2/14/2024

Intersection Analysis Summary

ID	Intersection Name	Control Type	Method	Worst Mvmt	V/C	Delay (s/veh)	LOS
2	El Dorado Hills Blvd/Saratoga Way	Signalized	HCM 7th Edition	SB Thru	1.293	123.7	F
3	El Dorado Hills Blvd/US 50 WB	Signalized	HCM 7th Edition	NB Left	1.137	92.7	F
5	Latrobe Rd/Town Center Blvd	Signalized	HCM 7th Edition	SB Left	1.017	42.2	D
6	Latrobe Rd/White Rock Rd	Signalized	HCM 7th Edition	NB Left	0.761	43.4	D
7	Latrobe Rd/Golden Foothill Pkwy N	Signalized	HCM 7th Edition	NB Right	0.962	43.4	D
9	Latrobe Rd/Golden Foothill Pkwy S	Signalized	HCM 7th Edition	WB Left	0.969	50.2	D
10	Latrobe Rd/Investment Blvd	Signalized	HCM 7th Edition	NB Left	0.980	13.8	B
11	Latrobe Rd/Avanti	Two-way stop	HCM 7th Edition	EB Left	0.376	46.9	E
12	Latrobe Rd/Royal Oaks Dr	Signalized	HCM 6th Edition	SB Left	0.725	23.5	C
13	Golden Foothill/Robert J Mathews	Roundabout	HCM 6th Edition	EB Thru		8.3	A
18	White Rock Rd/Carson Crossing Rd	Signalized	HCM 6th Edition	EB Left	0.687	16.0	B
21	White Rock Rd/Valley View Pkwy	Signalized	HCM 7th Edition	WB Thru	1.178	166.3	F

V/C, Delay, LOS: For two-way stop, these values are taken from the movement with the worst (highest) delay value. For all other control types, they are taken for the whole intersection.

Option 1: Copy of Latrobe Rd/US 50 EB

Intersection Level Of Service Report
Intersection 21: White Rock Rd/Valley View Pkwy

Control Type:	Signalized	Delay (sec / veh):	166.3
Analysis Method:	HCM 7th Edition	Level Of Service:	F
Analysis Period:	15 minutes	Volume to Capacity (v/c):	1.178

Intersection Setup

Intersection Analysis Summary

ID	Intersection Name	Control Type	Method	Worst Mvmt	V/C	Delay (s/veh)	LOS
3	El Dorado Hills Blvd/US 50 WB	Signalized	HCM 7th Edition	NB Left	1.188	115.8	F
5	Latrobe Rd/Town Center Blvd	Signalized	HCM 7th Edition	SB Left	0.963	37.5	D
9	Latrobe Rd/Golden Foothill Pkwy S	Signalized	HCM 7th Edition	WB Thru	1.030	61.7	E
10	Latrobe Rd/Investment Blvd	Signalized	HCM 7th Edition	NB Left	0.980	13.7	B
11	Latrobe Rd/Avanti	Two-way stop	HCM 7th Edition	EB Left	0.380	47.7	E
12	Latrobe Rd/Royal Oaks Dr	Signalized	HCM 6th Edition	SB Left	0.776	28.4	C

V/C, Delay, LOS: For two-way stop, these values are taken from the movement with the worst (highest) delay value. For all other control types, they are taken for the whole intersection.

Option 1: Copy of Latrobe Rd/US 50 EB

Intersection Analysis Summary

ID	Intersection Name	Control Type	Method	Worst Mvmt	V/C	Delay (s/veh)	LOS
3	El Dorado Hills Blvd/US 50 WB	Signalized	HCM 7th Edition	NB Left	1.074	70.7	E
5	Latrobe Rd/Town Center Blvd	Signalized	HCM 7th Edition	NB Thru	1.038	58.9	E
9	Latrobe Rd/Golden Foothill Pkwy S	Signalized	HCM 7th Edition	SB Left	0.923	50.1	D
10	Latrobe Rd/Investment Blvd	Signalized	HCM 7th Edition	SB Thru	1.022	61.4	E
11	Latrobe Rd/Avanti	Two-way stop	HCM 7th Edition	WB Left	0.046	90.3	F
12	Latrobe Rd/Royal Oaks Dr	Signalized	HCM 6th Edition	NB Left	0.701	21.9	C

V/C, Delay, LOS: For two-way stop, these values are taken from the movement with the worst (highest) delay value. For all other control types, they are taken for the whole intersection.

Option 1: Copy of Latrobe Rd/US 50 EB

Warrant 3 Condition A

Orientation	E	W
Total Stopped Delay Per Vehicle on Minor Approach (s)	18	39.1
Number of Lanes on Minor Street Approach	1	1
VehicleHours of Stopped Delay on Minor Approach ([h]h:mm)	0:18	0:20
Delay Condition Met	No	No
Volume on Minor Street Approach During Same Hour	60	32
High Minor Volume Condition Met	No	No
Total Entering Volume on All Approaches During Same Hour	1922	1922
Number of Approaches on Intersection	4	4
Total Volume Condition Met	Yes	Yes
Warrant Met for Approach	No	No
Warrant Met for Intersection	**No**

