REVISION HISTORY

Description	Date	Notes
Internal Draft	February 19, 2024	Draft TIS.
Admin Draft	February 22, 2024	Revisions for clarity.
Public Report	April 25, 2024	Added EBL queue data at intersection 3, clarified abatement 18A.

EXECUTIVE SUMMARY

This transportation impact study (TIS) analyzes the proposed Creekside Village Specific Plan (the Project) for consistency with the El Dorado County General Plan level-of-service policies and for vehicle miles of travel (VMT) impacts under the California Environmental Quality Act (CEQA). Where appropriate, abatement measures are provided to address any deficiencies relative to adopted General Plan policies and mitigation measures are provided to address any potentially significant impacts under CEQA.

Creekside Village (the Project) is a planned community with housing, parks, open space, and neighborhood commercial located in the El Dorado Hills community region of El Dorado County. Requested entitlements include a tentative subdivision map allowing for up to 918 single family homes and an option to include up to 5,400 sqft of neighborhood commercial, a General Plan amendment, and a new Specific Plan. The Project proposes 668 residential lots, and two large lots for the remaining 250 single family homes on a vacant 207.9 acre parcel located on the southern end of the El Dorado Hills Business Park, south of Investment Boulevard and west of Latrobe Road. The Project parcels are APNs 117-010-032 and a portion of 117-010-031. A vicinity map Is shown in **Figure ES-1**. The Project parcel is split by a creek, with most of the housing located on the south side of the creek. The north side of the creek would contain 87 of the residential lots, neighborhood commercial, parks and open space, and the south side of the creek would include 581 of the residential lots plus two large lots for the remaining 250 dwelling units, parks, and open space.

The Project parcel has been de-annexed from the business park, and the applicant is requesting to change its General Plan land use designation and zoning from Research and Development (R&D) to Adopted Plan (AP) with Single Family Low Density (CV-SFL), Single Family Medium Density (CV-SFM) residential, and Neighborhood Commercial (CV-NC), Open Space (CV-OS) and Parks (CV-P) land use designations within the plan area.

Project Description

Figure ES-2 provides a preliminary site plan for the Project. The Project would:

- Amend the General Plan, change the zoning designation, and adopt a specific plan to allow the development of 207.9 acres for residential, neighborhood commercial and related uses on land that is undeveloped and currently designated as industrial and R&D.

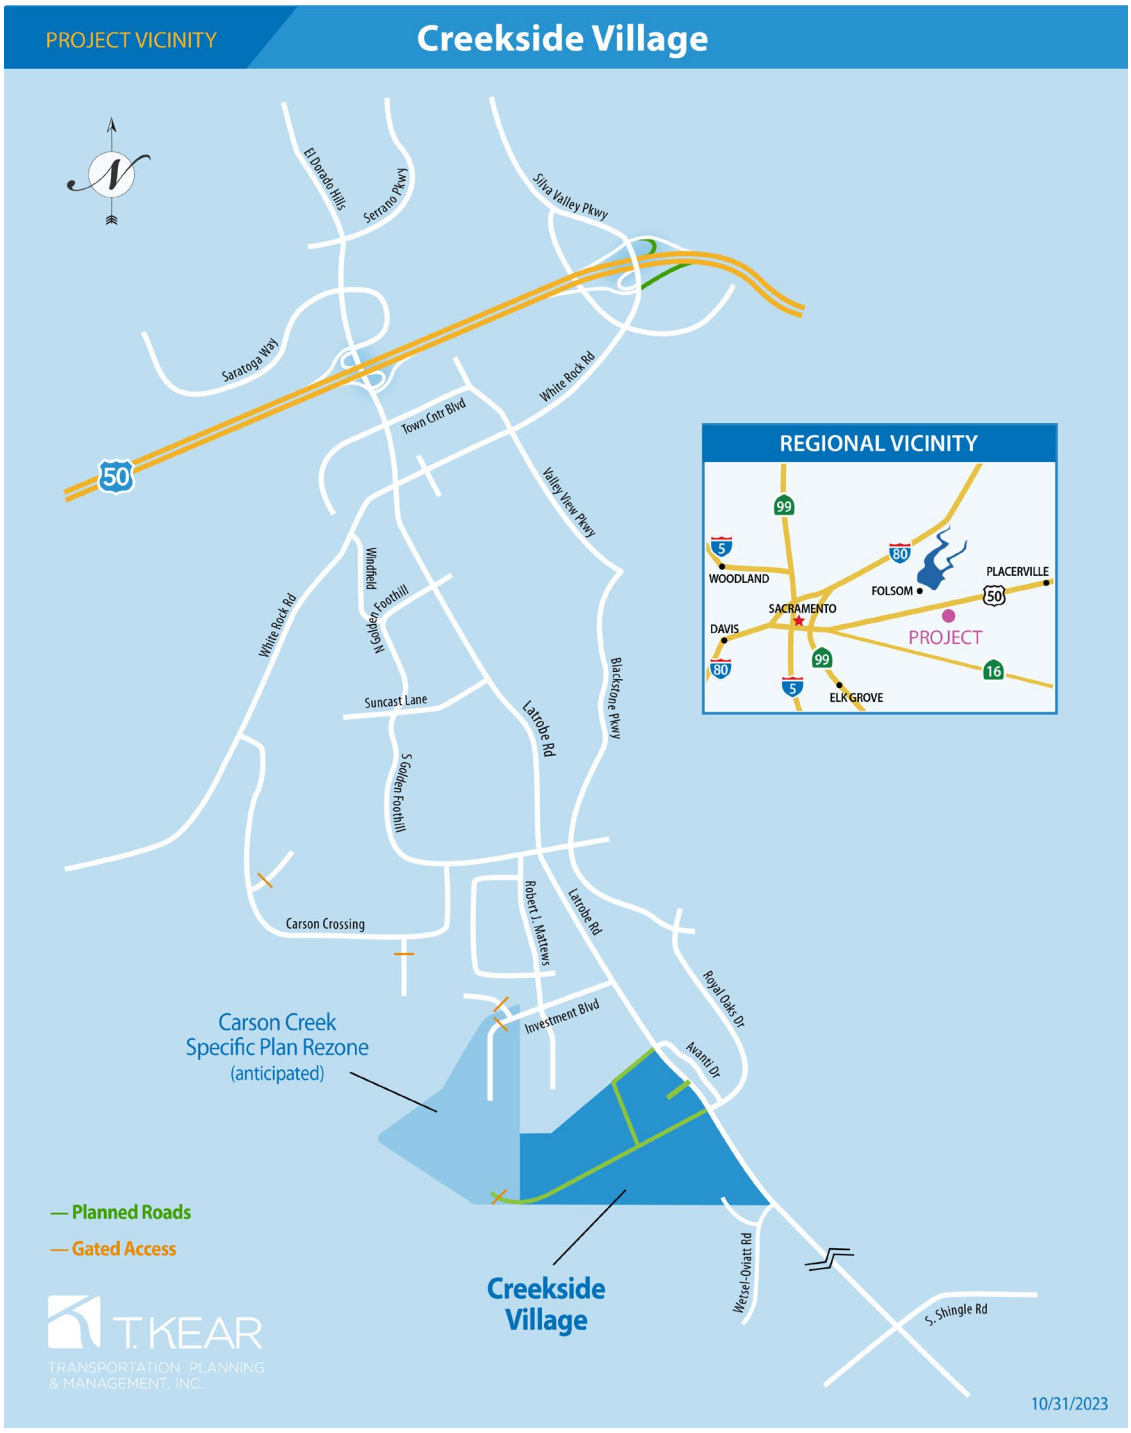

Figure ES-1. Project location map

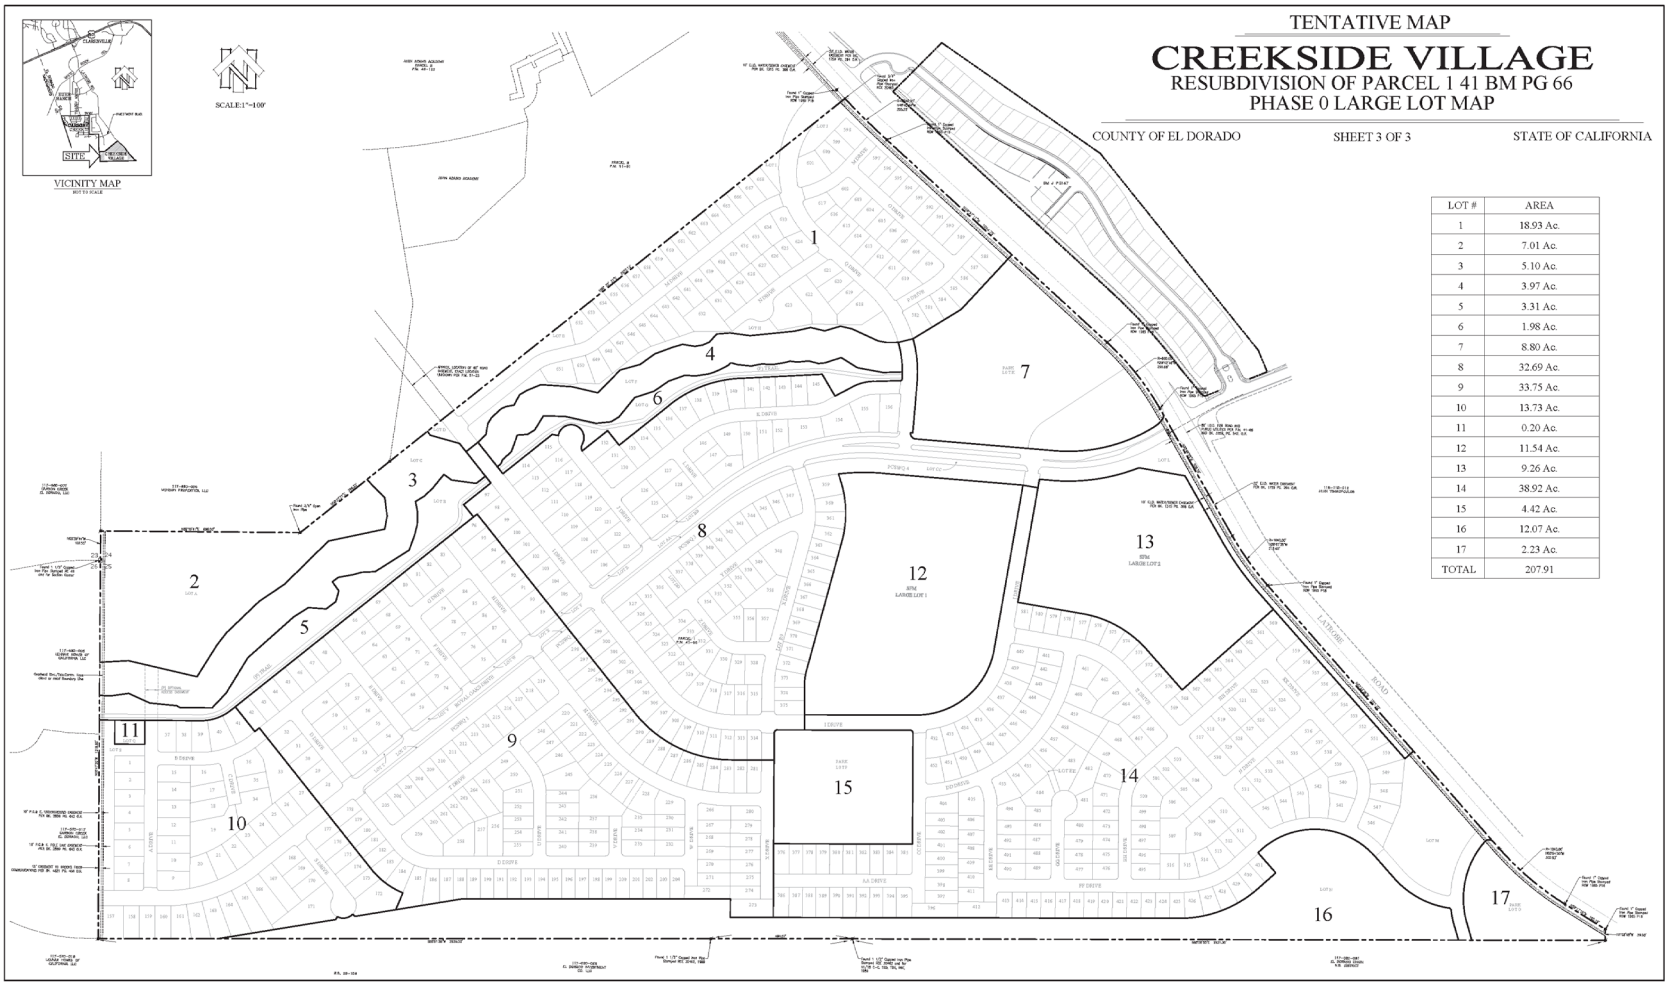

Figure ES-2. Preliminary Project site plan

- Create a Tentative Map for 668 homesites, 2 large-lot parcels that are analyzed as a combined total of 250 additional homes and 5,400 sqft of neighborhood commercial (918 homes and 5,400 sqft of commercial in total). The Tentative Map would include additional lots associated with parks and open space and various landscape lots.

Access to the Project will be provided by three roadways, a commercial driveway and a multiuse trail:

- The primary access will be from Latrobe Road via an extension of Royal Oaks Drive. The intersection of Latrobe Rd/Royal Oaks Dr is proposed to remain as full access, This intersection is analyzed with its existing two-way-stop-control, with signal-controlled recommended as an abatement to maintain acceptable level-of-service.
- The first secondary access road is an extension of Avanti Dr. The intersection is proposed as full access with side-street-stop-control.
- The second secondary access is via a connection to Wetsel-Oviatt Road.
- A right-in/right-out (RIRO) commercial driveway is proposed providing the neighborhood commercial site with direct access to southbound Latrobe Rd. The commercial driveway would be located just north of the existing Latrobe Rd/Royal Oaks Dr intersection.
- A pedestrian and bicycle access route connecting to Robert J. Mathews Parkway will provide enhanced non-motorized access to the medical, education, fitness, service, food, and retail options within the El Dorado Hills Business Park.

Traffic is distributed across the driveways based on the rough proximity of each land use to the access points.

Study Area

The TIS area (**Figure ES-3**), which includes portions of White Rock Road, Latrobe Road, El Dorado Hills Boulevard, Silva Valley Parkway and US 50 in El Dorado County, California, was selected with consideration of the requirements of CEQA and General Plan policies TC-Xd and TC-Xe. Specifically, the study was selected to include El Dorado County locations where Project traffic would constitute:

A. A two percent increase in traffic during the AM peak hour, PM peak hour, or daily; or,
B. The addition of 100 or more daily trips; or,
C. The addition of 10 or more trips during the AM peak hour or the PM peak hour.

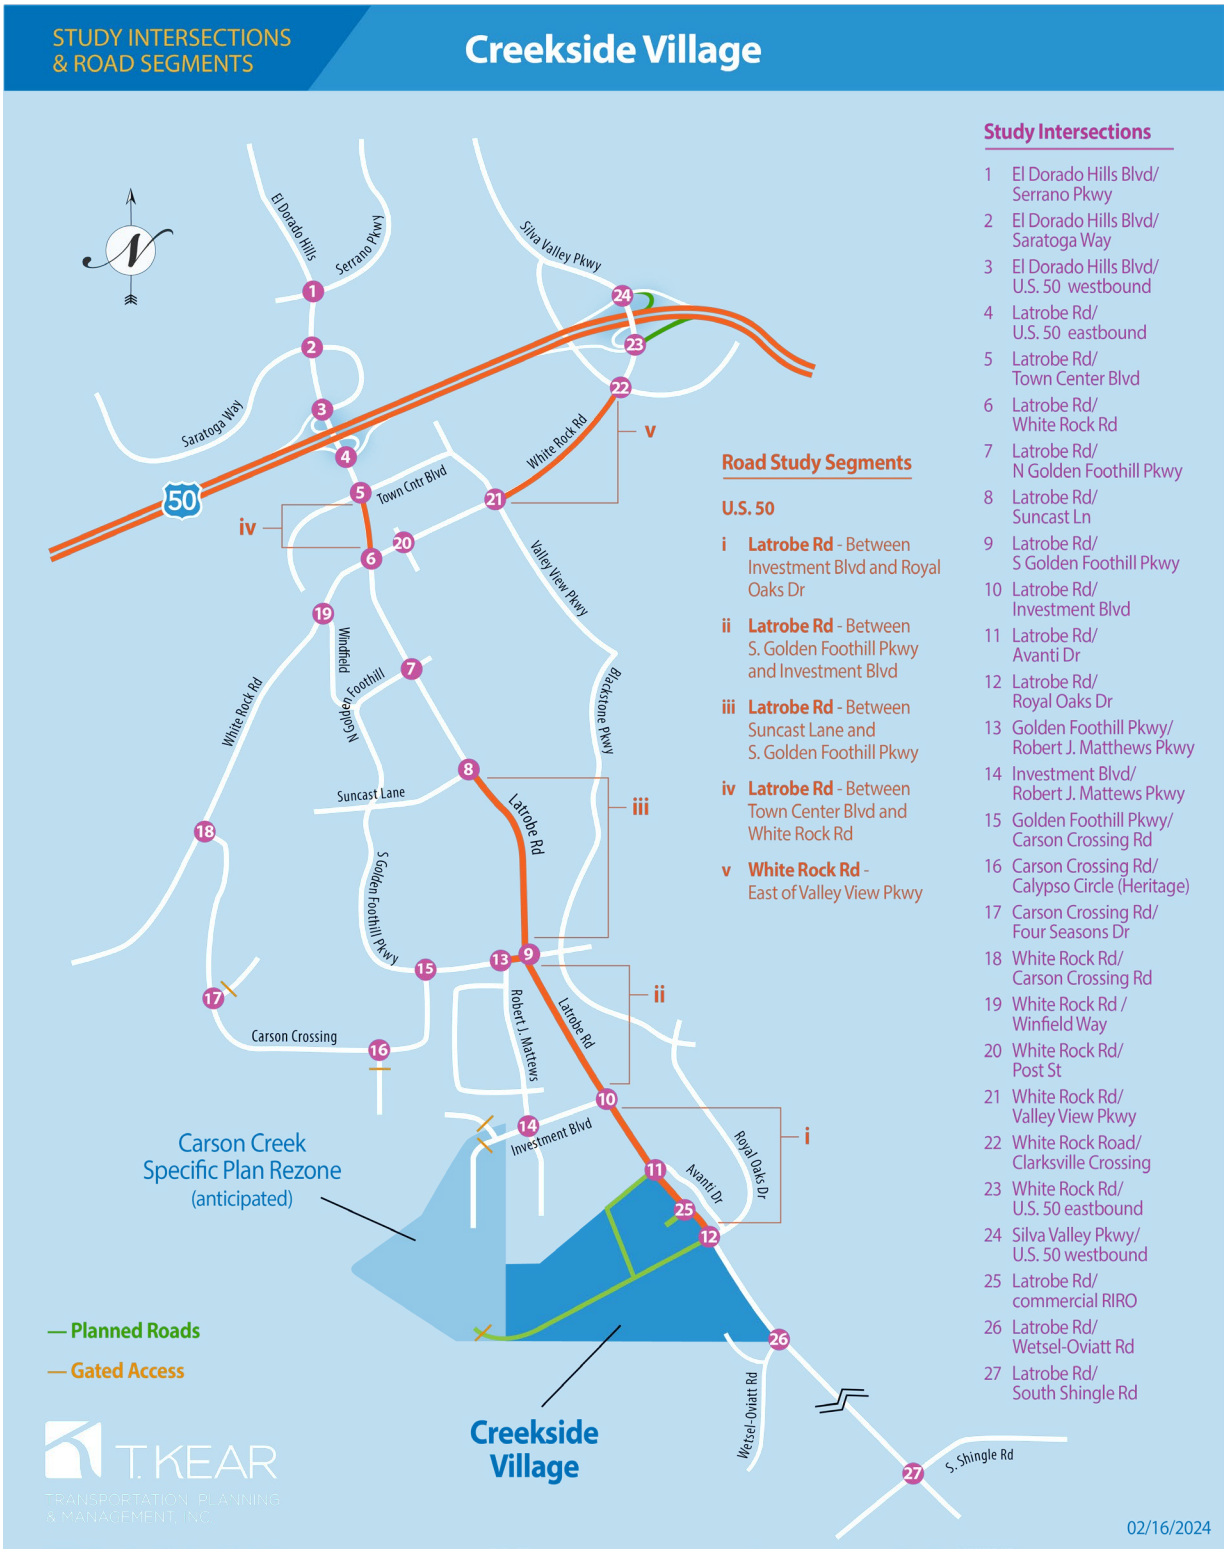

Figure ES-3 Study area

Project Trip Generation and Distribution

Anticipated Traffic generation by the Project reflects both trips generated by the Project itself, and, avoided trips in 2033 and 2040 from the commercial land uses that the El Dorado County TDM assumes will take place on the Project parcels.

Project Trips

Anticipated trips are based on Institute of Transportation Engineers (ITE) Trip Generation Manual, 11th Edition (2021). **Table ES-1** shows anticipated Project Trip Generation. To be conservative, trip generation estimates are generally based on the higher rates for the peak hour of the generator rather than the peak hour of adjacent street traffic. The higher of either the average trip generation rate or equation-based trip generation rate was also used.

Avoided Trips

Avoided trips are additional peak hour trips that the TDM assumes in the future from growth within the Project TAZ. These avoided trips were estimated by running the TDM with and without assumed 2020[1] through 2040 employment growth for the effected portion of the Project's transportation analysis zone (TAZ 612). Creekside Village replaces 62% of the available land in TAZ 612 (**Figure ES-4**), therefor 62% of the employment growth was eliminated from TAZ 612 when estimating the number of avoided trips using the TDM. TDM employment assumptions for TAZ 612 are shown in **Table ES-2** below, along with the resulting avoided trips.

Trip Distribution with Adjustment for Latrobe Elementary

Project trip distribution was based on the El Dorado County TDM, observed counts, prior studies in the vicinity of the Project, and consultation with El Dorado County staff. Additional adjustments were made to reflect school trips to Latrobe Elementary based on student generation statistics published by the school district. Trip distribution is shown in **Figure ES-5**.

[1] 2020 is used rather than 2023 because the process of purchasing the land and de-annexing it from the business park meant that no new employment on this portion of the model TAZ occurred as of that year.

Table ES-1. 918 Single-family dwelling units trip generation

Land Use	Quantity	Metric	Daily	AM Peak Hour			PM Peak Hour		
				Total	Inbound	Outbound	Total	Inbound	Outbound

FINDINGS

Trip Generation Findings

The 918 dwelling unit Project with 5,400 sqft of neighborhood commercial space is anticipated to generate 834 AM peak hour trips, 955 PM peak hour trips, and 10,040 daily trips. Those trips are largely offset by 2040 through forgone commercial development on the 207.9 ac project site which the travel demand model anticipated would have generated 733 AM peak hour trips, 829 PM peak hour trips, and 9,415 daily trips. Net, the Project therefore adds only 101 AM peak hour trips during the AM peak hour, 126 trips during the PM peak hour, and 625 daily trips over what was assumed in travel demand model horizon year. Trip Generation is discussed in more detail in **Section 5.1**.

CEQA Findings

VMT: The 918 dwelling unit residential component of the Project is anticipated to have home based VMT per capita of 13.6 in 2023 and 13.1 in 2040, compared to a significance threshold (calculated using the same methodology and data as the Project impacts) of 17.3. Therefore the residential component of the Project has a **less-than significant** impact on VMT. The 5,400 sqft neighborhood commercial local serving retail component of the Project offers improved destination choices for local residents and can be assumed to have a **less-than significant** impact on VMT. The VMT analysis is discussed in **Section 3.4** and **Section 11**.

Transit: The Project does not interfere with existing or proposed transit service and has a **less-than-significant** impact on transit. Transit impacts are briefly discussed in **Section 12**.

Bicycles and Pedestrians: The Project enhances bicycle and pedestrian access to the El Dorado Hills Business Park and does not interfere with existing or planned bicycle and pedestrian facilities. The Project includes a variety of bike and pedestrian amenities providing connections both within the planned community and externally to the existing bike and pedestrian facilities along Latrobe Road and Royal Oaks Dr. Therefore, the Project has a **less-than-significant** impact on bicycle and pedestrian facilities. Bicycles and pedestrian impacts are briefly discussed in **Section 12**.

General Plan Level-of-Service and Queue Length Findings

Deficiencies that are caused or worsened by the Project, and abatement measures to address said deficiencies, are identified for existing 2023 plus Project, Existing Plus Approved Projects (EPAP) 2033 plus Project, and cumulative 2040 plus Project conditions.

Throughout this document, segment deficiencies are numbered using the segment number (i through v) and a year code (2023 = “A”, 2033 = “B”, and 2040 = “C”). Intersection abatement measures are numbered using the intersection number (1-27) and the year code (A, B, or C). Locations with project causes new or worsen existing deficiencies are listed in **Table ES-2**. The first occurrence of an abatement measure is listed in **bold red** font, subsequent applications of an abatement measure are listed in a regular typeface. Abatement measures for existing 2023 plus Project conditions are described in more detail in **Section 6.3**, EPAP 2033 plus Project conditions in **Section 8.3**, and Cumulative 2040 plus Project in **Section 10.3**.

1.0 INTRODUCTION AND BACKGROUND

This transportation impact study (TIS) analyzes the proposed Creekside Village Specific Plan (the Project) for consistency with the El Dorado County General Plan level-of-service policies and for vehicle miles of travel (VMT) impacts under the California Environmental Quality Act (CEQA). Where appropriate, abatement measures are provided to address any deficiencies relative to adopted General Plan policies and mitigation measures are provided to address any potentially significant impacts under CEQA.

Creekside Village (the Project) is a planned community with housing, parks, open space, and neighborhood commercial located in the El Dorado Hills community region of El Dorado County. Requested entitlements include a tentative subdivision map allowing for up to 918 single family homes and 5,400 sqft of neighborhood commercial, a General Plan amendment, and a new Specific Plan. The Project proposes 668 residential lots, and two large lots for the remaining 250 single family homes on a vacant 207.9 acre parcel located on the southern end of the El Dorado Hills Business Park, south of Investment Boulevard and west of Latrobe Road. The Project parcels are APNs 117-010-032 and a portion of 117-010-031. A vicinity map is shown in **Figure 1**. The Project parcel is split by a creek, with most of the housing located on the south side of the creek. The north side of the creek would contain 87 of the residential lots and open space, and the south side of the creek would include 581 of the residential lots plus two large lots for the remaining 250 dwelling units.

The Project parcel has been de-annexed from the business park, and the applicant is requesting to change its General Plan land use designation and zoning from Research and Development (R&D) to Adopted Plan (AP) with Single Family Low Density (CV-SFL), Single Family Medium Density (CV-SFM) residential, and Neighborhood Commercial (CV-NC), Open Space (CV-OS) and Parks (CV-P) land use designations within the plan area.

Project Description

Figure 2 provides a preliminary site plan for the Project. The Project would:

- Amend the General Plan, change the zoning designation, and adopt a specific plan to allow the development of 207.9 acres for residential, neighborhood commercial and related uses on land that is undeveloped and currently designated as industrial and R&D.
- Create a Tentative Map for 668 homesites, 2 large-lot parcels that are analyzed as a combined total of 250 additional homes and 5,400 sqft of neighborhood commercial (918 homes and 5,400 sqft of commercial in total). The Tentative Map would include additional lots associated with parks and open space and various landscape lots.

Access to the Project will be provided by three roadways, a commercial driveway and a multiuse trail:

- The primary access will be from Latrobe Road via an extension of Royal Oaks Drive. The intersection of Latrobe Rd/Royal Oaks Dr is proposed to remain as full access, This intersection is analyzed with its existing two-way-stop-control, with signal-controlled recommended as an abatement to maintain acceptable level-of-service.

