the visual animations on the screen show this, and the transportation engineer can view these kinds of traffic flow problems and make appropriate mitigation adjustments to road sizing, intersection sizing, signal timings, traffic control choices, or even speed limits, etc. Interactively, the transportation system can be adjusted until a satisfactory capacity and throughput of traffic flows is achieved.

PRISM Engineering explored several methods to calculate the appropriate level of service for roadway segments (not intersections). These included HCM 2010 compatible methods built in to the SimTraffic software, the HCS 7 software, and the assumptions of the El Dorado County "Planning Level" roadway segment analysis method. These are briefly discussed in the following paragraphs:

1. The SimTraffic microsimulation model (incorporates all roadway cross-section details including Two-way Left Turn Lane (TWLTL) medians, posted speeds, lane capacities, all details of lane geometry and vehicle types in microsimulation, etc, which includes the effects on delay to a roadway segment from adjacent intersections, signal timings, etc. It looks at the bigger picture of a system of traffic intersections and segments) the sophisticated SimTraffic HCM 2010 microsimulation method which takes into consideration all adjacent intersections, signal timings, delays, turning movements, and medians which may be a two-way left turn lane (TWLTL) or a left turn pocket, or even a stop sign or signal. It also considers the specific speed limits and saturation flow rates determined from field data measurements.

**BEFORE CONDITION:**

*The picture above is a "screen shot" of the computerized SimTraffic microsimulation model which was calibrated to the existing PM peak hour traffic, and verified with video. The microsimulation shows vehicles queued up on the NB approach of the Redwood Highway Frontage Road at SR 131, as well as the WB approach on Tiburon Road, and also the US 101 NB Off-ramp and On-loop.*

*screen shot from SimTraffic software, in an analysis by PRISM Engineering, showing vehicle spacing and animation of traffic*

2. The **HCS 7** two-lane and multilane highways modules (cannot handle TWLTL for two lane highways which is critical to accurately analyze much of Missouri Flat Road; It is not a microsimulation model and cannot take into account a longer corridor of potential delays at adjacent intersections, etc It can simply incorporate directionality, speed limits, truck percentages, lane widths, etc) This method was ruled out because of inability

to calculate level of service for the specific cross-section on much of Missouri Flat Road where TWLTL is present (see notation in pop-up window in graphic: “Invalid Number of Lanes Value... Range is 2 to 9. Please try again”). The median type of TWLTL could be selected but only for two or more lanes in each direction of the roadway cross section. For this reason, the software would not analyze Missouri Flat Road which specifically had a single lane in each direction with the TWLTL median. HCS 7 also has a “Two Lane” highway calculation module, but has no feature to make the median configured as a TWLTL. This significant omission in the method makes it an inappropriate tool to try and analyze the traffic condition on Missouri Flat Road, and so the HCS 7 software was eliminated as a tool to analyze traffic in this report.

The screenshot displays the HCS 7 software interface with the following sections:

- Project Properties:** Analyst (Grant Johnson, TE), Agency (El Dorado County), Analysis Year (2019), Jurisdiction (El Dorado County), Time Period Analyzed, Date (4/24/2019), and Project Description.
- Geometric Data:**
  - Direction 1: Missouri Flat Road SB, Number of Lanes: 1, Measured FFS: , Base Free Flow Speed: 60.0, Median Type: TWLTL, Lane Width: 12, Right Side Clearance: 6, Median (Left) Side Clearance: 6, Access Point Density: 8.0, Terrain Type: Level, Percent Grade: -, Grade Length: -.
  - Direction 2: Missouri Flat Road NB, Number of Lanes: 2, Measured FFS: , Base Free Flow Speed: 60.0, Median Type: TWLTL, Lane Width: 12, Right Side Clearance: 6, Median (Left) Side Clearance: 6, Access Point Density: 0.0, Terrain Type: Level, Percent Grade: -, Grade Length: -.
- Demand Data:** Demand (1058), Peak Hour Factor (0.94), Total Trucks (6.00), Single-Unit Trucks (SUT) (-), Tractor-Trailers (TT) (-), Mixed Flow Model ().
- Adjustment Factors:** Driver Population (All Familiar), Capacity Adjustment Factor (1.000), Speed Adjustment Factor (1.000).