Appendix E: VMT Estimation Scripts

(This page intentionally left blank)

```
;-------------------------------------------------------------------------------
;
; Step 1: Skim the loaded networks for each period to get TAZ-to-TAZ
;         distances. Use half of the shortest centroid connector
;         length for the intrazonal distance. Adjust gateway trip lengths.
;
;         Inputs: loaded networks and final OD tables for each period.
;         Outputs: total TAZ-to-TAZ VMT by DA, SR, C2 and C3 for each period.

;-------------------------------------------------------------------------
;
; Step 2: Determine trips by purpose for each time period.
;
;         Inputs: PA tables for HBW, HBS, HBSc, HBO, WO, OO, Commercial,
;                 transit access, and Thru trips by class
;
;         Output for each period: Production to Attraction (PA) and
;                 Attraction to Production (AP) trip tables for
;                    (File 1) drive alone (HBW, HBS, HBSc, HBO, WO,and OO)
;                    (File 2) shared ride (HBW, HBS, HBSc, HBO, WO,and OO)
;                    (File 3) C2
;                    (File 4) C3
;        these are then  further processed to multiclass OD tables and
;        multiclass OD percentage tables.
;
;        Combine multiclass PA and AP tables to true OD tables for C2, C3, and
;        by purpose for drive alone and shared ride. Then estiumate the
;        percentage of each trip...all by period.
;
;        Inputs: PA and AP tables by purpose for DA, SR, C2 and C3 for each
;                 time period.
;        Outputs: Fraction of trips for DA (by purpose), SR (by purpose)
;                  C2, and C3.
;        These outputs from step 2 will be combined with VMT by class from
;        step 1 to estimate total VMT by trip purpose in step 3.
;
;-------------------------------------------------------------------------
; Note This is addopted from the script that parse the daily PA's to OD pairs
; by time-of-day (i.e., "EDC_CAT_082118C\APPLICATIONS1\03_ASSIGN\3AMAT00C.S")
; and from 3AMAT00D.S which is under the first highway assignment step in
; the assenment portion of the catalog.
;-------------------------------------------------------------------------
;    We have TAZ-to-TAZ VMT for DA, SR C2 and C3.
;
;   For residential we want want HBW, HBS, HBSc, and HBO trips for DA and SR.
;   For office we want HBW.
;   To derive percentages, we also want total OD pairs across HBW, HBS, HBS, HBO,
;   WO, OO, C2, and C3.

Active Adult Option VMT Addendum (June 2024)

T.KEAR
TRANSPORTATION PLANNING
& MANAGEMENT, INC.

Memorandum

TO: Mr. Anthony Gon, Winn Ridge Investments, LLC

FROM: Tom Kear

Date: June 4, 2024

RE: Creekside Village Project Active Adult (Age-Restricted) Housing Option, CEQA VMT Addendum

---

Introduction

This memorandum is an addendum to the Transportation Impact Study (TIS) prepared by T. Kear Transportation Planning and Management, Inc. (TKTPM) for the Creekside Village Project[1] (the Project). The original TIS analyzed the Project as 918 traditional single-family households and 5,400 sqft of commercial space and found that the Project was anticipated to have a less-than-significant impact on VMT under the California Environmental Quality Act (CEQA). This addendum addresses anticipated Vehicle Miles of Travel (VMT) impacts under CEQA for a partially active adult/age-restricted housing land use project option.

Subsequent to the original analysis, the age-restricted housing project option was introduced as a means to minimize impacts on student numbers at Latrobe Elementary and reduce the number of vehicle trips generated from the Project, which is not a consideration under CEQA. The age-restricted project option is also based on 918 dwelling units, however, all but 150 of those would be age-restricted. The proposed 5,400 sqft of commercial would remain with the age-restricted project option. The proposed Project and the age-restricted project option are compared in **Table 1** below.

Table 1. Comparison of land use alternatives

Land Use	Proposed Project	Age-Restricted Option
Traditional single-family housing	918 dwelling units	150 dwelling units
Age-restricted detached housing	0 dwelling units	768 dwelling units
Commercial	5,400 sqft	5,400 sqft
Total	918 dwelling units, and 5,400 sqft of commercial	918 dwelling units, and 5,400 sqft of commercial

Traditional vs Age Restricted Housing

There is limited information published on how the travel characteristics of age-restricted housing and traditional housing differ. The best available data comes from the published ITE trip generation rates for traditional and age-restricted housing and the 2017 National Household Travel Survey.

ITE Trip Generation Rates

Age-restricted households generate fewer trips than traditional households. Published Institute of Traffic Engineers (ITE) trip generation rates[2] anticipate that traditional housing has a daily trip generation rate of 9.43 trips per household, while age-restricted housing generates less than half of that at 4.31 trips per household. This supports the suspected result of lower VMT per capita from age-restricted housing but is not proof as changes in household size are not addressed. Anticipated trip generation for the proposed Project and the age-restricted option are provided in **Table 2** and **Table 3**, respectively.

National Household Travel Survey Person Miles of Travel (PMT)

The 2017 National Household Travel Survey[3] estimated PMT and person trips for both the population (as a whole) and for several subgroups, including those 65[4] and older. Those data show that the older drivers had 19% less PMT and took 5% fewer trips than the population as a whole. PMT being reduced at a greater rate than person trips indicates that the older population is taking fewer and shorter trips, leading to the 19% reduction in PMT.

[2] ITE (2021) Trip Generation Manual 11th Edition, Institute of Transportation Engineers, Washington DC
[3] FHWA (2018) Summary of Travel Trends: 2017 National Household Travel Survey (Tables 11 and 31), Federal Highway Administration, report FHWA-PL-18_019, https://nhts.ornl.gov/assets/2017_nhts_summary_travel_trends.pdf.
[4] Note that active adult/age-restricted housing is defined as 55 and older rather than 65 and older.

CEQA VMT thresholds

The County's VMT thresholds set an identifiable metric by which the Project's effect on VMT will be determined to be significant or less-than-significant. Land use specific thresholds have been adopted as follows[5]:

- Residential: 15% below baseline unincorporated countywide VMT per capita,
- Office: 15% below baseline unincorporated countywide VMT per capita,
- Retail: no net increase in VMT.

As noted by the Governor's Office of Planning and Research (OPR), adding local-serving retail into the urban fabric improves retail destination proximity.[6] Local-serving retail development tends to shorten trips and reduce VMT. Thus, lead agencies may presume such development creates a less-than-significant impact. (Regional serving retail on the other hand can substitute longer trips for shorter ones, which may lead to a significant impact.) The El Dorado County Board of Supervisors did not explicitly adopt the local serving retail as a screening criteria. However, the Board of Supervisors allowed that a different method of calculating VMT may be used if, in the exercise of sound engineering judgment, a different method is determined to be more accurate because the unique circumstances of a particular project or particular use that are not captured in the El Dorado County Travel Demand Model resulting in an underestimation or overestimation of VMT.

OPR defined local serving retail as less than 50,000 sqft, significantly greater than the 5,400 sqft commercial component of the Project. Additionally, the El Dorado County travel demand model does not differentiate between local serving and regional retail and therefore is not anticipated to be able to capture the shorter trip lengths associated with the local serving retail component of the Project. Because the travel demand model cannot distinguish between a large regional commercial center (i.e., Costco) and a small local coffee shop, the OPR guidance and methodology was applied for the local serving retail component of the Project, and the 15% reduction threshold was applied for the housing component of the Project[7]. Consistent with OPR guidance, it is unlikely that the neighborhood retail with relatively small footprints for commercial and retail spaces will attract customers beyond the surrounding community, especially when numerous offerings are available closer to Highway 50 at Town Center. It is also unlikely a potential customer would drive past Town Center to seek out the relatively smaller commercial and retail offerings at Creekside Village. Instead, given the scale of the

[5] EDC (2020) Resolution 141-2020, Adopting the El Dorado County "Vehicle Miles Traveled" Thresholds of Significance for Purposes of Analyzing Transportation Impacts Under the California Environmental Quality Act, https://www.eldoradocounty.ca.gov/files/assets/county/v/1/documents/government/transportation/executed-resolution-141-2020.pdf.

[6] OPR Technical Advisory on Evaluating Transportation Impacts in CEQA (April 2018), https://opr.ca.gov/docs/20180416-743_Technical_Advisory_4.16.18.pdf.

[7] The Governor's Office of Planning and Research advises lead agencies evaluate each component of a mixed-use project independently and apply the significance threshold for each project type included (e.g., residential and retail).

commercial component, location of Creekside Village, park amenities surrounding the commercial component, and interconnected trails developed with the project, it is anticipated that the neighborhood commercial offerings will primarily attract surrounding residents and many of those residents can walk or bike to the commercial component.

The Governor's Office of Planning and Research advises lead agencies to evaluate each component of a mixed-use project independently and apply the significance threshold for each project type included (e.g., residential and retail). Alternatively, a lead agency may consider only the project's dominant use. In the analysis of each use, a project should take credit for internal capture. Combining different land uses and applying one threshold to those land uses may result in an inaccurate impact assessment.

For Creekside Village, the residential portion of the Project was evaluated based on the 15% reduction from the baseline threshold listed above. The retail portion of the Project is considered local-serving retail and presumed to have a less-than-significant impact on VMT per OPR guidance as allowed by El Dorado County Board of Supervisors resolution 141-2020.

Discussion and findings

The original TIS found that the 918 traditional housing units were anticipated to have a less-than-significant impact on VMT per capita under CEQA. The implementation of the age-restricted housing option (with 768 or more age restricted dwelling units and 150 or fewer traditional dwelling units) is anticipated to produce fewer trips per household, fewer trips per capita, and less VMT per capita than the 918 traditional households analyzed in the original TIS. Therefore, the age-restricted housing project option is also anticipated to have a less-than-significant impact on VMT under CEQA.

REVISION HISTORY

Description	Date	Notes
Admin Draft	Feb 22, 2024	
Public Report	April 25, 2024	Added EBL queue data at intersection 3, clarified abatement 18A.
Revised Report	Dec 12, 2024	Updated to reflect age restricted housing, and removal of commercial component.
Revised Report	April 15, 2025	Addressed peer review comments related to presentation
Revised Report	May 20, 2025	Updated description of community input on Avanti Dr intersection and fixed minor typos.