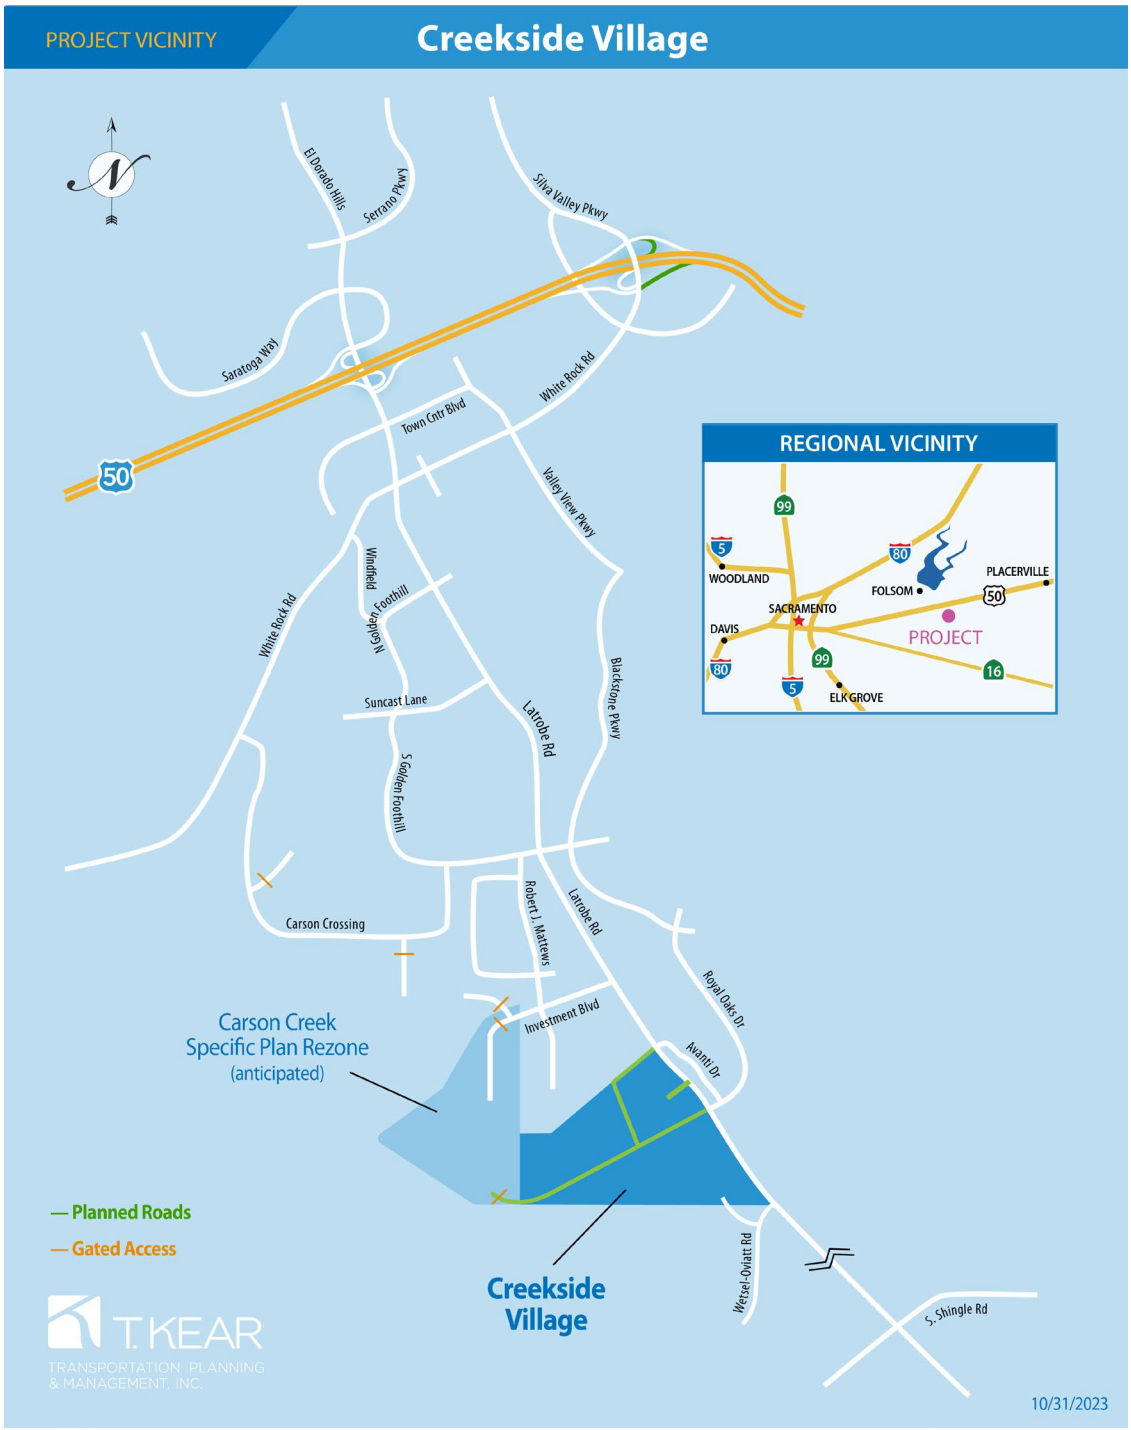

Figure 1. Project location map

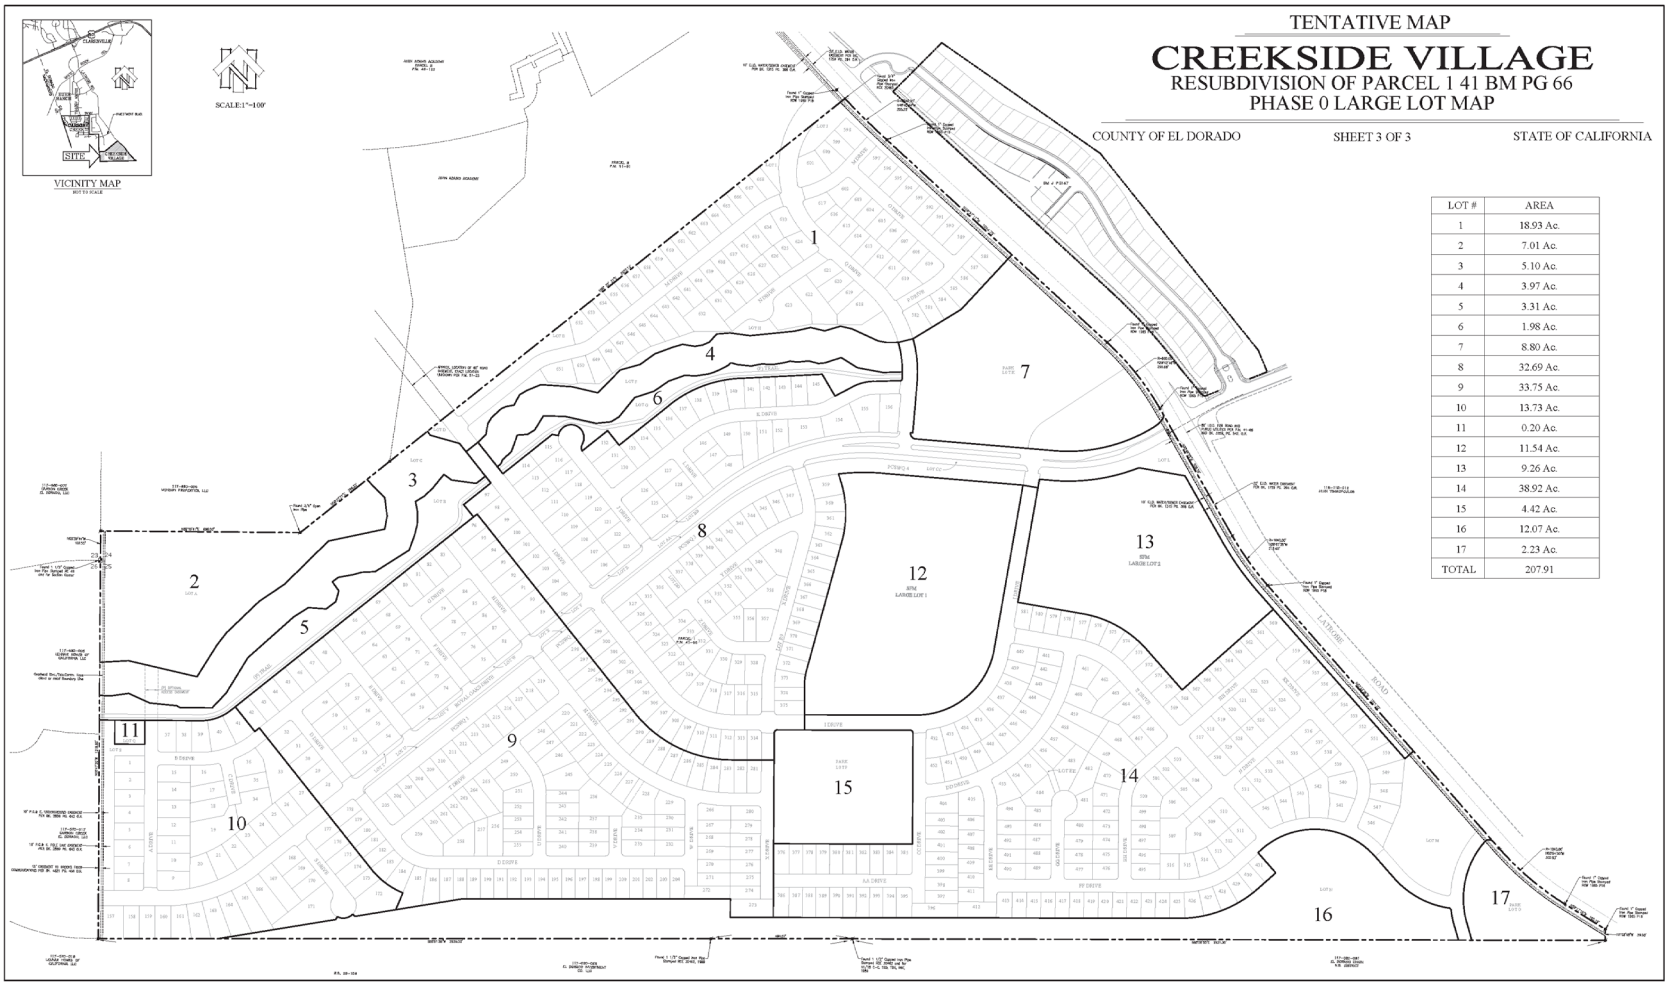

Figure 2. Preliminary Project site plan

- The first secondary access road is an extension of Avanti Dr. The intersection is proposed as full access with side-street-stop-control.
- The second secondary access is via a connection to Wetsel-Oviatt Road.
- A right-in/right-out (RIRO) commercial driveway is proposed providing the neighborhood commercial site with direct access to southbound Latrobe Rd. The commercial driveway would be located just north of the existing Latrobe Rd/Royal Oaks Dr intersection.
- A pedestrian and bicycle access route connecting to Robert J. Mathews Parkway will provide enhanced non-motorized access to the medical, education, fitness, service, food, and retail options within the El Dorado Hills Business Park.

Traffic is distributed across the driveways based on the rough proximity of each land use to the access points.

General Plan Consistency Considerations for Cumulative Impact Analysis

Projects that are consistent with the General Plan, and cumulative travel demand model assumptions, may rely upon the General Plan EIR's cumulative analysis. The Project parcel is currently designated as industrial and R&D in the General Plan and zoned accordingly. The Project requires a general plan amendment and rezoning to accommodate the proposed residential uses and is therefore not consistent with the General Plan or its related CEQA documents. Project-level cumulative analysis is included in this TIS.

2.0 STUDY AREA

The TIS area (**Figure 3**), which includes portions of White Rock Road, Latrobe Road, El Dorado Hills Boulevard, Silva Valley Parkway and US 50 in El Dorado County, California, was selected with consideration of the requirements of CEQA and General Plan policies TC-Xd and TC-Xe. Specifically, the study was selected to include El Dorado County locations where Project traffic would constitute:

D. A two percent increase in traffic during the AM peak hour, PM peak hour, or daily; or,
E. The addition of 100 or more daily trips; or,
F. The addition of 10 or more trips during the AM peak hour or the PM peak hour.

2.1 Project Area Roadways

The following are descriptions of the primary roadways in the project vicinity.

- **El Dorado Hills Boulevard** is a north-south arterial roadway that extends from Green Valley Road on the north to US 50 on the south where it continues as Latrobe Road. North of Green Valley Road it continues as Salmon Falls Road. Between US 50 and Saratoga Way El Dorado Hills Boulevard is a six-lane urban arterial, between Saratoga Way and Serrano Parkway it is a five-lane urban arterial, north of Serrano Parkway it continues as a four-lane urban arterial until Governor Drive, and then as a two-lane urban arterial northward to Green Valley Road. Just north of US 50, El Dorado Hills Boulevard carries approximately 28,000 vehicles per day.

- **Latrobe Road** is a north-south arterial roadway that provides a primary connection to US-50 for western El Dorado County. It extends from US 50, where it continues as El Dorado Hills Boulevard, to State Route 16. It is a six-lane urban arterial road between US 50 and White Rock Road. Latrobe Road is a four-lane urban arterial road between White Rock Road and Golden Foothill Parkway (south). It is a two-lane urban road from Golden Foothill Parkway (south) to Investment Boulevard and a two-lane rural road south of Investment Boulevard. North of White Rock Road, Latrobe Road carries approximately 32,500 vehicles per day with three through travel lanes in each direction. South of US 50, El Dorado Hills Boulevard becomes Latrobe Road.

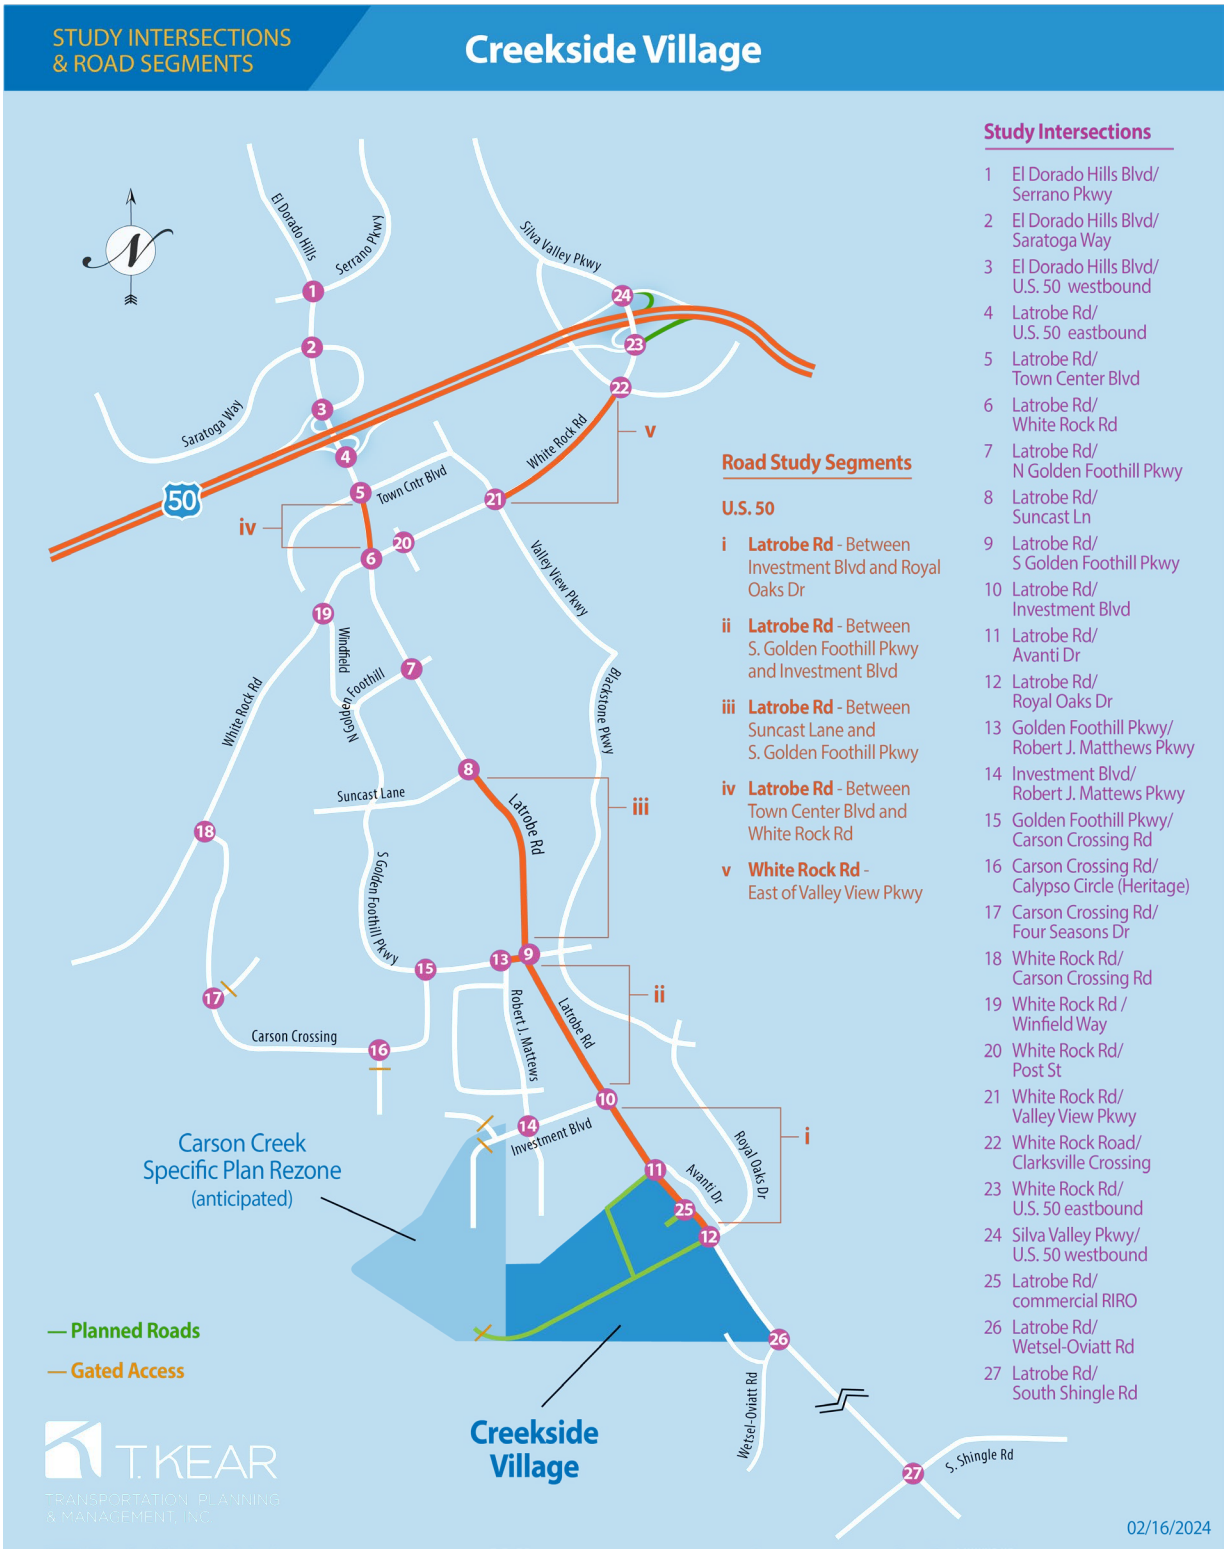

Figure 3. Study area

- **Park Drive** is a two-lane local roadway serving the shopping center located north of US 50 at the El Dorado Hills Boulevard interchange. Park Drive intersects El Dorado Hills Boulevard at two locations, opposite the reconstructed US 50 westbound ramps and then approximately 1000 feet to the north where Saratoga Way intersects El Dorado Hills Boulevard. Park Drive serves about 12,000 vehicles per day east of El Dorado Hills Boulevard.

- **Silva Valley Parkway** is a north-south roadway that generally runs parallel to El Dorado Hills Boulevard north of US 50. The General Plan identifies Silva Valley Parkway as a four-lane divided road. A new US 50 interchange at Silva Valley/White Rock Road opened in 2016, which provides a realigned Silva Valley Parkway that connects to the existing four-lane Silva Valley Parkway to the north and the existing two-lane White Rock Road on the south. The new interchange is located east of the existing underpass, which will be preserved for bike and pedestrian access. Silva Valley Parkway serves about 17,000 vehicles per day north of US 50.

- **White Rock Road** is an east-west arterial that extends through several jurisdictions from Silva Valley Parkway in El Dorado County to International Drive in Rancho Cordova. Within El Dorado County, it is a two-lane urban arterial road from the Sacramento County – El Dorado County line to Manchester Drive, a four-lane urban arterial between Manchester Drive and Post Street, and a two-lane urban arterial road between Post Street and Silva Valley Parkway. White Rock Road carries approximately 8,000 vehicles per day at the Sacramento County – El Dorado County Line and 17,000 vehicles per day just west (south) of the Silva Valley Parkway Interchange.

- **Investment Boulevard:** Is a two-lane local road, running east-west within the El Dorado Hills Business Park. It connects the eastern edge of the CCSP to Robert J. Mathews Parkway and Latrobe Road. Curb and gutter are provided. There are no bike lanes or sidewalks. Twenty-five-foot Lane widths are provided within the business park.

- **Robert J Mathews Parkway:** Is a two-lane local road, running north-south within the El Dorado Hills Business Park. It connects Investment Boulevard to Golden Foothill Parkway on the north. Curb and gutter are provided. There are no bike lanes or sidewalks. Twenty-five-foot Lane widths are provided within the business park. The Project includes an access connecting to Robert J. Mathews Parkway, to encourage residents to walk and bike to the plethora of schools, gyms, service and retail businesses and to minimize local traffic's use of Latrobe Road.

- **Royal Oaks Drive:** is a two-lane collector road within the Blackstone neighborhood of the Valley View Specific Plan. It provides the southernmost access for Blackstone to Latrobe Road. Royal Oaks Drive includes class 2 bike lanes, curb and gutter, and sidewalks fronting developed parcels.

2.2 Transit Service

El Dorado Transit is the primary public transit service provider in El Dorado County and provides local transit services within and between community areas of the county including Placerville and

Cameron Park. Within the study area, El Dorado Transit provides commuter service connecting a park-and-ride lot, located at the intersection of Latrobe Road and White Rock Road, with downtown Sacramento employment, and several locations in Folsom including the Iron Point Light Rail Station, Ingersoll Way & Parker Drive, Intel, Kaiser Permanente, and Folsom Lake College. Dial-a-ride services are also provided within many portions of El Dorado County, including El Dorado Hills.

2.3 Bicycle Facilities

There are existing class II bike lanes along White Rock Road, Silva Valley Parkway, Latrobe Road, Valley View Parkway, and Blackstone Parkway. A class 1 bike trail fronts the east side of Latrobe Road within the Valley View Specific Plan area between Royal Oaks Drive and the El Dorado Irrigation water treatment plant (4625 Latrobe Road). A short section of Class I trail also connects the Carson Crossing specific plan area to the El Dorado Hills Business Park.

The 2020 Active Transportation Plan[2] calls for a pedestrian overcrossing of US 50 connecting Class 1 bike and pedestrian trails through the Town Center shopping district with the bike and pedestrian trails adjacent to the Raley's shopping center north of US 50. There are also plans for a class 1 shared use path along the Placerville & Sacramento Valley Railroad rail line running to the Southeast from the City of Folsom and skirting the southwestern edge of the Carson Creek Specific Plan area.

2.4 Study Intersections and Segments

The following intersections are included in this evaluation and are marked in the preceding **Figure 3**:

1. El Dorado Hills Blvd/Serrano Pkwy
2. El Dorado Hills Blvd/Saratoga Way
3. El Dorado Hills Blvd/US 50 WB
4. El Dorado Hills Blvd/US 50 EB
5. Latrobe Road/Town Center Boulevard
6. Latrobe Road/White Rock Road
7. Latrobe Road/Golden Foothill Parkway (N)
8. Latrobe Road/Suncast Lane
9. Latrobe Road/ Golden Foothill Parkway (S)
10. Latrobe Road/Investment Boulevard
11. Latrobe Road/Avanti Drive
12. Latrobe Road/Royal Oaks Drive
13. Golden Foothill Pkwy/Robert J. Mathews Pkwy
14. Investment Boulevard/Robert J. Mathews Pkwy
15. Golden Foothill Parkway/Carson Crossing Road
16. Carson Crossing Road/Calypso Circle
17. Carson Crossing Road/Four Seasons Drive

[2] El Dorado County Transportation Commission (2020) El Dorado County Active Transportation Plan, https://www.edctc.org/atp-plans.

18. White Rock Road/Carson Crossing Road
19. White Rock Road/Windfield Way
20. White Rock Road/Post Street
21. White Rock Road/Valley View Parkway
22. White Rock Road/Clarksville Crossing
23. Silva Valley Parkway/US 50 EB ramps
24. Silva Valley Parkway/US 50 WB ramps
25. Latrobe Road/Commercial RIRO driveway
26. Latrobe Road/Wetsel-Oviatt Road
27. Latrobe Road/South Shingle Road

Merge/diverge/weave analysis for traffic entering and exiting US 50 will be conducted on US 50 at the following locations:

Westbound US 50

1. Bass Lake Rd to Silva Valley Pkwy (basic)
2. Silva Valley Pkwy offramp (diverge)
3. Silva Valley Pkwy offramp to the (future) loop onramp (basic)
4. (Future) Silva Valley loop onramp (merge)
5. Silva Valley Pkwy slip onramp to El Dorado Hills Blvd offramp (weave)
6. El Dorado Hills Blvd offramp to onramp (basic)
7. El Dorado Hills Blvd onramp (merge)
8. El Dorado Hills Blvd to EDC line (basic)

Eastbound US 50

9. EDC line to Latrobe Rd (basic)
10. Latrobe Rd slip offramp (diverge)
11. Latrobe Rd loop offramp (diverge)
12. Latrobe Rd offramp to onramp (basic)
13. Latrobe Rd to Silva Valley Pkwy (weave)
14. Silva Valley Pkwy offramp to loop onramp (basic)
15. Silva Valley Pkwy onramp (merge)
16. (Future) Silva Valley slip onramp (merge)
17. Silva Valley Pkwy to Bass Lake Rd (basic)

Arterial segment analysis was conducted for the portion of Latrobe Road and White Rock Road:

i. Latrobe Rd between Royal Oaks Dr and Investment Blvd
ii. Latrobe Rd between Investment Blvd and Golden Foothill Pkwy (south)
iii. Latrobe Rd between Golden Foothill Pkwy (south) and Suncast Ln)
iv. Latrobe Rd between White Rock Rd and Town Center Blvd
v. White Rock Rd between Valley View Pkwy to Silva Valley Pkwy

2.5 Study Scenarios

Six scenarios were identified for inclusion in this Traffic Impact Analysis through consultation with the development team and El Dorado County staff. The study determines the weekday AM peak

hour and PM peak hour level-of-service at the study intersections and segments under the following scenarios:

1. Existing 2023 (without Project);
2. Existing 2023 Plus Proposed Project;
3. Existing Plus Approved Projects (EPAP) 2033 (without project);
4. EPAP 2033 Plus Proposed Project;
5. Cumulative 2040 (without project); and
6. Cumulative 2040 Plus Proposed Project.

Existing 2023, and Existing 2023 Plus Proposed Project Scenarios

An analysis of the existing condition, which reflects the traffic volumes and roadway geometry at the time the study was initiated. This scenario is analyzed both with and without Project traffic to identify any Project related traffic deficiencies.

EPAP 2033, and EPAP 2033 Plus Proposed Project Scenarios

These scenarios, with and without the Project, will analyze conditions ten years from the current year calculated using a straight-line interpolation from existing traffic levels to the General Plan's 2040 traffic projections. These scenarios will expressly include an interpolated level of traffic from all projects with development agreements and approved tentative maps.

Cumulative 2040, and Cumulative 2040 Plus Proposed Scenarios

The Cumulative 2040 scenario reflects market rate buildout of the nearby specific plan areas and approved tentative maps in the El Dorado Hills area. This scenario was analyzed both with and without Project traffic to identify any Project related traffic deficiencies.

CEQA VMT analysis was performed for the existing and cumulative analysis scenarios.

3.0 TRAFFIC IMPACT ANALYSIS METHODOLOGY

This section provides a process overview, discusses traffic forecasting, and describes the methods/criteria used to evaluate level-of-service. A discussion of the criteria for conformity with General Plan level-of-service policies is included. California Environmental Quality Act (CEQA) analysis of transportation is limited to vehicle miles of travel (VMT). A discussion of CEQA significance thresholds for VMT is also included.

3.1 Process Overview

The overall analysis process was structured to identify potential adverse Project traffic effects relative to either conformity to General Plan level-of-service policies, or CEQA VMT impacts.

- Traffic counts collected in 2023 and crosschecked against historic 2017 and 2018 counts.
- Traffic volumes and turning movements for the Existing 2023 conditions were determined from traffic counts. Future-year volume forecasts were based on growth estimates from the El Dorado County travel demand mode (TDM)[3] applied to the observed count data. The NCHRP 255 procedure[4] was used to refine forecasted turning movements.
- Study intersections, arterial segments, and the US 50 segments were analyzed both with and without the proposed Project to identify potential Project impacts.
- General Plan level-of-service thresholds were based on El Dorado County General Plan, Transportation and Circulation Element policies TC-Xa (Measure Y and Measure E policies), TC-Xd and TC-Xe.
- CEQA thresholds of significance for VMT are based on guidance adopted by the Board of Supervisors on October 6, 2020.

3.2 Traffic Forecasting Methodology

The TDM catalog "EDC_CAT_082118" was used to generate existing and future traffic volume estimates for calculation of growth factors, and to estimate the distribution for trips generated by the Project. The TDM includes a 2018 baseline and 2040 cumulative scenario. Straight line interpolation was applied to estimate incremental growth from the base year through 2023, 2030, and 2040.

TDM Segment Level Calibration

The TDM was calibrated to local roadways by estimating and applying link level adjustment factors based on the difference between traffic counts and a 2023 TDM scenario. That calibration factor is applied to the 2023, 2033, and 2040 TDM results to improve the accuracy of the volume forecasts at each intersection. The NCHRP 255 process was used in combination with observed turning movements, and the calibrated 2020, 2030, and 2040 model volumes, to refine turning movements for no-Project conditions.

[3] El Dorado Travel Demand Model version "EDC_CAT_082118".
[4] Transportation Research Board (1982) National Cooperative Highway Research Program Report 255, Washington D.C.