An error pop-up window is overlaid on the Demand Data section, stating: "Invalid Number of Lanes value" and "Number of Lanes : Range is 2 to 9. Please try again." The error message lists the values 1058, 0.94, and 6.00. A "Next" button is visible on the right side of the interface.

screen shot from HCS 7 software

- The El Dorado County “**planning level**” method (only variables are total two-way volume and number of lanes in the type of cross-section; the method is very limited” having no consideration for lane widths, speeds or ability to look at TWLTL, etc.). The method is very conservative and yields the worst-case results by consistently putting roads with high volumes into the LOS F category, when there is no consideration that the side street volumes might be very relatively low, and the overall average of vehicle delay is also low. If the speeds of traffic on the main street are maintained, and it operates more like a freeway lane in that there are no delays or stops, even though side street traffic may have a very difficult time finding gaps in traffic to be able to enter the Missouri Flat Road traffic during peak time periods at intersections or driveways where there are no traffic signals installed, if the speeds of the main road are still maintaining at the posted speed limit it is not appropriate to label the level of service on the facility to LOS F conditions. This inaccurately makes it appear that there is a traffic jam taking place, and speeds are slow, when in actuality it is only the side street vehicles that are delayed at the LOS F condition. It may also only be a small number of cars on the side streets, such as is the case along the Missouri Flat Road corridor at Enterprise or Industrial. In summary, this planning level method is a simple tool that enables a quick result, but the result if shown at say, LOS F, should be further evaluated to see if the LOS F condition would really exist given more information into the overall traffic profile

and lane geometry. This was the engineering judgment that was used in this report, to conduct the planning level roadway segment analysis, and then provide additional information from the microsimulation tool SimTraffic so that a more accurate calculation of vehicle delay could be produced. The tables in this report that summarize roadway segment levels of service show the results from both methods, the microsimulation SimTraffic method, as well as the El Dorado County planning level method. The microsimulation SimTraffic method, being more accurate, governs the results and over-rides any results from the planning method. Both are shown to provide clarification and understanding as to how different methods focus on different things. The SimTraffic microsimulation is by far the best and most accurate method, but the simple planning level method can give results where it is not feasible to build a microsimulation model (time and/or budget constraints).

In the report, the tables that show results for the arterial roadway segment analyses for all scenarios, have two parts. The first analysis method is shown at the top section of the table summarizing an average vehicle delay for each roadway segment analyzed with the SimTraffic microsimulation software (based on HCM 2010 procedures), and the resulting speeds of traffic. The level of service is based on the calculated delay for vehicles, based on numerous factors built into the microsimulation model.

The results in the lower half of the table are for the County's generic planning level analysis, also based on HCM 2010 and a limited cross-section description (such as 4AD which is a 4 lane divided arterial, and 2A which is a two lane arterial), but with numerous assumptions not necessarily specific to the roadway being analyzed. The total segment volume (both directions) is summed and divided by a single capacity to determine a level of service for the segment. This is a quick method, but it has many limitations including any ability to consider directionality of traffic, what kind of median is present or not, or whether there are any turn lanes, etc. or how wide are the lanes or the shoulders of the paved road. Based on comparisons between the two halves of the table, it can be seen that the LOS F conditions calculated using the planning method are actually LOS B or better in the microsimulation method, and the LOS B conditions also correlate with the intersection analyses for nearby intersections. This is because the microsimulation method is calculating the delay for the overall segment and not just the side streets.