EXECUTIVE SUMMARY

This transportation impact study (TIS) analyzes the Reduced Impact Alternative for the Creekside Village Specific Plan (referred to herein as the "Project") for consistency with the El Dorado County General Plan level-of-service policies and for vehicle miles of travel (VMT) impacts under the California Environmental Quality Act (CEQA). Where appropriate, abatement measures are provided to address any deficiencies relative to adopted General Plan policies and mitigation measures are provided to address any potentially significant impacts under CEQA. Creekside Village was previously analyzed as a 918 dwelling unit project with 5,400 sqft of neighborhood commercial in an April 2024 transportation impact study, which is the proposed project analyzed in the Draft EIR. Subsequent to that analysis, a variety of constraints were identified which resulted in the Reduced Impact Alternative that is analyzed at a project-specific level. This transportation impact study addresses the Reduced Impact Alternative relative to what was considered in the April 2024 analysis. For ease of reading, the Reduced Impact Alternative analyzed herein is referred to as the "Project."

Creekside Village (the Project) is a planned community with housing, parks, and open space located in the El Dorado Hills community region of El Dorado County. Requested entitlements include a tentative subdivision map allowing for up to 763 single family homes (613 are age-restricted and 150 are traditional), plus neighborhood park parcels, and open space fronting creeks and avoiding sensitive features. The Project creates a new Specific Plan which would amend the General Plan. The Project is located on a vacant 207.9 acre site located on the southern end of the El Dorado Hills Business Park, south of Investment Boulevard and west of Latrobe Road. The Project parcels are APNs 117-010-032 and a portion of 117-720-012. A vicinity map is shown in **Figure ES-1**. The Project parcel is split by a creek, with most of the housing located on the south side of the creek. The north side of the creek would contain 104 of the single-family homes and open space, and the south side of the creek would include the remaining 659 single family homes.

The Project parcels have been de-annexed from the business park, and the applicant is requesting to change its General Plan land use designation and zoning from Research and Development (R&D) to Adopted Plan (AP) with Single Family Low Density (CV-SFL), Single Family Medium Density (CV-SFM) residential, Open Space (CV-OS), and Parks (CV-P) land use designations within the plan area.

Figure ES-1. Project location map

Project Description

Figure ES-2 provides a preliminary site plan for the Project. The Project would:

- Amend the General Plan, change the zoning designation, and adopt a specific plan to allow the development of 207.9 acres for residential and related uses on land that is undeveloped and currently designated as industrial and R&D.
- Create a Tentative Map for 613 age-restricted single-family homes and 150 traditional single-family homes. The Tentative Map would include additional lots associated with parks and open space and various landscape lots.

Access to the Project will be provided by three roadways and a multiuse trail:

- The primary access will be from Latrobe Road via an extension of Royal Oaks Drive. The intersection of Latrobe Rd/Royal Oaks Dr is proposed to remain as full access. This intersection is analyzed with its existing two-way-stop-control, with signal-controlled recommended as an abatement to maintain acceptable level-of-service.
- The first secondary access road is an extension of Avanti Dr. The intersection is currently a "T" intersection providing full access to Avanti Dr. At the request of community members, access to Avanti Dr at this location will be limited to right-in/right out (RIRO), with full access to the Project. Final configuration will be determined by DOT with confirmation with EDH Fire prior to approval of improvement plans. This intersection currently has and would retain two-way-stop-control (TWSC).
- The second secondary access is via a connection to Wetsel-Oviatt Road.
- A pedestrian and bicycle access route connecting to Robert J. Mathews Parkway will provide enhanced non-motorized access to the medical, education, fitness, service, food, and retail options within the El Dorado Hills Business Park. This will also available as Emergency Vehicle Access for fire apparatus, emergency medical, and law enforcement personnel in an emergency.

Traffic is distributed across the driveways based on the rough proximity of each land use to the access points.

Study Area

The TIS area (**Figure ES-3**), which includes portions of White Rock Road, Latrobe Road, El Dorado Hills Boulevard, Silva Valley Parkway and US 50 in El Dorado County, California, was selected with consideration of the requirements of CEQA and General Plan policies TC-Xd and TC-Xe. Specifically, the study was selected to include El Dorado County locations where Project traffic would constitute:

A. A two percent increase in traffic during the AM peak hour, PM peak hour, or daily; or,
B. The addition of 100 or more daily trips; or,
C. The addition of 10 or more trips during the AM peak hour or the PM peak hour.

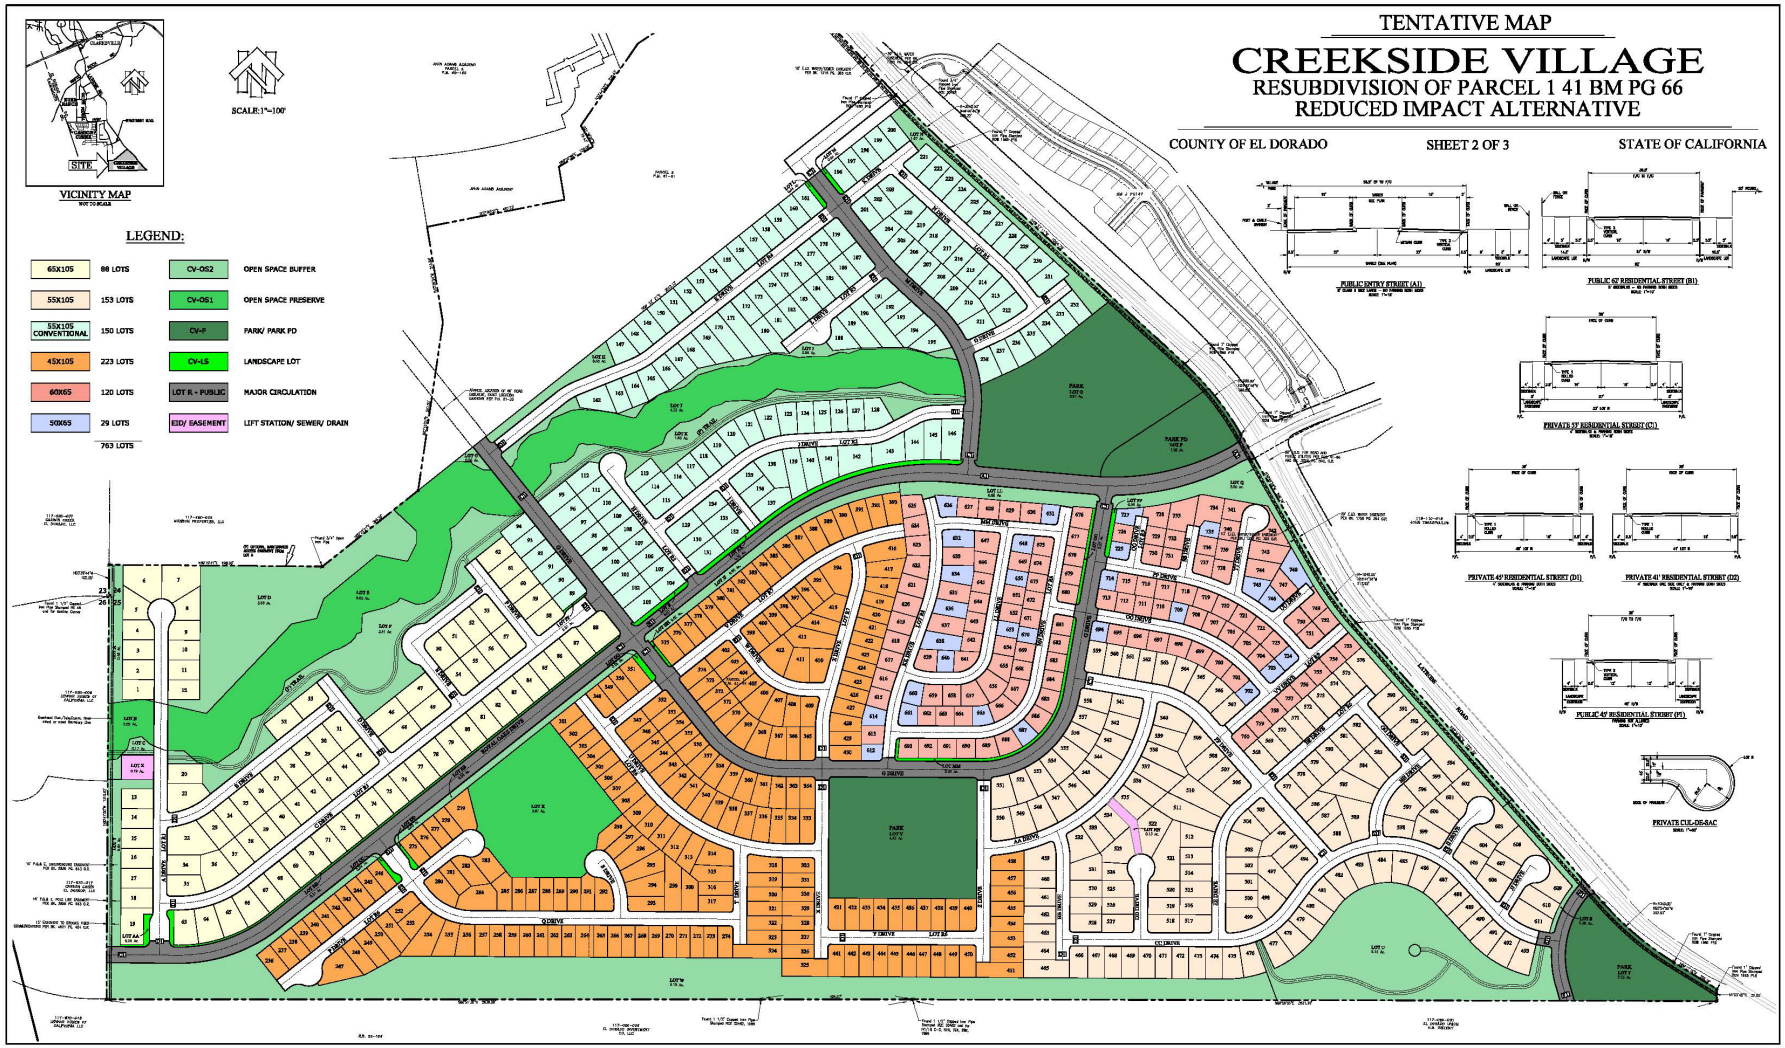

Figure ES-2. Preliminary Project site plan

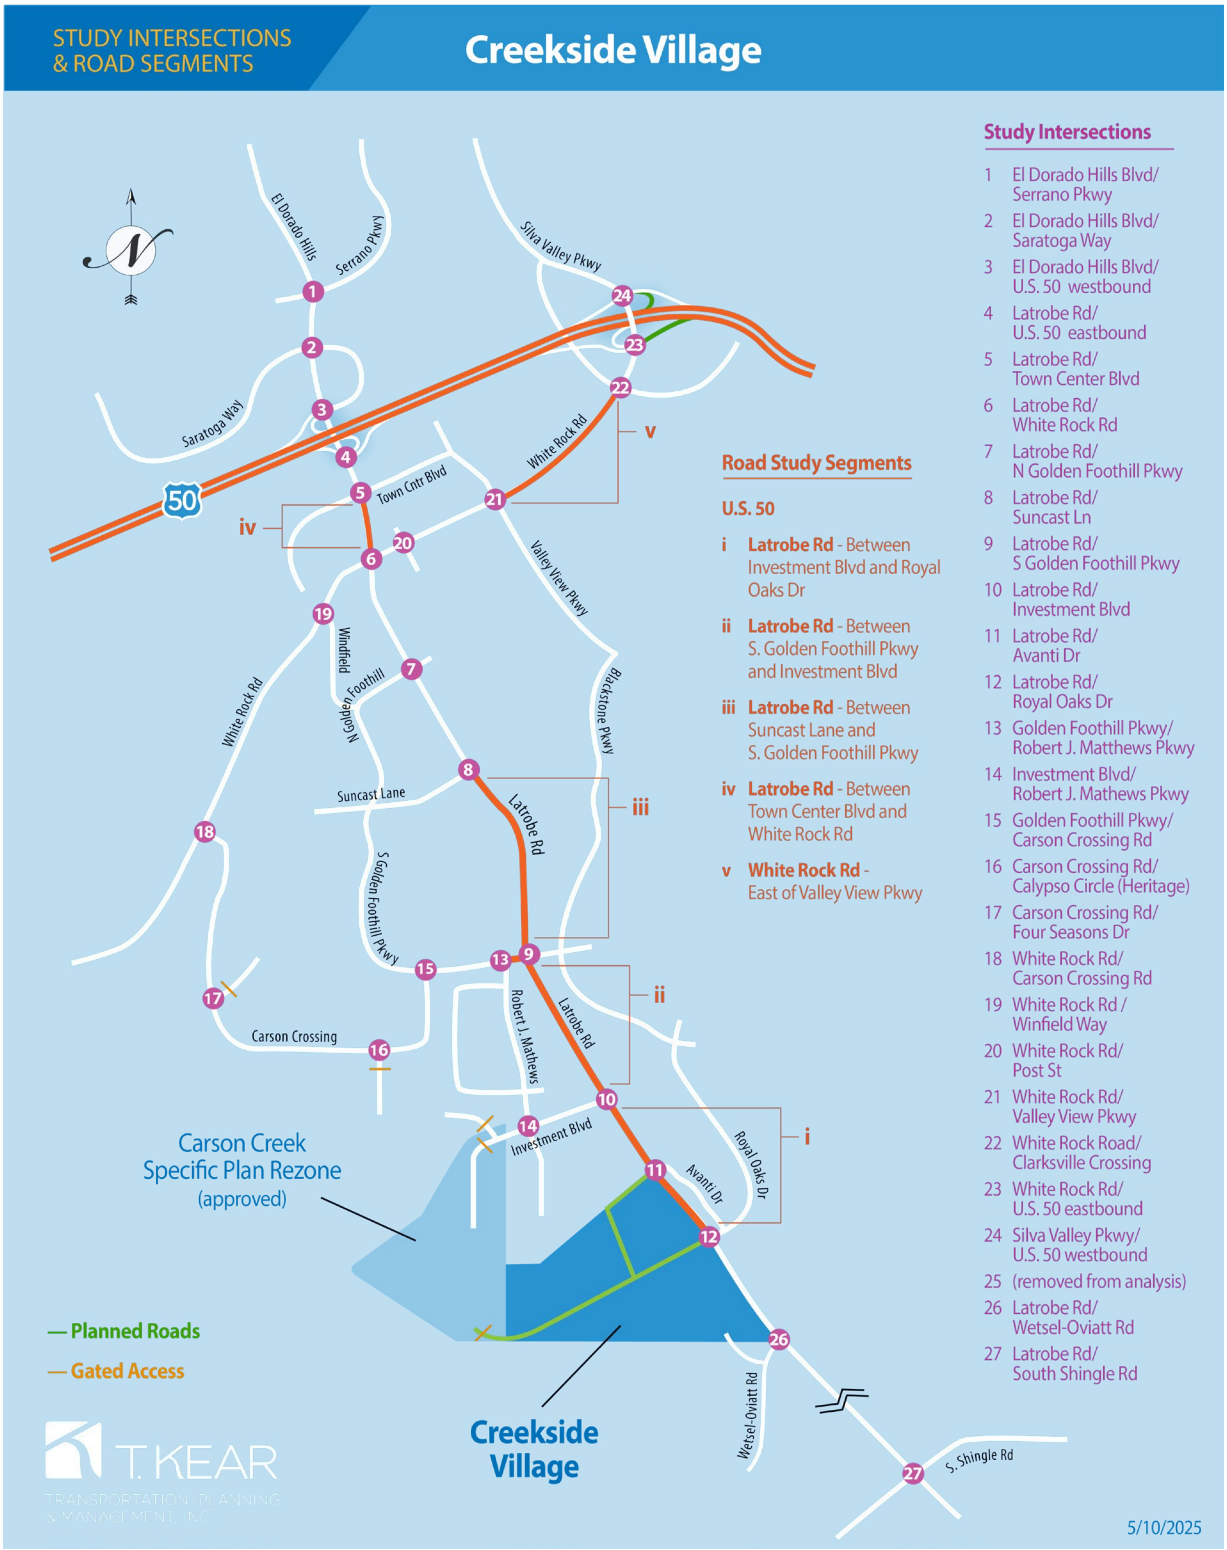

Figure ES-3 Study area

Project Trip Generation and Distribution

Anticipated Traffic generation by the Project reflects both trips generated by the Project itself, and, avoided trips in 2033 and 2040 from the commercial land uses that the El Dorado County Travel Demand Model (TDM) assumes will take place on the Project parcels.

Project Trips

Anticipated trips are based on Institute of Transportation Engineers (ITE) Trip Generation Manual, 11th Edition (2021). **Table ES-1** shows anticipated Project Trip Generation. To be conservative, trip generation estimates are generally based on the higher rates for the peak hour of the generator rather than the peak hour of adjacent street traffic. The higher of either the average trip generation rate or equation-based trip generation rate was also used.

Avoided Trips

Avoided trips are additional peak hour trips that the TDM assumes in the future from growth within the Project TAZ. These avoided trips were estimated by running the TDM with and without assumed 2020[1] through 2040 employment growth for the effected portion of the Project's transportation analysis zone (TAZ 612). Creekside Village replaces 62% of the available land in TAZ 612 (**Figure ES-4**), therefore 62% of the employment growth was eliminated from TAZ 612 when estimating the number of avoided trips using the TDM. TDM employment assumptions for TAZ 612 are shown in **Table ES-2** below, along with the resulting avoided trips.

Trip Distribution with Adjustment for Latrobe Elementary

Project trip distribution was based on the El Dorado County TDM, observed counts, prior studies in the vicinity of the Project, and consultation with El Dorado County staff. Additional adjustments were made to reflect school trips to Latrobe Elementary based on student generation statistics published by the school district. Trip distribution is shown in **Figure ES-5**.

Table ES-1. Trip generation

Land Use	Quantity	Metric	Daily	AM Peak Hour			PM Peak Hour		
				Total	Inbound	Outbound	Total	Inbound	Outbound
Single Family Detached Housing (ITE Use 210)	150 DU (1)	Notes	Equation Rate	Equation Rate for Peak Hour of Generator			Equation Rate for Peak Hour of Generator		
		Rate	9.77	0.76	26%	74%	1.01	64%	36%
		Trips	1465	114	30	84	151	97	54

(Dated October 25, 2024)

[1] 2020 is used rather than 2023 because the process of purchasing the land and de-annexing it from the business park meant that no new employment on this portion of the model TAZ occurred as of that year.

FINDINGS

Trip Generation Findings

The 763 dwelling unit Project is anticipated to generate 316 AM peak hour trips, 382 PM peak hour trips, and 4,147 daily trips. Those Project trips are offset under both the EPAP 2033 and Cumulative 2040 scenarios through forgone commercial development on the 207.9 ac project site which the travel demand model anticipated would have generated 733 AM and 829 PM peak hour trips, and 9,415 daily trips. Trip Generation is discussed in more detail in **Section 5.1**. Findings are reported in **Section 14.1**

CEQA Findings

VMT: The 763 dwelling unit Project is anticipated to have home based VMT per capita of 13.6 in 2023 and 13.1 in 2040, compared to a significance threshold of 17.3 (calculated using the same methodology and data as the Proposed Project impacts). Therefore, the Project has a **less-than significant** impact on VMT. The VMT analysis is discussed in **Section 3.4** and **Section 11**. CEQA Findings are reported in **Section 14.2**

Transit: The Project does not interfere with existing or proposed transit service and has a **less-than-significant** impact on transit. Transit impacts are briefly discussed in **Section 12**. CEQA Findings are reported in **Section 14.2**

Bicycles and Pedestrians: The Project enhances bicycle and pedestrian access to the El Dorado Hills Business Park and does not interfere with existing or planned bicycle and pedestrian facilities. The Project includes a variety of bike and pedestrian amenities providing connections both within the planned community and externally to the existing bike and pedestrian facilities along Latrobe Road and Royal Oaks Dr. Therefore, the Project has a **less-than-significant** impact on bicycle and pedestrian facilities. Bicycles and pedestrian impacts are briefly discussed in **Section 12**. CEQA Findings are reported in **Section 14.2**

General Plan Level-of-Service and Queue Length Findings

Deficiencies that are caused or worsened by the Project, and abatement measures to address said deficiencies, are identified for existing 2023 plus Project, Existing Plus Approved Projects (EPAP) 2033 plus Project, and cumulative 2040 plus Project conditions.

Throughout this document, segment deficiencies are numbered using the segment number (i through v) and a year code (2023 = “A”, 2033 = “B”, and 2040 = “C”). Intersection abatement measures are numbered using the intersection number (1-27) and the year code (A, B, or C). Locations where the Project causes new or worsen existing deficiencies are listed in **Table ES-3**. The first occurrence of an abatement measure is listed in **bold red** font, subsequent applications of an abatement measure are listed in a regular typeface. Abatement measures for existing 2023 plus Project conditions are described in more detail in **Section 14.3**.

Other Findings/Conditions of Approval ("On-Site Transportation Review")

As noted in sections 13 and 14 of this report, "On-Site Transportation Review" looks at internal circulation (i.e., sight distance, driveway spacing, minimum required throat depth, parking). For this Project the on-site review should be addressed for each Final Map. Review at Final Map is appropriate because the Specific Plan allows for minor administrative changes that may shift lotting and internal roadways. On-Site Transportation Review findings are reported in **Section 14.3**

1.0 INTRODUCTION AND BACKGROUND