Baseline 2016 TDM Network

The TDM network within the Folsom Ranch area for the 2018 baseline model runs assumed that traffic crossing the El Dorado County Line on White Rock Road would use Scott Road (AKA East Bidwell Street) for US 50 access. Placerville Road and Alder Creek Parkway to East Bidwell Street provides a more direct path. This shorter route exists today and Folsom's General Plan update (adopted 8/28/2018) preserves that Placerville Road-Alder Creek Parkway route through the Folsom Plan Area. Therefore, these network links were connected and turned on for the baseline 2018 model runs.

2040 Traffic Forecasts and Interpolation of 2030 Link Volumes

Growth in traffic for the EPAP scenario was based on linear interpolation of segment volumes between the Baseline 2018 scenario (with the Saratoga Way extension), and a cumulative (2040) TDM scenario. Land use was checked to ensure that it reflected a reasonable degree of buildout of the nearby specific plan areas and to ensure that interpolation of that land use would account for all approved tentative maps in the El Dorado Hills area.

- The model reflects buildout of the Carson Creek Specific Plan housing. There are 1,700 age-restricted dwelling units currently allowed within the CCSP. Age restricted dwelling units have lower trip generation than traditional homes[5] and the TDM reflects this by coding the land use as a smaller number of traditional homes. The 1,700 age-restricted homes would be reflected as 765 traditional single-family homes in the TDM. The model includes 1,042 homes in the CCSP area (reflecting approximately 2315 age-restricted homes). The County's buildout estimate is conservatively high and was not adjusted.
- Buildout of the El Dorado Hills Specific Plan is included in the 2040 model land use.
- Buildout of Promontory is included in the 2040 model land use.
- Buildout of Valley View Specific Plan (VVSP) (Blackstone) White Rock Village and West Valley Village is included in the 2040 model land use.
- Bass Lake Hills is a little under 85% built out (1,217 DUs out of 1,448) by 2040. Based on the rate of buildout of the Bass Lake Hills Specific Plan area the assumption of 85% buildout appears conservative and was not increased.

The 2040 model network was also updated to include the Mangini Parkway connection between Placerville Road and East Bidwell Street in the Folsom Plan area.

3.3 Intersection Turn Movement Forecast Methodology

Directional link level volume estimates from the 2018 and 2040 TDM model forecasts were used to scale traffic counts using the NCHRP 255 methodology. The methodology was applied through the TurnsW32 v2.0 software[6]. TDM result plots are provided in **Appendix C**. The Furness reports

[5] Age restricted housing generates about 45% of the daily trips of traditional housing, 33% of the AM peak hour trips, and 30% of the PM peak hour trips (Source: ITE Trip Generation Manual, 10th edition).
[6] Dowling Associates (2002), http://sites.kittelson.com/kittelsondownloads/Downloads/Download/12544.

for the AM and PM peak hour turn movement forecasts under EPAP 2033 and Cumulative 2040 conditions are provided in **Appendix D**.

3.4 VMT Modeling Methodology and CEQA Significance Thresholds

VMT was analyzed based on extracting information from an unmodified version of the El Dorado County TDM. Before discussing the specific approach, background information on how the El Dorado County TDM works is appropriate. The TDM is a traditional trip based four-step travel demand model (trip generation, distribution, mode choice and assignment) with a 2018 base year and 2040 horizon year. Trip productions and attractions are estimated at the transportation analysis zone (TAZ) level. Within developed portions of the County, TAZs are roughly neighborhood size areas for which population socioeconomic data is tabulated. (TAZs are larger in less populated rural portions of the County). Trips are estimated by trip purpose based on eight purposes:

- Home based work,
- Home based shop,
- Home based school,
- Home based other,
- Work other,
- Other-other,
- Commercial two axle, and
- Commercial 3+ axle

As trips are estimated and processed by the model, they are converted from productions and attractions by purpose to origins and destinations by class (single occupancy, shared ride, commercial two-axle and commercial three-plus-axle. Trips are then assigned to the network by class using the origin-destination data. Through trips are also assigned based on an external origin-destination table. Both the production-attraction and origin-destination data are preserved in large matrices which can be leveraged to disaggregate the model's VMT estimates into VMT by trip purpose for evaluating the residential portion of the Project.

There are 674 TAZs in the model (25 of which represent external gateways) connected by 7,171 road segments. Each Taz is represented by a centroid corresponding to the approximate center of travel activity with the TAZ. Each road segments includes relevant characteristics (location, uncongested speed, number of lanes, capacity, etc.) that allow the model to estimate travel times as trips are assigned to the network. **Figure 4** depicts the model road network with dots reflecting the centroid of each TAZ and red dots reflecting the model gateways. TAZ 612 where the project is located is represented by a red star. **Figure 5** then shows the shape and extent of TAZ's near the Project site, with TAZ 612 (where the Project is located) and adjacent residential TAZes which are predominantly residential (167 and 611) labeled.

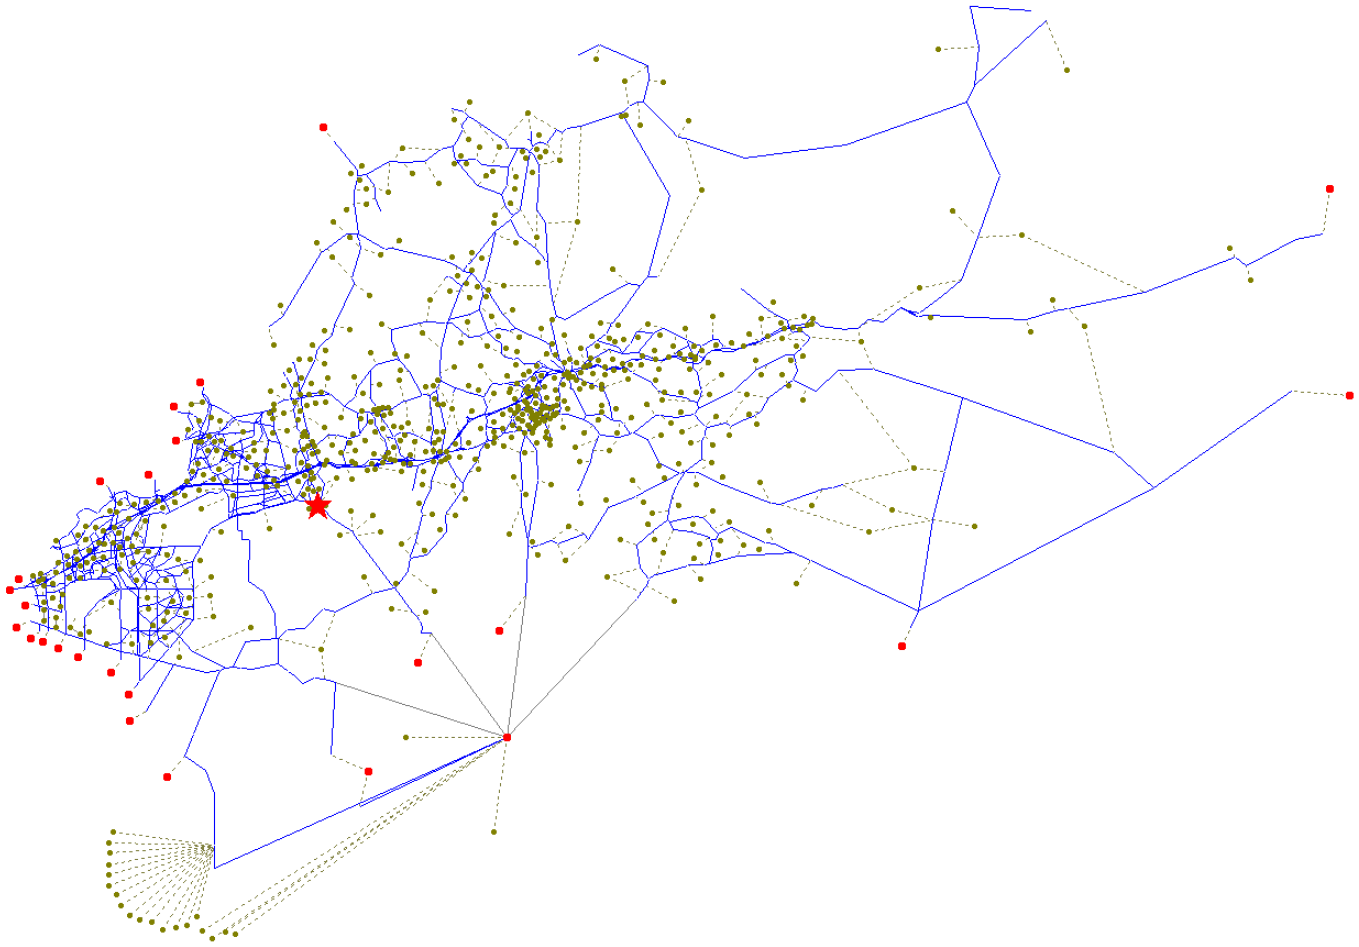

Figure 4. Travel demand model network and zone layout, Project TAZ (#612) shown as a star

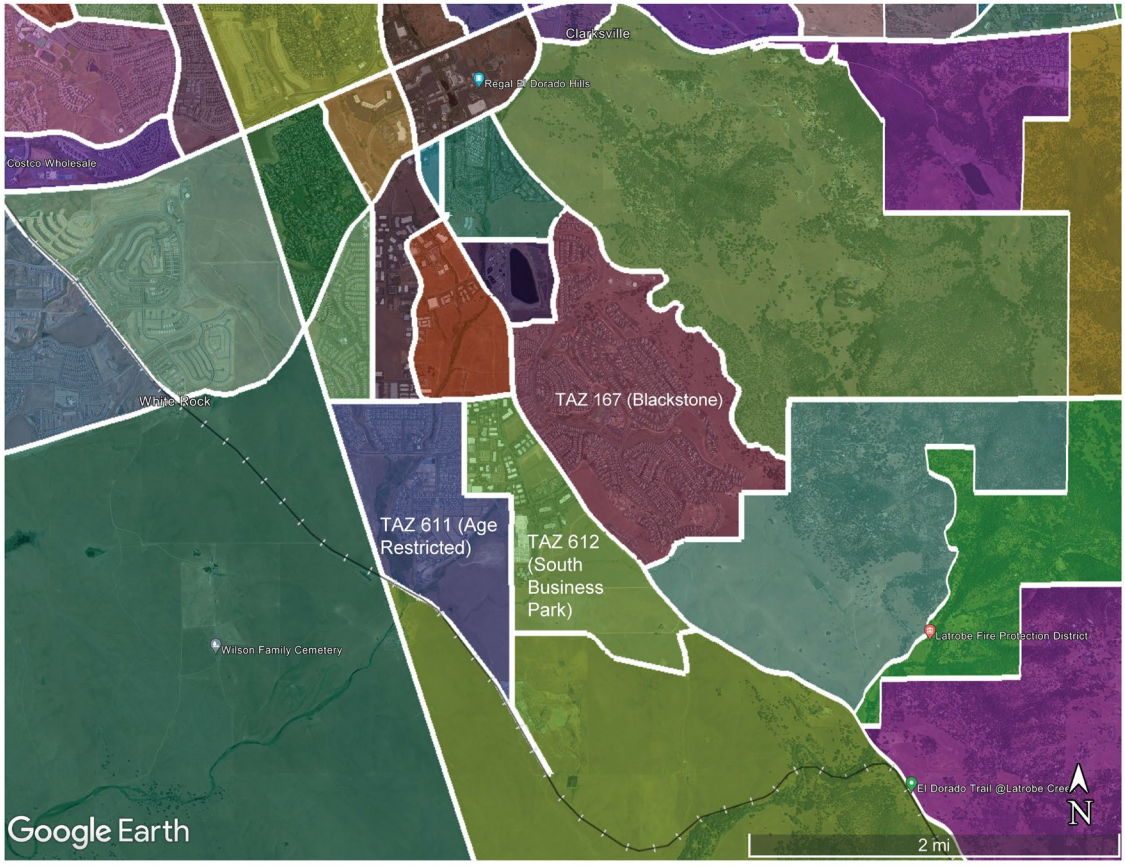

Figure 5. TAZ layout in the Project vicinity.

A three-step process for the baseline and cumulative analysis years was used to estimate per capita home based VMT.

Step 1. This step estimated TAZ[7]-to-TAZ distances from TDM skims, then combined those data with the number of TAZ-to-TAZ trips from the model's OD tables to estimate TAZ-to-TAZ VMT for drive along, shared ride, and commercial vehicles. Using the loaded networks accounts for any increases in trip distance that may result from congestion. In this step, model gateway trip lengths were adjusted based on **Table 1**. Those adjustments reflect the anticipated trip lengths for travel to/from El Dorado County from other parts of the region and state. This adjustment ensures that the TDM accounts for the full length of trips entering and exiting the County. The lengths for intrazonal trips (which have their origin and destination within the same TAZ) were estimated as half of the length of the

[7] TAZs are "transportation analysis zones", which are typically neighborhood size regions for which land use and demographic details, such as housing, employment, and population data are tabulated. The El Dorado County TDM has 674 TAZs.

TAZ's shortest centroid connector, which is the industry standard practice, and consistent with the County's VMT estimates.

Table 1. Average trip-length adjustments for TDM gateways

ID	Gateway Location	Average Additional Travel Distance (miles)	
		Internal to External (IX) Trips	External to Internal (XI) Trips
650	US 50 (to/from the west)	12.41	13.08
651	Dillard Rd	4.11	3.96
652	Sloughhouse Rd	0.00	0.00
653	Grant Line Rd/Sunrise Blvd	31.33	20.39
654	Excelsior Rd	11.07	10.38
655	Bradshaw Rd	11.32	8.80
656	Mayhew Rd	0.00	0.00
657	Jackson Rd (SR 16)	6.91	6.40
658	Local access between Bradshaw Rd and Excelsior Rd	0.00	0.00
659	Eagles Nest Rd	0.00	0.00
660	Folsom Blvd	7.73	7.19
661	Kiefer Blvd	8.88	8.54
662	Sunrise Blvd	5.47	6.14
663	Hazel Ave	8.16	5.41
664	Folsom Auburn Rd	10.17	12.66
665	Greenback Ln	5.43	5.17
666	Oak Ave	6.97	7.44
667	SR 49 (to/from the south)	0.00	0.00
668	Jackson Rd/Latrobe Rd/SR 49/Omo Ranch Rd	15.96	14.21
669	Jackson Rd	0.00	0.00
670	Latrobe Rd	0.00	0.00
671	SR 49 (to/from the north)	18.61	16.28
672	SR 88	0.00	0.00
673	N. South Rd	3.73	3.82
674	US 50 (to/from the east)	19.21	18.38

Note: Internal to External (IX) trips are trips that begin inside the El Dorado County model area and end outside. External to Internal (XI) trips are trips that begin outside the El Dorado County model area and end inside. Source: California Statewide Travel Demand Model.

Source: California Statewide Travel Demand Model as cited by Fehr and Peers in the Central El Dorado Hills Specific Plan VMT Analysis Memorandum dated January 5, 2021.

Step 2 This step estimated drive along, shared ride, and commercial vehicle trips by trip purpose from TDM trip production and attraction matrices. Then converted those data to the fraction of trip origins and destinations by trip purpose for each TAZ.

Step 2 The final step used the trip purpose data for each TAZ from task 2 to disaggregate the VMT data for each TAZ from task 1 into TAZ-to-TAZ VMT by trip purpose. Home based trips were assumed to consist of "home-based work", "home-based shop", "home-based school", "home-based other", and a portion of "other-other". Work-based trips were estimated as "work-other" and a portion of "other-other" trips. The other-other trips were allocated to the housing-based or work-based groups based on the ratio of home-other to work-other trips for each TAZ.

The resulting tables were summarized over unincorporated El Dorado County, and for TAZ 167 which was used as a surrogate for the Project[8]. TAZ 167 represents the Blackstone neighborhood across Latrobe Road from the Project. Blackstone was assumed to be the best available proxy for household size and income characteristics of the Project. It is likely a conservative comparison as the Project is envisioned to offer a wider variety of housing options with a diverse mix of housing styles and prices, where Blackstone was aimed at a higher income demographic. VMT per capita tends to increase as household income increases. The TDM is based in the CUBE software package by Bently Systems. Scripts used in each calculation step are provided **Appendix E**.

VMT Thresholds

The County's VMT thresholds set an identifiable metric by which the Project's effect on VMT will be determined to be significant or less-than-significant. Land use specific thresholds have been adopted as follows:

- Residential: 15% below baseline unincorporated countywide VMT per capita,
- Office: 15% below baseline unincorporated countywide VMT per capita,
- Retail: no net increase in VMT.

As noted by the Governor's Office of Planning and Research, adding local-serving retail into the urban fabric improves retail destination proximity. Local-serving retail development tends to shorten trips and reduce VMT. Thus, lead agencies may presume such development creates a less-than-significant impact. (Regional serving retail on the other hand can substitute longer trips for shorter ones, which may lead to a significant impact.)

[8] Using a nearby TAZ as a surrogate avoids the need to artificially manipulate the socioeconomic distribution assumptions for the affected population. When a new TAZ is used, the distribution of socioeconomic characteristics for the households is copied and scaled from a similar nearby TAZ (i.e., TAZ 167). Using the existing TAZ as a surrogate maintains the County wide population and employment control totals that were adopted by the Board of Supervisors when the travel demand model and major TIF update are adopted. Artificially inflating the county wide population and employment can have nonsensical impacts on the resulting per capita VMT estimates.

The Governor's Office of Planning and Research advises lead agencies evaluate each component of a mixed-use project independently and apply the significance threshold for each project type included (e.g., residential and retail). Alternatively, a lead agency may consider only the project's dominant use. In the analysis of each use, a project should take credit for internal capture. Combining different land uses and applying one threshold to those land uses may result in an inaccurate impact assessment.

For Creekside Village, the residential portion of the Project is evaluated based on the 15% reduction from baseline threshold listed above. The retail portion of the Project is considered local-serving retail and presumed to have a less-than-significant impact on VMT.

3.5 Level-of-Service Methodology

Level-of-service (LOS) is a qualitative indication of the level of delay and congestion experienced by motorists using an intersection. Levels-of-service are designated by the letters A through F, with "A" being the best conditions and "F" being the worst (high delay and congestion). Calculation methodologies, measures of performance, and thresholds for each letter grade differ for road segments, signalized intersections, and unsignalized intersections. LOS is analyzed only to demonstrate consistency with the General Plan. LOS is no longer the metric by which traffic impacts are analyzed for CEQA and the LOS discussion is not relevant to assessing impacts to the environment for purposes of CEQA.

Based on guidance from El Dorado County Community Development Agency staff, and the *County of El Dorado Department of Transportation – Traffic Impact Study Protocols and Procedures* (Dated November 2014), the following procedures described below for intersection traffic operations analysis were selected for this study.

Intersection Traffic Operations Analysis

Signalized Intersections

The methodology from Highway Capacity Manual (HCM) 7th Edition[9] are used to analyze signalized intersections. Level-of-service can be characterized for the entire intersection, each approach, or by lane group. Control delay alone (the weighted average delay for all vehicles entering the intersection) is used to characterize level-of-service for the entire intersection or an approach. Control delay and volume to capacity ratio are used to characterize level-of-service for lane groups. The average delay criteria used to determine the level-of-service at signalized intersections is presented in **Table 2**.

[9] TRB (2022) Highway Capacity Manual 7th Edition, Transportation Research Board, Washington D.C.

Table 2. Level-of-service criteria for signalized intersections

Level -of- Service	Description	Average Delay[1] (Sec. /Vehicle.)
A	Very Low Delay: This level-of-service occurs when progression is extremely favorable, and most vehicles arrive during a green phase. Most vehicles do not stop at all.	≤ 10.0
B	Minimal Delays: This level-of-service generally occurs with good progression, short cycle lengths, or both. More vehicles stop than at LOS A, causing higher levels of average delay.	10.1-20.0
C	Acceptable Delay: Delay increases due to only fair progression, longer cycle lengths, or both. Individual cycle failures (*to service all waiting vehicles*) may begin to appear at this level of service. The number of vehicles stopping is significant, though many still pass through the intersection without stopping.	20.1-35.0
D	Approaching Unstable/Tolerable Delays: The influence of congestion becomes more noticeable. Longer delays may result from some combination of unfavorable progression, long cycle lengths, or high v/c ratios. Many vehicles stop, and the proportion of vehicles not stopping declines. Individual cycle failures are noticeable.	35.1-55.0
E	Unstable Operation/Significant Delays: This is considered by many agencies the upper limit of acceptable delays. These high delay values generally indicate poor progression, long cycle lengths, and high v/c ratios. Individual cycle failures are frequent occurrences.	55.1-80.0
F	Excessive Delays: This level, considered to be unacceptable to most drivers, often occurs with oversaturation (i.e., when arrival flow rates exceed the capacity of the intersection). It may also occur at high v/c ratios below 1.00 with many individual cycle failures. Poor progression and long cycle lengths may also contribute to such delay levels.	> 80.0 or v/c >1.0

Note 1: Weighted average of delay on all approaches. This is the measure used by the Highway Capacity Manual to determine level-of-service. Any movement with a volume to capacity ratio (v/c) greater than 1.0 is considered to be level-of-service "F".

Source: Transportation Research Board (2022) Highway Capacity Manual, 6th Edition, Washington D.C., Chapter 19;

Unsignalized Intersections

The methodology from HCM 7th Edition is used for the analysis of unsignalized intersections. For unsignalized intersections, most of the main street traffic is un-delayed, and, by definition, have acceptable conditions. The main street left-turn movements and the minor street movements are all susceptible to delay of varying degrees. Generally, the higher the main street traffic volumes, the higher the delay for the minor movements. Separate methods are utilized for two-way stop-controlled (TWSC) intersections, and all-way stop-controlled (AWSC) intersections.

- **TWSC**: The methodology for analysis of two-way stop-controlled intersections calculates an average total delay per vehicle for each minor street movement and for the major

street left-turn movements, based on the availability of adequate gaps in the main street through traffic. A level-of-service designation is assigned to individual movements or to combinations of movements (in the case of shared lanes) based upon delay, it is not defined for the intersection as a whole. Unsignalized intersection level-of-service reported herein is for each movement (or group of movements) based upon the respective average delay per vehicle. **Table 3** presents the average delay criteria used to determine the level-of-service at TWSC and at AWSC intersections.

- **AWSC:** At all-way stop-controlled intersections, the level-of-service is determined by the weighted average delay for all vehicles entering the intersection. The methodologies for these types of intersections calculate a single weighted average delay and level-of-service for the intersection, as a whole. The average delay criteria used to determine the level-of-service at all-way stop intersections is the same as that presented in **Table 3**. Level-of-service for specific movements can also be determined based on the TWSC methodology.

It is not unusual for some of the minor street movements at unsignalized intersections to have level-of-service D, E, or F conditions while the major street movements have level-of-service A, B, or C conditions. In such a case, the minor street traffic experiences delay that can be substantial for individual minor street vehicles, but the majority of vehicles using the intersection have very little delay. Usually in such cases, the minor street traffic volumes are relatively low. If the minor street volume is large enough, improvements to reduce the minor street delay may be justified, such as channelization, widening, roundabout, or signalization.

Table 3. Level-of-service criteria for unsignalized intersections

Level of Service (LOS)	Description	TWSC[1] Average Delay by Movement (seconds / vehicle)	AWSC[2] Intersection Wide Average Delay (seconds / vehicle)
A	Little or no delay	< 10	< 10
B	Short traffic delay	> 10 and < 15	> 10 and < 15
C	Average traffic delays	> 15 and < 25	> 15 and < 25
D	Long traffic delays	> 25 and < 35	> 25 and < 35
E	Very long traffic delays	> 35 and < 50	> 35 and < 50
F	Extreme delays potentially affecting other traffic movements in the intersection	> 50 (or, v/c >1.0)	> 50

Note 1: Two-way stop-control (TWSC) level-of-service is calculated separately for each minor street movement (or shared movement) as well as major street left turns using these criteria. Any movement with a volume to capacity ratio (v/c) greater than 1.0 is considered to be level-of-service F.

Note 2: All-way stop-control (AWSC) assessment of level-of-service at the approach and intersection levels is based solely on control delay.

Source: Transportation Research Board (2022) Highway Capacity Manual, 7th Edition, Washington D.C., Chapter 20 (TWSC) and Chapter 21 (AWSC).

Signal Warrants

At each unsignalized intersection, the potential need for a traffic signal was evaluated. Traffic signal warrants are a series of standards that provide guidelines for determining if a traffic signal is appropriate. Signal warrant analyses are typically conducted at intersections of uncontrolled major streets and stop sign-controlled minor streets. If one or more signal warrants are met, signalization of the intersection may be appropriate. However, a signal should not be installed if none of the warrants are met, since the installation of signals would increase delays on the previously uncontrolled major street and may increase the occurrence of particular types of accidents.

As stated in revision 8 of the 2014 California Edition of the Manual on Uniform Traffic Control Devices (California MUTCD 2014)[10], "*The investigation of the need for a traffic control signal shall include an analysis of factors related to the existing operation and safety at the study location and the potential to improve these conditions, and the applicable factors contained in the following traffic signal warrants:*

- *Warrant 1, Eight-Hour Vehicular Volume*
- *Warrant 2, Four-Hour Vehicular Volume*
- *Warrant 3, Peak Hour*
- *Warrant 4, Pedestrian Volume*
- *Warrant 5, School Crossing*
- *Warrant 6, Coordinated Signal System*
- *Warrant 7, Crash Experience*
- *Warrant 8, Roadway Network*
- *Warrant 9, Intersection Near a Grade Crossing*

The satisfaction of a traffic signal warrant or warrants shall not in itself require the installation of a traffic control signal."

Consistent with the industry standard of practice, this Traffic Impact Analysis did not evaluate the full panoply of warrants for traffic signals, but instead focused on the peak hour warrant. The MUTCD states that, "*This [peak hour] signal warrant shall be applied only in unusual cases, such as office complexes, manufacturing plants, industrial complexes, or high-occupancy vehicle facilities that attract or discharge large numbers of vehicles over a short time.*" So, the peak hour warrant is being used in this impact analysis study as an "indicator" of the likelihood of an unsignalized intersection warranting a traffic signal in the future. Intersections that exceed the peak hour warrant are considered (for the purposes of this impact analysis) to be likely to meet one or more of the other signal warrants (such as the 4-hour or 8-hour warrants). This peak hour analysis is not intended to replace a rigorous and complete traffic signal warrant analysis by the responsible jurisdiction.

[10] Caltrans (2024) California Manual on Uniform Traffic Control Devices - FHWA's MUTCD 2009 Edition as amended for use in California - 2014 Edition - Revision 8, January 11, 2024. Section 4C.

Unsignalized intersections were evaluated using the Peak Hour Volume Warrant (Warrant No. 3) in the California MUTCD 2014. The Peak Hour Volume Warrant was applied where the minor street experiences long delays in entering or crossing the major street for at least one hour in a day.

Even if the Peak Hour Volume Warrant is met, a more detailed signal warrant study is recommended before a signal is installed. The more detailed study should consider volumes during the daily peak hours of roadway traffic, pedestrian traffic, and accident histories.

El Dorado County Roadway Segments

Several methods are available to evaluate roadway segments. The methodology selected for this analysis was chosen to be consistent with the 2014 El Dorado County Transportation Impact Study Guidelines.

Table 1 of that document contains the maximum flow rates for each level-of-service grade as a function of roadway classification. Those level-of-service criteria are shown in **Table 4**.

Table 4. Level-of-service criteria for county roadway segments

		HCM 2010 Planning Level Volumes[1]				
Code	**Functional Class Codes (Updated to HCM 2010)**	**A**	**B**	**C**	**D**	**E**

Arterial LOS based on HCM 2010, Exhibit 16-14, K-factor of 0.09, posted speed 45 mi/h

Volumes are for both directions unless noted

Caltrans Merge/Diverge/Weave Level-of-Service Analysis

Freeway merge/diverge segments, basic segments, and weaving segments were analyzed utilizing the methodologies outlined in Chapters 12-14 of the Highway Capacity Manual, 7th Edition (HCM 2016)[11]. Freeway operations and level-of-service is defined by density (passenger cars per mile per lane) which depends upon traffic volumes and the ramp characteristics. These characteristics include the length and type of acceleration/deceleration lanes; free-flow speeds; number of lanes;

[11] Transportation Research Board (2022) Highway Capacity Manual, 7th Edition, Washington, D.C.

grade; and types of facilities. **Table 5** through **Table 7** shows the relationship of level-of-service to freeway density. Note that the Leisch Method[12], which Caltrans prefers for weaving segments, was not applied because the State of California no longer considers level-of-service under CEQA, and the Leisch Method is not relevant to adopted General Plan policies.

Table 5. Level-of-Service Criteria – Basic freeway segment

Level of Service	Maximum Density (passenger vehicles per mile per lane)
A	0-11
B	>11-18

3.6 General Plan Level-of-Service Standards

Conformity to General Plan level-of-service policies for the Project were determined based on the methods described above and identified as either "significant" or "less-than-significant" in accordance with El Dorado County protocols and procedures[13] . However, level-of-service is only applicable to General Plan conformity. Delay and level-of-service is not a significant impact under CEQA.

General Plan Circulation Policy TC-Xd provides that level-of-service for county-maintained roads and state highways within the unincorporated areas of the county shall not be worse than level-of-service E in the community regions or level-of-service D in the rural centers and rural regions, unless specifically exempted as shown in **Table 8**.