## Section A.6 Planning Level Segment Analyses

*NOTE from County<sup>16</sup>: The County's TIA Guidelines allow the use of "planning level thresholds" as the default methodology for roadway segment analysis. These thresholds are quick to apply and result in conservative analysis results, but do not account for lane widths, speeds, and other roadway characteristics. The applicant may elect to provide HCM-based analysis, and this approach is generally preferred by the County DOT. Because the results of Prism's analysis using planning level thresholds were not consistent with field observations, County staff directed the applicant to perform HCM-based analysis.*

Planning Level Analysis yields LOS F results for many segment locations, but this is primarily indicative of an LOS F condition on the side streets, not the main road. This generic method does not correctly show the LOS A/B condition that exists on Missouri Flat Road through traffic (as can be seen in Table ES.2 and ES.3). This through traffic is primarily moving at or near posted speed limits, indicating a lack of congestion. However, there are fewer gaps in traffic due to the high volume of through traffic, resulting in higher delays for side street traffic (much smaller volumes), trying to enter the road. Table 4 summarizes the segment levels of service for Missouri Flat and Pleasant Valley Roads, using two methods for comparison: SimTraffic microsimulation (best), and simple planning level (least accurate).

Table 4 has two parts or two analyses shown. The first is the sophisticated SimTraffic HCM 2010 microsimulation method which takes into consideration all adjacent intersections, signal timings, delays, turning movements, and medians which may be a two-way left turn lane (TWLTL) or a left turn pocket, or even a stop sign or signal. It also considers the specific speed limits and saturation flow rates determined from field data measurements. The results shown at the top section of

---

<sup>16</sup> From "Peer Review of the Dorado Oaks Transportation Impact Study, 5/1/2019"

Table 4 are summarized as an average vehicle delay for each roadway segment as well as the corresponding level of service (based on HCM 2010), and the resulting speeds of traffic. The level of service is based on the calculated delay, which is based on numerous factors built into the microsimulation model.

The results in the lower half of the table are for the County’s generic planning level analysis, also based on HCM 2010 and a limited cross-section description (such as 4AD which is a 4 lane divided arterial, and 2A which is a two lane arterial). The total segment volume (both directions) is summed and divided by a single capacity to determine a level of service for the segment. This is a quick method, but it has many limitations including any ability to consider directionality of traffic, what kind of median is present or not, or whether there are any turn lanes, etc. or how wide are the lanes or the shoulders of the paved road. Based on comparisons between the two halves of the table, it can be seen that the LOS F conditions calculated using the planning method are actually LOS B or better in the microsimulation method. This is because the microsimulation method is calculating the delay for the segment and not the side streets.

**Table 4. Existing Year 2018 Link Segment Roadway Level of Service Summary**

| COUNTY PLANNING LEVEL SEGMENT ANALYSIS  |   | YEAR 2018 |     |         |     |       |

ADT Source:

Caltrans Traffic Volumes 2015, and El Dorado County Traffic County Annual Summary 2015

Capacity Source: El Dorado County Peak Hour Roadway Segment LOS Criterion, Table 1.

Source: Year 2018 traffic counts taken by PRISM Engineering, mid-block totals, am, pm peak hour, plus Project

The planning level method gives a quick idea of what the side street level of service would be for similar corresponding volumes. When comparing these planning results to the actual nearby intersection results, the Missouri Flat Road level of service is usually LOS A or LOS B, and the side street approaches at the intersections are LOS F (such as at Missouri Flat Road and Industrial or at Enterprise, see table ES.2).

Table 4 shows 4AD and 2A “planning level” roadway capacities in the table footer. The County has indicated that the 2A designation for Missouri Flat Road from Golden Center to Pleasant Valley Road will eventually upgrade (by CIP) to 4AD by the Year 2035, and this is reflected in relevant analyses in this report. More details on the County’s planning level of service criteria for street segments is shown in Table 5.

**Year 2018 Roadway Segment Analyses Results**

Table 4 shows that all locations for roadway segments calculate to LOS B or better conditions based on the HCM 2010 microsimulation model, SimTraffic, with the exception of the LOS D condition on Missouri Flat Road between Plaza Drive and the US 50 WB Ramps. These are satisfactory levels of service for roadway segments, and correspond to the levels of service calculated for intersections (see Table ES.2). The County has indicated that if it can be demonstrated (with other more reliable software) that the roadway segment (such as Missouri Flat Road or Pleasant Valley Road) does not operate at LOS F using the given service volumes, then an HCM 2010 analysis would override the planning level thresholds and these roadway segments may not be considered to be a significant impact. As a result, PRISM Engineering conducted two analyses for all roadway segments, to illustrate and show the differing results, but also offer an explanation as to why there are differences. All roadway segment analysis tables in this report for existing and future scenarios show the HCM 2010 microsimulation results for all roadway segment locations on the top half of each table, and the planning level results on the lower half. The planning level analyses generically yield a worst-case result for level of service of a segment, but it corresponds primarily to the level of service of side street traffic, and not the main street traffic. The main street traffic LOS can be better calculated with microsimulation tools based on HCM 2010 procedures such as SimTraffic, which was used in this study.