This transportation impact study (TIS) analyzes the Reduced Impact Alternative analyzed in the Draft EIR for the Creekside Village Specific Plan (the Project) for consistency with the El Dorado County General Plan level-of-service policies and for vehicle miles of travel (VMT) impacts under the California Environmental Quality Act (CEQA). Where appropriate, abatement measures are provided to address any deficiencies relative to adopted General Plan policies and mitigation measures are provided to address any potentially significant impacts under CEQA. Creekside Village was originally analyzed as a 918 dwelling unit project with 5,400 sqft of neighborhood commercial in an April 2024 transportation impact study. Subsequent to that analysis a variety of constraints were identified which led to the development of the Reduced Impact Alterative that is analyzed at the project-specific level. This transportation impact study addresses that alternative relative to what was considered in the April 2024 analysis and is referred to as the "Project" for purposes of this analysis.

Creekside Village (the Project) is a planned community with housing, parks, and open space located in the El Dorado Hills community region of El Dorado County. Requested entitlements include a tentative subdivision map allowing for up to 763 single family homes (613 of which are age-restricted and 150 are traditional), plus neighborhood park parcels, and open space fronting creeks and avoiding sensitive features. The Project creates a new Specific Plan which would amend the General Plan. The Project is located on a vacant 207.9 acre site located on the southern end of the El Dorado Hills Business Park, south of Investment Boulevard and west of Latrobe Road. The Project parcels are APNs 117-010-032 and a portion of 117-720-012. A vicinity map is shown in **Figure 1**. The Project parcel is split by a creek, with most of the housing located on the south side of the creek. The north side of the creek would contain 104 of the single-family homes and open space, and the south side of the creek would include the remaining 659 single family homes.

The Project parcels have been de-annexed from the business park, and the applicant is requesting to change its General Plan land use designation and zoning from Research and Development (R&D) to Adopted Plan (AP) with Single Family Low Density (CV-SFL), Single Family Medium Density (CV-SFM) residential, Open Space (CV-OS), and Parks (CV-P) land use designations within the plan area.

Project Description

Figure 2 provides a preliminary site plan for the Project. The Project would:

- Amend the General Plan, change the zoning designation, and adopt a specific plan to allow the development of 207.9 acres for residential and related uses on land that is undeveloped and currently designated as industrial and R&D.
- Create a Tentative Map for 613 of age-restricted single-family homes and 150 traditional single-family homes. The Tentative Map would include additional lots associated with parks and open space and various landscape lots.

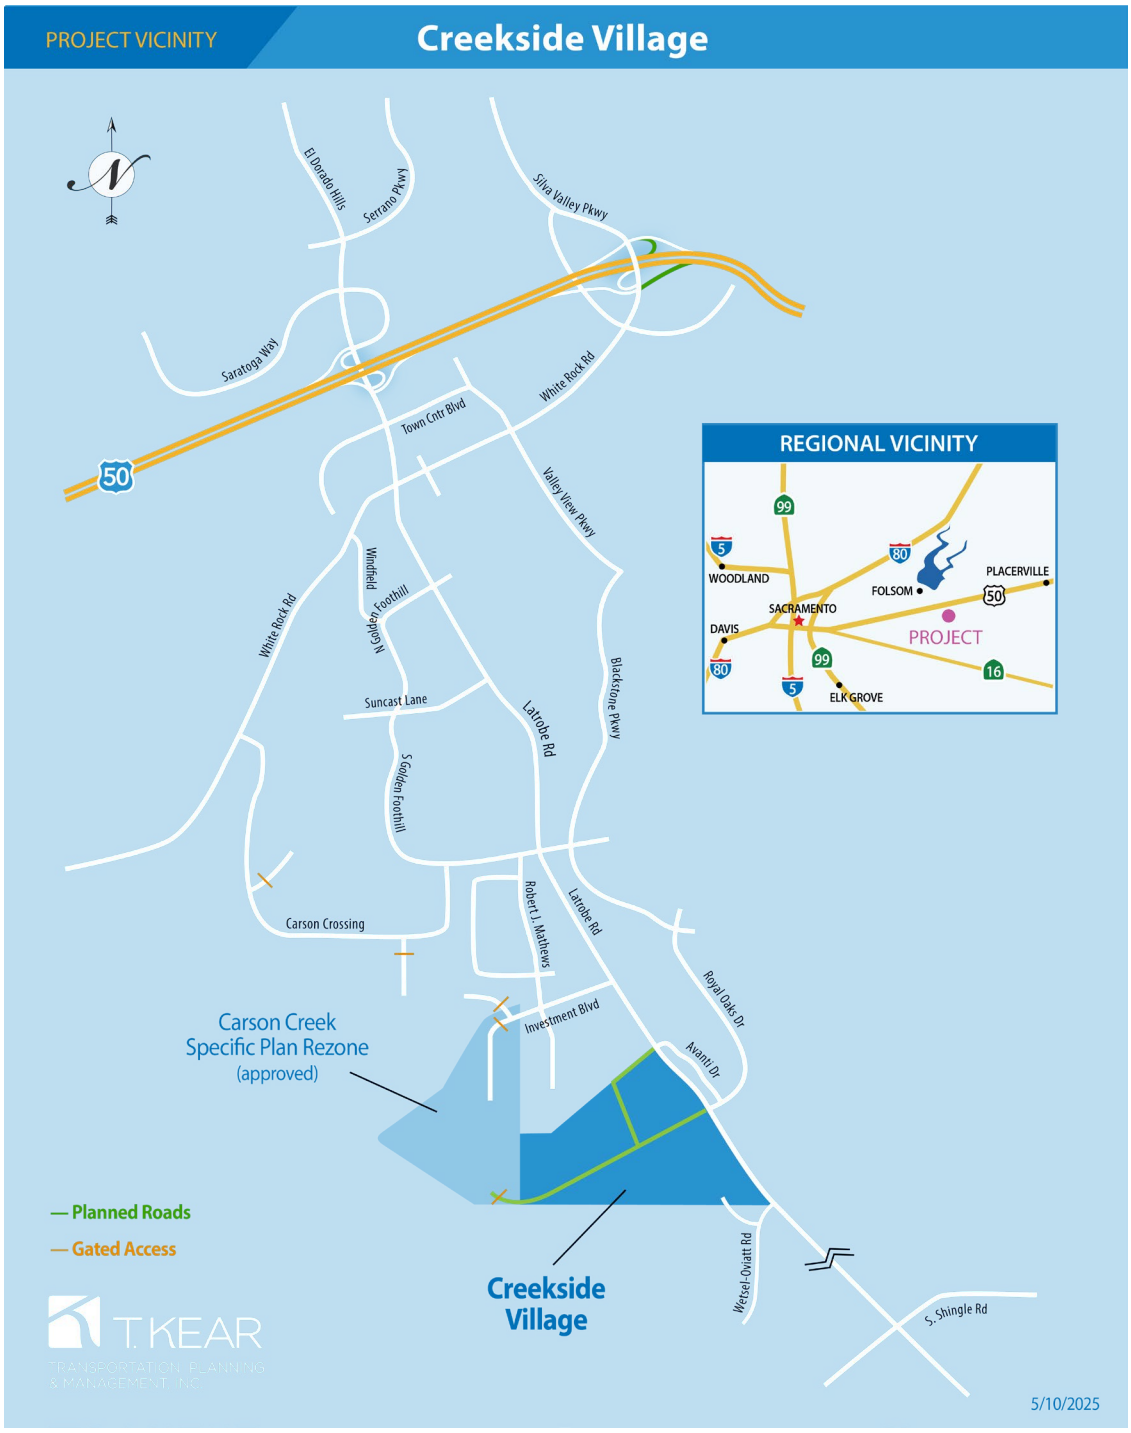

Figure 1. Project location map

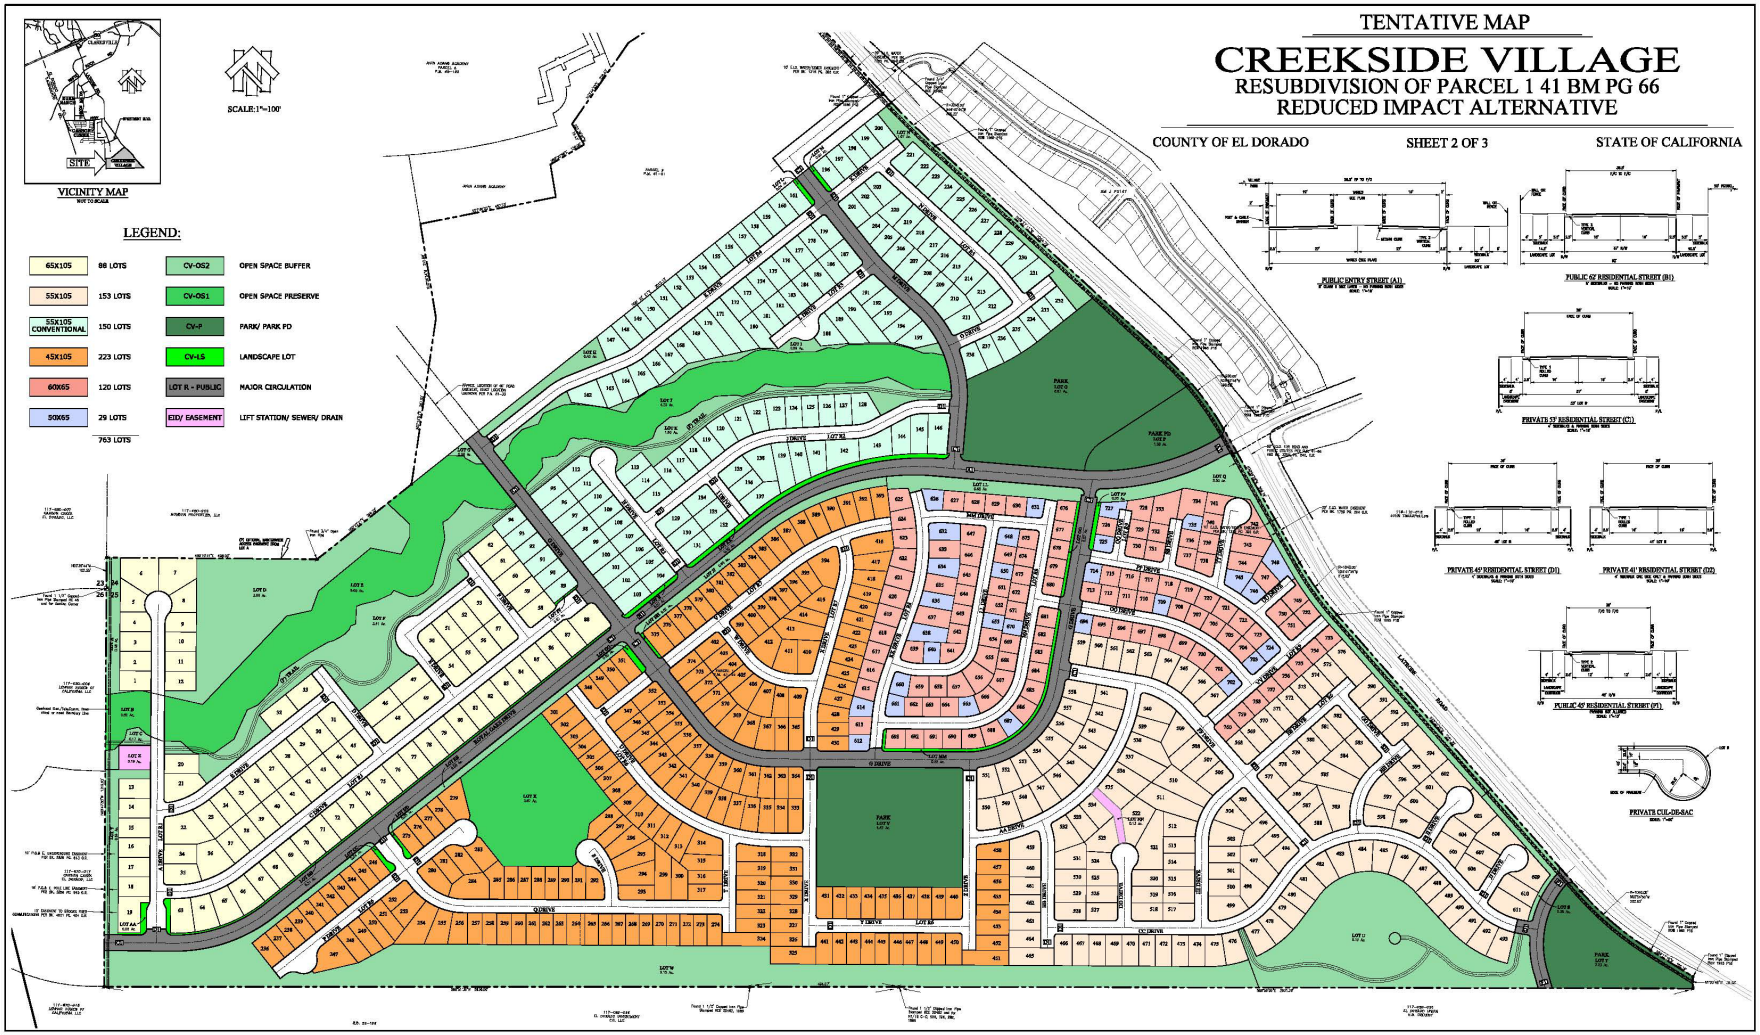

Figure 2. Preliminary Project site plan

Access to the Project will be provided by three roadways, and a multiuse trail:

- The primary access will be from Latrobe Road via an extension of Royal Oaks Drive. The intersection of Latrobe Rd/Royal Oaks Dr is proposed to remain as full access. This intersection is analyzed with its existing two-way-stop-control, with signal-controlled recommended as an abatement to maintain acceptable level-of-service.
- The first secondary access road is an extension of Avanti Dr. The intersection is currently a "T" intersection providing full access to Avanti Dr. At the request of community members, access to Avanti Dr at this location will be limited to right-in/right out (RIRO), with full access to the Project. Final configuration will be determined by DOT with confirmation with EDH Fire prior to approval of improvement plans. This intersection currently has and would retain two-way-stop-control (TWSC).
- The second secondary access is via a connection to Wetsel-Oviatt Road.
- A pedestrian and bicycle access route connecting to Robert J. Mathews Parkway will provide enhanced non-motorized access to the medical, education, fitness, service, food, and retail options within the El Dorado Hills Business Park. This will also be available as Emergency Vehicle Access for fire apparatus, emergency medical, and law enforcement personnel in an emergency.

Traffic is distributed across the driveways based on the rough proximity of each land use to the access points.

General Plan Consistency Considerations for Cumulative Impact Analysis

Projects that are consistent with the General Plan, and cumulative travel demand model assumptions, may rely upon the General Plan EIR's cumulative analysis. The Project parcel is currently designated as industrial and R&D in the General Plan and zoned accordingly. The Project requires a general plan amendment and rezoning to accommodate the proposed residential uses and is therefore not consistent with the General Plan or its related CEQA documents. Project-level cumulative analysis is included in this TIS.

2.0 STUDY AREA

The TIS area (**Figure 3**), which includes portions of White Rock Road, Latrobe Road, El Dorado Hills Boulevard, Silva Valley Parkway and US 50 in El Dorado County, California, was selected with consideration of the requirements of CEQA and General Plan policies TC-Xd and TC-Xe. Specifically, the study was selected to include El Dorado County locations where Project traffic would constitute:

D. A two percent increase in traffic during the AM peak hour, PM peak hour, or daily; or,
E. The addition of 100 or more daily trips; or,
F. The addition of 10 or more trips during the AM peak hour or the PM peak hour.

2.1 Project Area Roadways

The following are descriptions of the primary roadways in the project vicinity.

- **El Dorado Hills Boulevard** is a north-south arterial roadway that extends from Green Valley Road on the north to US 50 on the south where it continues as Latrobe Road. North of Green Valley Road it continues as Salmon Falls Road. Between US 50 and Saratoga Way El Dorado Hills Boulevard is a six-lane urban arterial, between Saratoga Way and Serrano Parkway it is a five-lane urban arterial, north of Serrano Parkway it continues as a four-lane urban arterial until Governor Drive, and then as a two-lane urban arterial northward to Green Valley Road. Just north of US 50, El Dorado Hills Boulevard carries approximately 28,000 vehicles per day.

- **Latrobe Road** is a north-south arterial roadway that provides a primary connection to US-50 for western El Dorado County. It extends from US 50, where it continues as El Dorado Hills Boulevard, to State Route 16. It is a six-lane urban arterial road between US 50 and White Rock Road. Latrobe Road is a four-lane urban arterial road between White Rock Road and Golden Foothill Parkway (south). It is a two-lane urban road from Golden Foothill Parkway (south) to Investment Boulevard and a two-lane rural road south of Investment Boulevard. North of White Rock Road, Latrobe Road carries approximately 32,500 vehicles per day with three through travel lanes in each direction. South of US 50, El Dorado Hills Boulevard becomes Latrobe Road.

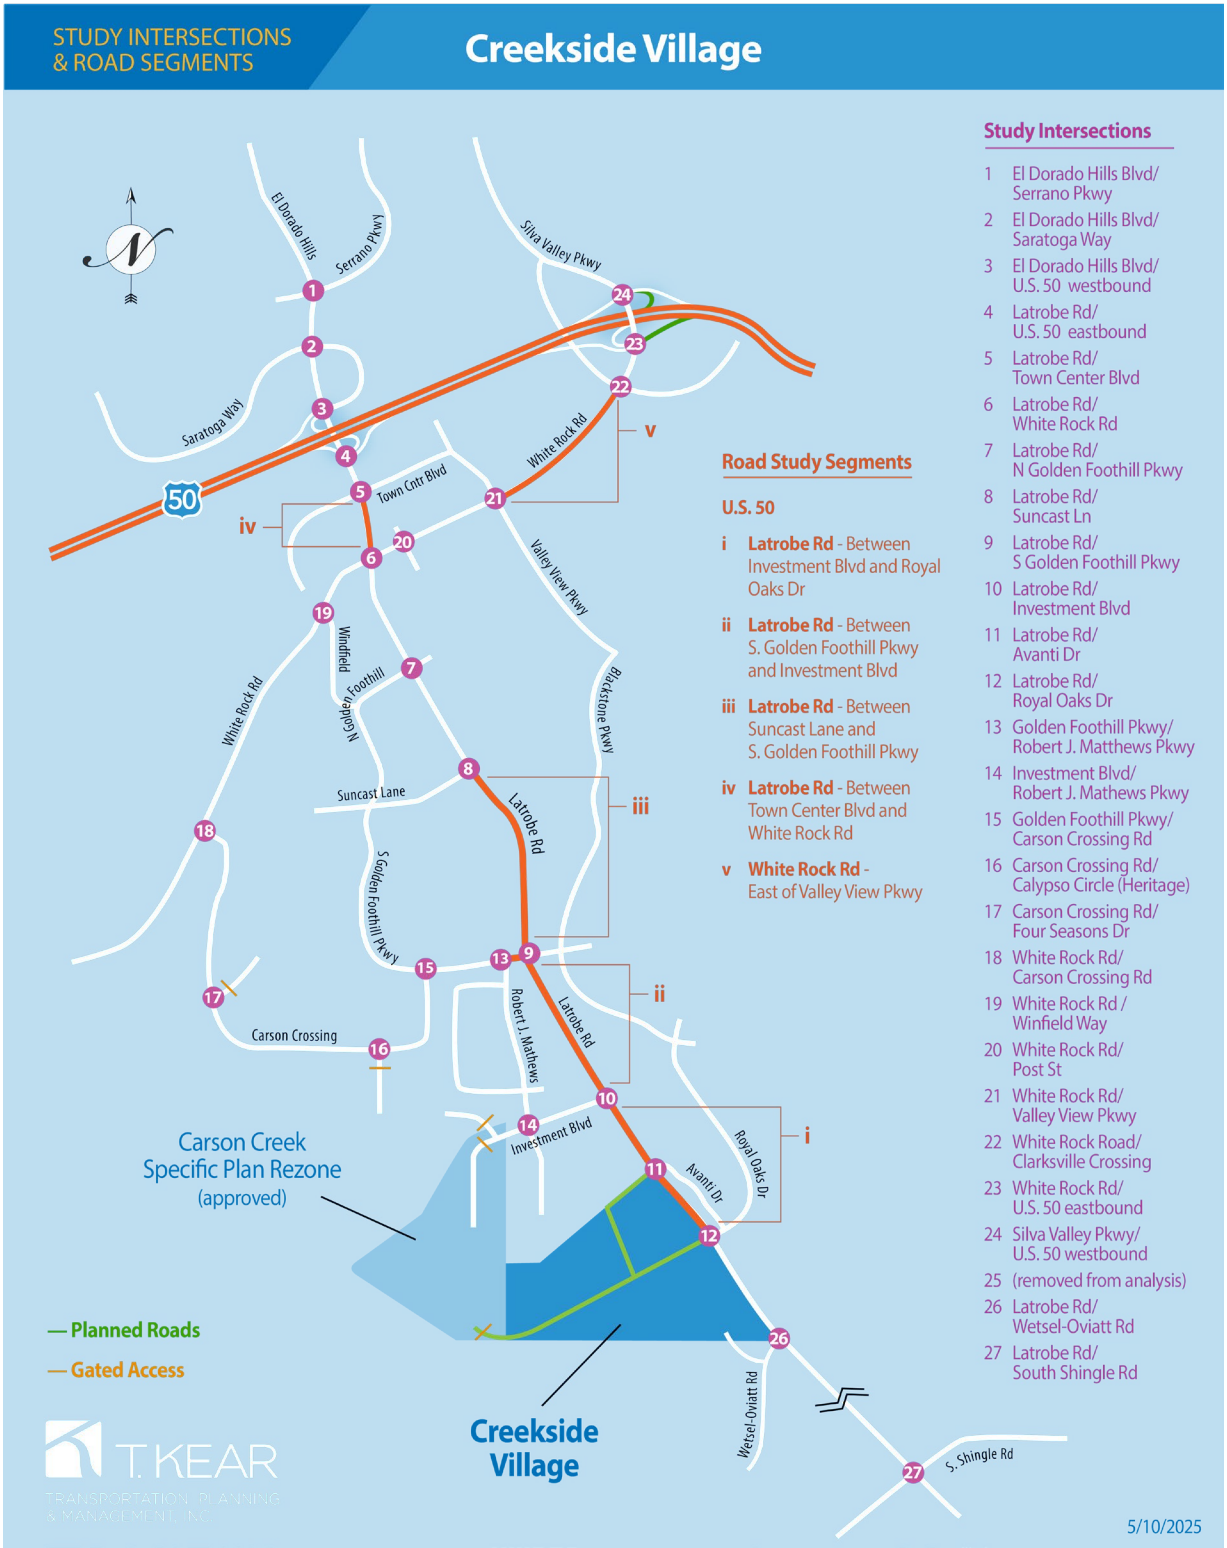

Figure 3. Study area

- **Park Drive** is a two-lane local roadway serving the shopping center located north of US 50 at the El Dorado Hills Boulevard interchange. Park Drive intersects El Dorado Hills Boulevard at two locations, opposite the reconstructed US 50 westbound ramps and then approximately 1000 feet to the north where Saratoga Way intersects El Dorado Hills Boulevard. Park Drive serves about 12,000 vehicles per day east of El Dorado Hills Boulevard.

- **Silva Valley Parkway** is a north-south roadway that generally runs parallel to El Dorado Hills Boulevard north of US 50. The General Plan identifies Silva Valley Parkway as a four-lane divided road. A new US 50 interchange at Silva Valley/White Rock Road opened in 2016, which provides a realigned Silva Valley Parkway that connects to the existing four-lane Silva Valley Parkway to the north and the existing two-lane White Rock Road on the south. The new interchange is located east of the existing underpass, which will be preserved for bike and pedestrian access. Silva Valley Parkway serves about 17,000 vehicles per day north of US 50.

- **White Rock Road** is an east-west arterial that extends through several jurisdictions from Silva Valley Parkway in El Dorado County to International Drive in Rancho Cordova. Within El Dorado County, it is a two-lane urban arterial road from the Sacramento County – El Dorado County line to Manchester Drive, a four-lane urban arterial between Manchester Drive and Post Street, and a two-lane urban arterial road between Post Street and Silva Valley Parkway. White Rock Road carries approximately 8,000 vehicles per day at the Sacramento County – El Dorado County Line and 17,000 vehicles per day just west (south) of the Silva Valley Parkway Interchange.

- **Investment Boulevard:** Is a two-lane local road, running east-west within the El Dorado Hills Business Park. It connects the eastern edge of the CCSP to Robert J. Mathews Parkway and Latrobe Road. Curb and gutter are provided. There are no bike lanes or sidewalks. Twenty-five-foot Lane widths are provided within the business park.

- **Robert J Mathews Parkway:** Is a two-lane local road, running north-south within the El Dorado Hills Business Park. It connects Investment Boulevard to Golden Foothill Parkway on the north. Curb and gutter are provided. There are no bike lanes or sidewalks. Twenty-five-foot Lane widths are provided within the business park. The Project includes an access connecting to Robert J Mathews Parkway, to encourage residents to walk and bike to the plethora of schools, gyms, service and retail businesses and to minimize local traffic's use of Latrobe Road.

- **Royal Oaks Drive:** is a two-lane collector road within the Blackstone neighborhood of the Valley View Specific Plan. It provides the southernmost access for Blackstone to Latrobe Road. Royal Oaks Drive includes class 2 bike lanes, curb and gutter, and sidewalks fronting developed parcels.

2.2 Transit Service

El Dorado Transit is the primary public transit service provider in El Dorado County and provides local transit services within and between community areas of the county including Placerville and

Cameron Park. Within the study area, El Dorado Transit provides commuter service connecting a park-and-ride lot, located at the intersection of Latrobe Road and White Rock Road, with downtown Sacramento employment ("Sac Commuter"), and several locations in Folsom including the Iron Point Light Rail Station, Ingersoll Way & Parker Drive, Intel, Kaiser Permanente, and Folsom Lake College ("50X – 50 Express"). Dial-a-ride services are also provided within many portions of El Dorado County, including El Dorado Hills. A transit map provided as **Figure 4** shows the Sac Commuter and 50X-50 Express service.

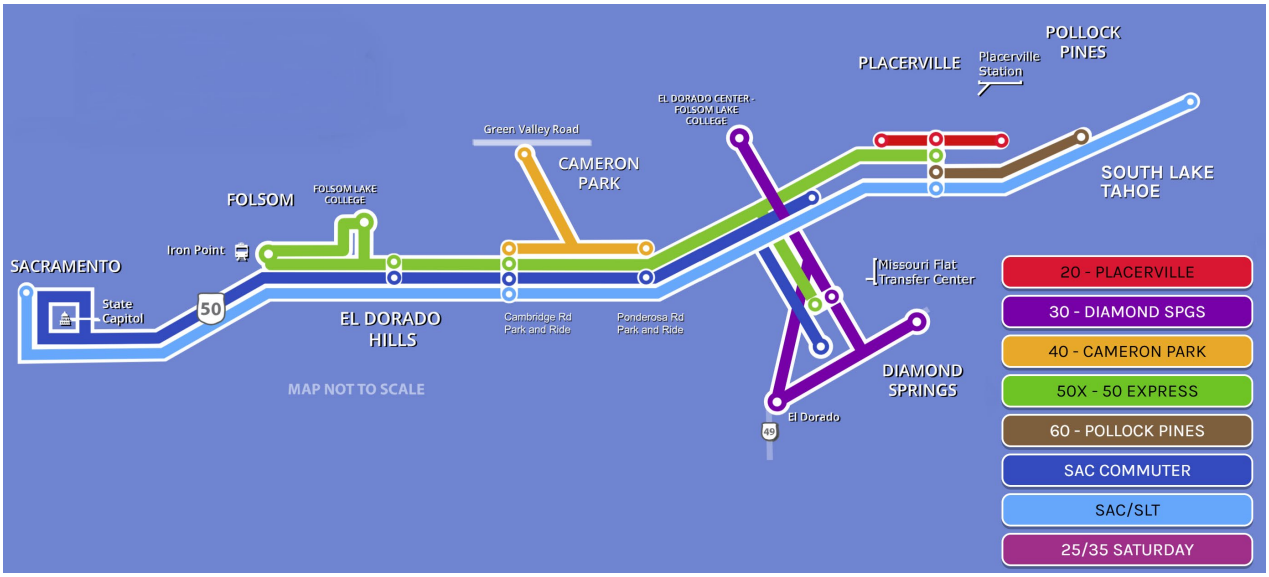

Figure 4. El Dorado County Transit Map

2.3 Bicycle Facilities

There are existing class II bike lanes along White Rock Road, Silva Valley Parkway, Latrobe Road, Valley View Parkway, and Blackstone Parkway. A class 1 bike trail fronts the east side of Latrobe Road within the Valley View Specific Plan area between Royal Oaks Drive and the El Dorado Irrigation water treatment plant (4625 Latrobe Road). A short section of Class I trail also connects the Carson Crossing specific plan area to the El Dorado Hills Business Park.

The 2020 Active Transportation Plan[2] calls for a pedestrian overcrossing of US 50 connecting Class 1 bike and pedestrian trails through the Town Center shopping district with the bike and pedestrian trails adjacent to the Raley's shopping center north of US 50. There are also plans for a class 1 shared use path along the Placerville & Sacramento Valley Railroad rail line running to the Southeast from the City of Folsom and skirting the southwestern edge of the Carson Creek Specific Plan area.

[2] El Dorado County Transportation Commission (2020) El Dorado County Active Transportation Plan, https://www.edctc.org/atp-plans.