Table 8. General plan exceptions to level-of-service standards

El Dorado County Roads Allowed to Operate at Level-of-Service F[a] (Through December 31, 2029)		
Road Segments		**Max. v/c[b]**
Cambridge Road	Country Club Drive to Oxford Road	1.07
Cameron Park Drive	Robin Lane to Coach Lane	1.11
Missouri Flat Road	US 50 to Mother Lode Drive	1.12
	Mother Lode Drive to China Garden Road	1.20
Pleasant Valley Road	El Dorado Road to State Route 49	1.28
US 50	Canal Street to junction of State Route 49 (Spring Street)	1.25
	Junction of State Route 49 (Spring Street) to Coloma Street	1.59
	Coloma Street to Bedford Avenue	1.61
	Bedford Avenue to beginning of freeway	1.73
	Beginning of freeway to Washington overhead	1.16
	Ice House Road to Echo Lake	1.16
State Route 49	Pacific/Sacramento Street to new four-lane section	1.31
	US 50 to State Route 193	1.32
	State Route 193 to county line	1.51

Note a: Roads improved to their maximum width given right-of-way and physical limitations
Note b: Volume-to-capacity ratio.
Source: 2004 General Plan (amended January 2009) Table TC-2

All but two study intersections are within the El Dorado Hills community region and shall operate at level-of-service E or better. Intersection #22 (White Rock Rd/Clarksville Crossing) and #23 (White Rock Road/US 50 EB) are outside of the community region and shall operate at level-of-service D or better. If a project causes the peak hour level-of-service or volume/capacity ratio on a county road or state highway that would otherwise meet the county standards (without the project) to exceed the values listed in the above tables and text, then the impact shall be considered significant. Because this Traffic Impact Analysis is not a CEQA document, facilities and intersections will be noted as having deficient level-of-service rather than an impact.

[13] Traffic Impact Study Protocols and Procedures, County of El Dorado, Department of Transportation, 2008.

If any county road or state highway fails to meet the above listed county standards for peak hour level-of-service or volume/capacity ratios under without Project conditions, and the Project will "significantly worsen" conditions on the road or highway, then the impact shall be considered significant. The term, "significantly worsen" is defined for the purpose of this paragraph according to General Plan Policy TC-Xe as follows:

A. A two percent increase in traffic during the AM peak hour, PM peak hour, or daily; or,

B. The addition of 100 or more daily trips; or,

C. The addition of 10 or more trips during the AM peak hour or the PM peak hour.

Though not explicitly stated in the General Plan policies, 95% left turn queues that exceed available storage lengths are considered to operate deficiently. The highway capacity manual calculations assume that left turn queues do not typically spill out of turn pockets to block through traffic. In keeping with the state of the practice, where the Project adds less than one car length (25 feet) to 95% left turn queues that exceed available storage, that addition is considered to de minimis.

3.7 Analysis Tools

El Dorado County Travel Demand Model (TDM)

As noted in prior sections, The El Dorado County Travel Demand Model (version EDC_CAT_082118) was utilized to estimate VMT and forecast growth in traffic volumes on study area roadways.

NCHRP 255 Adjustment

The NCHRP 255[14] adjustment procedure was used to improve turning movement forecasts for EPAP 2030 and Cumulative 2040 conditions.

Macroscopic Intersection Analysis

Control delay and level-of-service for study intersections were calculated using PTV Vistro[15] traffic analysis software (Version 2024, SP 0-2). Vistro is a complete traffic analysis software package used for evaluating development impacts, optimizing traffic signal timings, and evaluating intersection levels of service. It implements the methodologies of the HCM 2000, 2010, and 6th Ed. for signalized and unsignalized intersections, and requires data on road characteristics (geometric), traffic counts, and the signal timing data for each analysis intersection.

When calculating intersection control delay and level-of-service for all study intersections, default parameters were used, except for locations where specific field data were available (e.g., peak-hour factors). Heavy vehicle percentages during the peak-hour of 2% were assumed.

4.0 EXISTING (2023) CONDITIONS

4.1 Data Sources

The analysis tools require a variety of data to generate the evaluation criteria. The following sections describe data collection procedures for Existing Conditions. There were three primary data elements (roadway characteristics, intersection turning movement counts, and traffic control data); and two supplementary elements (other recent studies, and field data) that comprised the data collection program for this traffic analysis.

Roadway Geometry and Usage Characteristics

The geometry and usage data for the analysis were collected using aerial photographs, field visits, and prior studies. Current intersection geometry was field validated. **Table 9** shows the key items included in the geometric data and the source for each item.

Table 9. Key items and sources for geometry and usage data

Key Item	Source
Lane configurations & width	Aerial photographs and field visits
Lane utilization	Prior studies, aerial photographs, and field visits
Intersection spacing	Aerial photographs and field visits
Length of storage bays	Aerial photographs and field visits
Transit stops and routes	Transit schedules, aerial photographs, and field visits
Turn prohibitions or allowance	Aerial photographs and field visits
Signal timing	Timing sheets provided by El Dorado County

Lane configurations and width – These data specify the number of lanes and the width of the roadway in each direction, and the directional turns that are allowed from each lane.

Lane utilization – These data specify how lanes are used by drivers, such as traffic distribution between lanes on a multi-lane roadway.

Intersection spacing – These data refer to the distance between intersections, which is recorded in feet.

Length of storage bays – These data refer to the length (feet) of available storage for left- or right-turning vehicles where exclusive turn lanes are available. These data are collected for right-turn lanes when the parking lane is used as a right- turn lane.

Transit stops and routes – A transit stop is an area where passengers await, board, alight, and transfer between transit vehicles. A transit route is the roadway that transit vehicles operate on.

Turn prohibitions or allowance – This data specifies if right turns on red (RTOR) are allowed on the roadway.

Intersection Turning Movement Counts

Existing morning and evening peak-period vehicle and pedestrian turning movement counts collected in April 2023 were used for this study. Historic 2017 and 2018 counts were also used as a “floor” to ensure that there were no COVID related reductions in the 2023 counts. Traffic count

data sheets are provided in **Appendix A** of this report. Traffic volumes between intersections were balanced where differences could not reasonably be attributed to a vehicle platoon being held at one of the lights, driveway access between intersections, or shifts in the time of the peak hour from one intersection to another. All balancing was done by adding vehicle trips to the 2023 turning movements. Observed intersection peak hour factors (PHF) were applied. **Figure 6** provides a summary of the intersection lane geometry and peak period turning movements under Existing 2023 conditions.

Segment Counts

Turning movement counts can significantly overstate segment volumes. The practice of balancing traffic flows between adjacent intersections when counts may have been collected on different days and/or the corresponding intersections experience slightly different peak-hours can make those counts too conservative to apply to the segments.

Segment counts collected by El Dorado County on multiple days in 2023 and the development team were used to analyze road segments. Segment counts are summarized in **Table 12** below. Raw count data can be found in **Appendix A.**

4.2 Existing Condition Intersection and Segment Level-of-Service

Table 10 through **Table 12** present a summary of level-of-service results for the study intersections and segments under Existing 2023 conditions. Intersection control is listed as signal, two-way stop-controlled (TWSC), or all-way stop-control (AWSC). Both the estimated delay and level-of-service (LOS) is provided. At TWSC intersections, the movement with the worst delay is shown in parentheses. Ninety-fifth percentile left turn queues are also listed. Entries shown in **bold black** typeface denote deficient traffic operations, and unsignalized intersections that meet the peak hour signal warrant are denoted with an asterisk and shading.

The results indicate fourteen study intersections operate deficiently with level-of-service F conditions and/or 95% left turn queues that exceed available storage lengths.

White Rock Rd between Valley View Pkwy to Silva Valley Pkwy	2-lane arterial (threshold 1650)	1194	1440

5.0 ASSESSMENT OF PROPOSED CREEKSIDE VILLAGE PROJECT

5.1 Proposed Project Trip Generation

Anticipated Traffic generation by the Project reflects both trips generated by the Project itself, and, avoided trips in 2033 and 2040 from the commercial land uses that the El Dorado County TDM assumes will take place on the Project parcels.

Project Trips

Anticipated trips are based on Institute of Transportation Engineers (ITE) Trip Generation Manual, 11th Edition (2021). **Table 13** shows anticipated Project Trip Generation. To be conservative, trip generation estimates are generally based on the higher rates for the peak hour of the generator rather than the peak hour of adjacent street traffic. The higher of either the average trip generation rate or equation-based trip generation rate was also used. Use of these higher rates has historically been preferred by El Dorado County. Pass by trip estimates for the commercial uses are based on both the ITE Trip Generation Manual 11th Edition's electronic appendices and the more detailed ITE Trip Generation Handbook 3rd Edition[16] The ITE data was parsed to better reflect the Project. Specifically pass-by rates for the morning were limited to locations where data was available for the 7-9 AM period (which eliminates the 68% rate from Kentucky, resulting in a lower pass-by rate). That Kentucky rate was for 6-9 AM, and for a larger store (3.3 ksf). The AM pass-by rate also included the 44% pass-by rate from Chicago which is in the 3rd Ed of the Trip Gen Handbook, but not in the newer electronic appendices. For the evening peak we only considered the studies reflecting 4-6 PM for sites that are no larger than the proposed use of 2.4 ksf. The resulting rate was 67.5% (the table footnote says 68%). Note that one needs to look at both the Trip Generation Handbook and the Trip Generation Manual to identify the time periods that the data in the electronic appendix reflect.

Trip Distribution with Adjustment for Latrobe Elementary

Project trip distribution was based on the El Dorado County TDM, observed counts, prior studies in the vicinity of the Project, and consultation with El Dorado County staff. Additional adjustments were made to reflect school trips to Latrobe Elementary based on student generation statistics published by the school district. Trip distribution is shown in **Figure 7**. Assignment of the Project trips to study intersections is shown in **Figure 8**.

[16] ITE (2017) Trip Generation Handbook, 3rd Ed. Institute of Transportation Engineers, Washington DC.

Avoided Trips

Avoided trips are additional peak hour trips that the TDM assumes in the future from growth within the Project TAZ. These avoided trips were estimated by running the TDM with and without assumed 2020[17] through 2040 employment growth for the effected portion of the Project's transportation analysis zone (TAZ 612). Creekside Village replaces 62% of the available land in TAZ 612 (**Figure 9**), therefor 62% of the employment growth was eliminated from TAZ 612 when estimating the number of avoided trips using the TDM. TDM employment assumptions for TAZ 612 are shown in **Table 14** below, along with the resulting avoided trips. Avoided trips for 2040 are shown in **Figure 10**. Using straight line interpolation, 2033 avoided trips reflect the 13 years of unrealized growth from 2020.

[17] 2020 is used rather than 2023 because the process of purchasing the land and de-annexing it from the business park meant that no new employment on this portion of the model TAZ occurred as of that year.

Figure 9. Creekside Village is 62% of available land in TAZ 612

6.0 EXISTING 2023 PLUS PROPOSED PROJECT CONDITIONS

6.1 Traffic Volumes

Peak hour traffic associated with the proposed Project was added to the Existing 2023 Condition scenario's traffic volumes, delay and level-of-service were determined at the study intersections and segments. **Figure 12** summarizes the turning movements and lane configurations for the Existing 2023 Plus Proposed Project scenario.

6.2 Level-of-Service

Table 15 through **Table 17** present a summary of level-of-service results for the study intersections and segments under Existing 2023 conditions with and without Project traffic. Intersection control is listed as signal, two-way stop-controlled (TWSC), or all-way stop-control (AWSC). Both the estimated delay and level-of-service (LOS) is provided. At TWSC intersections, the movement with the worst delay is shown in parentheses. Ninety-fifth percentile left turn queues are also listed. Entries shown in **Bold black** text in **Table 15** through **Table 17** denote locations with preexisting deficiencies that the Project is not anticipated to worsen. **Bold red** text denotes locations where the Project is anticipated to create new or worsen preexisting deficiencies. Unsignalized intersections that meet the peak hour signal warrant are shaded and denoted with an asterisk.

One arterial segment (Latrobe Road between Golden Foothill Pkwy (south) and Investment Blvd) is anticipated to operate at level-of-service F. Sixteen intersections are anticipated to have level-of-service and/or queue spillback deficiencies.

4 Locations that are deficient with or without the Project that are not worsened:

- (1) El Dorado Hills Blvd/Serrano Pkwy AM;
- (7) Latrobe Road/Golden Foothill Parkway (N): PM;
- (19) White Rock Road/Windfield Way AM and PM; and
- (20) White Rock Road/Post Street: AM and PM.

10 Locations that are deficient with or without the Project that are worsened:

- (2) El Dorado Hills Blvd/Saratoga Way: AM and PM;
- (3) El Dorado Hills Blvd/US 50 WB AM and PM;
- (5) Latrobe Road/Town Center Boulevard: PM;
- (6) Latrobe Road/White Rock Road AM and PM;
- (8) Latrobe Rd/Suncast Ln AM and PM;
- (9) Latrobe Road/ Golden Foothill Parkway (S): AM and PM;
- (10) Latrobe Road/Investment Boulevard: AM and PM;
- (13) Golden Foothill Parkway (S)/Robert J. Mathewsws Pkwy PM;
- (18) White Rock Road/Carson Crossing Road PM; and
- (21) White Rock Road/Valley View Parkway: AM and PM.

2 Locations where the Project is anticipated to cause new deficiencies:

- (11) Latrobe Road/Avanti Drive AM and PM; and
- (12) Latrobe Road/Royal Oaks Drive AM and PM.

Calculation sheets for delay and level-of-service are provided in **Appendix B**. the remainder of the study intersections, all of the US 50 study segments, and arterial study segments were found to operate acceptably.

Latrobe Rd between Golden Foothill Pkwy (south) and Suncast Ln)	4-lane divided arterial (threshold 3290)	1998	2030	2529	2880
Latrobe Rd between White Rock Rd and Town Center Blvd	8-lane divided arterial (threshold 6280, extrapolated from 6-lane divided arterial)	2931	3018	4572	4483
White Rock Rd between Valley View Pkwy to Silva Valley Pkwy	2-lane arterial (threshold 1650)	1194	1440	1312	1574

6.3 Existing 2023 Plus Project General Plan Deficiency Findings

Level-of-service and queueing impacts are not considered significant under CEQA. Intersections and/or segments where Project traffic creates new or worsens existing exceedances of General Plan policy thresholds are referred to as having a "Project deficiency." There are ten intersections and one arterial segment where the Project is anticipated to create new or worsen existing deficiencies under existing 2023 conditions.

There are two sections that follow describing the segment level abatement measures and intersection level abatement measures. Throughout this document, segment deficiencies are numbered using the segment number (i through v) and a year code (2023 = "A", 2033 = "B", and 2040 = "C"). Intersection abatement measures are numbered using the intersection number (1-27) and the year code (A, B, or C).

All deficiencies and abatements described below include the deficiency number/abatement number and location as a title, followed by a description of the deficiency, the abatement, findings, responsibility, and timing. For certain abatements, a building permit trigger has been analyzed and included to determine the necessary timing for the improvement. For all other abatements, it is assumed the timing would be prior to issuance of the first building permit. If desired, a building permit trigger could also be determined for those abatements.

2023 Segment Deficiencies and Abatement Measures

(ii)A. Latrobe Rd between Investment Blvd and Golden Foothill Pkwy (south) in 2023 (CIP Project Latrobe 72)

Deficiency: Level-of-service is anticipated to worsen to F with the addition of Project traffic during the AM and PM peak-hours.

Abatement: Before issuance of the 658th residential building permit or the first commercial building permit, the CIP project Latrobe 72 (widen Latrobe Rd to four-lanes between Investment Blvd and Royal Oaks Dr) shall be included in the 10-year CIP. Latrobe 72 consists of widening Latrobe Rd between Investment Blvd and Golden Foothill Pkwy (south) from two-lanes to four-lanes, and all associated improvements at the intersections of Latrobe Rd/Investment Blvd and Latrobe Rd/Golden Foothill Pkwy (south).

Finding: With implementation of the abatement measure, the Project is not anticipated to cause new, or worsen existing, General Plan level-of-service policy deficiencies at this location. **Table 18** presents the segment level-of-service results with this abatement.

Project Responsibility: The Project is responsible for its fair share of the cost of these off-site improvements which would be addressed by payment of fees after Latrobe 72 is added to the 10-year CIP. Addition of these improvements to the CIP will provide the mechanism to ensure the Project is responsible for its fair share.

Timing: Prior to issuance of the 658th residential building permit or the first commercial building permit. Note the 658th unit constraint is based on the cumulative 2040 scenario which is the most constrained scenario for this deficiency.

Table 18. Existing 2023 arterial level-of-service check with and without the abated Project

Arterial Segment	Description	2023 AM No Project	2023 PM No Project	2023 AM Plus Project	2023 PM Plus Project
Latrobe Rd between Investment Blvd and Golden Foothill Pkwy (south)	**Un Abated** 2-lane arterial (threshold 1650)	1015	932	**1744**	**1763**
	Limit Project to 658 dwelling units: 2-lane arterial (threshold 1650)	1015	932	1438	1488
	Add Widening to CIP: 4-lane divided arterial (threshold 3290)	1015	932	1744	1763

2023 Intersection Deficiencies and Abatement Measures

2A. El Dorado Hills Blvd/Saratoga Way in 2023

Deficiency: Level-of-service is F prior to addition of Project traffic, with northbound left-turn queues spilling out of the turn pocket. Project traffic is anticipated to worsen level-of-service and northbound left-turn queues.

Abatement: Construct a 300-foot southbound right turn pocket and adjust signal timing.

Finding: With implementation of the abatement measure, the Project is not anticipated to cause new, or worsen existing, General Plan level-of-service policy deficiencies at this location. **Table 19** at the end of this section presents intersection level-of-service results with this abatement.

Project Responsibility: This abatement partially implements Project #36105076 in the 10-year Capital Improvement Program (CIP). The Project may satisfy this requirement through payment of applicable fees under the El Dorado County traffic impact Fee (TIF) program.

Timing: Prior to issuance of 1st building permit.

Cross reference: See abatement 2B, which builds on abatement 2A.

3A. El Dorado Hills Blvd/US 50 WB in 2023

Deficiency: Existing AM peak-hour level-of-service is F prior to addition of Project traffic. Project traffic is anticipated to worsen level-of-service.

Abatement: Adjust signal splits.

Finding: With implementation of the abatement measure, the Project is not anticipated to cause new, or worsen existing, General Plan level-of-service policy deficiencies at this location. **Table 19** at the end of this section presents intersection level-of-service results with this abatement.

Project responsibility: Project is responsible for its fair-share of signal timing adjustment. The CIP includes funding for intersection and safety improvements at “to be determined” locations. The Project may satisfy this requirement through payment of applicable fees under the El Dorado County traffic impact Fee (TIF) program.

Timing: Prior to issuance of 1st building permit.

5A. Latrobe Road/Town Center Boulevard in 2023

Deficiency: The southbound left turn queue spills back out of its pocket during the PM peak-hour under existing conditions prior to the addition of Project traffic. Project traffic is anticipated to worsen the southbound left turn queue spillback and cause the westbound left turn queue to exceed its pocket length.

Abatement: Adjust signal splits and extend the westbound left-turn pocket from 100 feet to 140 feet.

Finding: With implementation of the abatement measure, the Project is not anticipated to cause new, or worsen existing, General Plan level-of-service policy deficiencies at this location. **Table 19** at the end of this section presents intersection level-of-service results with this abatement.

Project responsibility: The Project is responsible for its fair share of these intersection improvements. These improvements could be addressed through the line item in the CIP for intersection improvements and the Project would contribute its fair share through payment of the TIF. Because a discrete CIP project is not approved or anticipated for the specific improvement, these intersections improvements were included within the area of potential effect (APE) for the Project.

Timing: Prior to issuance of 1st building permit.

6A. Latrobe Road/White Rock Road in 2023

Deficiency: The westbound left-turn queue spills back out of its turn pocket under existing conditions without the Project. Project traffic is anticipated to worsen that queue spillback.

Abatement: Adjust signal splits.

Finding: With implementation of the abatement measure, the Project is not anticipated to cause new, or worsen existing, General Plan level-of-service policy deficiencies at this location. **Table 19** at the end of this section presents intersection level-of-service results with this abatement.

Project responsibility: This abatement partially implements Project #36105069 in the 20-year Capital Improvement Program (CIP). The Project is responsible for its fair share of modification of signal timing, which may be addressed through payment of fees if the CIP project is moved to the 10-year CIP.

Timing: Prior to issuance of 1st building permit.

8A. Latrobe Road/Suncast Lane in 2023

Deficiency: The eastbound left turn queue spills-back out of its pocket during the PM peak-hour under existing conditions prior to the addition of Project traffic. Project traffic is anticipated to worsen the existing deficiency.

Abatement: Restripe the eastbound approach to have a left and a shared left-right lane.

Finding: With implementation of the abatement measure, the Project is not anticipated to cause new, or worsen existing, General Plan level-of-service policy deficiencies at this location. **Table 19** at the end of this section presents intersection level-of-service results with this abatement.

Project responsibility: Project is responsible for its fair-share of restriping. The CIP includes funding for intersection and safety improvements at "to be determined" locations. The Project may satisfy this requirement through payment of applicable fees under the El Dorado County traffic impact Fee (TIF) program.

Timing: Prior to issuance of 1st building permit.

9A. Latrobe Road/ Golden Foothill Parkway (south) in 2023

Deficiency: Project traffic is anticipated to create a new intersection level-of-service deficiency during the PM peak-hour, and worsen existing queue spillback from the eastbound left turn during both the AM and PM peak-hours.

Abatement: Stripe eastbound approach as 2-lanes between Robert J. Mathewsws Pkwy and Latrobe Rd and widen to three lanes at the intersection by constructing a 200-foot eastbound right turn pocket. Label the eastbound approach lanes as left, left, thru-right. Adjust cycle length and splits. These improvements are consistent with intersection improvements that would be constructed under Abatement (ii)A ("Latrobe 72") above. Therefore, addition of LATROBE 72 to the 10-year CIP would address the Project's fair share cost of these improvements as well.

Finding: With implementation of the abatement measure, the Project is not anticipated to cause new, or worsen existing, General Plan level-of-service policy deficiencies at this location. **Table 19** at the end of this section presents intersection level-of-service results with this abatement.

Project responsibility: The Project is responsible for its fair share of the cost of these off-site improvements which would be addressed by payment of fees after Latrobe 72 is added to the 10-year CIP.

Timing: Prior to issuance of 1st building permit.

Cross reference: See abatement 9B, which builds on abatement 9a.

10A. Latrobe Road/Investment Boulevard in 2023

Deficiency: Project traffic is anticipated to cause the northeast bound (Investment Blvd) left turn queue to spill out of its left-turn pocket during the AM peak-hour, and worsen existing queue spill back for that same movement during the PM peak-hour.

Abatement: Stripe eastbound approach as left, shared left-right in 180-foot pocket. Adjust cycle length and splits. These improvements are consistent with intersection improvements that would be constructed under Abatement (ii)A ("Latrobe 72") above. Therefore, addition of LATROBE 72 to the 10-year CIP would address the Project's fair share cost of these improvements as well.

Finding: With implementation of the abatement measure, the Project is not anticipated to cause new, or worsen existing, General Plan level-of-service policy deficiencies at this location. **Table 19** at the end of this section presents intersection level-of-service results with this abatement.

Project responsibility: The Project is responsible for its fair share of the cost of these off-site improvements which would be addressed by payment of fees after Latrobe 72 is added to the 10-year CIP.

Timing: Prior to issuance of 1st building permit.

11A. Latrobe Road/Avanti Drive in 2023

Deficiency: Project traffic is anticipated to cause this intersection to operate at level-of-service F.

Abatement: Construct 100-foot left turn pockets on Latrobe (NB and SB). Construct 100-foot receiving lane on NB Latrobe for EB left turns from Project. This intersection is a Project access point and these improvements can likely be done as part of the Project's frontage improvements.

Finding: With implementation of the abatement measure, the Project is not anticipated to cause new, or worsen existing, General Plan level-of-service policy deficiencies at this location. **Table 19** at the end of this section presents intersection level-of-service results with this abatement.

Project responsibility: The Project is responsible for construction of these intersection improvements.

Timing: Prior to issuance of 1st building permit.

12A. Latrobe Road/Royal Oaks Drive in 2023

Deficiency: Project traffic is anticipated to worsen the intersection to level-of-service F.

Abatement: Reconstruct the intersection as a signal-controlled intersection. The eastbound approach should be constructed as a three-lane approach with a left-turn lane in a 220-foot pocket, a shared left-thru, and a right turn lane in a 100-foot pocket. This intersection is a Project access point and these improvements can likely be done as part of the Project's frontage improvements.

Finding: With implementation of the abatement measure, the Project is not anticipated to cause new, or worsen existing, General Plan level-of-service policy deficiencies at this location. **Table 19** at the end of this section presents intersection level-of-service results with this abatement.

Project responsibility: The Project is responsible for construction of these intersection improvements.

Timing: Prior to issuance of 1st building permit.

13A. Golden Foothill Pkwy/Robert J. Mathews Pkwy in 2023

Deficiency: Project traffic is anticipated to worsen existing level-of-service F conditions.

Abatement: Reconstruct as a roundabout. Construct as follows:

- Northbound approach - a shared left-right lane and a right-turn lane in a 100-foot pocket.
- Westbound approach - a left-turn lane and a through lane.
- Eastbound approach – a shared through-right lane.

Figure 13 provides the traffic model's representation of this geometry and its relation to the adjacent intersection of Latrobe Rd/Golden foothill Pkwy (south) with abatement 9A implemented.

Finding: With implementation of the abatement measure, the Project is not anticipated to cause new, or worsen existing, General Plan level-of-service policy deficiencies at this location. **Table 19** at the end of this section presents intersection level-of-service results with this abatement.

Project responsibility: The Project is responsible for its fair share of the cost of these off-site improvements which would be addressed by payment of fees after the roundabout is added to the 10-year CIP.

Timing: Prior to issuance of 1st building permit.

Figure 13. Golden Foothill Pkwy (south)/Robert J. Mathews Pkwy roundabout 2023 geometry

18A. White Rock Road/Carson Crossing Road in 2023

Deficiency: Project traffic is anticipated to worsen existing level-of-service F conditions and cause the peak-hour signal warrant to be met.

Abatement: Signalize the intersection utilizing existing geometry.

Finding: With implementation of the abatement measure, the Project is not anticipated to cause new, or worsen existing, General Plan level-of-service policy deficiencies at this location. **Table 19** at the end of this section presents intersection level-of-service results with this abatement.

Project responsibility: This off-site improvement partially implements 20-year CIP project 36105041 (White Rock Road Widening 2 to 4 Lanes - Windfield Way to Sacramento County Line) and it should be advanced to the 10-year CIP. The Project is responsible for its fair share of cost, which would be met through payment of the TIF program fee.

Timing: Prior to issuance of 1st building permit.

21A. White Rock Road/Valley View Parkway in 2023

Deficiency: Project traffic is anticipated to worsen level-of-service to F and worsen existing left-turn queue spillback on eastbound and westbound White Rock Rd.

Abatement: Reconstruct White Rock Rd through the intersection as follows:

- Eastbound approach: restripe the left turn pocket to 400-feet, restripe the shared through-right lane as a through lane, construct a right-turn lane in a 220-foot pocket.
- Westbound approach (White Rock Rd): Widen to construct a right-turn lane in a 220-foot pocket and extend the left-turn pocket to 400-feet. Restripe the shared through-right lane as a through lane.

Widening should be done to the south or Latrobe Rd to avoid high voltage lines. Eastbound-westbound Lane alignment may require additional space.

Finding: With implementation of the abatement measure, the Project is not anticipated to cause new, or worsen existing, General Plan level-of-service policy deficiencies at this location. **Table 19** at the end of this section presents intersection level-of-service results with this abatement.

Project responsibility: CIP Project 36105042 (White Rock Road Widening 2 to 4 lanes - Post Street to South of Silva Valley Parkway) includes funding for improvements to this intersection in both the 10-year and 20-year CIPs and all components should be advanced to 10-year CIP. The Project's fair share responsibility for this improvement can be met through payment of TIF program fees.

Timing: Payment of TIF at issuance of each building permit.

Cross reference: See abatement 21B, which builds on abatement 21a.

Table 19. Existing 2023 intersection delay and level-of-service with and without the abated Project

ID	Intersection	Control	Left Turn Storage	2023 AM Peak No Project			2023 PM Peak No Project			2023 AM Peak with Project			2023 PM Peak with Project			Abatement Strategy	Left Turn Storage	Abated AM Peak (+ Proj)			Abated PM Peak (+ Proj)			Existing or Anticipated CIP Project

(This page intentionally left blank)

7.0 EPPAP 2033 CONDITIONS

The EPAP 2033 conditions analysis started with lane configurations from Existing 2023 conditions, turning movements derived from existing traffic counts, growth factors from the Travel Demand Model, and the NCHRP 255 adjustment procedure[18].

Several volume and network adjustments were then made.

One Capital Improvement Program (CIP) project that effects study intersection geometry was accounted for:

- CIP Project 36105076: "El Dorado Hills Saratoga Way Turn Pockets" will construct a southbound right turn pocket and extend the northbound and southbound left turn pockets on El Dorado Hills Blvd. The southbound right pocket was modeled as a 300-foot right turn pocket. The northbound and southbound left turn pockets were modeled as 500-foot left turn pockets.