As per Policy TC-Xa (Table TC-2), Missouri Flat Road is allowed to operate at LOS F, provided the V/C ratio does not exceed 1.12 from U.S. Highway 50 to Mother Lode Drive, or 1.20 from Mother Lode Drive to China Garden Road.

ADT Source: Caltrans Traffic Volumes 2015, and El Dorado County Traffic County Annual Summary 2015

Capacity Source: El Dorado County Peak Hour Roadway Segment LOS Criterion, Table 1.

Source: Year 2018 traffic counts taken by PRISM Engineering, mid-block totals, am, pm peak hour, plus Project

The planning level analysis generically yields a worst-case result for level of service of a segment, corresponding primarily to the level of service of nearby side street traffic, and not the main street traffic. Even though the planning level method identifies some segments as LOS F, only the side street traffic along Missouri Flat Road is at LOS F in some locations. The main street traffic level of service for road segments is more accurately calculated using microsimulation tools based on HCM 2010 procedures such as SimTraffic, which was used in this study. The results in Table 10 in the main body of the report indicate that LOS D or better conditions prevails on Missouri Flat Road (far better than LOS F shown here in the appendix), and is LOS B or better conditions on Pleasant Valley Road. The project, therefore, does not create a significant impact to levels of service on the Missouri Flat Road arterial road segments (LOS D is OK), nor does the project create any significant impact to any of the Pleasant Valley Road arterial road segments (all LOS B or better). No roadway segment widening mitigations are recommended for this scenario.

- County Planning Segment Level of Service: Unacceptable at four locations in pm peak hour for Year 2018 without the project at LOS F (see Table 10). When project traffic is added in, one more segment goes to LOS F conditions, Pleasant Valley Road from Missouri Flat Road to Faith Lane.

**Table 16. Year 2027 Scenarios Roadway Segment Level of Service Summary**

This more generic calculation gives some idea of the kind of level of service that would be expected for unsignalized side streets and driveways along these segments. In the Year 2018 scenario, there were four locations at LOS F conditions, but in this Year 2027 scenario it has dropped to just two locations. This improvement is attributable to the slight lowering of volumes on Missouri Flat Road and Pleasant Valley Road on account of the Diamond Springs Parkway diverting some traffic away from these sections of these roads. However, when the project traffic is added in, the level of service becomes LOS F at three more locations. This will improve to LOS D in the future when Missouri Flat Road is widened to 4 lanes as planned in the CIP (goes from 2A to 4AD by Year 2035).

- County Planning Segment Level of Service: Unacceptable at two locations for Year 2027 pm peak hour volumes plus the project (shown as LOS F in Table 16). When project traffic is added in, three more segments go to LOS F conditions under the planning method.

**Table 20. Year 2035 Scenarios Roadway Segment Level of Service Summary**

| COUNTY PLANNING LEVEL SEGMENT ANALYSIS |   | YEAR 2035 AM Peak |     |        |     | YEAR 2035 PM Peak |     |        |     |       |

ADT Source: Caltrans Traffic Volumes 2015, and El Dorado County Traffic County Annual Summary 2015

Capacity Source: El Dorado County Peak Hour Roadway Segment LOS Criterion, Table 1.