2.4 Study Intersections and Segments

The following intersections are included in this evaluation and are marked in the preceding **Figure 3**:

1. El Dorado Hills Blvd/Serrano Pkwy
2. El Dorado Hills Blvd/Saratoga Way
3. El Dorado Hills Blvd/US 50 WB
4. El Dorado Hills Blvd/US 50 EB
5. Latrobe Road/Town Center Boulevard
6. Latrobe Road/White Rock Road
7. Latrobe Road/Golden Foothill Parkway (N)
8. Latrobe Road/Suncast Lane
9. Latrobe Road/ Golden Foothill Parkway (S)
10. Latrobe Road/Investment Boulevard
11. Latrobe Road/Avanti Drive
12. Latrobe Road/Royal Oaks Drive
13. Golden Foothill Pkwy/Robert J Mathews Pkwy
14. Investment Boulevard/Robert J Mathews Pkwy
15. Golden Foothill Parkway/Carson Crossing Road
16. Carson Crossing Road/Calypso Circle
17. Carson Crossing Road/Four Seasons Drive
18. White Rock Road/Carson Crossing Road
19. White Rock Road/Windfield Way
20. White Rock Road/Post Street
21. White Rock Road/Valley View Parkway
22. White Rock Road/Clarksville Crossing
23. Silva Valley Parkway/US 50 EB ramps
24. Silva Valley Parkway/US 50 WB ramps
25. (not used)[3]
26. Latrobe Road/Wetsel-Oviatt Road
27. Latrobe Road/South Shingle Road

Merge/diverge/weave analysis for traffic entering and exiting US 50 will be conducted on US 50 at the following locations:

<u>Westbound US 50</u>

1. Bass Lake Rd to Silva Valley Pkwy (basic)
2. Silva Valley Pkwy offramp (diverge)
3. Silva Valley Pkwy offramp to the (future) loop onramp (basic)
4. (Future) Silva Valley loop onramp (merge)
5. Silva Valley Pkwy slip onramp to El Dorado Hills Blvd offramp (weave)

[3] Intersection 25 represented a commercial driveway accessing Latrobe Road, just north of Royal Oaks Drive. The "Reduced Impact Alternative" described in this report eliminated the commercial land use and driveway, thus intersection 25 was removed.

6. El Dorado Hills Blvd offramp to onramp (basic)
7. El Dorado Hills Blvd onramp (merge)
8. El Dorado Hills Blvd to EDC line (basic)

Eastbound US 50

9. EDC line to Latrobe Rd (basic)
10. Latrobe Rd slip offramp (diverge)
11. Latrobe Rd loop offramp (diverge)
12. Latrobe Rd offramp to onramp (basic)
13. Latrobe Rd to Silva Valley Pkwy (weave)
14. Silva Valley Pkwy offramp to loop onramp (basic)
15. Silva Valley Pkwy onramp (merge)
16. (Future) Silva Valley slip onramp (merge)
17. Silva Valley Pkwy to Bass Lake Rd (basic)

Arterial segment analysis was conducted for the portion of Latrobe Road and White Rock Road:

i. Latrobe Rd between Royal Oaks Dr and Investment Blvd
ii. Latrobe Rd between Investment Blvd and Golden Foothill Pkwy (south)
iii. Latrobe Rd between Golden Foothill Pkwy (south) and Suncast Ln
iv. Latrobe Rd between White Rock Rd and Town Center Blvd

2.5 Study Scenarios

Six scenarios were identified for inclusion in this traffic impact study through consultation with the development team and El Dorado County staff. The study determines the weekday AM peak hour and PM peak hour level-of-service at the study intersections and segments under the following scenarios:

1. Existing 2023 (without Project);
2. Existing 2023 Plus Proposed Project;
3. Existing Plus Approved Projects (EPAP) 2033 (without project);
4. EPAP 2033 Plus Proposed Project;
5. Cumulative 2040 (without project); and
6. Cumulative 2040 Plus Proposed Project.

Existing 2023, and Existing 2023 Plus Proposed Project Scenarios

An analysis of the existing condition, which reflects the traffic volumes and roadway geometry at the time the study was initiated. This scenario is analyzed both with and without Project traffic to identify any Project related traffic deficiencies.

EPAP 2033, and EPAP 2033 Plus Proposed Project Scenarios

These scenarios, with and without the Project, will analyze conditions ten years from the current year calculated using a straight-line interpolation from existing traffic levels to the General Plan's 2040 traffic projections. These scenarios will expressly include an interpolated level of traffic from all projects with development agreements and approved tentative maps.

Cumulative 2040, and Cumulative 2040 Plus Proposed Scenarios

The Cumulative 2040 scenario reflects market rate buildout of the nearby specific plan areas and approved tentative maps in the El Dorado Hills area. This scenario was analyzed both with and without Project traffic to identify any Project related traffic deficiencies.

CEQA VMT analysis was performed for the existing and cumulative analysis scenarios.

(This page intentionally left blank)

3.0 TRAFFIC IMPACT ANALYSIS METHODOLOGY

This section provides a process overview, discusses traffic forecasting, and describes the methods/criteria used to evaluate level-of-service. A discussion of the criteria for conformity with General Plan level-of-service policies is included. California Environmental Quality Act (CEQA) analysis of transportation is limited to vehicle miles of travel (VMT). A discussion of CEQA significance thresholds for VMT is also included.

3.1 Process Overview

The overall analysis process was structured to identify potential adverse Project traffic effects relative to either conformity to General Plan level-of-service policies, or CEQA VMT impacts.

- Traffic counts collected in 2023 were crosschecked against historic 2017 and 2018 counts. Counts reflect the 6-9 AM peak period and 4-7 PM peak period.
- Traffic volumes and turning movements for the Existing 2023 conditions were determined from traffic counts. Future-year volume forecasts were based on growth estimates from the El Dorado County travel demand mode (TDM)[4] applied to the observed count data. The NCHRP 255 procedure[5] was used to refine forecasted turning movements.
- Study intersections, arterial segments, and the US 50 segments were analyzed both with and without the proposed Project to identify potential Project impacts.
- General Plan level-of-service thresholds were based on El Dorado County General Plan, Transportation and Circulation Element policies TC-Xa (Measure Y and Measure E policies), TC-Xd and TC-Xe.
- CEQA thresholds of significance for VMT are based on guidance adopted by the Board of Supervisors on October 6, 2020.

3.2 Traffic Forecasting Methodology

The TDM catalog "EDC_CAT_082118" was used to generate existing and future traffic volume estimates for calculation of growth factors, and to estimate the distribution for trips generated by the Project. The TDM includes a 2018 baseline and 2040 cumulative scenario. Straight line interpolation was applied to estimate incremental growth from the base year through 2023, 2030, and 2040.

TDM Segment Level Calibration

The TDM was calibrated to local roadways by estimating and applying link level adjustment factors based on the difference between traffic counts and a 2023 TDM scenario. That calibration factor is applied to the 2023, 2033, and 2040 TDM results to improve the accuracy of the volume forecasts at each intersection. The NCHRP 255 process was used in combination with observed

[4] El Dorado Travel Demand Model version "EDC_CAT_082118".
[5] Transportation Research Board (1982) National Cooperative Highway Research Program Report 255, Washington D.C.; as cited by Transportation Research Board (2014) National Cooperative Highway Research Program Report 765, Washington D.C.

turning movements, and the calibrated 2020, 2030, and 2040 model volumes, to refine turning movements for no-Project conditions.

Baseline 2016 TDM Network

The TDM network within the Folsom Ranch area for the 2018 baseline model runs assumed that traffic crossing the El Dorado County Line on White Rock Road would use Scott Road (AKA East Bidwell Street) for US 50 access. Placerville Road and Alder Creek Parkway to East Bidwell Street provides a more direct path. This shorter route exists today and Folsom's General Plan update (adopted 8/28/2018) preserves that Placerville Road-Alder Creek Parkway route through the Folsom Plan Area. Therefore, these network links were connected and turned on for the baseline 2018 model runs.

2040 Traffic Forecasts and Interpolation of 2030 Link Volumes

Growth in traffic for the EPAP scenario was based on linear interpolation of segment volumes between the Baseline 2018 scenario (with the Saratoga Way extension), and a cumulative (2040) TDM scenario. Land use was checked to ensure that it reflected a reasonable degree of buildout of the nearby specific plan areas and to ensure that interpolation of that land use would account for all approved tentative maps in the El Dorado Hills area.

- The model reflects buildout of the Carson Creek Specific Plan housing. There are 1,700 age-restricted dwelling units currently allowed within the CCSP. Age restricted dwelling units have lower trip generation than traditional homes[6] and the TDM reflects this by coding the land use as a smaller number of traditional homes. The 1,700 age-restricted homes would be reflected as 765 traditional single-family homes in the TDM. The model includes 1,042 homes in the CCSP area (reflecting approximately 2315 age-restricted homes). The County's buildout estimate is conservatively high and was not adjusted.
- Buildout of the El Dorado Hills Specific Plan is included in the 2040 model land use.
- Buildout of Promontory is included in the 2040 model land use.
- Buildout of Valley View Specific Plan (VVSP) (Blackstone) White Rock Village and West Valley Village is included in the 2040 model land use.
- Bass Lake Hills is a little under 85% built out (1,217 DUs out of 1,448) by 2040. Based on the rate of buildout of the Bass Lake Hills Specific Plan area the assumption of 85% buildout appears conservative and was not increased.

The 2040 model network was also updated to include the Mangini Parkway connection between Placerville Road and East Bidwell Street in the Folsom Plan area.

3.3 Intersection Turn Movement Forecast Methodology

Directional link level volume estimates from the 2018 and 2040 TDM model forecasts were used to scale traffic counts using the NCHRP 255 methodology. The methodology was applied through

[6] Age restricted housing generates about 45% of the daily trips of traditional housing, 33% of the AM peak hour trips, and 30% of the PM peak hour trips (Source: ITE Trip Generation Manual, 11th edition).

the TurnsW32 v2.0 software[7]. TDM result plots are provided in **Appendix C**. The Furness reports for the AM and PM peak hour turn movement forecasts under EPAP 2033 and Cumulative 2040 conditions are provided in **Appendix D**.

3.4 VMT Modeling Methodology and CEQA Significance Thresholds

VMT was analyzed based on extracting information from an unmodified version of the El Dorado County TDM. Before discussing the specific approach, background information on how the El Dorado County TDM works is appropriate. The TDM is a traditional trip based four-step travel demand model (trip generation, distribution, mode choice and assignment) with a 2018 base year and 2040 horizon year. Trip productions and attractions are estimated at the transportation analysis zone (TAZ) level. Within developed portions of the County, TAZs are roughly neighborhood size areas for which population socioeconomic data is tabulated. (TAZs are larger in less populated rural portions of the County). Trips are estimated by trip purpose based on eight purposes:

- Home based work,
- Home based shop,
- Home based school,
- Home based other,
- Work other,
- Other-other,
- Commercial two axle, and
- Commercial 3+ axle

As trips are estimated and processed by the model, they are converted from productions and attractions by purpose to origins and destinations by class (single occupancy, shared ride, commercial two-axle and commercial three-plus-axle). Trips are then assigned to the network by class using the origin-destination data. Through trips are also assigned based on an external origin-destination table. Both the production-attraction and origin-destination data are preserved in large matrices which can be leveraged to disaggregate the model's VMT estimates into VMT by trip purpose for evaluating the residential portion of the Project.