Traffic volumes from 2023 without the Project were used as a floor before traffic from the avoided trips (see **Figure 11**, page 47) was shifted from where the TDM loads it directly onto Carson Crossing Drive to Investment Blvd.

Traffic for the approved Carson Creek/Heritage Project was added. Note that because the Creekside Village project also has avoided R&D and industrial vehicle trips, some turning movements are lower in 2033 than they were in 2023.

Figure *14* summarizes the turning movements and lane configurations for the EPPAP 2033 conditions scenario.

Delay and level-of-service is presented in **Table 20** through **Table 22**. Intersection control is listed as signal, two-way stop-controlled (TWSC), or all-way stop-control (AWSC). Both the estimated delay and level-of-service (LOS) is provided. At TWSC intersections, the movement with the worst delay is shown in parentheses. Ninety-fifth percentile left turn queues are also listed. Entries shown in **bold black** typeface denote deficient traffic operations, and unsignalized intersections that meet the peak hour signal warrant are denoted with an asterisk and shading.

The results indicate that one study segment (White Rock Rd between Valley View Pkwy to Silva Valley Pkwy) and sixteen study intersections operate deficiency with level-of-service F conditions and/or 95% left turn queues that exceed available storage lengths.

(This page intentionally left blank)

8.0 EPAP 2033 PLUS PROPOSED PROJECT CONDITIONS

8.1 Traffic Volumes

Peak hour Project trips (**Figure 8** page 40) and avoided R&D and industrial trips (**Figure 11** page 47) were added to the EPAP 2033 conditions traffic volumes. Delay and level-of-service were determined at the study intersections and segments. **Figure 15** summarizes the turning movements and lane configurations for the EPPAP 2033 Plus Proposed Project scenario.

8.2 Level-of-Service

Table 23 through **Table 25** present a summary of the level-of-service results for the study intersections and segments under EPAP 2033 Plus Proposed Project conditions. Intersection control is listed as signal, two-way stop-controlled (TWSC), or all-way stop-control (AWSC). Both the estimated delay and level-of-service (LOS) is provided. At TWSC intersections, the movement with the worst delay is shown in parentheses. Ninety-fifth percentile left turn queues are also listed. Entries shown in **Bold black** text in **Table 23** through **Table 25** denote locations with preexisting deficiencies that the Project is not anticipated to worsen. **Bold red** text denotes locations where the Project is anticipated to create new or worsen preexisting deficiencies. Unsignalized intersections that meet the peak hour signal warrant are shaded and denoted with an asterisk.

Two arterial segments are anticipated to have a preexisting deficiency worsened by Project traffic or a new deficiency caused by Project traffic. Eighteen intersections are anticipated to have level-of-service and/or queue spillback deficiencies.

2 Arterial segments with worsened or new Project related deficiencies:

- White Rock Rd between Valley View Pkwy to Silva Valley Pkwy AM and PM; and
- Latrobe Rd between Investment Blvd and Golden Foothill Pkwy (south) PM.

6 Locations that are deficient with or without the Project that are not worsened:

- (1) El Dorado Hills Blvd/Serrano Pkwy AM;
- (8) Latrobe Rd/Suncast Ln AM and PM;
- (14) Investment Boulevard/Robert J. Mathews Pkwy AM;
- (19) White Rock Road/Windfield Way AM and PM;
- (20) White Rock Road/Post Street AM and PM; and
- (23) Silva Valley Parkway/US 50 EB ramps AM.

10 Locations that are deficient with or without the Project that are worsened:

- (2) El Dorado Hills Blvd/Saratoga Way AM and PM;
- (3) El Dorado Hills Blvd/US 50 WB AM and PM;
- (5) Latrobe Road/Town Center Boulevard PM;
- (6) Latrobe Road/White Rock Road AM and PM;
- (7) Latrobe Road/Golden Foothill Parkway (N) AM and PM;
- (9) Latrobe Road/ Golden Foothill Parkway (S) AM and PM;

- (10) Latrobe Road/Investment Boulevard AM and PM;
- (13) Golden Foothill Parkway (S)/Robert J. Mathewsws Pkwy AM and PM;
- (18) White Rock Road/Carson Crossing Road PM; and
- (21) White Rock Road/Valley View Parkway: AM and PM.

2 Locations where the Project is anticipated to cause new deficiencies:

- (11) Latrobe Road/Avanti Drive AM and PM; and
- (12) Latrobe Road/Royal Oaks Drive AM and PM.

Calculation sheets for delay and level-of-service are provided in **Appendix B**. the remainder of the study intersections, all of the US 50 study segments, and arterial study segments were found to operate acceptably.

17	Silva Valley Pkwy to Bass Lake Rd	basic	HCM 7th Ed.	12.4/B	18.3/C	12.8/B	18.2/C

Notes:
Density in units of passenger cars per mile per lane.
*Prior to the opening of the Saratoga Way extension, Caltrans has reported occasional LOS F conditions during the morning peak for this segment based on planning methods rather than counts.

Project plus forgone business park trips will reduce WB US 50 volume between Latrobe Rd and the El Dorado County line during the PM-peak.

Project plus forgone business park trips will reduce EB US 50 volume between EDC line and Latrobe Rd during the AM-peak, and between Silva Valley Pkwy and Bass Lake Rd during the PM peak.

Table 25. EPPAP 2033 arterial level-of-service check with and without the Project

Arterial Segment	Description	2033 AM No Project	2033 PM No Project	2033 AM Plus Project	2033 PM Plus Project
Latrobe Rd between Royal Oaks Dr and Investment Blvd	2-lane arterial (threshold 1650)	736	734	1476	1553
Latrobe Rd between Investment Blvd and Golden Foothill Pkwy (south)	2-lane arterial (threshold 1650)	1213	1035	1891	1781
Latrobe Rd between Golden Foothill Pkwy (south) and Suncast Ln	4-lane divided arterial (threshold 3290)	2756	2549	3073	2622
Latrobe Rd between White Rock Rd and Town Center Blvd	8-lane divided arterial (threshold 6280, extrapolated from 6-lane divided arterial)	3327	3354	4727	4540
White Rock Rd between Valley View Pkwy to Silva Valley Pkwy	2-lane arterial (threshold 1650)	**1856**	**2360**	**1910**	**2417**

8.3 Existing 2033 Plus Project General Plan Deficiency Findings

Level-of-service and queueing impacts are not considered significant under CEQA. Intersections and/or segments where Project traffic creates new or worsens existing exceedances of General Plan policy thresholds are referred to as having a "project deficiency". There are twelve intersections and two arterial segments where the Project is anticipated to create new or worsen existing deficiencies under EPAP 2033 conditions.

There are two sections that follow describing the segment level abatement measures and intersection level abatement measures. Throughout this document, segment deficiencies are numbered using the segment number (i through v) and a year code (2023 = "A", 2033 = "B", and 2040 = "C"). Intersection abatement measures are numbered using the intersection number (1-27) and the year code (A, B, or C).

All deficiencies and abatements described below include the deficiency number/abatement number and location as a title, followed by a description of the deficiency, the abatement, findings, responsibility, and timing. For certain abatements, a building permit trigger has been analyzed and included to determine the necessary timing for the improvement. For all other abatements, it is assumed the timing would be prior to issuance of the first building permit. If desired, a building permit trigger could also be determined for those abatements.

2033 Segment Deficiencies and Abatement Measures

(ii)B. Latrobe Rd between Investment Blvd and Golden Foothill Pkwy (south) in 2033 (CIP Project Latrobe 72)

Deficiency: Level-of-service is anticipated to worsen to F with the addition of Project traffic during the AM and PM peak-hours.

Abatement: Implement as abatement (ii)A.

Finding: With implementation of the abatement measure, the Project is not anticipated to cause new, or worsen existing, General Plan level-of-service policy deficiencies at this location. **Table 26** presents the segment level-of-service results with this abatement.

Project responsibility: None, addressed through abatement (ii)A.

Timing: Not applicable, addressed through abatement (ii)A.

(v)B. White Rock Rd between Valley View Pkwy to Silva Valley Pkwy in 2033

Deficiency: This segment operates at level-of-service F under EPAP 2033 conditions without the Project and the Project is anticipated to add more than 10 peak hour trips to this segment, worsening the existing level-of-service deficiency.

Abatement: Before issuance of the 173rd residential building permit or the first commercial building permit, advance CIP Project 36105042 to the 10-year CIP (widen White Rock Rd to four lanes between Valley View Pkwy and Silva Valley Pkwy.).

Finding: With implementation of the abatement measure, the Project is not anticipated to cause new, or worsen existing, General Plan level-of-service policy deficiencies at this location. **Table 26** presents the segment level-of-service results with this abatement.

Project Responsibility: CIP Project 36105042 (White Rock Road Widening 2 to 4 lanes - Post Street to South of Silva Valley Parkway) includes funding for improvements to this segment in both the 10-year and 20-year CIPs and all components should be advanced to 10-year CIP. The Project's fair share responsibility for this improvement can be met through payment of TIF program fees.

Timing: Prior to issuance of the 173rd residential building permit or the first commercial building permit.

Table 26. EPAP 2033 arterial level-of-service check with and without the abated Project

Arterial Segment	Description	2033 AM No Project	2033 PM No Project	2033 AM Plus Project	2033 PM Plus Project
Latrobe Rd between Investment Blvd and Golden Foothill Pkwy (south)	**Un Abated** 2-lane arterial (threshold 1650)	1213	1035	**1891**	**1781**
	Limit Project to 658 dwelling units: 2-lane arterial (threshold 1650)	1213	1035	1606	1534
	Add Widening to CIP: 4-lane divided arterial (threshold 3290)	1213	1035	1891	1781
White Rock Rd between Valley View Pkwy to Silva Valley Pkwy	**Un Abated** 2-lane arterial (threshold 1650)	**1856**	**2360**	**1910**	**2417**
	Limit Project to 172 dwelling units: 2-lane arterial (threshold 1650)	**1856**	**2360**	**1864.19**	**2369.96**
	Add Widening to CIP: 4-lane divided arterial (threshold 3290)	1213	1035	1891	1781

2033 Intersection Deficiencies and Abatement Measures

2B. El Dorado Hills Blvd/Saratoga Way in 2033

Deficiency: Level-of-service is F prior to addition of Project traffic, with northbound left-turn queues spilling out of the turn pocket. Project traffic is anticipated to worsen level-of-service and northbound left-turn queues.

2023-2033 Improvements Assumed: Southbound right-turn pocket (300-foot) and 500-foot northbound and southbound left turn pockets are assumed as part of CIP project 36105076.

Abatement: In addition to abatement 2A, prohibit northbound U-turns, overlap the eastbound right turn with the northbound left turn, and overlap the southbound right turn with the eastbound left turn.

Finding: With implementation of the abatement measure, the Project is not anticipated to cause new, or worsen existing, General Plan level-of-service policy deficiencies at this location. **Table 27** at the end of this section presents intersection level-of-service results with this abatement.

Project Responsibility: This abatement partially implements Project #36105076 in the 10-year Capital Improvement Program (CIP). The Project may satisfy its fair share of this requirement through payment of applicable fees under the El Dorado County traffic impact Fee (TIF) program.

Timing: Prior to issuance of 1st building permit.

Cross reference: See abatement 2A.

3B. El Dorado Hills Blvd/US 50 WB in 2033

Deficiency: AM peak-hour level-of-service is F prior to addition of Project traffic. Project traffic is anticipated to worsen level-of-service.

2023-2033 Improvements Assumed: None.

Abatement: Implement as abatement 3A

Finding: With implementation of the abatement measure, the Project is not anticipated to cause new, or worsen existing, General Plan level-of-service policy deficiencies at this location. **Table 27** at the end of this section presents intersection level-of-service results with this abatement.

Project responsibility: None, addressed through abatement 3A.

Timing: Not applicable, addressed through abatement 3A.

4B. El Dorado Hills Blvd/US 50 EB in 2033

Deficiency: PM peak-hour 95th percentile queue on ramp is anticipated to reach 1251-feet, ending with 500-feet of the gore-point (where the ramp exits the freeway). Project traffic is anticipated to add 172-feet to the queue. This is a potentially traffic operations issue as the 2 lane portion of the ramp is limited to 430-feet.

2023-2033 Improvements Assumed: None.

Abatement: construct a 3rd eastbound right turn lane from the offramp to southbound Latrobe Road. The new turn lane shall match the approximate length of the existing 2-lane portion of the offramp.

Finding: With implementation of the abatement measure, the Project is not anticipated to cause new, or worsen existing, General Plan level-of-service policy deficiencies at this location. **Table 27** at the end of this section presents intersection level-of-service results with this abatement.

Project responsibility: While this deficiency will occur with or without the Project, the Project is responsible for its fair share of the cost of this off-site improvement, which can be addressed through payment of fees after widening of the eastbound diagonal offramp has been added to 10-year CIP. Note that CIP Project 36104001 (US 50 / Latrobe Road/ El Dorado Hills Boulevard Interchange Improvements Phase 2B) includes reconstruction of the EB diagonal on-ramp, EB on-ramp auxiliary lane, and the EB loop off-ramp. That CIP project could potential address this eastbound offramp widening as well or be done as an independent CIP project.

Timing: Payment of TIF at issuance of each building permit.

Cross reference: See abatement 4C.

5B. Latrobe Road/Town Center Boulevard in 2033

Deficiency: The southbound left-turn queue spills back out of its pocket during the PM peak-hour prior to the addition of Project traffic. Project traffic is anticipated to worsen the southbound left-turn queue spillback and cause the westbound left-turn queue to exceed its pocket length.

2023-2033 Improvements Assumed: None.

Abatement: implement as abatement 5A.

Finding: With implementation of the abatement measure, the Project is not anticipated to cause new, or worsen existing, General Plan level-of-service policy deficiencies at this location. **Table 27** at the end of this section presents intersection level-of-service results with this abatement.

Project responsibility: None, addressed through abatement 5A.

Timing: Not applicable, addressed through abatement 5A.

6B. Latrobe Road/White Rock Road in 2033

Deficiency: The westbound left-turn queue spills back out of its turn pocket. Project traffic is anticipated to worsen that queue spillback.

2023-2033 Improvements Assumed: None.

2023-2033 Improvements Assumed: None.

Abatement: implement as abatement 6A

Finding: With implementation of the abatement measure, the Project is not anticipated to cause new, or worsen existing, General Plan level-of-service policy deficiencies at this location. **Table 27** at the end of this section presents intersection level-of-service results with this abatement.

Project responsibility: None, addressed through abatement 6A.

Timing: Not applicable, addressed through abatement 6A.

7B. Latrobe Road/Golden Foothill Parkway (N) in 2033

Deficiency: Project traffic is anticipated to worsen level-of-service to F.

2023-2033 Improvements Assumed: None.

Abatement: Construct 180-foot southbound right turn pocket.

Finding: With implementation of the abatement measure, the Project is not anticipated to cause new, or worsen existing, General Plan level-of-service policy deficiencies at this location. **Table 27** at the end of this section presents intersection level-of-service results with this abatement.

Project responsibility: CIP 36105069 will widen this portion of Latrobe Rd to six lanes by 2040 and should be advanced to the 10-year CIP. The Project's fair share cost of this improvement is payment of the TIF program fee.

Timing: Prior to issuance of 1st building permit.

9B. Latrobe Road/ Golden Foothill Parkway (S) in 2033

Deficiency: Project traffic is anticipated to worsen the intersection to level-of-service F conditions.

2023-2033 Improvements Assumed: None.

Abatement: Abatement 9B is similar, but expands upon, abatement 9A:

- Eastbound approach: Implement abatement 9A.
- Westbound approach: Stripe westbound approach to 2-lanes between Blackstone Pkwy and Latrobe Rd, and construct a 250' right left pocket. Label the resulting three lanes as left, left, thru-right.
- Northbound approach: Widen northbound approach by constructing an additional 100' right turn pocket and extending the left turn pocket to 260'. Label the resulting four lanes as left, thru, thru, and right.
- Southbound approach: Widen southbound approach by constructing an additional 300' right turn pocket, label the resulting four lanes as left, thru, thru, right.

Figure 16 below shows the traffic model's representation of these improvements. Note that the depicted northbound right turn lane was drawn with a 24-foot width to reflect the assumed ultimate width of Latrobe Rd after widening to four lanes with the "Latrobe 72" improvements and an additional northbound through lane. The Project is not obligated to build improvements to that footprint, but it is advised that any relocation of traffic signals be placed outside of the intersection's ultimate footprint.

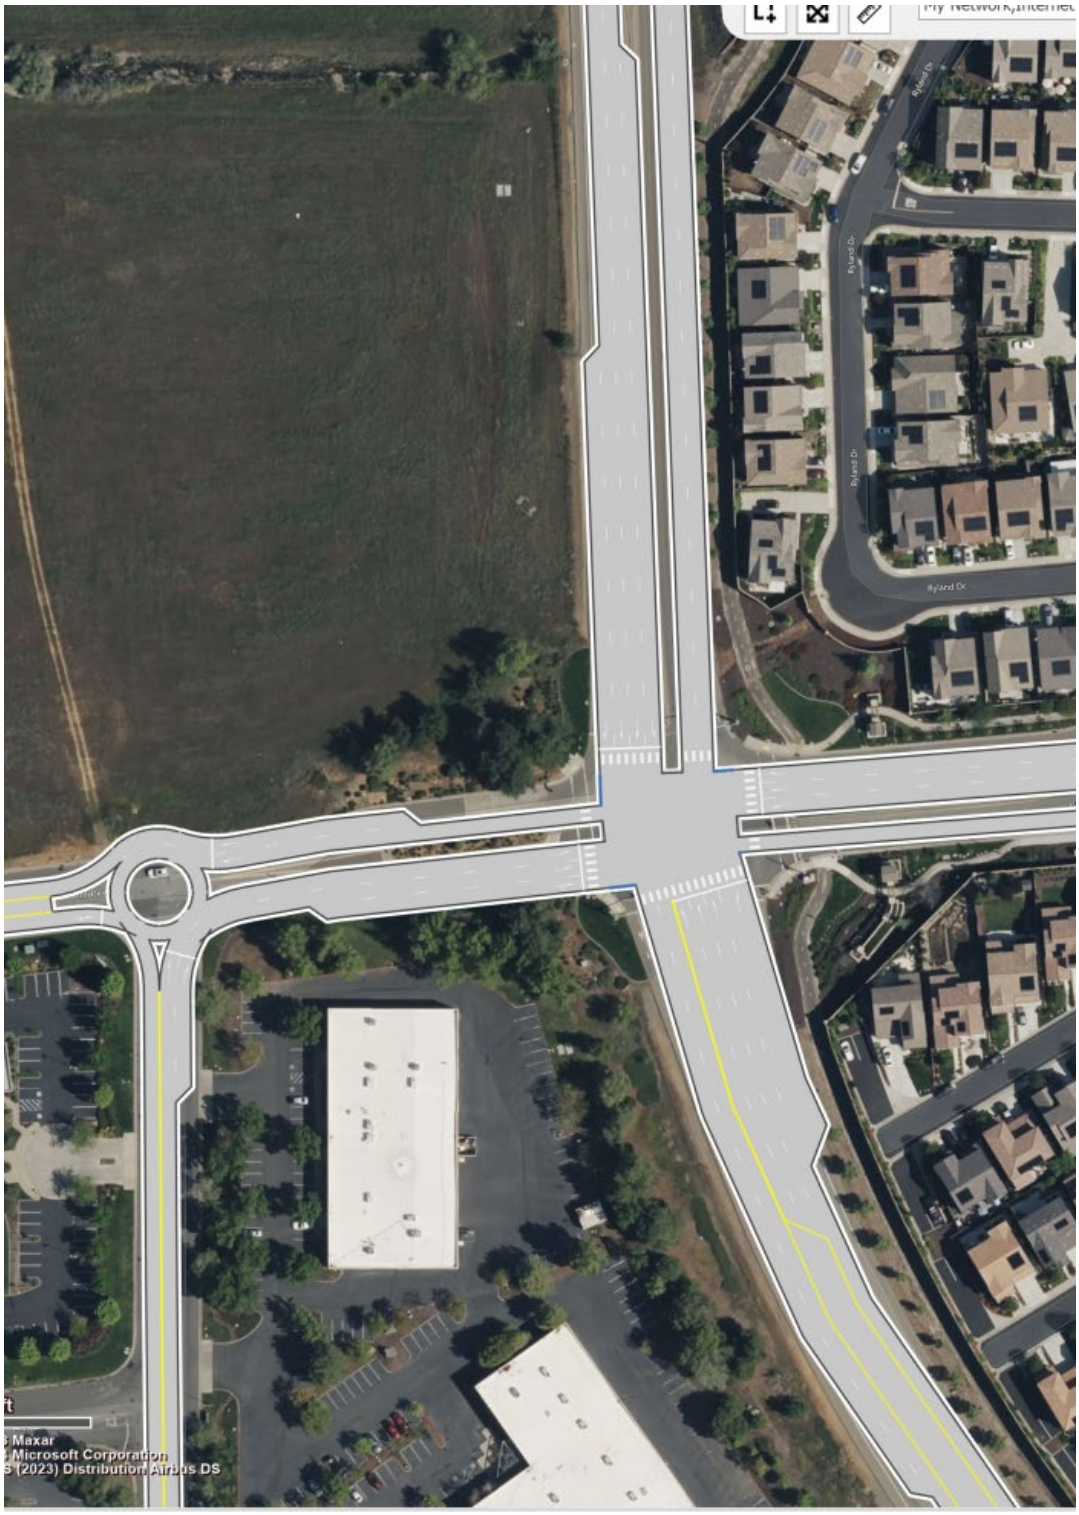

Figure 16. Latrobe Rd/Golden Foothill Pkwy (south) 2033 geometry with adjacent roundabout at Golden Foothill Pkwy/Robert J. Mathews Pkwy.

Finding: With implementation of the abatement measure, the Project is not anticipated to cause new, or worsen existing, General Plan level-of-service policy deficiencies at this location. **Table 27** at the end of this section presents intersection level-of-service results with this abatement.

Project responsibility: The Project is responsible for its fair share of the cost of these off-site improvements which would be addressed by payment of fees after Latrobe 72 is added to the 10-year CIP.

Timing: Prior to issuance of 1st building permit.

Cross reference: See abatement 9A.

10B. Latrobe Road/Investment Boulevard in 2033

Deficiency: Project traffic is anticipated to cause the eastbound (Investment Blvd) left-turn queue to spill out of its left-turn pocket.

2023-2033 Improvements Assumed: None.

Abatement: Implement as abatement 10A

Finding: With implementation of the abatement measure, the Project is not anticipated to cause new, or worsen existing, General Plan level-of-service policy deficiencies at this location. **Table 27** at the end of this section presents intersection level-of-service results with this abatement.

Project responsibility: None, addressed through abatement 10A.

Timing: Not applicable, addressed through abatement 10A.

11B. Latrobe Road/Avanti Drive in 2033

Deficiency: Project traffic is anticipated to cause this intersection to operate at level-of-service F.

2023-2033 Improvements Assumed: None.

Abatement: Implement as abatement 11A

Finding: With implementation of the abatement measure, the Project is not anticipated to cause new, or worsen existing, General Plan level-of-service policy deficiencies at this location. **Table 27** at the end of this section presents intersection level-of-service results with this abatement.

Project responsibility: None, addressed through abatement 11A.

Timing: Not applicable, addressed through abatement 11A.

12B. Latrobe Road/Royal Oaks Drive in 2033

Deficiency: Project traffic is anticipated to worsen the intersection to level-of-service F.

2023-2033 Improvements Assumed: None.

Abatement: Implement as abatement 12A.

Finding: With implementation of the abatement measure, the Project is not anticipated to cause new, or worsen existing, General Plan level-of-service policy deficiencies at this location. **Table 27** at the end of this section presents intersection level-of-service results with this abatement.

Project responsibility: None, addressed through abatement 12A.

Timing: Not applicable, addressed through abatement 12A.

13B. Golden Foothill Pkwy/Robert J. Mathews Pkwy in 2033

Deficiency: The Project is anticipated to worsen existing level-of-service F conditions at this intersection.

2023-2033 Improvements Assumed: None.

Abatement: Implement as abatement 13A

Finding: With implementation of the abatement measure, the Project is not anticipated to cause new, or worsen existing, General Plan level-of-service policy deficiencies at this location. **Table 27** at the end of this section presents intersection level-of-service results with this abatement.

Project responsibility: None, addressed through abatement 13A.

Timing: Not applicable, addressed through abatement 13A.

18B. White Rock Road/Carson Crossing Road in 2033

Deficiency: Project traffic is anticipated to cause new and worsen level-of-service F conditions. The peak-hour signal warrant is met with or without the Project.

2023-2033 Improvements Assumed: None.

Abatement: Implement as abatement 18A

Finding: With implementation of the abatement measure, the Project is not anticipated to cause new, or worsen existing, General Plan level-of-service policy deficiencies at this

location. **Table 27** at the end of this section presents intersection level-of-service results with this abatement.

Project responsibility: None, addressed through abatement 18A.

Timing: Not applicable, addressed through abatement 18A.

21B. White Rock Road/Valley View Parkway in 2033

Deficiency: Project traffic is anticipated to worsen level-of-service to F conditions and worsen left-turn queue spillback on eastbound and westbound White Rock Rd.

2023-2033 Improvements Assumed: None.

Abatement: Reconstruct White Rock Rd through the intersection as follows:

- Implement abatement 21 A.
- Further extend the westbound left turn pocket to 1000 feet. (note: abatement 21A will extend this pocket to 400 feet, abatement 21B reflects an additional 600 feet of westbound right turn storage.)

Widening should be done to the south of Latrobe Rd to avoid high voltage lines. Eastbound-westbound Lane alignment may require additional space.

Finding: With implementation of the abatement measure, the Project is not anticipated to cause new, or worsen existing, General Plan level-of-service policy deficiencies at this location. **Table 27** at the end of this section presents intersection level-of-service results with this abatement.

Project responsibility: CIP Project 36105042 (White Rock Road Widening 2 to 4 lanes – Post Street to South of Silva Valley Parkway) includes funding for improvements to this intersection in both the 10-year and 20-year CIPs and all components should be advanced to 10-year CIP. The Project's fair share responsibility for this improvement can be met through payment of TIF program fees.

Timing: Prior to issuance of 1st building permit.

9.0 CUMULATIVE 2040 CONDITIONS

The Cumulative 2040 conditions analysis started with lane configurations from Existing 2020 conditions and turning movements derived from existing traffic counts, growth factors from the Travel Demand Model, and the NCHRP 255 adjustment procedure. Several volume and network adjustments were then made.

Seven Capital Improvement Program (CIP) projects that effect study intersection geometry were accounted for:

- CIP Project 36105042: Widening of White Rock Road to four-lanes between Post Street and the US 50 Silva Valley interchange.
- CIP Project 36105007: Country Club Drive Extension to El Dorado Hills Blvd.
- CIP Project 36105035: Saratoga Way Extension Phase 2 (widening to 4-lanes and associated intersection improvements).
- CIP Project 36104021: US 50 auxiliary lane westbound - El Dorado Hills Blvd to El Dorado County line.
- CIP Project 36104001: US 50/El Dorado Hills Blvd interchange improvements phase 2B (adds another NB through lane at study intersection #4.
- CIP Project 36104004: US 50/Silva Valley Parkway interchange Phase 2 – on ramps and auxiliary lanes. (adds eastbound slip onramp and westbound loop onramp).
- CIP Project 36105041: White Rock Road widening to four-lanes between Manchester Drive and the El Dorado County Line.

Traffic volumes from 2033 without the Project were used as a floor before traffic from the avoided trips (see **Figure 10**, page 44) was shifted from where the TDM loads it directly onto Carson Crossing Drive to Investment Blvd. Traffic for the approved Carson Creek/Heritage project was added. Note that because the Creekside Village project also has avoided R&D and industrial vehicle trips, some turning movements are lower in 2040 than they were in 2033. For 2040, a peak hour factor of 0.92 was also used as a floor.

Figure *17* summarizes the turning movements and lane configurations for the Cumulative 2040 conditions scenario.