Source: Year 2018 traffic counts taken by PRISM Engineering, mid-block totals, am, pm peak hour, plus Project

Table 20 shows the Year 2035 capacity analysis results for *link segments* using El Dorado County’s planning method as defined in the first chapter, Table 5. The planning level calculations give a general indication of the level of service that would be expected for side streets of unsignalized intersections along these segments. In the Year 2018 pm scenario, there were four street segment locations at LOS F conditions, but in this Year 2035 pm scenario it has dropped to zero locations in the pm peak hour. This is because the width of Missouri Flat Road was assumed to be widened from 2A to 4AD (four lanes as shown in Table 20) and capacity therefore increased. Also, there was a lowering of volumes on Missouri Flat Road and Pleasant Valley Road on account of the Diamond Springs Parkway diverting some regional through traffic away from these sections of these roads. The Diamond Springs Parkway will connect Missouri Flat Road on the west to SR 49 on the east. In addition, there are some roads which will interface with Diamond Springs Parkway (DSP) between these two intersections (Intersections #18 and #19 in this study), such as Throwita Way on the south side and another street on the north side of DSP at the same location. It was assumed that a small portion of traffic would enter and leave at these locations in the analyses. For this reason, volumes between intersections #18 and #19 will not exactly match up because of this condition.

- County Planning Segment Level of Service: Acceptable at all locations for Year 2035 am and pm peak hour volumes with and without the project are at LOS E or better conditions. No further mitigations necessary.

**Planning Level Impacts: Roadway Street Segment Planning LOS**

The project has planning level road segment impacts to Pleasant Valley Road between Faith Lane and Missouri Flat Road according to Table 10 that show the level of service at LOS F for the existing conditions (on a link segment peak hour volume planning basis). This level of service methodology is conservative and often represents the level of service for drivers on side streets or driveways trying to find a gap in traffic to enter the main roadway. When drivers have difficulty finding gaps, some drivers take chances and cause slowing of traffic flows when cutting in to through traffic. Overall, all drivers are affected by this condition where gaps in traffic are rare, which also affects overall safety of the transportation system. The roadway planning level of service is an analysis method that compliments intersection analyses, and offers

additional insight as to how a roadway will likely operate based on cross section (the number of lanes) between intersections. The roadway level of service corresponds well to levels of service calculated for side streets using standard HCM 2010 methods for intersection calculation. Drivers on a side street or driveway waiting for a safe gap in traffic, are often challenged to do so and must sometimes wait long periods of time. This situation can contribute to drivers taking unsafe chances to get onto the main street.

Although the future Diamond Springs Parkway will help relieve some of the future traffic impact on Missouri Flat Road south of China Garden Road (by diverting traffic on Pleasant Valley Road / Missouri Flat Road to use the new parkway facility), there will still remain LOS F conditions until new traffic signals are installed at various intersections where signal warrants have been met (as identified in this report, Tables 13, 19, and 24). The project will add more than 10 peak hour trips to these affected roadways indicating it will have significant impact. Mitigations are required according to the County's criteria, and although Missouri Flat Road was anticipated in the County's CIP for improvements (from China Garden to Pleasant Valley Road), Pleasant Valley Road from Missouri Flat Road to Faith Lane and beyond was not anticipated for widening, or installation of roundabouts or traffic signals. Because the project will have significant impacts to street segments on Missouri Flat Road in the future, it can mitigate this impact by paying the fair share traffic impact fees as part of the County's CIP. The project's impacts to Pleasant Valley Road are also significant and were unanticipated by the County. These impacts would be mitigated by direct mitigation in the form of local intersection improvements, such as a roundabout or signalization at Faith Lane. It can be argued that although the County did not anticipate improvements being made along Pleasant Valley Road between Missouri Flat Road and Fowler Lane due to future growth, the road segment level of service for existing conditions alone along this segment is currently LOS F conditions and would indicate improvements would be needed (see Table 4 for a summary of this LOS F condition for existing pm peak hour). The current County LOS criteria are summarized in Table 5 for HCM 6<sup>th</sup> edition values.

## Section A.10 Synchro and SimTraffic Instructions

PRISM Engineering consulted extensively with County DOT Staff concerning the most appropriate traffic analysis methods to be used for this traffic study. The main two corridors of analysis were:

1. Missouri Flat Road from US 50 to Pleasant Valley Road, and
2. Pleasant Valley Road from SR 49 S to SR 49 N/Fowler Road.