There are 674 TAZs in the model (25 of which represent external gateways) connected by 7,171 road segments. Each TAZ is represented by a centroid corresponding to the approximate center of travel activity with the TAZ. Each road segment includes relevant characteristics (location, uncongested speed, number of lanes, capacity, etc.) that allow the model to estimate travel times as trips are assigned to the network. **Figure 5** depicts the model road network with dots reflecting the centroid of each TAZ and red dots reflecting the model gateways. TAZ 612 where the Project is located is represented by a red star. **Figure 6** then shows the shape and extent of TAZ's near the Project site, with TAZ 612 (where the Project is located) and adjacent residential TAZ's which are predominantly residential (167 and 611) labeled.

[7] Dowling Associates (2002), http://sites.kittelson.com/kittelsondownloads/Downloads/Download/12544.

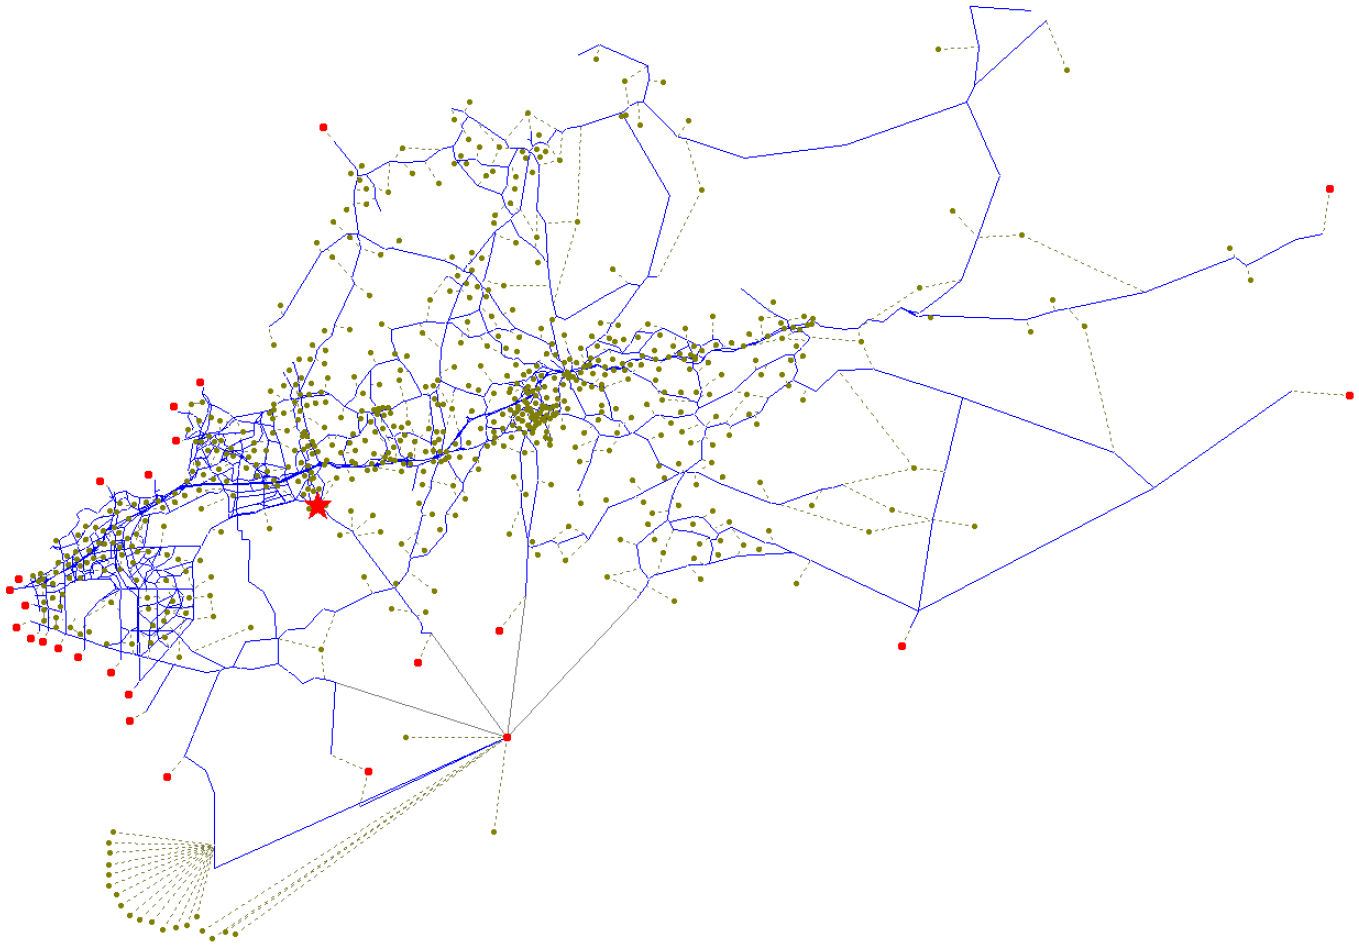

Figure 5. Travel demand model network and zone layout, Project TAZ (#612) shown as a star

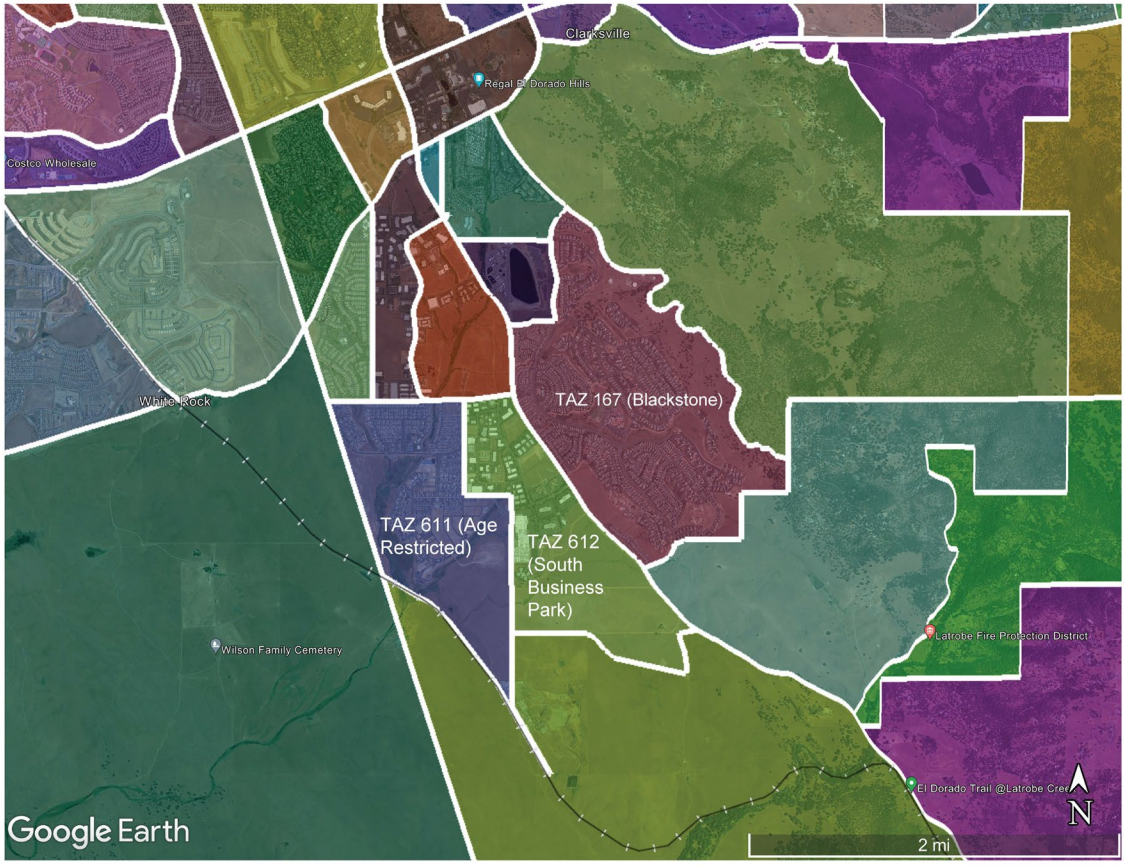

Figure 6. TAZ layout in the Project vicinity.

A three-step process for the baseline and cumulative analysis years was used to estimate per capita home based VMT.

Step 1. This step estimated TAZ[8]-to-TAZ distances from TDM skims, then combined those data with the number of TAZ-to-TAZ trips from the model's OD tables to estimate TAZ-to-TAZ VMT for drive along, shared ride, and commercial vehicles. Using the loaded networks accounts for any increases in trip distance that may result from congestion. In this step, model gateway trip lengths were adjusted based on **Table 1**. Those adjustments reflect the anticipated trip lengths for travel to/from El Dorado County from other parts of the region and state. This adjustment ensures that the TDM accounts for the full length of trips entering and exiting the County. The lengths for intrazonal trips (which have their origin and destination within the same TAZ) were estimated as half of the length of the

[8] TAZs are "transportation analysis zones", which are typically neighborhood size regions for which land use and demographic details, such as housing, employment, and population data are tabulated. The El Dorado County TDM has 674 TAZs.

TAZ's shortest centroid connector, which is the industry standard practice, and consistent with the County's VMT estimates.

Table 1. Average trip-length adjustments for TDM gateways

ID	Gateway Location	Average Additional Travel Distance (miles)	
		Internal to External (IX) Trips	External to Internal (XI) Trips

674	US 50 (to/from the east)	19.21	18.38

Note: Internal to External (IX) trips are trips that begin inside the El Dorado County model area and end outside. External to Internal (XI) trips are trips that begin outside the El Dorado County model area and end inside. Source: California Statewide Travel Demand Model.

Source: California Statewide Travel Demand Model as cited by Fehr and Peers in the Central El Dorado Hills Specific Plan VMT Analysis Memorandum dated January 5, 2021.

Step 2 This step estimated drive along, shared ride, and commercial vehicle trips by trip purpose from TDM trip production and attraction matrices. Then converted those data to the fraction of trip origins and destinations by trip purpose for each TAZ.

Step 3 The final step used the trip purpose data for each TAZ from task 2 to disaggregate the VMT data for each TAZ from task 1 into TAZ-to-TAZ VMT by trip purpose. Home based trips were assumed to consist of "home-based work", "home-based shop", "home-based school", "home-based other", and a portion of "other-other". Work-based trips were estimated as "work-other" and a portion of "other-other" trips. The other-other trips were allocated to the housing-based or work-based groups based on the ratio of home-other to work-other trips for each TAZ.

The resulting tables were summarized over unincorporated El Dorado County, and for TAZ 167 which was used as a surrogate for the Project[9]. TAZ 167 represents the Blackstone neighborhood across Latrobe Road from the Project. Blackstone was assumed to be the best available proxy for household size and income characteristics of the Project. It is likely a conservative comparison as the Project is envisioned to offer a wider variety of housing options with a diverse mix of housing styles and prices, where Blackstone was aimed at a higher income demographic. VMT per capita tends to increase as household income increases. The TDM is based in the CUBE software package by Bently Systems. Scripts used in each calculation step are provided **Appendix E**.

VMT Thresholds

The County's VMT thresholds set an identifiable metric by which the Project's effect on VMT will be determined to be significant or less-than-significant. Land use specific thresholds have been adopted as follows:

- Residential: 15% below baseline unincorporated countywide VMT per capita,
- Office: 15% below baseline unincorporated countywide VMT per capita,
- Retail: no net increase in VMT.

For Creekside Village, the residential use of the Project is evaluated based on the 15% reduction from baseline threshold listed above.

3.5 Level-of-Service Methodology

Level-of-service (LOS) is a qualitative indication of the level of delay and congestion experienced by motorists using an intersection. Levels-of-service are designated by the letters A through F, with "A" being the best conditions and "F" being the worst (high delay and congestion).

[9] Using a nearby TAZ as a surrogate avoids the need to artificially manipulate the socioeconomic distribution assumptions for the affected population. When a new TAZ is used, the distribution of socioeconomic characteristics for the households is copied and scaled from a similar nearby TAZ (i.e., TAZ 167). Using the existing TAZ as a surrogate maintains the County wide population and employment control totals that were adopted by the Board of Supervisors when the travel demand model and major TIF update are adopted. Artificially inflating the county wide population and employment can have nonsensical impacts on the resulting per capita VMT estimates.

Calculation methodologies, measures of performance, and thresholds for each letter grade differ for road segments, signalized intersections, and unsignalized intersections. LOS is analyzed only to demonstrate consistency with the General Plan. LOS is no longer the metric by which traffic impacts are analyzed for CEQA and the LOS discussion is not relevant to assessing impacts to the environment for purposes of CEQA.

Based on guidance from El Dorado County Community Development Agency staff, and the *County of El Dorado Department of Transportation – Traffic Impact Study Protocols and Procedures* (Dated November 2014), the following procedures described below for intersection traffic operations analysis were selected for this study.

Intersection Traffic Operations Analysis

Signalized Intersections

The methodology from Highway Capacity Manual (HCM) 7th Edition[10] are used to analyze signalized intersections. Level-of-service can be characterized for the entire intersection, each approach, or by lane group. Control delay alone (the weighted average delay for all vehicles entering the intersection) is used to characterize level-of-service for the entire intersection or an approach. Control delay and volume to capacity ratio are used to characterize level-of-service for lane groups. The average delay criteria used to determine the level-of-service at signalized intersections is presented in **Table 2**.

[10] TRB (2022) Highway Capacity Manual 7th Edition, Transportation Research Board, Washington D.C.

Table 2. Level-of-service criteria for signalized intersections

Level -of- Service	Description	Average Delay[1] (Sec. /Vehicle.)
A	Very Low Delay: This level-of-service occurs when progression is extremely favorable, and most vehicles arrive during a green phase. Most vehicles do not stop at all.	≤ 10.0
B	Minimal Delays: This level-of-service generally occurs with good progression, short cycle lengths, or both. More vehicles stop than at LOS A, causing higher levels of average delay.	10.1-20.0
C	Acceptable Delay: Delay increases due to only fair progression, longer cycle lengths, or both. Individual cycle failures (*to service all waiting vehicles*) may begin to appear at this level of service. The number of vehicles stopping is significant, though many still pass through the intersection without stopping.	20.1-35.0
D	Approaching Unstable/Tolerable Delays: The influence of congestion becomes more noticeable. Longer delays may result from some combination of unfavorable progression, long cycle lengths, or high v/c ratios. Many vehicles stop, and the proportion of vehicles not stopping declines. Individual cycle failures are noticeable.	35.1-55.0
E	Unstable Operation/Significant Delays: This is considered by many agencies the upper limit of acceptable delays. These high delay values generally indicate poor progression, long cycle lengths, and high v/c ratios. Individual cycle failures are frequent occurrences.	55.1-80.0
F	Excessive Delays: This level, considered to be unacceptable to most drivers, often occurs with oversaturation (i.e., when arrival flow rates exceed the capacity of the intersection). It may also occur at high v/c ratios below 1.00 with many individual cycle failures. Poor progression and long cycle lengths may also contribute to such delay levels.	> 80.0 or v/c >1.0

Note 1: Weighted average of delay on all approaches. This is the measure used by the Highway Capacity Manual to determine level-of-service. Any movement with a volume to capacity ratio (v/c) greater than 1.0 is considered to be level-of-service "F".

Source: Transportation Research Board (2022) Highway Capacity Manual, 6th Edition, Washington D.C., Chapter 19;

Unsignalized Intersections

The methodology from HCM 7th Edition is used for the analysis of unsignalized intersections. For unsignalized intersections, most of the main street traffic is un-delayed, and, by definition, have acceptable conditions. The main street left-turn movements and the minor street movements are all susceptible to delay of varying degrees. Generally, the higher the main street traffic volumes, the higher the delay for the minor movements. Separate methods are utilized for two-way stop-controlled (TWSC) intersections, and all-way stop-controlled (AWSC) intersections.

- **TWSC**: The methodology for analysis of two-way stop-controlled intersections calculates an average total delay per vehicle for each minor street movement and for the major

street left-turn movements, based on the availability of adequate gaps in the main street through traffic. A level-of-service designation is assigned to individual movements or to combinations of movements (in the case of shared lanes) based upon delay, it is not defined for the intersection as a whole. Unsignalized intersection level-of-service reported herein is for each movement (or group of movements) based upon the respective average delay per vehicle. **Table 3** presents the average delay criteria used to determine the level-of-service at TWSC and at AWSC intersections.

- **AWSC:** At all-way stop-controlled intersections, the level-of-service is determined by the weighted average delay for all vehicles entering the intersection. The methodologies for these types of intersections calculate a single weighted average delay and level-of-service for the intersection, as a whole. The average delay criteria used to determine the level-of-service at all-way stop intersections is the same as that presented in **Table 3**. Level-of-service for specific movements can also be determined based on the TWSC methodology.