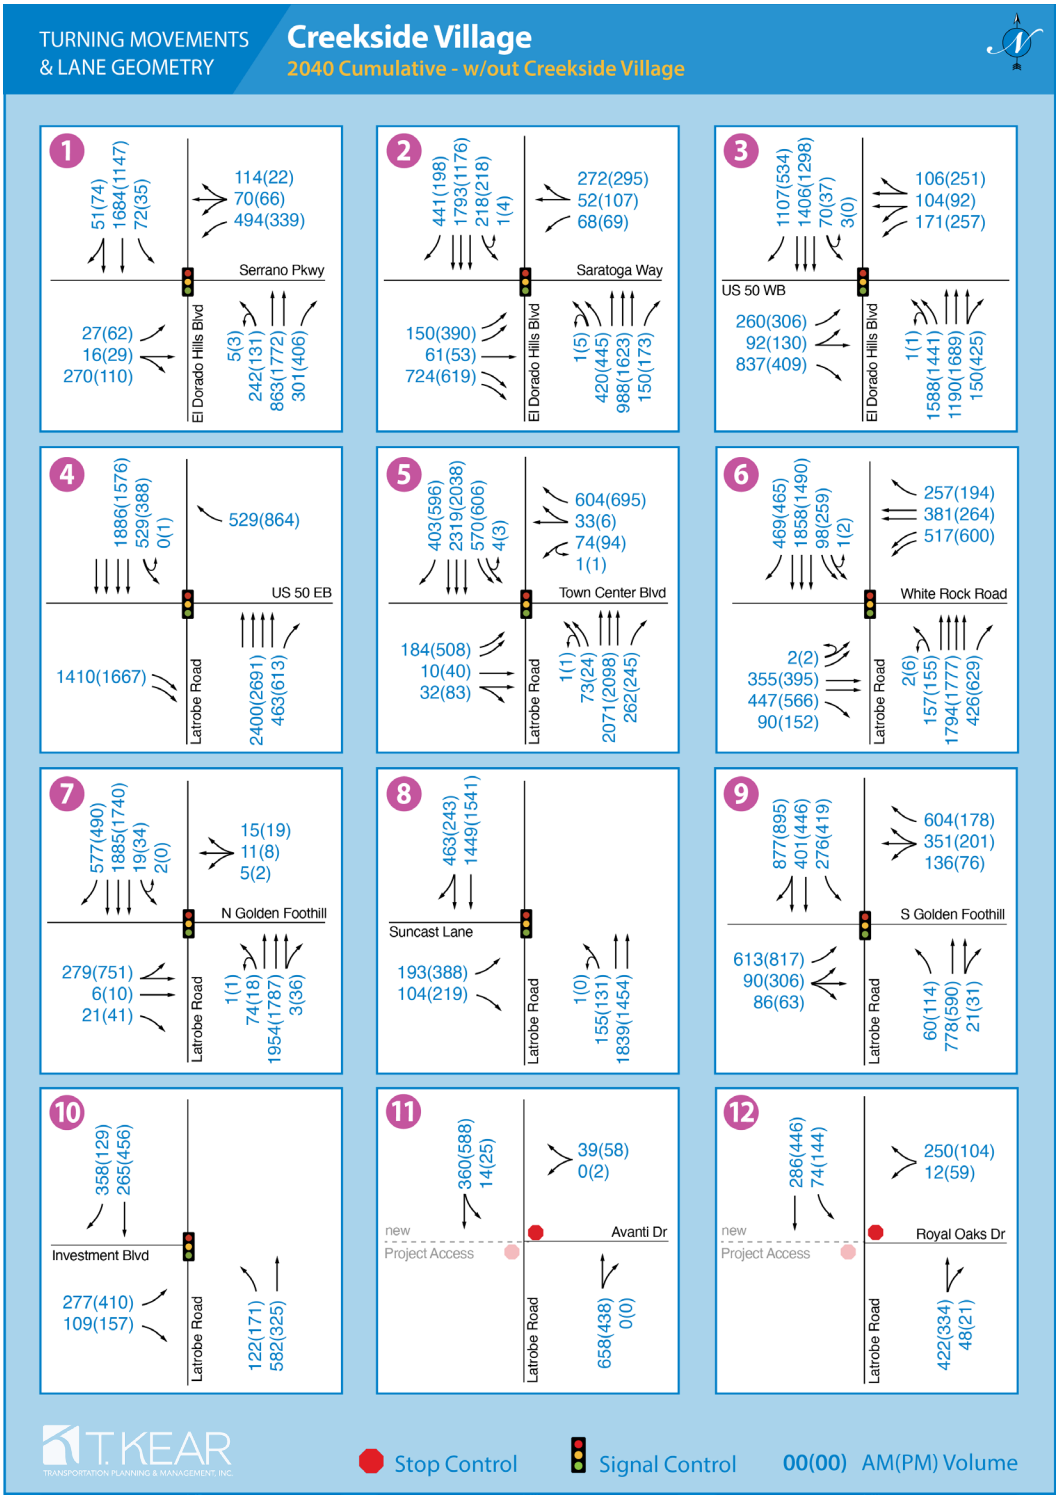

Figure 17. Cumulative 2040 lane geometry and turning movements

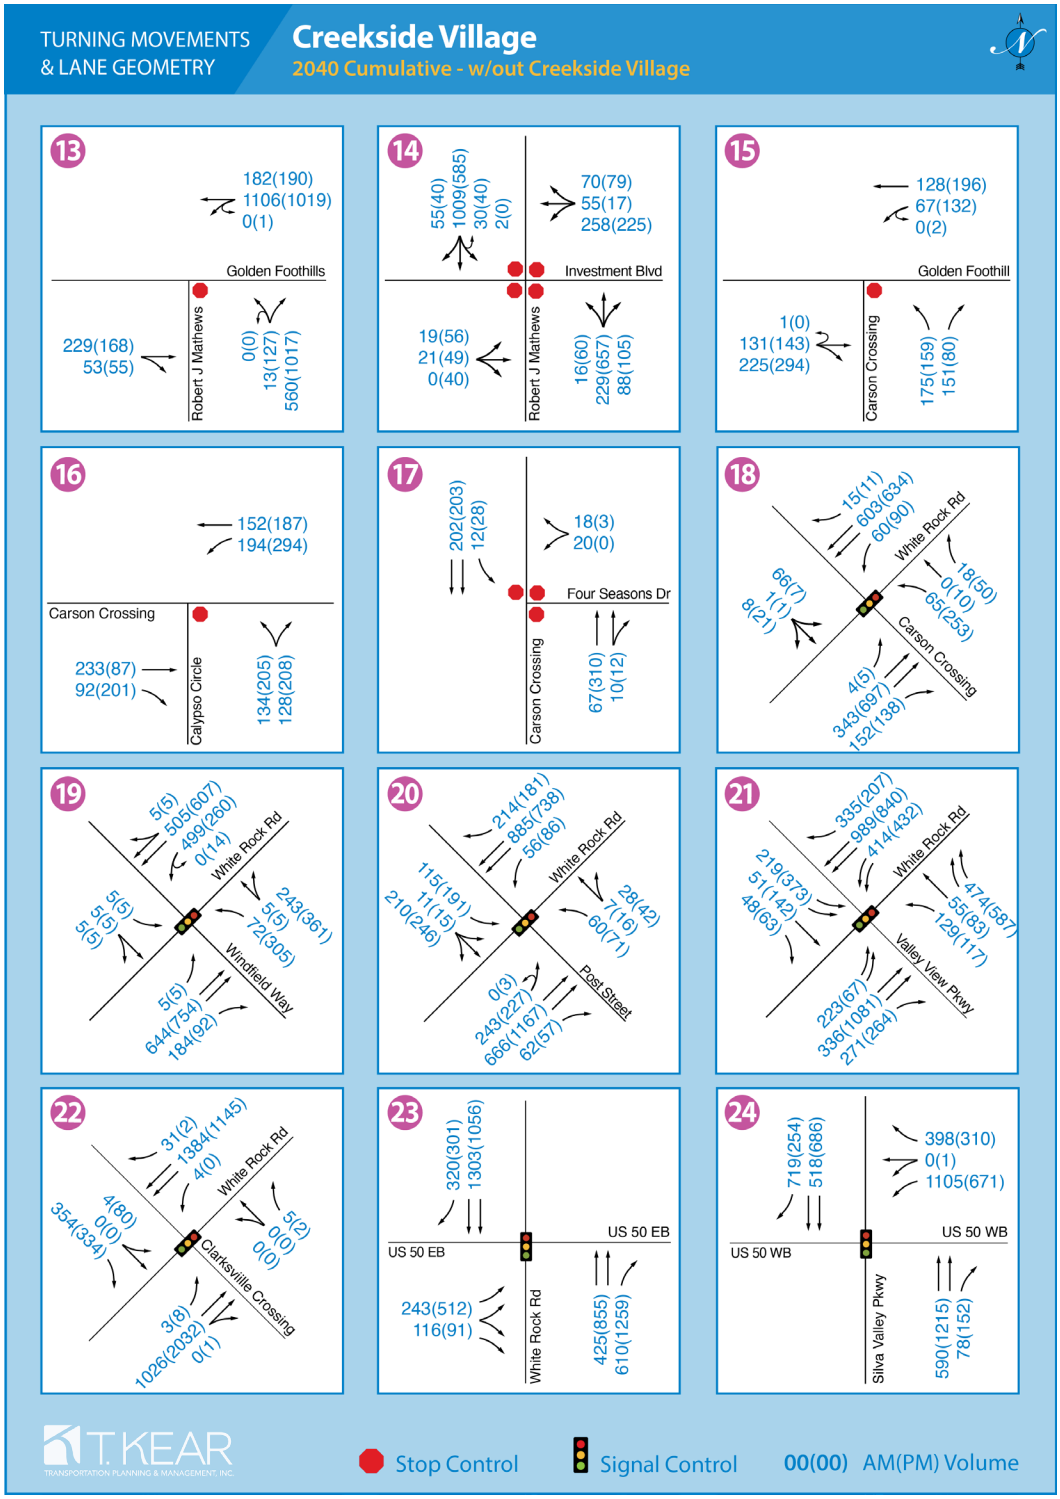

Figure 17. Cumulative 2040 lane geometry and turning movements (continued)

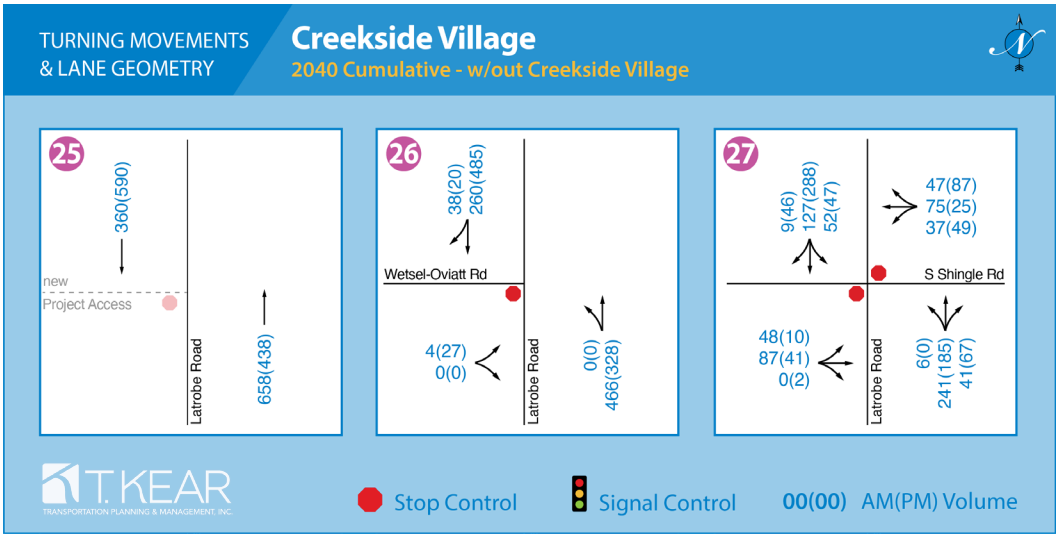

Figure *17*. Cumulative 2040 lane geometry and turning movements (continued)

Delay and level-of-service is presented in **Table 28** through **Table 30**. Intersection control is listed as signal, two-way stop-controlled (TWSC), or all-way stop-control (AWSC). Both the estimated delay and level-of-service (LOS) is provided. At TWSC intersections, the movement with the worst delay is shown in parentheses. Ninety-fifth percentile left turn queues are also listed. Entries shown in **bold black** typeface denote deficient traffic operations, and unsignalized intersections that meet the peak hour signal warrant are denoted with an asterisk and shading.

The results indicate that thirteen study intersections operate deficiency with level-of-service F conditions and/or 95% left turn queues that exceed available storage lengths.

- (1) El Dorado Hills Blvd/Serrano Pkwy AM;
- (2) El Dorado Hills Blvd/Saratoga Way PM;
- (3) El Dorado Hills Blvd/US 50 WB AM and PM;
- (5) Latrobe Road/Town Center Boulevard AM and PM;

Table 30. Cumulative 2040 arterial level-of-service check without the Project

Arterial Segment	Description	2040 AM No Project	2040 PM No Project
Latrobe Rd between Royal Oaks Dr and Investment Blvd	2-lane arterial (threshold 1650)	775	809
Latrobe Rd between Investment Blvd and Golden Foothill Pkwy (south)	2-lane arterial (threshold 1650)	1303	1073
Latrobe Rd between Golden Foothill Pkwy (south) and Suncast Ln	4-lane divided arterial (threshold 3290)	3134	2776
Latrobe Rd between White Rock Rd and Town Center Blvd	8-lane divided arterial (threshold 6280, extrapolated from 6-lane divided arterial)	3598	3580
White Rock Rd between Valley View Pkwy to Silva Valley Pkwy	4-lane divided arterial (threshold 3290)	2303	2934

(This page intentionally left blank)

10.0 CUMULATIVE 2040 PLUS PROPOSED PROJECT CONDITIONS

10.1 Traffic Volumes

Peak hour Project trips (**Figure 8** page 40) and avoided R&D and industrial trips (**Figure 10** page 44) were added to the EPPAP 2040 conditions traffic volumes. Delay and level-of-service were determined at the study intersections and segments. **Figure 18** summarizes the turning movements and lane configurations for the Cumulative 2040 Plus Proposed Project scenario.

10.2 Level-of-Service

Table 31 through **Table 33** present a summary of the level-of-service results for the study intersections and segments under Cumulative 2040 Plus Proposed Project conditions. Intersection control is listed as signal, two-way stop-controlled (TWSC), or all-way stop-control (AWSC). Both the estimated delay and level-of-service (LOS) is provided. At TWSC intersections, the movement with the worst delay is shown in parentheses. Ninety-fifth percentile left turn queues are also listed. Entries shown in **Bold black** text in **Table 31** through **Table 33** denote locations with preexisting deficiencies that the Project is not anticipated to worsen. **Bold red** text denotes locations where the Project is anticipated to create new or worsen preexisting deficiencies. Unsignalized intersections that meet the peak hour signal warrant are shaded and denoted with an asterisk.

One arterial segment is anticipated to have new deficiency caused by Project traffic (Latrobe Rd between Investment Blvd and Golden Foothill Pkwy (south). Fifteen intersections are anticipated to have level-of-service and/or queue spillback deficiencies.

<u>9 Locations that are deficient with or without the Project that are not worsened:</u>

- (1) El Dorado Hills Blvd/Serrano Pkwy AM;
- (2) El Dorado Hills Blvd/Saratoga Way PM;
- (8) Latrobe Rd/Suncast Ln AM and PM;
- (13) Golden Foothill Parkway (S)/Robert J. Mathewsws Pkwy AM and PM;
- (14) Investment Boulevard/Robert J. Mathews Pkwy AM;
- (16) Carson Crossing Road/Calypso Circle PM;
- (19) White Rock Road/Windfield Way AM and PM;
- (20) White Rock Road/Post Street AM and PM; and
- (21) White Rock Road/Valley View Parkway PM.

<u>4 Locations that are deficient with or without the Project that are worsened:</u>

- (3) El Dorado Hills Blvd/US 50 WB AM and PM;
- (5) Latrobe Road/Town Center Boulevard PM;
- (9) Latrobe Road/ Golden Foothill Parkway (S) AM and PM;
- (10) Latrobe Road/Investment Boulevard AM and PM;

2 Locations where the Project is anticipated to cause new deficiencies:

- (11) Latrobe Road/Avanti Drive AM and PM; and
- (12) Latrobe Road/Royal Oaks Drive AM and PM.

Calculation sheets for delay and level-of-service are provided in **Appendix B**. the remainder of the study intersections, all of the US 50 study segments, and arterial study segments were found to operate acceptably.

Density in units of passenger cars per mile per lane.

*Prior to the opening of the Saratoga Way extension, Caltrans has reported occasional LOS F conditions during the morning peak for this segment based on planning methods rather than counts.

Project plus forgone business park trips will reduce WB US 50 volume between Bass Lake Rd and Latrobe Rd in the morning, and between Latrobe Rd and the El Dorado County Line during the afternoon.

Project plus forgone business park trips will reduce EB US 50 volume between EDC line and Latrobe Rd during the AM-peak, and between Silva Valley Pkwy and Bass Lake Rd during the PM peak.

Table 33. Cumulative 2040 arterial level-of-service check with and without the Project

Arterial Segment	Description	2040 AM No Project	2040 PM No Project	2040 AM Plus Project	2040 PM Plus Project
Latrobe Rd between Royal Oaks Dr and Investment Blvd	2-lane arterial (threshold 1650)	775	809	1510	1606
Latrobe Rd between Investment Blvd and Golden Foothill Pkwy (south)	2-lane arterial (threshold 1650)	1303	1073	**1901**	**1751**
Latrobe Rd between Golden Foothill Pkwy (south) and Suncast Ln	4-lane divided arterial (threshold 3290)	3134	2776	3284	3017
Latrobe Rd between White Rock Rd and Town Center Blvd	8-lane divided arterial (threshold 6280, extrapolated from 6-lane divided arterial)	3598	3580	4284	4563
White Rock Rd between Valley View Pkwy to Silva Valley Pkwy	4-lane divided arterial (threshold 3290)	2303	2934	2313	2941

10.3 Findings of Project General Plan Level-of-Service and Queueing Deficiencies

Level-of-service and queueing impacts are not considered significant under CEQA. Intersections and/or segments where Project traffic creates new or worsens existing exceedances of General Plan policy thresholds are referred to as having a "Project deficiency". There are twelve intersections and two arterial segments where the Project is anticipated to create new or worsen existing deficiencies under EPAP 2033 conditions.

There are two sections that follow describing the segment level abatement measures and intersection level abatement measures. Throughout this document, segment deficiencies are numbered using the segment number (i through v) and a year code (2023 = "A", 2033 = "B", and 2040 = "C"). Intersection abatement measures are numbered using the intersection number (1-27) and the year code (A, B, or C).

All deficiencies and abatements described below include the deficiency number/abetment number and location as a title, followed by a description of the deficiency, the abatement, findings, responsibility, and timing. For certain abatements, a building permit trigger has been analyzed and included to determine the necessary timing for the improvement. For all other abatements, it is assumed the timing would be prior to issuance of the first building permit. If desired, a building permit trigger could also be determined for those abatements.

2040 Segment Deficiencies and Abatement Measures

(ii)C. Latrobe Rd between Investment Blvd and Golden Foothill Pkwy (south) in 2040 (CIP Project Latrobe 72)

Deficiency: Level-of-service is anticipated to worsen to F with the addition of Project traffic during the AM and PM peak-hours.

Abatement: Implement as abatement (ii)A.

Finding: With implementation of the abatement measure, the Project is not anticipated to cause new, or worsen existing, General Plan level-of-service policy deficiencies at this location. **Table 34** presents the segment level-of-service results with this abatement.

Project responsibility: None, addressed through abatement (ii)A.

Timing: Not applicable, addressed through abatement (ii)A.

Table 34. EPAP 2033 arterial level-of-service check with and without the abated Project

Arterial Segment	Description	2033 AM No Project	2033 PM No Project	2033 AM Plus Project	2033 PM Plus Project
Latrobe Rd between Investment Blvd and Golden Foothill Pkwy (south)	**Un Abated** 2-lane arterial (threshold 1650)	1303	1073	**1901**	**1751**
	Limit Project to 658 dwelling units: 2-lane arterial (threshold 1650)	1303	1073	1649.9	1526.4
	Add Widening to CIP: 4-lane divided arterial (threshold 3290)	1303	1073	1901	1751

2040 Intersection Deficiencies and Abatement Measures

3C. El Dorado Hills Blvd/US 50 WB in 2040

Deficiency: AM peak-hour level-of-service is F prior to addition of Project traffic. Project traffic is anticipated to worsen level-of-service.

2023-2040 Improvements Assumed: 2023 CIP 36104001.

Abatement: Implement as abatement 3A

Finding: With implementation of the abatement measure, the Project is not anticipated to cause new, or worsen existing, General Plan level-of-service policy deficiencies at this location. **Table 35** at the end of this section presents intersection level-of-service results with this abatement.

Project responsibility: None, addressed through abatement 3A.

Timing: Not applicable, addressed through abatement 3A.

4C. El Dorado Hills Blvd/US 50 EB in 2040

Deficiency: PM peak-hour 95th percentile queue on ramp is anticipated to reach 1400-feet, ending with 500-feet of the gore-point (where the ramp exits the freeway). Project traffic is anticipated to add 124-feet to the queue. This is a potentially traffic operations issue as the 2-lane portion of the ramp is limited to 430-feet.

2023-2040 Improvements Assumed: 2023 CIP 36104001.

Abatement: Implement as abatement 4B

Finding: With implementation of the abatement measure, the Project is not anticipated to cause new, or worsen existing, General Plan level-of-service policy deficiencies at this location. **Table 35** at the end of this section presents intersection level-of-service results with this abatement.

Project responsibility: None, addressed through abatement 4B.

Timing: Not applicable, addressed through abatement 4B.

5C. Latrobe Road/Town Center Boulevard in 2040

Deficiency: The southbound left-turn queue spills back out of its pocket during the PM peak-hour prior to the addition of Project traffic. Project traffic is anticipated to worsen the southbound left-turn queue spillback and cause the westbound left-turn queue to exceed its pocket length.

2023-2040 Improvements Assumed: None.

Abatement: Implement as abatement 5A

Finding: With implementation of the abatement measure, the Project is not anticipated to cause new, or worsen existing, General Plan level-of-service policy deficiencies at this location. **Table 35** at the end of this section presents intersection level-of-service results with this abatement.

Project responsibility: None, addressed through abatement 5A.

Timing: Not applicable, addressed through abatement 5A.

9C. Latrobe Road/ Golden Foothill Parkway (S) in 2040

Deficiency: Project traffic is anticipated to worsen the intersection to level-of-service F conditions.

2023-2033 Improvements Assumed: None.

Abatement: Implement as abatement 9B

Finding: With implementation of the abatement measure, the Project is not anticipated to cause new, or worsen existing, General Plan level-of-service policy deficiencies at this location. **Table 35** at the end of this section presents intersection level-of-service results with this abatement.

Project responsibility: None, addressed through abatement 9B.

Timing: Not applicable, addressed through abatement 9B.

Cross reference: See abatement 9A, 9B.

10C. Latrobe Road/Investment Boulevard in 2040

Deficiency: Project traffic is anticipated to cause the eastbound (Investment Blvd) left-turn queue to spill out of its left-turn pocket.

2023-2040 Improvements Assumed: None.

Abatement: Implement as abatement 10A

Finding: With implementation of the abatement measure, the Project is not anticipated to cause new, or worsen existing, General Plan level-of-service policy deficiencies at this location. **Table 35** at the end of this section presents intersection level-of-service results with this abatement.

Project responsibility: None, addressed through abatement 10A.

Timing: Not applicable, addressed through abatement 10A.

11C. Latrobe Road/Avanti Drive in 2040

Deficiency: Project traffic is anticipated to cause this intersection to operate at level-of-service F.

2023-2040 Improvements Assumed: None.

Abatement: Implement as abatement 11A

Finding: With implementation of the abatement measure, the Project is not anticipated to cause new, or worsen existing, General Plan level-of-service policy deficiencies at this location. **Table 35** at the end of this section presents intersection level-of-service results with this abatement.

Project responsibility: None, addressed through abatement 11A.

Timing: Not applicable, addressed through abatement 11A.

12C. Latrobe Road/Royal Oaks Drive in 2040

Deficiency: Project traffic is anticipated to worsen the intersection to level-of-service F.

2023-2040 Improvements Assumed: None.

Abatement: Implement as abatement 12A.

Finding: With implementation of the abatement measure, the Project is not anticipated to cause new, or worsen existing, General Plan level-of-service policy deficiencies at this location. **Table 35** at the end of this section presents intersection level-of-service results with this abatement.

Project responsibility: None, addressed through abatement 12A.

Timing: Not applicable, addressed through abatement 12A.

Table 35. EPAP 2040 intersection delay and level-of-service with and without the abated Project

ID	Intersection	Control	Left Turn Storage	2040 AM Peak No Project				2040 PM Peak No Project				2040 AM Peak with Project				2040 PM Peak with Project				Abatement Strategy	Left Turn Storage	2040 Abated AM Peak (+ Proj)				2040 Abated PM Peak (+ Proj)				Existing or Anticipated CIP Project

(This page intentionally left blank)

11.0 CEQA VMT ANALYSIS

Residential and local serving retail components of the Project are each addressed below based on the methods and thresholds specified in Section 3.4.

11.1 Residential Component

The unincorporated countywide VMT per capita for determining the significance threshold for residential projects, and the Project analysis itself are estimated using the same tools and methodology. For this analysis 2018 baseline model results and 2040 cumulative model results were used to estimate the baseline, 15% reduction threshold adopted by the County in Resolution 141-2020 and incorporated herein by reference, and Project VMT as shown in **Table 36**. The significance threshold determined by this calculation is 17.3 VMT per capita. The residential component of the Project is anticipated to generate 13.6 VMT per capita based on 2018 land use and drop to 13.1 VMT per capita by 2040. CEQA Finding: The residential portion of the Project is anticipated to have a **less-than-significant** impact on VMT.

Table 36. Creekside Village residential VMT analysis

	El Dorado County		Project (Based on TAZ 167)	
	2018	**2040**	**2018**	**2040**
Home based VMT	2,813,221	3,158,464	39,441	45,417
Population	137,989	162,164	2,904	3,478
Trips	616,395	746,555	10,217	12,453
VMT per capita	20.4	19.5	13.6	13.1
VMT threshold with 15% reduction	17.3	n/a	n/a	n/a
Avg. trip length (miles)	4.6	4.2	3.9	3.6

11.2 Local Serving Retail Component

The Project includes 5.4 ksf of neighborhood commercial/local serving retail, which will add coffee and dining opportunities within walking distance of the Project, the neighboring Blackstone and Heritage communities, and vehicles passing by on Latrobe Rd. There is not a clear definition of local serving vs regional serving retail; OPR guidance states that retail projects of 50,000 sqft or larger are generally regional rather than local serving. The proposed retail Project component is well under the OPR threshold and is anticipated to be local serving. Therefore, the retail component of Creekside Village is anticipated to be less-than-significant.

The 1.8 ac/5.4 ksf neighborhood commercial/local serving retail is proposed for potential uses such as convenience stores, coffee shops and professional offices. If built entirely as professional office rather than retail, its anticipated trip generation is under the County's 100 trip per day de minimis threshold for small projects and the VMT impact would remain less-than-significant.

(This page intentionally left blank)

12.0 BICYCLE PEDESTRIAN AND TRANSIT IMPACTS

The Project does not interfere with existing or proposed transit service and has a **less-than-significant** impact on transit.

The Project enhances bicycle and pedestrian access to the El Dorado Hills Business Park (**Figure 19**) and does not interfere with existing or planned bicycle and pedestrian facilities. The Project includes a variety of bike and pedestrian amenities providing connections both within the planned community and externally to the existing bike and pedestrian facilities along Latrobe Road and Royal Oaks Dr:

- The Creekside Village entry road will feature class II bike lanes from its intersection with Latrobe Road.
- The Project features a complete system of paved and unpaved trails located in the open space buffer areas and landscape corridors. The trails will be destination-oriented and link the various residential neighborhoods, parks, and the business park.
- The majority of Creekside Village streets will include attached or separated sidewalks on both sides of the street. Sidewalks will comply with ADA standards and be a minimum of 4-feet in width.

The Project has a **less-than-significant** impact on bicycle and pedestrian facilities.