The traffic control for Missouri flat Road varies significantly from the US 50 freeway interchange on the north to Pleasant Valley Road on the south. For example, traffic operations are complex at the freeway interchange. Signals are coordinated. Prism engineering conducted extensive field reviews with video for verification, to study signal timings, signal phasings, offset times, as well as vehicle operations in a detailed saturation flow study. All of this information was carefully edited into the Synchro and SimTraffic models developed for the study.

Other intersections along Missouri flat Road such as at Forni Road, are typical signalized intersections. Further to the south there are several intersections that are not signalized, but have side street stop control (TWSC). Another section of Missouri flat Road has a two way left turn lane in the median, but this is not consistent throughout the length of an signalized intersection, as there is a left turn pocket at the end signalized intersection at China Garden Road. For this reason, several different types of traffic models were developed and utilized in the study. For example, the traffic analysis option within the Synchro microsimulation traffic model is several fold, including:

1. HCM 2000, Signalized and Unsignalized
2. **HCM 2010 Signalized Summary, Detail, Pedestrians, Bicycles**
3. **HCM 2010 Roundabout, Detail**
4. **HCM AWSC, Detail**
5. **HCM 2010 TWSC, Detail, Pedestrians**
6. **HCM 2010 SimTraffic Arterial Analysis and**
7. **HCM 2010 SimTraffic Intersection Analysis**

In this study option 2, 3, 4, 5, 6, and option 7 were considered to calculate the appropriate level of service depending on the specific traffic control in place at each intersection. Option one, HCM 2000 was not utilized because the methodology is outdated. In the appendix output sheets for each scenario, there are two different files, one for the signalized intersections, and one for the unsignalized intersections (which were calculated using different appropriate methods). In each file there are typically several different kinds of reports based on different analysis options. Care should be taken when reviewing these files that the analysis method utilized is understood, and this can be seen specifically in the header of each page as a title (such as HCM 2010 TWSC, etc).

PRISM Engineering generally used the SimTraffic model output for signalized intersections, since the SimTraffic model encompassed the entire study area intersections, and used the HCM 2010 unsignalized methods for the remaining intersections (labeled as ZONE B in the appendix file names). ZONE B calculation summary sheets refer to intersections that had Two-Way Stop control (TWSC using HCM 2010 methodology), Roundabouts (using HCM 2010 methodology), All Way Stop Control (AWSC using HCM 2010 methodology).

There are many ways to calculate levels of service, different methods, and PRISM Engineering on consultation with the County Staff agreed that the microsimulation methods were most appropriate because of their ability to best match field conditions. The operations and animations in the SimTraffic models were able to replicate actual existing conditions, as verified by video of traffic in the field.