It is not unusual for some of the minor street movements at unsignalized intersections to have level-of-service D, E, or F conditions while the major street movements have level-of-service A, B, or C conditions. In such a case, the minor street traffic experiences delay that can be substantial for individual minor street vehicles, but the majority of vehicles using the intersection have very little delay. Usually in such cases, the minor street traffic volumes are relatively low. If the minor street volume is large enough, improvements to reduce the minor street delay may be justified, such as channelization, widening, roundabout, or signalization.

Table 3. Level-of-service criteria for unsignalized intersections

Level of Service (LOS)	Description	TWSC[1] Average Delay by Movement (seconds / vehicle)	AWSC[2] Intersection Wide Average Delay (seconds / vehicle)
A	Little or no delay	< 10	< 10
B	Short traffic delay	> 10 and < 15	> 10 and < 15
C	Average traffic delays	> 15 and < 25	> 15 and < 25
D	Long traffic delays	> 25 and < 35	> 25 and < 35
E	Very long traffic delays	> 35 and < 50	> 35 and < 50
F	Extreme delays potentially affecting other traffic movements in the intersection	> 50 (or, v/c >1.0)	> 50

Note 1: Two-way stop-control (TWSC) level-of-service is calculated separately for each minor street movement (or shared movement) as well as major street left turns using these criteria. Any movement with a volume to capacity ratio (v/c) greater than 1.0 is considered to be level-of-service F.

Note 2: All-way stop-control (AWSC) assessment of level-of-service at the approach and intersection levels is based solely on control delay.

Source: Transportation Research Board (2022) Highway Capacity Manual, 7th Edition, Washington D.C., Chapter 20 (TWSC) and Chapter 21 (AWSC).

Signal Warrants

At each unsignalized intersection, the potential need for a traffic signal was evaluated. Traffic signal warrants are a series of standards that provide guidelines for determining if a traffic signal is appropriate. Signal warrant analyses are typically conducted at intersections of uncontrolled major streets and stop sign-controlled minor streets. If one or more signal warrants are met, signalization of the intersection may be appropriate. However, a signal should not be installed if none of the warrants are met, since the installation of signals would increase delays on the previously uncontrolled major street and may increase the occurrence of particular types of accidents.

As stated in revision 8 of the 2014 California Edition of the Manual on Uniform Traffic Control Devices (California MUTCD 2014)[11], "*The investigation of the need for a traffic control signal shall include an analysis of factors related to the existing operation and safety at the study location and the potential to improve these conditions, and the applicable factors contained in the following traffic signal warrants:*

- *Warrant 1, Eight-Hour Vehicular Volume*
- *Warrant 2, Four-Hour Vehicular Volume*
- *Warrant 3, Peak Hour*
- *Warrant 4, Pedestrian Volume*
- *Warrant 5, School Crossing*
- *Warrant 6, Coordinated Signal System*
- *Warrant 7, Crash Experience*
- *Warrant 8, Roadway Network*
- *Warrant 9, Intersection Near a Grade Crossing*

The satisfaction of a traffic signal warrant or warrants shall not in itself require the installation of a traffic control signal."

Consistent with the industry standard of practice, this Traffic Impact Analysis did not evaluate the full panoply of warrants for traffic signals, but instead focused on the peak hour warrant. The MUTCD states that, "*This [peak hour] signal warrant shall be applied only in unusual cases, such as office complexes, manufacturing plants, industrial complexes, or high-occupancy vehicle facilities that attract or discharge large numbers of vehicles over a short time.*" So, the peak hour warrant is being used in this impact analysis study as an "indicator" of the likelihood of an unsignalized intersection warranting a traffic signal in the future. Intersections that exceed the peak hour warrant are considered (for the purposes of this impact analysis) to be likely to meet one or more of the other signal warrants (such as the 4-hour or 8-hour warrants). This peak hour analysis is not intended to replace a rigorous and complete traffic signal warrant analysis by the responsible jurisdiction.

[11] Caltrans (2024) California Manual on Uniform Traffic Control Devices - FHWA's MUTCD 2009 Edition as amended for use in California - 2014 Edition - Revision 8, January 11, 2024. Section 4C.

Unsignalized intersections were evaluated using the Peak Hour Volume Warrant (Warrant No. 3) in the California MUTCD 2014. The Peak Hour Volume Warrant was applied where the minor street experiences long delays in entering or crossing the major street for at least one hour in a day.

Even if the Peak Hour Volume Warrant is met, a more detailed signal warrant study is recommended before a signal is installed. The more detailed study should consider volumes during the daily peak hours of roadway traffic, pedestrian traffic, and accident histories.

El Dorado County Roadway Segments

Several methods are available to evaluate roadway segments. The methodology selected for this analysis was chosen to be consistent with the 2014 El Dorado County Transportation Impact Study Guidelines.

Table 1 of that document contains the maximum flow rates for each level-of-service grade as a function of roadway classification. Those level-of-service criteria are shown in **Table 4**.

Table 4. Level-of-service criteria for county roadway segments

Caltrans Merge/Diverge/Weave Level-of-Service Analysis

Freeway merge/diverge segments, basic segments, and weaving segments were analyzed utilizing the methodologies outlined in Chapters 12-14 of the Highway Capacity Manual, 7th Edition (HCM 2016)[12]. Freeway operations and level-of-service is defined by density (passenger cars per mile per lane) which depends upon traffic volumes and the ramp characteristics. These characteristics include the length and type of acceleration/deceleration lanes; free-flow speeds; number of lanes;

[12] Transportation Research Board (2022) Highway Capacity Manual, 7th Edition, Washington, D.C.

grade; and types of facilities. **Table 5** through **Table 7** shows the relationship of level-of-service to freeway density. Note that the Leisch Method[13], which Caltrans prefers for weaving segments, was not applied because the State of California no longer considers level-of-service under CEQA, and the Leisch Method is not relevant to adopted General Plan policies.

[13] Caltrans (2012) Highway Design Manual, Index 504.7

3.6 General Plan Level-of-Service Standards

Conformity to General Plan level-of-service policies for the Project were determined based on the methods described above and identified as "deficient" in accordance with El Dorado County protocols and procedures[14] . Level-of-service is only applicable to General Plan conformity. Delay and level-of-service is not a significant impact under CEQA.

General Plan Circulation Policy TC-Xd provides that level-of-service for county-maintained roads and state highways within the unincorporated areas of the county shall not be worse than level-of-service E in the community regions or level-of-service D in the rural centers and rural regions, unless specifically exempted as shown in **Table 8**.

Table 8. General plan exceptions to level-of-service standards

El Dorado County Roads Allowed to Operate at Level-of-Service F[a] (Through December 31, 2029)		
Road Segments		**Max. v/c[b]**
Cambridge Road	Country Club Drive to Oxford Road	1.07
Cameron Park Drive	Robin Lane to Coach Lane	1.11
Missouri Flat Road	US 50 to Mother Lode Drive	1.12
	Mother Lode Drive to China Garden Road	1.20
Pleasant Valley Road	El Dorado Road to State Route 49	1.28
US 50	Canal Street to junction of State Route 49 (Spring Street)	1.25
	Junction of State Route 49 (Spring Street) to Coloma Street	1.59
	Coloma Street to Bedford Avenue	1.61
	Bedford Avenue to beginning of freeway	1.73
	Beginning of freeway to Washington overhead	1.16
	Ice House Road to Echo Lake	1.16
State Route 49	Pacific/Sacramento Street to new four-lane section	1.31
	US 50 to State Route 193	1.32
	State Route 193 to county line	1.51

Note a: Roads improved to their maximum width given right-of-way and physical limitations
Note b: Volume-to-capacity ratio.
Source: 2004 General Plan (amended January 2009) Table TC-2

All but two study intersections are within the El Dorado Hills community region and shall operate at level-of-service E or better. Intersection #22 (White Rock Rd/Clarksville Crossing) and #23 (White Rock Road/US 50 EB) are outside of the community region and shall operate at level-of-service D or better. If a project causes the peak hour level-of-service or volume/capacity ratio on a county road or state highway that would otherwise meet the county standards (without the project) to exceed the values listed in the above tables and text, then the impact shall be considered significant. Because this Traffic Impact Analysis is not a CEQA document, facilities and intersections will be noted as having deficient level-of-service rather than an impact.

If any county road or state highway fails to meet the above listed county standards for peak hour level-of-service or volume/capacity ratios under without Project conditions, and the Project will

[14] Traffic Impact Study Protocols and Procedures, County of El Dorado, Department of Transportation, 2008.

"significantly worsen" conditions on the road or highway, then the impact shall be considered significant. The term, "significantly worsen" is defined for the purpose of this paragraph according to General Plan Policy TC-Xe as follows:

A. A two percent increase in traffic during the AM peak hour, PM peak hour, or daily; or,

B. The addition of 100 or more daily trips; or,

C. The addition of 10 or more trips during the AM peak hour or the PM peak hour.

Though not explicitly stated in the General Plan policies, 95% left turn queues that exceed available storage lengths are considered to operate deficiently. The highway capacity manual calculations assume that left turn queues do not typically spill out of turn pockets to block through traffic. In keeping with the state of the practice, where the Project adds less than one car length (25 feet) to 95% left turn queues that exceed available storage, that addition is considered to de minimis.

3.7 Analysis Tools

El Dorado County Travel Demand Model (TDM)

As noted in prior sections, The El Dorado County Travel Demand Model (version EDC_CAT_082118) was utilized to estimate VMT and forecast growth in traffic volumes on study area roadways.

NCHRP 255 Adjustment

The NCHRP 255[15] adjustment procedure was used to improve turning movement forecasts for EPAP 2030 and Cumulative 2040 conditions.

Macroscopic Intersection Analysis

Control delay and level-of-service for study intersections were calculated using PTV Vistro[16] traffic analysis software (Version 2024, SP 0-2). Vistro is a complete traffic analysis software package used for evaluating development impacts, optimizing traffic signal timings, and evaluating intersection levels of service. It implements the methodologies of the HCM 2000, 2010, and 6th Ed. for signalized and unsignalized intersections, and requires data on road characteristics (geometric), traffic counts, and the signal timing data for each analysis intersection.

When calculating intersection control delay and level-of-service for all study intersections, default parameters were used, except for locations where specific field data were available (e.g., peak-hour factors). Heavy vehicle percentages during the peak-hour of 2% were assumed.