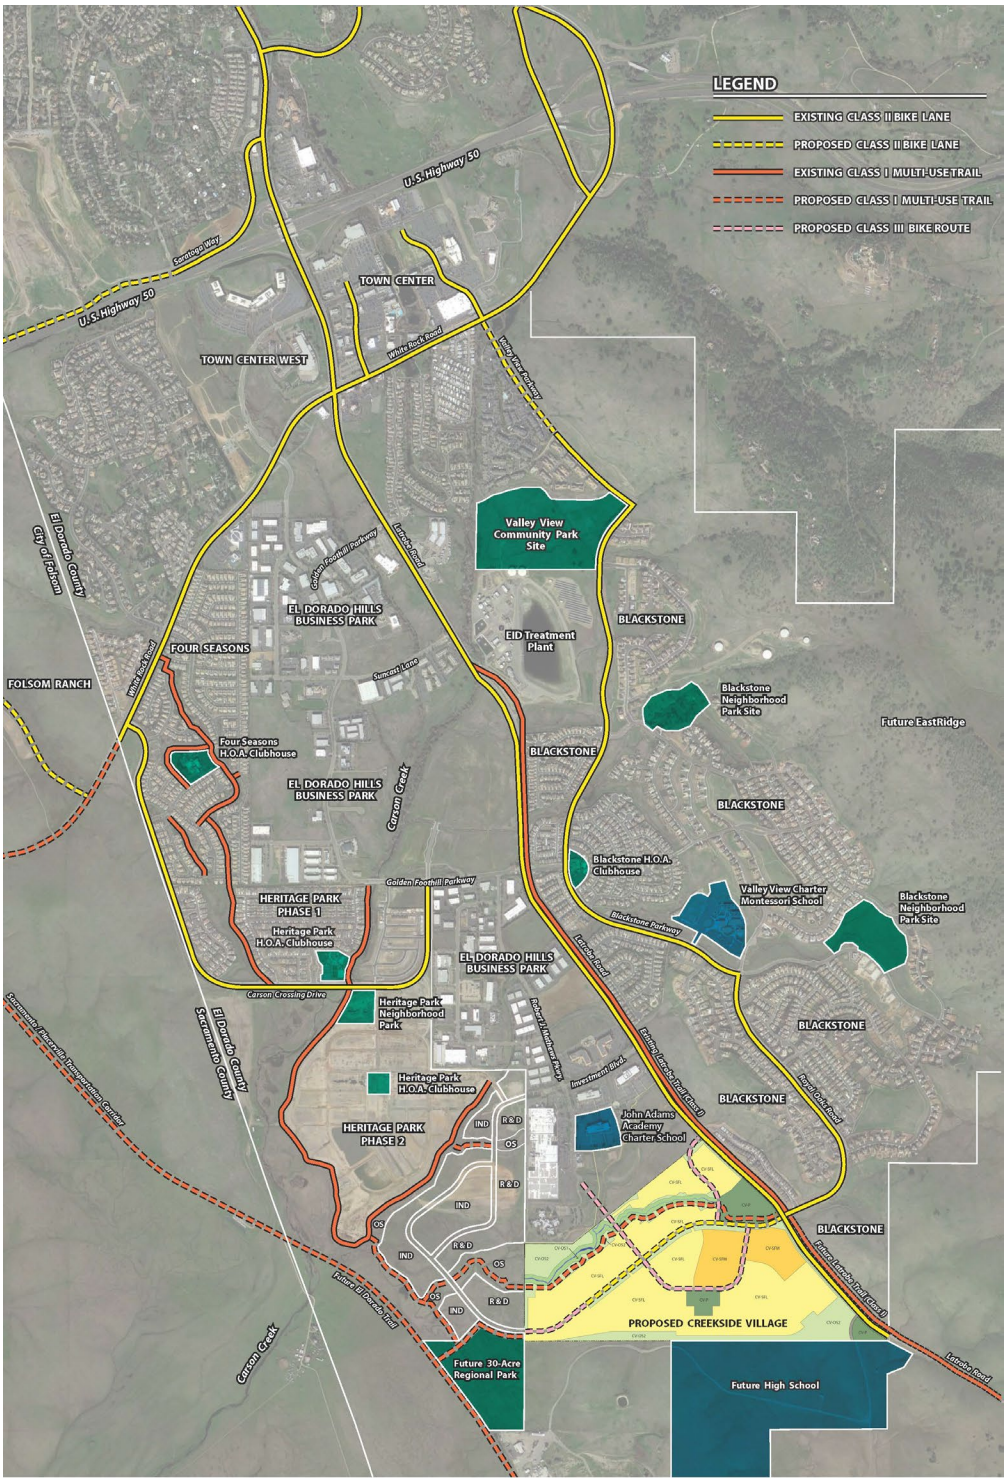

Figure 19. Bike and pedestrian facilities map (Project would construct on-site facilities)

13.0 FINDINGS

13.1 Trip Generation Findings

The 918 dwelling unit Project with 5,400 sqft of neighborhood commercial space is anticipated to generate 834 AM peak hour trips, 955 PM peak hour trips, and 10,040 daily trips. Those trips are largely offset by 2040 through forgone commercial development on the 207.9 ac project site which the travel demand model anticipated would have generated 733 AM peak hour trips, 829 PM peak hour trips, and 9,415 daily trips. Net, the Project therefore adds only 101 AM peak hour trips during the AM peak hour, 126 trips during the PM peak hour, and 625 daily trips over what was assumed in travel demand model horizon year. Trip Generation is discussed in more detail in **Section 5.1**.

13.2 CEQA Findings

VMT: The 918 dwelling unit residential component of the Project is anticipated to have home based VMT per capita of 13.6 in 2023 and 13.1 in 2040, compared to a significance threshold (calculated using the same methodology and data as the Project impacts) of 17.3. Therefore the residential component of the Project has a **less-than significant** impact on VMT. The 5,400 sqft neighborhood commercial local serving retail component of the Project offers improved destination choices for local residents and can be assumed to have a **less-than significant** impact on VMT. The VMT analysis is discussed in **Section 3.4** and **Section 11**.

Transit: The Project does not interfere with existing or proposed transit service and has a **less-than-significant** impact on transit. Transit impacts are briefly discussed in **Section 12**.

Bicycles and Pedestrians: The Project enhances bicycle and pedestrian access to the El Dorado Hills Business Park and does not interfere with existing or planned bicycle and pedestrian facilities. The Project includes a variety of bike and pedestrian amenities providing connections both within the planned community and externally to the existing bike and pedestrian facilities along Latrobe Road and Royal Oaks Dr. Therefore, the Project has a **less-than-significant** impact on bicycle and pedestrian facilities. Bicycles and pedestrian impacts are briefly discussed in **Section 12**.

13.3 General Plan Level-of-Service and Queue Length Findings

Deficiencies that are caused or worsened by the Project, and abatement measures to address said deficiencies, are identified for existing 2023 plus Project, EPAP 2033 plus Project, and cumulative 2040 plus Project conditions.

Throughout this document, segment deficiencies are numbered using the segment number (i through v) and a year code (2023 = “A”, 2033 = “B”, and 2040 = “C”). Intersection abatement measures are numbered using the intersection number (1-27) and the year code (A, B, or C).

Existing 2023 Plus Project Conditions

Existing 2023 plus Project conditions are discussed in **Section 6.** The Project is anticipated to cause new or worsen existing level-of-service/queuing deficiencies on one road segment and at twelve intersections (deficiencies may be caused by anticipated level-of-service and/or queue spillback):

1 Arterial segments with worsened or new Project related deficiencies:

- Latrobe Rd between Investment Blvd and Golden Foothill Pkwy (south) AM and PM

10 Locations that are deficient with or without the Project that are worsened:

- (2) El Dorado Hills Blvd/Saratoga Way AM and PM;
- (3) El Dorado Hills Blvd/US 50 WB AM and PM;
- (5) Latrobe Road/Town Center Boulevard PM;
- (6) Latrobe Road/White Rock Road AM and PM;
- (8) Latrobe Rd/Suncast Ln AM and PM;
- (9) Latrobe Road/ Golden Foothill Parkway (S) AM and PM;
- (10) Latrobe Road/Investment Boulevard AM and PM;
- (13) Golden Foothill Parkway (S)/Robert J. Mathewsws Pkwy PM;
- (18) White Rock Road/Carson Crossing Road PM; and
- (21) White Rock Road/Valley View Parkway AM and PM.

2 Locations where the Project is anticipated to cause new deficiencies:

- (11) Latrobe Road/Avanti Drive AM and PM; and
- (12) Latrobe Road/Royal Oaks Drive AM and PM.

Deficiency/Abatement (ii)A. Latrobe Rd between Investment Blvd and Golden Foothill Pkwy (south) in 2023 (CIP Project Latrobe 72)

Deficiency: Level-of-service is anticipated to worsen to F with the addition of Project traffic during the AM and PM peak-hours.

Abatement: Before issuance of the 658th residential building permit or the first commercial building permit, the CIP project Latrobe 72 (widen Latrobe Rd to four-lanes between Investment Blvd and Royal Oaks Dr) shall be included in the 10-year CIP. Latrobe 72 consists of widening Latrobe Rd between Investment Blvd and Golden Foothill Pkwy (south) from two-lanes to four-lanes, and all associated improvements at the intersections of Latrobe Rd/Investment Blvd and Latrobe Rd/Golden Foothill Pkwy (south).

Finding: With implementation of the abatement measure, the Project is not anticipated to cause new, or worsen existing, General Plan level-of-service policy deficiencies at this location. **Table 18** presented the segment level-of-service results with this abatement.

Project Responsibility: The Project is responsible for its fair share of the cost of these off-site improvements which would be addressed by payment of fees after Latrobe 72 is added to the 10-year CIP. Addition of these improvements to the CIP will provide the mechanism to ensure the Project is responsible for its fair share.

Timing: Prior to issuance of the 658th residential building permit or the first commercial building permit. Note the 658 th unit constraint is based on the cumulative 2040 scenario which is the most constrained scenario for this deficiency.

Deficiency/Abatement 2A. El Dorado Hills Blvd/Saratoga Way in 2023

Deficiency: Level-of-service is F prior to addition of Project traffic, with northbound left-turn queues spilling out of the turn pocket. Project traffic is anticipated to worsen level-of-service and northbound left-turn queues.

Abatement: Construct a 300-foot southbound right turn pocket and adjust signal timing.

Finding: With implementation of the abatement measure, the Project is not anticipated to cause new, or worsen existing, General Plan level-of-service policy deficiencies at this location. **Table 19** presented intersection level-of-service results with this abatement.

Project Responsibility: This abatement partially implements Project #36105076 in the 10-year Capital Improvement Program (CIP). The Project may satisfy its fair share requirement through payment of applicable fees under the El Dorado County traffic impact Fee (TIF) program.

Timing: Prior to issuance of 1st building permit.

Cross reference: See abatement 2B, which builds on abatement 2A.

Deficiency/Abatement 3A. El Dorado Hills Blvd/US 50 WB in 2023

Deficiency: Existing AM peak-hour level-of-service is F prior to addition of Project traffic. Project traffic is anticipated to worsen level-of-service.

Abatement: Adjust signal splits.

Finding: With implementation of the abatement measure, the Project is not anticipated to cause new, or worsen existing, General Plan level-of-service policy deficiencies at this location. **Table 19** presented intersection level-of-service results with this abatement.

Project responsibility: Project is responsible for its fair-share of signal timing adjustment. The CIP includes funding for intersection and safety improvements at "to be determined" locations. The Project may satisfy this requirement through payment of applicable fees under the El Dorado County traffic impact Fee (TIF) program.

Timing: Prior to issuance of 1st building permit.

Deficiency/Abatement 5A. Latrobe Road/Town Center Boulevard in 2023

Deficiency: The southbound left turn queue spills back out of its pocket during the PM peak-hour under existing conditions prior to the addition of Project traffic. Project traffic is anticipated to worsen the southbound left turn queue spillback and cause the westbound left turn queue to exceed its pocket length.

Abatement: Adjust signal splits and extend the westbound left-turn pocket from 100 feet to 140 feet.

Finding: With implementation of the abatement measure, the Project is not anticipated to cause new, or worsen existing, General Plan level-of-service policy deficiencies at this location. **Table 19** presented intersection level-of-service results with this abatement.

Project responsibility: The Project is responsible for its fair share of these intersection improvements. These improvements could be addressed through the line item in the CIP for intersection improvements and the Project would contribute its fair share through payment of the TIF. Because a discrete CIP project is not approved or anticipated for the specific improvement, these intersections improvements were included within the area of potential effect (APE) for the Project.

Timing: Prior to issuance of 1st building permit.

Deficiency/Abatement 6A. Latrobe Road/White Rock Road in 2023

Deficiency: The westbound left-turn queue spills back out of its turn pocket under existing conditions without the Project. Project traffic is anticipated to worsen that queue spillback.

Abatement: Adjust signal splits.

Finding: With implementation of the abatement measure, the Project is not anticipated to cause new, or worsen existing, General Plan level-of-service policy deficiencies at this location. **Table 19** presented intersection level-of-service results with this abatement.

Project responsibility: This abatement partially implements Project #36105069 in the 20-year Capital Improvement Program (CIP). The Project is responsible for its fair share of

modification of signal timing, which may be addressed through payment of fees if the CIP project is moved to the 10-year CIP.

Timing: Prior to issuance of 1st building permit.

Deficiency/Abatement 8A. Latrobe Road/Suncast Lane in 2023

Deficiency: The eastbound left turn queue spills-back out of its pocket during the PM peak-hour under existing conditions prior to the addition of Project traffic. Project traffic is anticipated to worsen the existing deficiency.

Abatement: Restripe the eastbound approach to have a left and a shared left-right lane.

Finding: With implementation of the abatement measure, the Project is not anticipated to cause new, or worsen existing, General Plan level-of-service policy deficiencies at this location. **Table 19** presented intersection level-of-service results with this abatement.

Project responsibility: Project is responsible for its fair-share of restriping. The CIP includes funding for intersection and safety improvements at "to be determined" locations. The Project may satisfy this requirement through payment of applicable fees under the El Dorado County traffic impact Fee (TIF) program.

Timing: Prior to issuance of 1st building permit.

Deficiency/Abatement 9A. Latrobe Road/ Golden Foothill Parkway (south) in 2023

Deficiency: Project traffic is anticipated to create a new intersection level-of-service deficiency during the PM peak-hour and worsen existing queue spillback from the eastbound left turn during both the AM and PM peak-hours.

Abatement: Stripe eastbound approach as 2-lanes between Robert J. Mathewsws Pkwy and Latrobe Rd and widen to three lanes at the intersection by constructing a 200-foot eastbound right turn pocket. Label the eastbound approach lanes as left, left, thru-right. Adjust cycle length and splits. These improvements are consistent with intersection improvements that would be constructed under abatement (ii)A ("Latrobe 72") above. Therefore, addition of Latrobe 72 to the 10-year CIP would address the Project's fair share cost of these improvements as well.

Finding: With implementation of the abatement measure, the Project is not anticipated to cause new, or worsen existing, General Plan level-of-service policy deficiencies at this location. **Table 19** presented intersection level-of-service results with this abatement.

Project responsibility: The Project is responsible for its fair share of the cost of these off-site improvements which would be addressed by payment of fees after Latrobe 72 is added to the 10-year CIP.

Timing: Prior to issuance of 1st building permit.

Cross reference: See abatement 9B, which builds on abatement 9a.

Deficiency/Abatement 10A. Latrobe Road/Investment Boulevard in 2023

Deficiency: Project traffic is anticipated to cause the northeast bound (Investment Blvd) left turn queue to spill out of its left-turn pocket during the AM peak-hour and worsen existing queue spill back for that same movement during the PM peak-hour.

Abatement: Stripe eastbound approach as left, shared left-right in 180-foot pocket. Adjust cycle length and splits. These improvements are consistent with intersection improvements that would be constructed under abatement (ii)A ("Latrobe 72") above. Therefore, addition of Latrobe 72 to the 10-year CIP would address the Project's fair share cost of these improvements as well.

Finding: With implementation of the abatement measure, the Project is not anticipated to cause new, or worsen existing, General Plan level-of-service policy deficiencies at this location. **Table 19** presented intersection level-of-service results with this abatement.

Project responsibility: The Project is responsible for its fair share of the cost of these off-site improvements which would be addressed by payment of fees after Latrobe 72 is added to the 10-year CIP.

Timing: Prior to issuance of 1st building permit.

Deficiency/Abatement 11A. Latrobe Road/Avanti Drive in 2023

Deficiency: Project traffic is anticipated to cause this intersection to operate at level-of-service F.

Abatement: Construct 100-foot left turn pockets on Latrobe (NB and SB). Construct 100-foot receiving lane on NB Latrobe for EB left turns from Project. This intersection is a Project access point, and these improvements can likely be done as part of the Project's frontage improvements.

Finding: With implementation of the abatement measure, the Project is not anticipated to cause new, or worsen existing, General Plan level-of-service policy deficiencies at this location. **Table 19** presented intersection level-of-service results with this abatement.

Project responsibility: The Project is responsible for construction of these intersection improvements.

Timing: Prior to issuance of 1st building permit.

Deficiency/Abatement 12A. Latrobe Road/Royal Oaks Drive in 2023

Deficiency: Project traffic is anticipated to worsen the intersection to level-of-service F.

Abatement: Reconstruct the intersection as a signal-controlled intersection. The eastbound approach should be constructed as a three-lane approach with a left-turn lane in a 220-foot pocket, a shared left-thru, and a right turn lane in a 100-foot pocket. This intersection is a Project access point, and these improvements can likely be done as part of the Project's frontage improvements.

Finding: With implementation of the abatement measure, the Project is not anticipated to cause new, or worsen existing, General Plan level-of-service policy deficiencies at this location. **Table 19** presented intersection level-of-service results with this abatement.

Project responsibility: The Project is responsible for construction of these intersection improvements.

Timing: Prior to issuance of 1st building permit.

Deficiency/Abatement 13A. Golden Foothill Pkwy/Robert J. Mathews Pkwy in 2023

Deficiency: Project traffic is anticipated to worsen level-of-service F conditions.

Abatement: Reconstruct as a roundabout. Construct as follows:

- Northbound approach - a shared left-right lane and a right-turn lane in a 100-foot pocket.
- Westbound approach - a left-turn lane and a through lane.
- Eastbound approach – a shared through-right lane.

Figure 13 provides the traffic model's representation of this geometry and its relation to the adjacent intersection of Latrobe Rd/Golden foothill Pkwy (south) with abatement 9A implemented.

Finding: With implementation of the abatement measure, the Project is not anticipated to cause new, or worsen existing, General Plan level-of-service policy deficiencies at this location. **Table 19** presented intersection level-of-service results with this abatement.

Project responsibility: The Project is responsible for its fair share of the cost of these off-site improvements which would be addressed by payment of fees after the roundabout is added to the 10-year CIP.

Timing: Prior to issuance of 1st building permit.

Deficiency/Abatement 18A. White Rock Road/Carson Crossing Road in 2023

Deficiency: Project traffic is anticipated to worsen level-of-service F conditions and cause the peak-hour signal warrant to be met.

Abatement: Signalize the intersection utilizing existing geometry.

Finding: With implementation of the abatement measure, the Project is not anticipated to cause new, or worsen existing, General Plan level-of-service policy deficiencies at this location. **Table 19** presented intersection level-of-service results with this abatement.

Project responsibility: This off-site improvement partially implements 20-year CIP project 36105041 (White Rock Road widening 2 to 4 Lanes - Windfield Way to Sacramento County Line) and should be advanced to the 10-year CIP. Through payment of the TIF,. the Project would be responsible for its fair share of cost.

Timing: Prior to issuance of 1st building permit.

Deficiency/Abatement 21A. White Rock Road/Valley View Parkway in 2023

Deficiency: Project traffic is anticipated to worsen level-of-service to F and worsen left-turn queue spillback on eastbound and westbound White Rock Rd.

Abatement: Reconstruct White Rock Rd through the intersection as follows:

- Eastbound approach: restripe the left turn pocket to 400-feet, restripe the shared through-right lane as a through lane, construct a right-turn lane in a 220-foot pocket.
- Westbound approach (White Rock Rd): Widen to construct a right-turn lane in a 220-foot pocket and extend the left-turn pocket to 400-feet. Restripe the shared through-right lane as a through lane.

Widening should be done to the south or Latrobe Rd to avoid high voltage lines. Eastbound-westbound Lane alignment may require additional space.

Finding: With implementation of the abatement measure, the Project is not anticipated to cause new, or worsen existing, General Plan level-of-service policy deficiencies at this location. **Table 19** presented intersection level-of-service results with this abatement.

Project responsibility: CIP Project 36105042 (White Rock Road widening 2 to 4 lanes - Post Street to South of Silva Valley Parkway) includes funding for improvements to this intersection in both the 10-year and 20-year CIPs and all components should be advanced to 10-year CIP. The Project's fair share responsibility for this improvement can be met through payment of TIF program fees.

Timing: Payment of TIF at issuance of each building permit.

Cross reference: See abatement 21B, which builds on abatement 21a.

EPAP 2033 Plus Project Conditions

EPAP 2033 plus Project conditions are discussed in **Section 8.** The Project is anticipated to cause new or worsen existing level-of-service/queuing deficiencies on two road segments and at thirteen intersections (deficiencies may be caused by anticipated level-of-service and/or queue spillback):

2 Arterial segments with worsened or new Project related deficiencies:

- White Rock Rd between Valley View Pkwy to Silva Valley Pkwy AM and PM; and
- Latrobe Rd between Investment Blvd and Golden Foothill Pkwy (south) PM.

11 Locations that are deficient with or without the Project that are worsened:

- (2) El Dorado Hills Blvd/Saratoga Way AM and PM;
- (3) El Dorado Hills Blvd/US 50 WB AM and PM;
- (4) El Dorado Hills Blvd/US 50 EB PM;
- (5) Latrobe Road/Town Center Boulevard PM;
- (6) Latrobe Road/White Rock Road AM and PM;
- (7) Latrobe Road/Golden Foothill Parkway (N) AM and PM;
- (9) Latrobe Road/ Golden Foothill Parkway (S) AM and PM;
- (10) Latrobe Road/Investment Boulevard AM and PM;
- (13) Golden Foothill Parkway (S)/Robert J. Mathewsws Pkwy AM and PM;
- (18) White Rock Road/Carson Crossing Road PM; and
- (21) White Rock Road/Valley View Parkway AM and PM.

2 Locations where the Project is anticipated to cause new deficiencies:

- (11) Latrobe Road/Avanti Drive AM and PM; and
- (12) Latrobe Road/Royal Oaks Drive AM and PM.

Deficiency/Abatement (ii)B. Latrobe Rd between Investment Blvd and Golden Foothill Pkwy (south) in 2033 (CIP Project Latrobe 72)

Deficiency: Level-of-service is anticipated to worsen to F with the addition of Project traffic during the AM and PM peak-hours.

Abatement: Implement as abatement (ii)A.

Finding: With implementation of the abatement measure, the Project is not anticipated to cause new, or worsen existing, General Plan level-of-service policy deficiencies at this location. **Table 26** presented the segment level-of-service results with this abatement.

Project responsibility: None, addressed through abatement (ii)A.

Timing: Not applicable, addressed through abatement (ii)A.

Deficiency/Abatement (v)B. White Rock Rd between Valley View Pkwy to Silva Valley Pkwy in 2033

Deficiency: This segment operates at level-of-service F under EPAP 2033 conditions without the Project and the Project is anticipated to add more than 10 peak hour trips to this segment, worsening the existing level-of-service deficiency.

Abatement: Before issuance of the 173rd residential building permit or the first commercial building permit, advance CIP Project 36105042 to the 10-year CIP (widen White Rock Rd to four lanes between Valley View Pkwy and Silva Valley Pkwy.).

Finding: With implementation of the abatement measure, the Project is not anticipated to cause new, or worsen existing, General Plan level-of-service policy deficiencies at this location. **Table 26** presented the segment level-of-service results with this abatement.

Project Responsibility: CIP Project 36105042 (White Rock Road widening 2 to 4 lanes - Post Street to South of Silva Valley Parkway) includes funding for improvements to this segment in both the 10-year and 20-year CIPs and all components should be advanced to 10-year CIP. The Project's fair share responsibility for this improvement can be met through payment of TIF program fees.

Timing: Prior to issuance of the 173rd residential building permit or the first commercial building permit.

Deficiency/Abatement 2B. El Dorado Hills Blvd/Saratoga Way in 2023

Deficiency: Level-of-service is F prior to addition of Project traffic, with northbound left-turn queues spilling out of the turn pocket. Project traffic is anticipated to worsen level-of-service and northbound left-turn queues.

2023-2033 Improvements Assumed: Southbound right-turn pocket (300-foot) and 500-foot northbound and southbound left turn pockets are assumed as part of CIP project 36105076.

Abatement: In addition to abatement 2A, prohibit northbound U-turns, overlap the eastbound right turn with the northbound left turn, and overlap the southbound right turn with the eastbound left turn.

Finding: With implementation of the abatement measure, the Project is not anticipated to cause new, or worsen existing, General Plan level-of-service policy deficiencies at this location. **Table 27** presented intersection level-of-service results with this abatement.

Project Responsibility: This abatement partially implements Project #36105076 in the 10-year Capital Improvement Program (CIP). The Project may satisfy this requirement through payment of applicable fees under the El Dorado County traffic impact Fee (TIF) program.

Timing: Prior to issuance of 1st building permit.

Cross reference: See abatement 2A.

Deficiency/Abatement 3B. El Dorado Hills Blvd/US 50 WB in 2033

Deficiency: AM peak-hour level-of-service is F prior to addition of Project traffic. Project traffic is anticipated to worsen level-of-service.

2023-2033 Improvements Assumed: None.

Abatement: Implement as abatement 3A

Finding: With implementation of the abatement measure, the Project is not anticipated to cause new, or worsen existing, General Plan level-of-service policy deficiencies at this location. **Table 27** presented intersection level-of-service results with this abatement.

Project responsibility: None, addressed through abatement 3A.

Timing: Not applicable, addressed through abatement 3A.

Deficiency/Abatement 4B. El Dorado Hills Blvd/US 50 EB in 2033

Deficiency: PM peak-hour 95th percentile queue on ramp is anticipated to reach 1251-feet, ending with 500-feet of the gore-point (where the ramp exits the freeway). Project traffic is anticipated to add 172-feet to the queue. This is a potentially traffic operations issue as the 2 lane portion of the ramp is limited to 430-feet.

2023-2033 Improvements Assumed: None.

Abatement: construct a 3rd eastbound right turn lane from the offramp to southbound Latrobe Road. The new turn lane shall match the approximate length of the existing 2-lane portion of the offramp.

Finding: With implementation of the abatement measure, the Project is not anticipated to cause new, or worsen existing, General Plan level-of-service policy deficiencies at this location. **Table 27** at the end of this section presents intersection level-of-service results with this abatement.

Project responsibility: CIP Project 36104001 (US 50 / Latrobe Road/ El Dorado Hills Boulevard Interchange Improvements Phase 2B) includes reconstruction of the EB diagonal on-ramp, EB on-ramp auxiliary lane, and the EB loop off-ramp. The Project is responsible for its fair share of the cost of this off-site improvement. Which would be addressed through payment of fees after widening of the eastbound diagonal offramp has been added to CIP Project 36104001.

Timing: Payment of TIF at issuance of each building permit.

Cross reference: See abatement 4C.

Deficiency/Abatement 5B. Latrobe Road/Town Center Boulevard in 2033

Deficiency: The southbound left-turn queue spills back out of its pocket during the PM peak-hour prior to the addition of Project traffic. Project traffic is anticipated to worsen the southbound left-turn queue spillback and cause the westbound left-turn queue to exceed its pocket length.

2023-2033 Improvements Assumed: None.

Abatement: Implement as abatement 5A

Finding: With implementation of the abatement measure, the Project is not anticipated to cause new, or worsen existing, General Plan level-of-service policy deficiencies at this location. **Table 27** presented intersection level-of-service results with this abatement.

Project responsibility: None, addressed through abatement 5A.

Timing: Not applicable, addressed through abatement 5A.

Deficiency/Abatement 6B. Latrobe Road/White Rock Road in 2033

Deficiency: The westbound left-turn queue spills back out of its turn pocket. Project traffic is anticipated to worsen that queue spillback.

2023-2033 Improvements Assumed: None.

2023-2033 Improvements Assumed: None.

Abatement: Implement as abatement 6A

Finding: With implementation of the abatement measure, the Project is not anticipated to cause new, or worsen existing, General Plan level-of-service policy deficiencies at this location. **Table 27** presented intersection level-of-service results with this abatement.

Project responsibility: None, addressed through abatement 6A.

Timing: Not applicable, addressed through abatement 6A.

Deficiency/Abatement 7B. Latrobe Road/Golden Foothill Parkway (N) in 2033

Deficiency: Project traffic is anticipated to worsen level-of-service to F.

2023-2033 Improvements Assumed: None.

Abatement: Construct 180-foot southbound right turn pocket.

Finding: With implementation of the abatement measure, the Project is not anticipated to cause new, or worsen existing, General Plan level-of-service policy deficiencies at this location. **Table 27** presented intersection level-of-service results with this abatement.

Project responsibility: CIP 36105069 will widen this portion of Latrobe Rd to six lanes by 2040 and should be advanced to the 10-year CIP. The Project's fair share cost of this improvement is payment of the TIF program fee.

Timing: Prior to issuance of 1st building permit.

Deficiency/Abatement 9B. Latrobe Road/ Golden Foothill Parkway (S) in 2033

Deficiency: Project traffic is anticipated to worsen the intersection to level-of-service F conditions.

2023-2033 Improvements Assumed: None.

Abatement: Abatement 9B is similar, but expands upon, abatement 9A:

- Eastbound approach: Implement abatement 9A.

- Westbound approach: Stripe westbound approach to 2-lanes between Blackstone Pkwy and Latrobe Rd, and construct a 250' right left pocket. Label the resulting three lanes as left, left, thru-right.
- Northbound approach: Widen northbound approach by constructing an additional 100' right turn pocket and extending the left turn pocket to 260'. Label the resulting four lanes as left, thru, thru, and right.
- Southbound approach: Widen southbound approach by constructing an additional 300' right turn pocket, label the resulting four lanes as left, thru, thru, right.

Figure 16 below shows the traffic model's representation of these improvements. Note that the depicted northbound right turn lane was drawn with a 24-foot width to reflect the assumed ultimate width of Latrobe Rd after widening to four lanes with the "Latrobe 72" improvements and an additional northbound through lane. The Project is not obligated to build improvements to that footprint, but it is advised that any relocation of traffic signals be placed outside of the intersection's ultimate footprint.

Finding: With implementation of the abatement measure, the Project is not anticipated to cause new, or worsen existing, General Plan level-of-service policy deficiencies at this location. **Table 27** presented intersection level-of-service results with this abatement.

Project responsibility: The Project is responsible for its fair share of the cost of these off-site improvements which would be addressed by payment of fees after Latrobe 72 is added to the 10-year CIP.

Timing: Prior to issuance of 1st building permit.

Cross reference: See abatement 9A.

Deficiency/Abatement 10B. Latrobe Road/Investment Boulevard in 2033

Deficiency: Project traffic is anticipated to cause the eastbound (Investment Blvd) left-turn queue to spill out of its left-turn pocket.

2023-2033 Improvements Assumed: None.