## Synchro versus SimTraffic

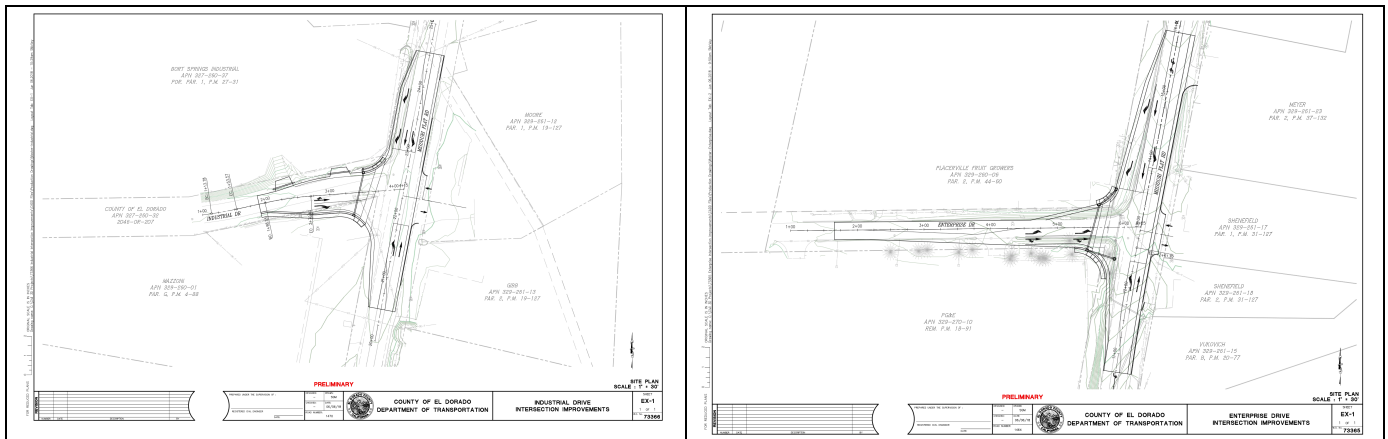

The County has instructed in their TIS Guidelines that both Synchro and SimTraffic use HCM methodology to analyze intersection operations. We utilized HCM 2010 methods in all cases. The County further states that “SimTraffic should be used to analyze traffic operations when the following conditions exist (or could exist in the future):

- Closely spaced intersections
- Over-capacity conditions (queues spill out of storage pockets)
- Uneven lane utilization
- Unusual lane configurations or alignment
- Unusual platoon dispersion or compression

For example, SimTraffic should be used at interchanges, such as Missouri Flat Road and El Dorado Hills Boulevard. If upstream or downstream intersections affect the traffic operations of a study intersection, SimTraffic should be used for analysis. Synchro should be used to analyze isolated intersections without unusual lane configurations or constraints.”

The PRISM Engineering analysis followed these guidelines, as well as all procedures outlines in the TIS Guidelines document pertaining to Synchro Procedures and SimTraffic procedures.

## Missouri Flat Road New Signal Installation Plan Sheets

These are the lane configurations used in the calculation of level of service at the intersections of Enterprise Dr and Industrial Dr along Missouri Flat Rd

## Section A.11 Signal Warrant Analysis Worksheets

### Signal Warrants for Year 2018 AM & PM Peak Hour Scenarios (supports Table 12 in report)

|                                       | AM 2018                             | AM+PROJ               | PM 2018               | PM+PROJ               | MINOR STREET HIGHER VOLUME |         |     |         |

## El Dorado Irrigation District

Letter No.: DS0618-113

June 12, 2018

VIA E-MAIL

Kevin Sweeney  
2700 S. Azusa Avenue  
West Covina, CA 91792  
Via Email: [sweeneyko@aol.com](mailto:sweeneyko@aol.com)

Subject: Facility Improvement Letter (FIL), 2905FIL, Stonehenge Springs (revised)  
Assessor's Parcel No. 329-310-10,11,12 + 054-402-18+  
329-301-15 &20 (Diamond Springs)

Dear Mr. Sweeney:

This letter is in response to your request dated May 4, 2018 and is valid for a period of three years. This letter supersedes the FIL issued June 6, 2018. If s Facility Plan Report (FPR) for your project is not submitted to El Dorado Irrigation District (EID or District) within three years of the date of this letter, a new Facility Improvement Letter will be required.

Design drawings for your project must be in conformance with the District's *Water, Sewer and Recycled Water Design and Construction Standards*.

This proposed project is an approximately 370-lot residential subdivision on 143.72 acres. Water service, sewer service and fire hydrants are requested. The property is within the District boundary.

This letter is not a commitment to serve, but does address the location and approximate capacity of existing facilities that may be available to serve your project.

### **Water Supply**

As of January 1, 2017, there were 12,630 equivalent dwelling units (EDUs) of water supply available in the Western/Eastern Water Supply Region. Your project as proposed on this date would require 315 EDUs of water supply.

### **Water Facilities**

An 18-inch water line exists in Highway 49 and a 10-inch water line is located in Fowler Lane. Several water lines of various sizes are located around the project perimeter (see enclosed System Map). The Diamond Springs/El Dorado Fire Protection District has determined that the

minimum fire flow for this project is 1500 GPM for a 2-hour duration while maintaining a 20-psi residual pressure. According to the District's hydraulic model, the existing system can deliver the required fire flow. In order to provide this fire flow and receive service, you must construct a water line extension connecting to the previously identified water lines in Highway 49 and Fowler Lane. This project will also be required to connect to a water main from the Deer Park Estates Subdivision located west of the property to be developed. These facilities have a lower operating hydraulic grade line and as a result the FPR will need to evaluate pressure zone separation in the proposed design. The hydraulic grade line for the existing water distribution facilities (Hwy 49/Fowler Ln) is 2,030 feet above mean sea level at static conditions and 1,956 feet above mean sea level during fire flow and maximum day demands.