Abatement: Implement as abatement 10A

Finding: With implementation of the abatement measure, the Project is not anticipated to cause new, or worsen existing, General Plan level-of-service policy deficiencies at this location. **Table 27** presented intersection level-of-service results with this abatement.

Project responsibility: None, addressed through abatement 10A.

Timing: Not applicable, addressed through abatement 10A.

Deficiency/Abatement 11B. Latrobe Road/Avanti Drive in 2033

Deficiency: Project traffic is anticipated to cause this intersection to operate at level-of-service F.

2023-2033 Improvements Assumed: None.

Abatement: Implement as abatement 11A

Finding: With implementation of the abatement measure, the Project is not anticipated to cause new, or worsen existing, General Plan level-of-service policy deficiencies at this location. **Table 27** presented intersection level-of-service results with this abatement.

Project responsibility: None, addressed through abatement 11A.

Timing: Not applicable, addressed through abatement 11A.

Deficiency/Abatement 12B. Latrobe Road/Royal Oaks Drive in 2033

Deficiency: Project traffic is anticipated to worsen the intersection to level-of-service F.

2023-2033 Improvements Assumed: None.

Abatement: Implement as abatement 12A.

Finding: With implementation of the abatement measure, the Project is not anticipated to cause new, or worsen existing, General Plan level-of-service policy deficiencies at this location. **Table 27** presented intersection level-of-service results with this abatement.

Project responsibility: None, addressed through abatement 12A.

Timing: Not applicable, addressed through abatement 12A.

Deficiency/Abatement 13B. Golden Foothill Pkwy/Robert J. Mathews Pkwy in 2033

Deficiency: The Project is anticipated to worsen existing level-of-service F conditions at this intersection.

2023-2033 Improvements Assumed: None.

Abatement: Implement as abatement 13A

Finding: With implementation of the abatement measure, the Project is not anticipated to cause new, or worsen existing, General Plan level-of-service policy deficiencies at this location. **Table 27** presented intersection level-of-service results with this abatement.

Project responsibility: None, addressed through abatement 13A.

Timing: Not applicable, addressed through abatement 13A.

Deficiency/Abatement 18B. White Rock Road/Carson Crossing Road in 2033

Deficiency: Project traffic is anticipated to cause new and worsen level-of-service F conditions. The peak-hour signal warrant is met with or without the Project.

2023-2033 Improvements Assumed: None.

Abatement: Implement as abatement 18A

Finding: With implementation of the abatement measure, the Project is not anticipated to cause new, or worsen existing, General Plan level-of-service policy deficiencies at this location. **Table 27** presented intersection level-of-service results with this abatement.

Project responsibility: None, addressed through abatement 18A.

Timing: Not applicable, addressed through abatement 18A.

Deficiency/Abatement 21B. White Rock Road/Valley View Parkway in 2033

Deficiency: Project traffic is anticipated to worsen level-of-service to F conditions and worsen left-turn queue spillback on eastbound and westbound White Rock Rd.

2023-2033 Improvements Assumed: None.

Abatement: Reconstruct White Rock Rd through the intersection as follows:

- Implement abatement 21 A.
- Further extend the westbound left turn pocket to 1000 feet. (Note: abatement 21A will extend this pocket to 400 feet, abatement 21B reflects an additional 600 feet of westbound right turn storage.)

Widening should be done to the south of Latrobe Rd to avoid high voltage lines. Eastbound-westbound Lane alignment may require additional space.

Finding: CIP Project 36105042 (White Rock Road widening 2 to 4 lanes - Post Street to South of Silva Valley Parkway) includes funding for improvements to this intersection in both the 10-year and 20-year CIPs and all components should be advanced to 10-year CIP. The Project's responsibility for this improvement can be met through payment of TIF program fees. With implementation of the abatement measure, the Project is not anticipated to cause new, or worsen existing, General Plan level-of-service policy

deficiencies at this location. **Table 27** presented intersection level-of-service results with this abatement.

Project responsibility: CIP Project 36105042 (White Rock Road widening 2 to 4 lanes - Post Street to South of Silva Valley Parkway) includes funding for improvements to this intersection in both the 10-year and 20-year CIPs and all components should be advanced to 10-year CIP. The Project's fair share responsibility for this improvement can be met through payment of TIF program fees.

Timing: Prior to issuance of 1st building permit.

Cumulative 2040 Plus Project Conditions

Existing 2040 plus Project conditions are discussed in **Section 10.** The Project is anticipated to cause new or worsen existing level-of-service/queuing deficiencies on one road segment and at seven intersections (deficiencies may be caused by anticipated level-of-service and/or queue spillback):

1 Arterial segments with worsened or new Project related deficiencies:

- Latrobe Rd between Investment Blvd and Golden Foothill Pkwy (south) PM.

5 Locations that are deficient with or without the Project that are worsened:

- (3) El Dorado Hills Blvd/US 50 WB AM and PM;
- (4) El Dorado Hills Blvd/US 50 EB PM;
- (5) Latrobe Road/Town Center Boulevard PM;
- (9) Latrobe Road/ Golden Foothill Parkway (S) AM and PM;
- (10) Latrobe Road/Investment Boulevard AM and PM;

2 Locations where the Project is anticipated to cause new deficiencies:

- (11) Latrobe Road/Avanti Drive AM and PM; and
- (12) Latrobe Road/Royal Oaks Drive AM and PM.

Deficiency/Abatement (ii)C. Latrobe Rd between Investment Blvd and Golden Foothill Pkwy (south) in 2040 (CIP Project Latrobe 72)

Deficiency: Level-of-service is anticipated to worsen to F with the addition of Project traffic during the AM and PM peak-hours.

Abatement: Implement as abatement (ii)A.

Finding: With implementation of the abatement measure, the Project is not anticipated to cause new, or worsen existing, General Plan level-of-service policy deficiencies at this location. **Table 34** presents the segment level-of-service results with this abatement.

Project responsibility: None, addressed through abatement (ii)A.

Timing: Not applicable, addressed through abatement (ii)A.

Deficiency/Abatement 3C. El Dorado Hills Blvd/US 50 WB in 2040

Deficiency: AM peak-hour level-of-service is F prior to addition of Project traffic. Project traffic is anticipated to worsen level-of-service.

2023-2040 Improvements Assumed: 2023 CIP 36104001.

Abatement: Implement as abatement 3A

Finding: With implementation of the abatement measure, the Project is not anticipated to cause new, or worsen existing, General Plan level-of-service policy deficiencies at this location. **Table 35** presented intersection level-of-service results with this abatement.

Project responsibility: None, addressed through abatement 3A.

Timing: Not applicable, addressed through abatement 3A.

Deficiency/Abatement 4C. El Dorado Hills Blvd/US 50 EB in 2040

Deficiency: PM peak-hour 95th percentile queue on ramp is anticipated to reach 1400-feet, ending with 500-feet of the gore-point (where the ramp exits the freeway). Project traffic is anticipated to add 124-feet to the queue. This is a potentially traffic operations issue as the 2-lane portion of the ramp is limited to 430-feet.

2023-2040 Improvements Assumed: 2023 CIP 36104001.

Abatement: Implement as abatement 4B

Finding: With implementation of the abatement measure, the Project is not anticipated to cause new, or worsen existing, General Plan level-of-service policy deficiencies at this location. **Table 35** at the end of this section presents intersection level-of-service results with this abatement.

Project responsibility: None, addressed through abatement 4B.

Timing: Not applicable, addressed through abatement 4B.

Deficiency/Abatement 5C. Latrobe Road/Town Center Boulevard in 2040

Deficiency: The southbound left-turn queue spills back out of its pocket during the PM peak-hour prior to the addition of Project traffic. Project traffic is anticipated to worsen the southbound left-turn queue spillback and cause the westbound left-turn queue to exceed its pocket length.

2023-2040 Improvements Assumed: None.

Abatement: Implement as abatement 5A

Finding: With implementation of the abatement measure, the Project is not anticipated to cause new, or worsen existing, General Plan level-of-service policy deficiencies at this location. **Table 35** presented intersection level-of-service results with this abatement.

Project responsibility: None, addressed through abatement 5A.

Timing: Not applicable, addressed through abatement 5A.

Deficiency/Abatement 9C. Latrobe Road/ Golden Foothill Parkway (S) in 2040

Deficiency: Project traffic is anticipated to worsen the intersection to level-of-service F conditions.

2023-2033 Improvements Assumed: None.

Abatement: Implement as abatement 9B

Finding: With implementation of the abatement measure, the Project is not anticipated to cause new, or worsen existing, General Plan level-of-service policy deficiencies at this location. **Table 35** presented intersection level-of-service results with this abatement.

Project responsibility: None, addressed through abatement 9B.

Timing: Not applicable, addressed through abatement 9B.

Cross reference: See abatement 9A, 9B.

Deficiency/Abatement 10C. Latrobe Road/Investment Boulevard in 2040

Deficiency: Project traffic is anticipated to cause the eastbound (Investment Blvd) left-turn queue to spill out of its left-turn pocket.

2023-2040 Improvements Assumed: None.

Abatement: Implement as abatement 10A

Finding: With implementation of the abatement measure, the Project is not anticipated to cause new, or worsen existing, General Plan level-of-service policy deficiencies at this location. **Table 35** presented intersection level-of-service results with this abatement.

Project responsibility: None, addressed through abatement 10A.

Timing: Not applicable, addressed through abatement 10A.

Deficiency/Abatement 11C. Latrobe Road/Avanti Drive in 2040

Deficiency: Project traffic is anticipated to cause this intersection to operate at level-of-service F.

2023-2040 Improvements Assumed: None.

Abatement: Implement as abatement 11A

Finding: With implementation of the abatement measure, the Project is not anticipated to cause new, or worsen existing, General Plan level-of-service policy deficiencies at this location. **Table 35** presented intersection level-of-service results with this abatement.

Project responsibility: None, addressed through abatement 11A.

Timing: Not applicable, addressed through abatement 11A.

Deficiency/Abatement 12C. Latrobe Road/Royal Oaks Drive in 2040

Deficiency: Project traffic is anticipated to worsen the intersection to level-of-service F.

2023-2040 Improvements Assumed: None.

Abatement: Implement as abatement 12A.

Finding: With implementation of the abatement measure, the Project is not anticipated to cause new, or worsen existing, General Plan level-of-service policy deficiencies at this location. **Table 35** presented intersection level-of-service results with this abatement.

Project responsibility: None, addressed through abatement 12A.

Timing: Not applicable, addressed through abatement 12A.

30: 6:30pm-6:45pm
31: 6:45pm-7:00pm

Country: USA
Metrics Version: R125-M127

Metric results for this analysis include rows generated using an upsampling technique that uses data from adjacent day parts and analogous day parts outside of the original data period to synthesize a representative metric in cases where sample size would have been otherwise too low to provide a high-quality result. Please contact support@streetlightdata.com with any questions.

Analysis ID: 1472996
Analysis: Creekside #3 4/18-27/2023
Created by: tkear@tkearinc.com
Created on: 2023-07-13
Organization: T. Kear/Creekside Village Intersection Studies

Analysis Setup Details:
Analysis Type: Turning Movement Analysis
Unit of Measurement: Miles
Mode of Travel: All Vehicles CVD+
Output Type: StL All Vehicles Volume

Analysis Options:
Data Periods: Apr 18, 2023 - Apr 27, 2023

Day Type:
0: All Days (M-Su)
1: Tues-Thurs (Tu-Th)

Day Part:
00: 6:00am-6:15am
01: 6:15am-6:30am
02: 6:30am-6:45am
03: 6:45am-7:00am
04: 7:00am-7:15am
05: 7:15am-7:30am
06: 7:30am-7:45am
07: 7:45am-8:00am
08: 8:00am-8:15am
09: 8:15am-8:30am
10: 8:30am-8:45am
11: 8:45am-9:00am
12: 9:00am-9:15am
13: 9:15am-9:30am
14: 9:30am-9:45am
15: 9:45am-10:00am
16: 3:00pm-3:15pm
17: 3:15pm-3:30pm
18: 3:30pm-3:45pm
19: 3:45pm-4:00pm
20: 4:00pm-4:15pm
21: 4:15pm-4:30pm
22: 4:30pm-4:45pm
23: 4:45pm-5:00pm
24: 5:00pm-5:15pm
25: 5:15pm-5:30pm
26: 5:30pm-5:45pm
27: 5:45pm-6:00pm
28: 6:00pm-6:15pm
29: 6:15pm-6:30pm
30: 6:30pm-6:45pm
31: 6:45pm-7:00pm

Country: USA
Metrics Version: R125-M127

Metric results for this analysis include rows generated using an upsampling technique that uses data from adjacent day parts and analogous day parts outside of the original data period to synthesize a representative metric in cases where sample size would have been otherwise too low to provide a high-quality result. Please contact support@streetlightdata.com with any questions.

Analysis ID: 1472999
Analysis: Creekside #6 4/18-27/2023
Created by: tkear@tkearinc.com
Created on: 2023-07-13
Organization: T. Kear/Creekside Village Intersection Studies

Analysis Setup Details:
Analysis Type: Turning Movement Analysis
Unit of Measurement: Miles
Mode of Travel: All Vehicles CVD+
Output Type: StL All Vehicles Volume

Analysis Options:
Data Periods: Apr 18, 2023 - Apr 27, 2023

Day Type:
0: All Days (M-Su)
1: Tues-Thurs (Tu-Th)

Day Part:
00: 6:00am-6:15am
01: 6:15am-6:30am
02: 6:30am-6:45am
03: 6:45am-7:00am
04: 7:00am-7:15am
05: 7:15am-7:30am
06: 7:30am-7:45am
07: 7:45am-8:00am
08: 8:00am-8:15am
09: 8:15am-8:30am
10: 8:30am-8:45am
11: 8:45am-9:00am
12: 9:00am-9:15am
13: 9:15am-9:30am
14: 9:30am-9:45am
15: 9:45am-10:00am
16: 3:00pm-3:15pm
17: 3:15pm-3:30pm
18: 3:30pm-3:45pm
19: 3:45pm-4:00pm
20: 4:00pm-4:15pm
21: 4:15pm-4:30pm
22: 4:30pm-4:45pm
23: 4:45pm-5:00pm
24: 5:00pm-5:15pm
25: 5:15pm-5:30pm
26: 5:30pm-5:45pm
27: 5:45pm-6:00pm
28: 6:00pm-6:15pm
29: 6:15pm-6:30pm
30: 6:30pm-6:45pm
31: 6:45pm-7:00pm

Country: USA
Metrics Version: R125-M127

Metric results for this analysis include rows generated using an upsampling technique that uses data from adjacent day parts and analogous day parts outside of the original data period to synthesize a representative metric in cases where sample size would have been otherwise too low to provide a high-quality result. Please contact support@streetlightdata.com with any questions.

Analysis ID: 1473000
Analysis: Creekside #7 4/18-27/2023
Created by: tkear@tkearinc.com
Created on: 2023-07-13
Organization: T. Kear/Creekside Village Intersection Studies

Analysis Setup Details:
Analysis Type: Turning Movement Analysis
Unit of Measurement: Miles
Mode of Travel: All Vehicles CVD+
Output Type: StL All Vehicles Volume

Analysis Options:
Data Periods: Apr 18, 2023 - Apr 27, 2023

Day Type:
0: All Days (M-Su)
1: Tues-Thurs (Tu-Th)

Day Part:
00: 6:00am-6:15am
01: 6:15am-6:30am
02: 6:30am-6:45am
03: 6:45am-7:00am
04: 7:00am-7:15am
05: 7:15am-7:30am
06: 7:30am-7:45am
07: 7:45am-8:00am
08: 8:00am-8:15am
09: 8:15am-8:30am
10: 8:30am-8:45am
11: 8:45am-9:00am
12: 9:00am-9:15am
13: 9:15am-9:30am
14: 9:30am-9:45am
15: 9:45am-10:00am
16: 3:00pm-3:15pm
17: 3:15pm-3:30pm
18: 3:30pm-3:45pm
19: 3:45pm-4:00pm
20: 4:00pm-4:15pm
21: 4:15pm-4:30pm
22: 4:30pm-4:45pm
23: 4:45pm-5:00pm
24: 5:00pm-5:15pm
25: 5:15pm-5:30pm
26: 5:30pm-5:45pm
27: 5:45pm-6:00pm
28: 6:00pm-6:15pm
29: 6:15pm-6:30pm
30: 6:30pm-6:45pm
31: 6:45pm-7:00pm

Country: USA
Metrics Version: R125-M127

Metric results for this analysis include rows generated using an upsampling technique that uses data from adjacent day parts and analogous day parts outside of the original data period to synthesize a representative metric in cases where sample size would have been otherwise too low to provide a high-quality result. Please contact support@streetlightdata.com with any questions.

30: 6:30pm-6:45pm
31: 6:45pm-7:00pm

Country: USA
Metrics Version: R125-M127

Metric results for this analysis include rows generated using an upsampling technique that uses data from adjacent day parts and analogous day parts outside of the original data period to synthesize a representative metric in cases where sample size would have been otherwise too low to provide a high-quality result. Please contact support@streetlightdata.com with any questions.

Analysis ID: 1475496
Analysis: Creekside #10 4/18-27/2023
Created by: tkear@tkearinc.com
Created on: 2023-07-19
Organization: T. Kear/Creekside Village Intersection Studies

Analysis Setup Details:
Analysis Type: Turning Movement Analysis
Unit of Measurement: Miles
Mode of Travel: All Vehicles CVD+
Output Type: StL All Vehicles Volume

Analysis Options:
Data Periods: Apr 18, 2023 - Apr 27, 2023

Day Type:
0: All Days (M-Su)
1: Tues-Thurs (Tu-Th)

Day Part:
00: 6:00am-6:15am
01: 6:15am-6:30am
02: 6:30am-6:45am
03: 6:45am-7:00am
04: 7:00am-7:15am
05: 7:15am-7:30am
06: 7:30am-7:45am
07: 7:45am-8:00am
08: 8:00am-8:15am
09: 8:15am-8:30am
10: 8:30am-8:45am
11: 8:45am-9:00am
12: 9:00am-9:15am
13: 9:15am-9:30am
14: 9:30am-9:45am
15: 9:45am-10:00am
16: 3:00pm-3:15pm
17: 3:15pm-3:30pm
18: 3:30pm-3:45pm
19: 3:45pm-4:00pm
20: 4:00pm-4:15pm
21: 4:15pm-4:30pm
22: 4:30pm-4:45pm
23: 4:45pm-5:00pm
24: 5:00pm-5:15pm
25: 5:15pm-5:30pm
26: 5:30pm-5:45pm
27: 5:45pm-6:00pm
28: 6:00pm-6:15pm
29: 6:15pm-6:30pm
30: 6:30pm-6:45pm
31: 6:45pm-7:00pm

Country: USA
Metrics Version: R126-M128

Metric results for this analysis include rows generated using an upsampling technique that uses data from adjacent day parts and analogous day parts outside of the original data period to synthesize a representative metric in cases where sample size would have been otherwise too low to provide a high-quality result. Please contact support@streetlightdata.com with any questions.

29: 6:15pm-6:30pm
30: 6:30pm-6:45pm
31: 6:45pm-7:00pm

Country: USA
Metrics Version: R125-M127

Metric results for this analysis include rows generated using an upsampling technique that uses data from adjacent day parts and analogous day parts outside of the original data period to synthesize a representative metric in cases where sample size would have been otherwise too low to provide a high-quality result. Please contact support@streetlightdata.com with any questions.

Analysis ID: 1473014
Analysis: #13 4/18-27/2023
Created by: tkear@tkearinc.com
Created on: 2023-07-13
Organization: T. Kear/Creekside Village Intersection Studies

Analysis Setup Details:
Analysis Type: Turning Movement Analysis
Unit of Measurement: Miles
Mode of Travel: All Vehicles CVD+
Output Type: StL All Vehicles Volume

Analysis Options:
Data Periods: Apr 18, 2023 - Apr 27, 2023

Day Type:
0: All Days (M-Su)
1: Tues-Thurs (Tu-Th)

Day Part:
00: 6:00am-6:15am
01: 6:15am-6:30am
02: 6:30am-6:45am
03: 6:45am-7:00am
04: 7:00am-7:15am
05: 7:15am-7:30am
06: 7:30am-7:45am
07: 7:45am-8:00am
08: 8:00am-8:15am
09: 8:15am-8:30am
10: 8:30am-8:45am
11: 8:45am-9:00am
12: 9:00am-9:15am
13: 9:15am-9:30am
14: 9:30am-9:45am
15: 9:45am-10:00am
16: 3:00pm-3:15pm
17: 3:15pm-3:30pm
18: 3:30pm-3:45pm
19: 3:45pm-4:00pm
20: 4:00pm-4:15pm
21: 4:15pm-4:30pm
22: 4:30pm-4:45pm
23: 4:45pm-5:00pm
24: 5:00pm-5:15pm
25: 5:15pm-5:30pm
26: 5:30pm-5:45pm
27: 5:45pm-6:00pm
28: 6:00pm-6:15pm
29: 6:15pm-6:30pm
30: 6:30pm-6:45pm
31: 6:45pm-7:00pm

Country: USA
Metrics Version: R125-M127

Metric results for this analysis include rows generated using an upsampling technique that uses data from adjacent day parts and analogous day parts outside of the original data period to synthesize a representative metric in cases where sample size would have been otherwise too low to provide a high-quality result. Please contact support@streetlightdata.com with any questions.

29: 6:15pm-6:30pm
30: 6:30pm-6:45pm
31: 6:45pm-7:00pm

Country: USA
Metrics Version: R126-M128

Metric results for this analysis include rows generated using an upsampling technique that uses data from adjacent day parts and analogous day parts outside of the original data period to synthesize a representative metric in cases where sample size would have been otherwise too low to provide a high-quality result. Please contact support@streetlightdata.com with any questions.

Analysis ID: 1473504
Analysis: Creekside #21 4/18-27/2023
Created by: tkear@tkearinc.com
Created on: 2023-07-17
Organization: T. Kear/Creekside Village Intersection Studies

Analysis Setup Details:
Analysis Type: Turning Movement Analysis
Unit of Measurement: Miles
Mode of Travel: All Vehicles CVD+
Output Type: StL All Vehicles Volume

Analysis Options:
Data Periods: Apr 18, 2023 - Apr 27, 2023

Day Type:
0: All Days (M-Su)
1: Tues-Thurs (Tu-Th)

Day Part:
00: 6:00am-6:15am
01: 6:15am-6:30am
02: 6:30am-6:45am
03: 6:45am-7:00am
04: 7:00am-7:15am
05: 7:15am-7:30am
06: 7:30am-7:45am
07: 7:45am-8:00am
08: 8:00am-8:15am
09: 8:15am-8:30am
10: 8:30am-8:45am
11: 8:45am-9:00am
12: 9:00am-9:15am
13: 9:15am-9:30am
14: 9:30am-9:45am
15: 9:45am-10:00am
16: 3:00pm-3:15pm
17: 3:15pm-3:30pm
18: 3:30pm-3:45pm
19: 3:45pm-4:00pm
20: 4:00pm-4:15pm
21: 4:15pm-4:30pm
22: 4:30pm-4:45pm
23: 4:45pm-5:00pm
24: 5:00pm-5:15pm
25: 5:15pm-5:30pm
26: 5:30pm-5:45pm
27: 5:45pm-6:00pm
28: 6:00pm-6:15pm
29: 6:15pm-6:30pm
30: 6:30pm-6:45pm
31: 6:45pm-7:00pm

Country: USA
Metrics Version: R125-M127

Metric results for this analysis include rows generated using an upsampling technique that uses data from adjacent day parts and analogous day parts outside of the original data period to synthesize a representative metric in cases where sample size would have been otherwise too low to provide a high-quality result. Please contact support@streetlightdata.com with any questions.

Analysis ID: 1473537
Analysis: Creekside #26 4/18-27/2023
Created by: tkear@tkearinc.com
Created on: 2023-07-17
Organization: T. Kear/Creekside Village Intersection Studies

Analysis Setup Details:
Analysis Type: Turning Movement Analysis
Unit of Measurement: Miles
Mode of Travel: All Vehicles CVD+
Output Type: StL All Vehicles Volume

Analysis Options:
Data Periods: Apr 18, 2023 - Apr 27, 2023

Day Type:
0: All Days (M-Su)
1: Tues-Thurs (Tu-Th)

Day Part:
00: 6:00am-6:15am
01: 6:15am-6:30am
02: 6:30am-6:45am
03: 6:45am-7:00am
04: 7:00am-7:15am
05: 7:15am-7:30am
06: 7:30am-7:45am
07: 7:45am-8:00am
08: 8:00am-8:15am
09: 8:15am-8:30am
10: 8:30am-8:45am
11: 8:45am-9:00am
12: 9:00am-9:15am
13: 9:15am-9:30am
14: 9:30am-9:45am
15: 9:45am-10:00am
16: 3:00pm-3:15pm
17: 3:15pm-3:30pm
18: 3:30pm-3:45pm
19: 3:45pm-4:00pm
20: 4:00pm-4:15pm
21: 4:15pm-4:30pm
22: 4:30pm-4:45pm
23: 4:45pm-5:00pm
24: 5:00pm-5:15pm
25: 5:15pm-5:30pm
26: 5:30pm-5:45pm
27: 5:45pm-6:00pm
28: 6:00pm-6:15pm
29: 6:15pm-6:30pm
30: 6:30pm-6:45pm
31: 6:45pm-7:00pm

Country: USA
Metrics Version: R125-M127

Metric results for this analysis include rows generated using an upsampling technique that uses data from adjacent day parts and analogous day parts outside of the original data period to synthesize a representative metric in cases where sample size would have been otherwise too low to provide a high-quality result. Please contact support@streetlightdata.com with any questions.

The conflict monitor program card is supplied with all 120 diodes installed. Diodes for phases **NOT** in conflict must be removed.

1. Mark channels (phases) that are not conflicting.
2. Remove corresponding diodes from diode board.
3. Mark diode board with name of intersection.

Comments and Notes:
2000-01-05 O.T.O. @ 12:40 BY P.A. DIAZ, A. HEBERT, J. ELEM (CT), S. KOCH, M. VAN DORMICK (ED CO)
2000-04-19 APPLIED QUICNET BY P.A.DIAZ
2002-05-09 @ Appproximate 11:05 Removed phase 8 & Permitted Phase 5. Modified Traffic Signal Interseciton - New EB Off-Ramp. By P.A.Diaz, State Maintenance: Gary B. & Robert R.
2003-08-29 Changed from C8V3 to C8V4 and Applied CTNet by P.A.Diaz
????-??-?? Upgrade to 2070 w/TSCP Vers. 2.16 - add bicycle detection.
2013-07-28 Upgraded to TSCP 2.17
2014-08-29 Upgraded to TSCP 2.20 Build 118 dh

The conflict monitor program card is supplied with all 120 diodes installed. Diodes for phases **NOT** in conflict must be removed.

1. Mark channels (phases) that are not conflicting.
2. Remove corresponding diodes from diode board.
3. Mark diode board with name of intersection.

Intersection Analysis Summary

ID	Intersection Name	Control Type	Method	Worst Mvmt	V/C	Delay (s/veh)	LOS
2	El Dorado Hills Blvd/Saratoga Way	Signalized	HCM 7th Edition	EB Right	1.278	134.0	F
3	El Dorado Hills Blvd/US 50 WB	Signalized	HCM 7th Edition	NB Left	0.946	89.7	F
5	Latrobe Rd/Town Center Blvd	Signalized	HCM 7th Edition	WB Right	0.836	23.4	C
6	Latrobe Rd/White Rock Rd	Signalized	HCM 7th Edition	NB Left	0.660	32.9	C
8	Latrobe Rd/Suncast Ln	Signalized	HCM 7th Edition	NB Left	0.745	9.2	A
9	Latrobe Rd/Golden Foothill Pkwy S	Signalized	HCM 7th Edition	NB Right	0.869	45.3	D
10	Latrobe Rd/Investment Blvd	Signalized	HCM 7th Edition	NB Left	0.972	11.0	B
11	Latrobe Rd/Avanti	Two-way stop	HCM 7th Edition	EB Left	0.323	38.7	E
12	Latrobe Rd/Royal Oaks Dr	Signalized	HCM 6th Edition	SB Left	0.737	19.4	B
13	Golden Foothill/Robert J Mathews	Roundabout	HCM 6th Edition	EB Thru		6.4	A
18	White Rock Rd/Carson Crossing Rd	Signalized	HCM 6th Edition	EB Left	0.598	14.5	B
21	White Rock Rd/Valley View Pkwy	Signalized	HCM 7th Edition	WB Thru	0.884	44.4	D

V/C, Delay, LOS: For two-way stop, these values are taken from the movement with the worst (highest) delay value. For all other control types, they are taken for the whole intersection.

Intersection Level Of Service Report
Intersection 2: El Dorado Hills Blvd/Saratoga Way

Control Type:	Signalized	Delay (sec / veh):	134.0
Analysis Method:	HCM 7th Edition	Level Of Service:	F
Analysis Period:	15 minutes	Volume to Capacity (v/c):	1.278

Intersection Level Of Service Report
Intersection 6: Latrobe Rd/White Rock Rd

Control Type:	Signalized	Delay (sec / veh):	43.4
Analysis Method:	HCM 7th Edition	Level Of Service:	D
Analysis Period:	15 minutes	Volume to Capacity (v/c):	0.761