The flow predicted above was developed using a computer model and is not an actual field flow test.

### **Sewer Facilities**

A 24-inch gravity sewer main is located in Highway 49 near the intersection of Tullis Mine Road. This gravity line has adequate capacity to serve the project. A sewer lift station will be required to pump waste water to this gravity line. There is an existing District lift station (Deb's Frosty Lift Station) and force main/gravity lines located on the property to be developed. This existing lift station does not have adequate capacity to serve any of the proposed project. It is preferred by the District that in lieu of two stations on the property, the project should make an attempt to grade in such a way as to allow for a single new lift station that would serve both the proposed project and existing demands. If this is not feasible, the project will be required to construct odor control at the existing lift station, in addition to constructing a new lift station to serve the project. The FPR shall address the lift station options and evaluation. In order to receive service from this line, an extension of facilities of adequate size must be constructed. Cost sharing between the District and the Developer shall be discussed during the tentative map /FRP process.

Your project as proposed on this date would require 315 EDUs of sewer service.

### **Facility Plan Report**

A Facility Plan Report (FPR) will be required for this project. The FPR shall address the expansion of the water and sewer facilities and the specific fire flow requirements for all phases of the project. A meeting to discuss the content of the report will be required. Please contact this office to arrange the meeting. A preliminary utility plan, prepared by your engineer, must be brought to the meeting.

Two copies of the FPR will be required along with a \$3,000.00 deposit. You will be billed for actual time spent in review and processing of your FPR. Please submit the FPR and fee to our

Customer Service Department. Enclosed is the FPR description and transmittal form for your use. The items listed under content in the description and the completed transmittal form must be bound in each copy of the FPR.

### **Easement Requirements**

Proposed water lines, sewer lines and related facilities must be located within an easement accessible by conventional maintenance vehicles. When the water lines or sewer lines are within streets, they shall be located within the paved section of the roadway. No structures will be permitted within the easements of any existing or proposed facilities. The District must have unobstructed access to these easements at all times, and generally does not allow water or sewer facilities along lot lines.

Easements for any new District facilities constructed by this project must be granted to the District prior to District approval of water and/or sewer improvement plans, whether onsite or offsite. In addition, due to either nonexistent or prescriptive easements for some older facilities, any existing onsite District facilities that will remain in place after the development of this property must also have an easement granted to the District.

### **Environmental**

The County is the lead agency for environmental review of this project per Section 15051 of the California Environmental Quality Act Guidelines (CEQA). The County's environmental document should include a review of both offsite and onsite water and sewer facilities that may be constructed by this project. You may be requested to submit a copy of the County's environmental document to the District if your project involves significant off-site facilities. If the County's environmental document does not address all water and sewer facilities and they are not exempt from environmental review, a supplemental environmental document will be required. This document would be prepared by a consultant. It could require several months to prepare and you would be responsible for its cost.

### **Summary**

Service to this proposed development is contingent upon the following:

- The availability of uncommitted water supplies at the time service is requested;
- Approval of the County's environmental document by the District (if requested);
- Approval of a Facility Plan Report by the District;
- Executed grant documents for all required easements;
- Approval of an extension of facilities application by the District;
- Approval of facility improvement plans by the District;
- Construction by the developer of all onsite and offsite proposed water and sewer facilities
- Acceptance of these facilities by the District; and
- Payment of all District connection costs.

Letter No.: DS0618-113  
To: Kevin Sweeney

June 11, 2018

Services shall be provided in accordance with El Dorado Irrigation District Board Policies and Administrative Regulations, as amended from time-to-time. As they relate to conditions of and fees for extension of service, District Administrative Regulations will apply as of the date of a fully executed Extension of Facilities Agreement.

If you have any questions, please contact me at (530) 642-4054.

Sincerely,

A handwritten signature in blue ink, appearing to read 'Michael J. Brink', is written over a horizontal line.