4.0 EXISTING (2023) CONDITIONS

4.1 Data Sources

The analysis tools require a variety of data to generate the evaluation criteria. The following sections describe data collection procedures for Existing Conditions. There were three primary data elements (roadway characteristics, intersection turning movement counts, and traffic control data); and two supplementary elements (other recent studies, and field data) that comprised the data collection program for this traffic analysis.

Roadway Geometry and Usage Characteristics

The geometry and usage data for the analysis were collected using aerial photographs, field visits, and prior studies. Current intersection geometry was field validated. **Table 9** shows the key items included in the geometric data and the source for each item.

Table 9. Key items and sources for geometry and usage data

Key Item	Source
Lane configurations & width	Aerial photographs and field visits
Lane utilization	Prior studies, aerial photographs, and field visits
Intersection spacing	Aerial photographs and field visits
Length of storage bays	Aerial photographs and field visits
Transit stops and routes	Transit schedules, aerial photographs, and field visits
Turn prohibitions or allowance	Aerial photographs and field visits
Right Turn on Red (RTOR)	Turn movement counts
Signal timing	Timing sheets provided by El Dorado County

Lane configurations and width – These data specify the number of lanes and the width of the roadway in each direction, and the directional turns that are allowed from each lane.

Lane utilization – These data specify how lanes are used by drivers, such as traffic distribution between lanes on a multi-lane roadway.

Intersection spacing – These data refer to the distance between intersections, which is recorded in feet.

Length of storage bays – These data refer to the length (feet) of available storage for left- or right-turning vehicles where exclusive turn lanes are available. These data are collected for right-turn lanes when the parking lane is used as a right- turn lane.

Transit stops and routes – A transit stop is an area where passengers await, board, alight, and transfer between transit vehicles. A transit route is the roadway that transit vehicles operate on.

Turn prohibitions or allowance – This data specifies if right turns on red (RTOR) are allowed on the roadway.

Right Turn on Red – Volumes making a right turn on red were based on observed traffic counts.

Intersection Turning Movement Counts

Existing morning and evening peak-period vehicle and pedestrian turning movement counts collected in April 2023 were used for this study. Historic 2017 and 2018 counts were also used as a "floor" to ensure that there were no COVID related reductions in the 2023 counts. Traffic count data sheets are provided in **Appendix A** of this report. Traffic volumes between intersections were balanced where differences could not reasonably be attributed to a vehicle platoon being held at one of the lights, driveway access between intersections, or shifts in the time of the peak hour from one intersection to another. All balancing was done by adding vehicle trips to the 2023 turning movements. Observed intersection peak hour factors (PHF) were applied. **Figure 7** provides a summary of the intersection lane geometry and peak period turning movements under Existing 2023 conditions.

Segment Counts

Turning movement counts can significantly overstate segment volumes. The practice of balancing traffic flows between adjacent intersections when counts may have been collected on different days and/or the corresponding intersections experience slightly different peak-hours can make those counts too conservative to apply to the segments.

Segment counts collected by El Dorado County on multiple days in 2023 and the development team were used to analyze road segments. Segment counts are summarized in **Table 12** below. Raw count data can be found in **Appendix A.**

4.2 Existing Condition Intersection and Segment Level-of-Service

Table 10 through **Table 12** present a summary of level-of-service results for the study intersections and segments under Existing 2023 conditions. Intersection control is listed as signal, two-way stop-controlled (TWSC), or all-way stop-control (AWSC). Both the estimated delay and level-of-service (LOS) are provided. At TWSC intersections, the movement with the worst delay is shown in parentheses. Ninety-fifth percentile left turn queues are also listed. Entries shown in **bold black** typeface denote deficient traffic operations, and unsignalized intersections that meet the peak hour signal warrant are denoted with an asterisk and shading.

The results indicate thirteen study intersections operate deficiently with level-of-service F conditions and/or 95% left turn queues that exceed available storage lengths.

- (1) El Dorado Hills Blvd/Serrano Pkwy AM;
- (2) El Dorado Hills Blvd/Saratoga Way: AM and PM;
- (3) El Dorado Hills Blvd/US 50 WB AM and PM;
- (5) Latrobe Road/Town Center Boulevard: PM;
- (6) Latrobe Road/White Rock Road AM and PM;
- (7) Latrobe Road/Golden Foothill Parkway (N): PM;
- (8) Latrobe Rd/Suncast Ln PM;
- (9) Latrobe Road/ Golden Foothill Parkway (S): AM and PM;
- (10) Latrobe Road/Investment Boulevard: PM;
- (13) Golden Foothill Parkway (S)/Robert J. Mathews Pkwy PM;
- (19) White Rock Road/Windfield Way AM and PM;

- (20) White Rock Road/Post Street: AM and PM; and
- (21) White Rock Road/Valley View Parkway: AM and PM.

Calculation sheets for delay and level-of-service are provided in **Appendix B**. The remainder of the study intersections, all of the US 50 study segments, and arterial study segments were found to operate acceptably.

Density in units of passenger cars per mile per lane.

*Prior to the opening of the Saratoga Way extension, Caltrans has reported occasional LOS F conditions during the morning peak for this segment based on planning methods rather than counts.

Table 12. Existing 2023 arterial level-of-service check without the Project

Arterial Segment	**Description (and level-of-service E threshold)**	**2023 AM No Project** (vehicle trips)	**2023 PM No Project** (vehicle trips)
Latrobe Rd between Royal Oaks Dr and Investment Blvd	2-lane arterial (threshold 1650 vehicle trips)	593 (Better than LOS E)	655 (Better than LOS E)
Latrobe Rd between Investment Blvd and Golden Foothill Pkwy (south)	2-lane arterial (threshold 1650 vehicle trips)	1015 (Better than LOS E)	932 (Better than LOS E)
Latrobe Rd between Golden Foothill Pkwy (south) and Suncast Ln)	4-lane divided arterial (threshold 3290 vehicle trips)	1998 (Better than LOS E)	2030 (Better than LOS E)
Latrobe Rd between White Rock Rd and Town Center Blvd	8-lane divided arterial (threshold 6280 vehicle trips, extrapolated from 6-lane divided arterial)	2931 (Better than LOS E)	3018 (Better than LOS E)
White Rock Rd between Valley View Pkwy to Silva Valley Pkwy	2-lane arterial (threshold 1650 vehicle trips)	1194 (Better than LOS E)	1440 (Better than LOS E)

5.0 ASSESSMENT OF PROPOSED CREEKSIDE VILLAGE PROJECT

5.1 Proposed Project Trip Generation

Anticipated Traffic generation by the Project reflects both trips generated by the Project itself, and, avoided trips in 2033 and 2040 from the commercial land uses that the El Dorado County TDM assumes will take place on the Project parcels.

Project Trips

Anticipated trips are based on Institute of Transportation Engineers (ITE) Trip Generation Manual, 11th Edition (2021). **Table 13** shows anticipated Project Trip Generation. To be conservative, trip generation estimates are generally based on the higher rates for the peak hour of the generator rather than the peak hour of adjacent street traffic. The higher of either the average trip generation rate or equation-based trip generation rate was also used. Use of these higher rates has historically been preferred by El Dorado County.

Table 13. Trip generation

Land Use	Quantity	Metric	Daily	AM Peak Hour			PM Peak Hour		
				Total	Inbound	Outbound	Total	Inbound	Outbound
Single Family Detached Housing (ITE Use 210)	150 DU (1)	Notes	Equation Rate	Equation Rate for Peak Hour of Generator			Equation Rate for Peak Hour of Generator		
		Rate	9.77	0.76	26%	74%	1.01	64%	36%

							(Dated October 25, 2024)		

Trip Distribution with Adjustment for Latrobe Elementary

Project trip distribution was based on the El Dorado County TDM, observed counts, prior studies in the vicinity of the Project, and consultation with El Dorado County staff. Additional adjustments were made to reflect school trips to Latrobe Elementary based on student generation statistics published by the school district. Trip distribution is shown in **Figure 8**. Assignment of the Project trips to study intersections is shown in **Figure 9**.

Figure 8. Creekside Village Project trip distribution

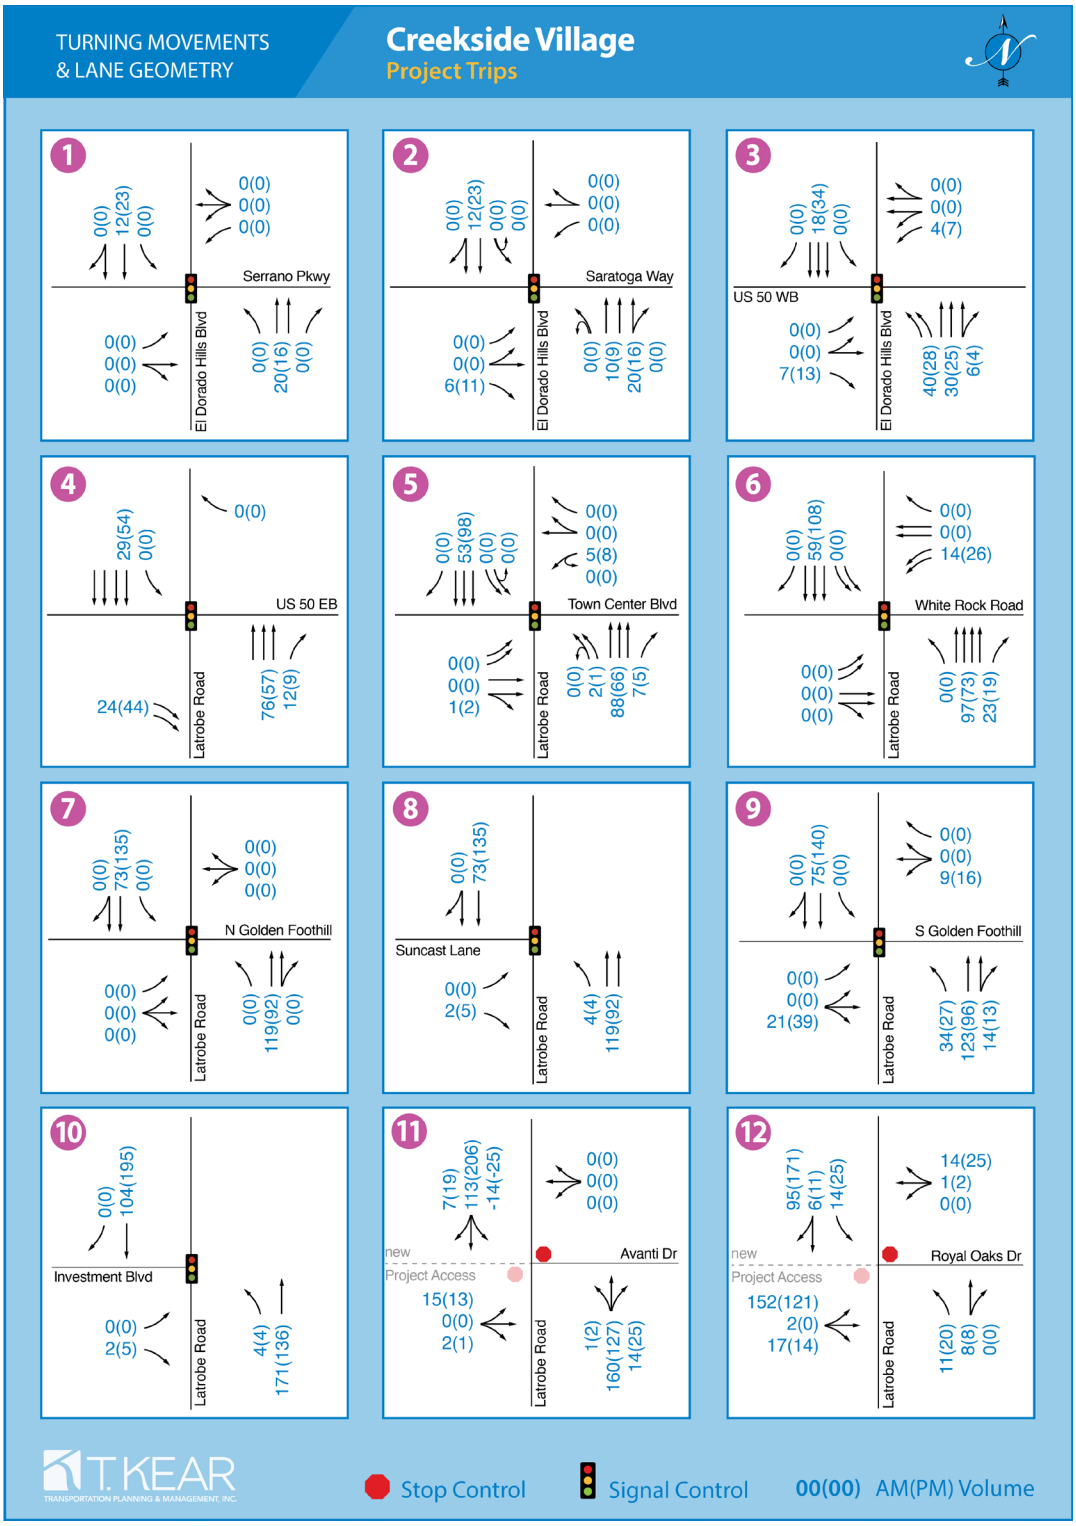

Figure 9. Project trip assignment for 763 dwelling units

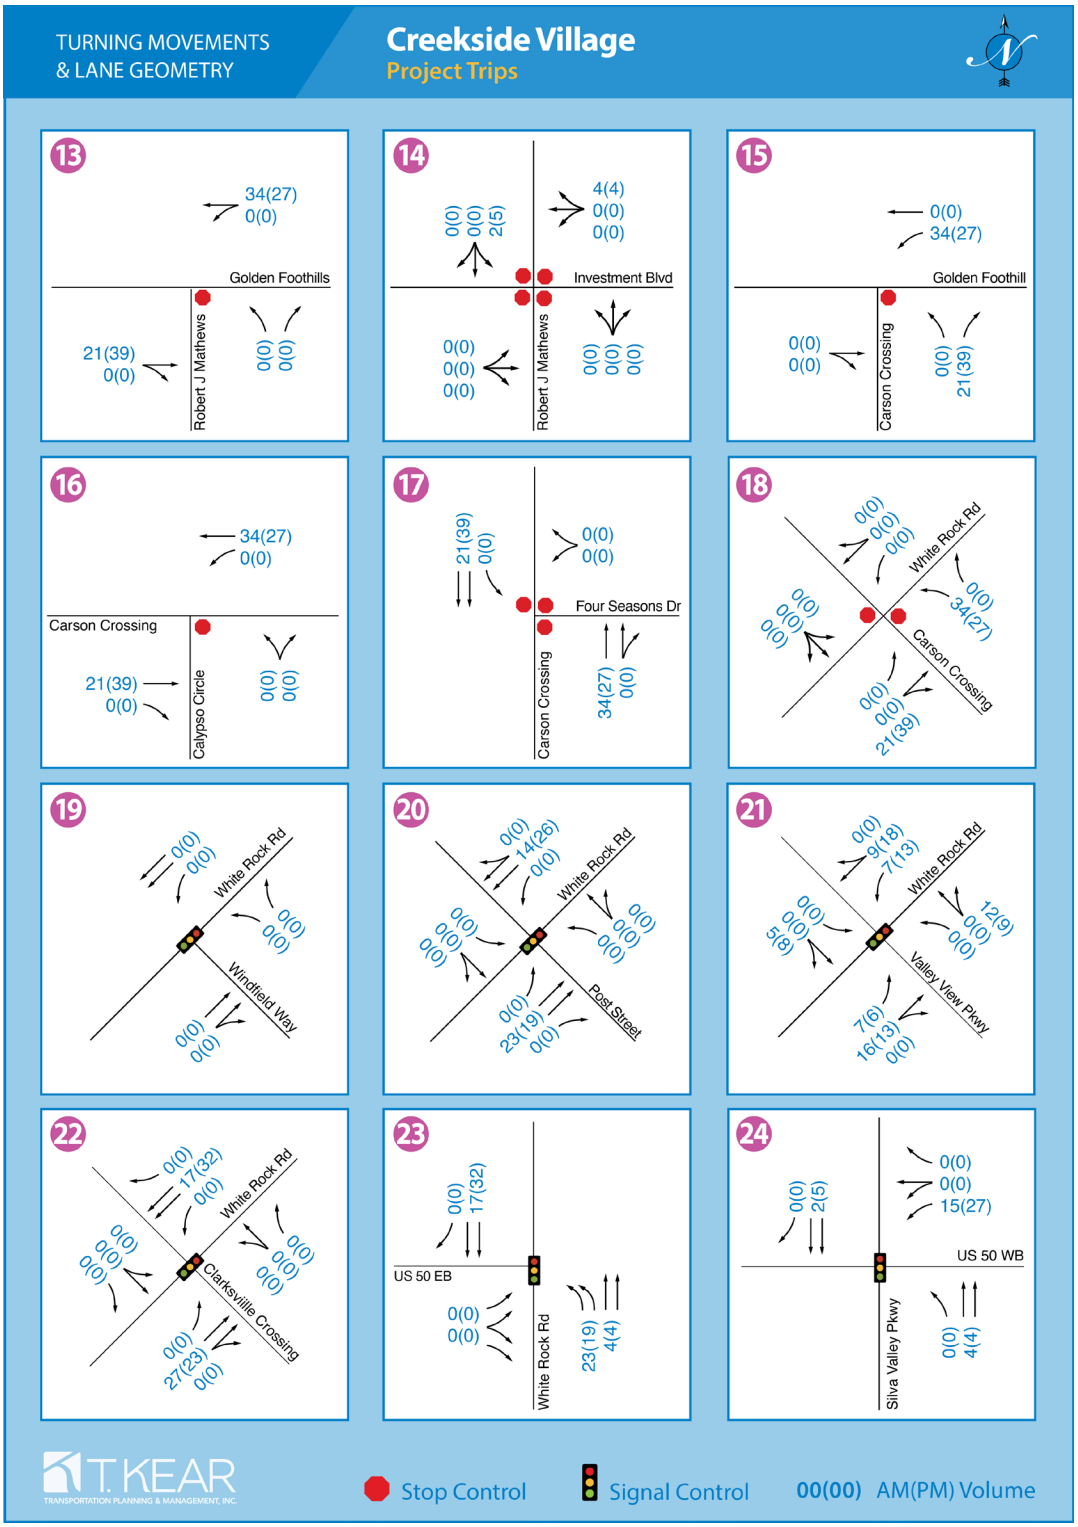

Figure 9. Project trip assignment for 763 dwelling units (continued)

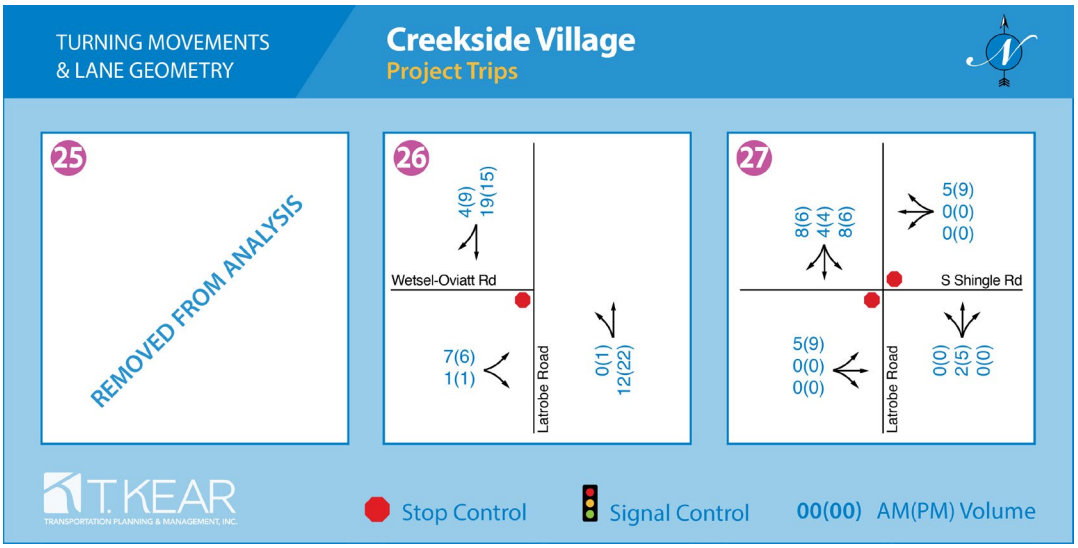

Figure 9. Project trip assignment for 763 dwelling units (continued)

Avoided Trips

Avoided trips are additional peak hour trips that the TDM assumes in the future from growth within the Project TAZ. These avoided trips were estimated by running the TDM with and without assumed 2020[17] through 2040 employment growth for the effected portion of the Project's transportation analysis zone (TAZ 612). Creekside Village replaces 62% of the available land in TAZ 612 (**Figure 10**), therefore 62% of the employment growth was eliminated from TAZ 612 when estimating the number of avoided trips using the TDM. TDM employment assumptions for TAZ 612 are shown in **Table 14** below, along with the resulting avoided trips. Avoided trips for 2040 are shown in **Figure 11**. Using straight line interpolation, 2033 avoided trips reflect the 13 years of unrealized growth from 2020. These avoided trips in this report for the Reduced Impact Alternative match those in the April 25, 2024 report for the Preferred Project.

[17] 2020 is used rather than 2023 because the process of purchasing the land and de-annexing it from the business park meant that no new employment on this portion of the model TAZ occurred as of that year.

Figure 10. Creekside Village is 62% of available land in TAZ 612

Table 14. TDM employment assumptions and avoided trips

	2020	2040 without Project	2040 with Project	Notes
Employment				
Retail	224	433	304	Creekside Village is 62% of remaining land in TAZ 612. Housing is assumed to replace 62% of employment growth. (With Project there are 2097 fewer employees.)

6.0 EXISTING 2023 PLUS PROPOSED PROJECT CONDITIONS

6.1 Traffic Volumes

Peak hour traffic associated with the proposed Project was added to the Existing 2023 condition scenario's traffic volumes, delay and level-of-service were determined at the study intersections and segments. **Figure 13** summarizes the turning movements and lane configurations for the Existing 2023 Plus Proposed Project scenario.

6.2 Level-of-Service

Table 15 through **Table 17** present a summary of level-of-service results for the study intersections and segments under Existing 2023 conditions with and without Project traffic. Intersection control is listed as signal, two-way stop-controlled (TWSC), or all-way stop-control (AWSC). Both the estimated delay and level-of-service (LOS) are provided. At TWSC intersections, the movement with the worst delay is shown in parentheses. Ninety-fifth percentile left turn queues are also listed. Entries shown in **Bold black** text in **Table 15** through **Table 17** denote locations with preexisting deficiencies that the Project is not anticipated to worsen. **Bold red** text denotes locations where the Project is anticipated to create new or worsen preexisting deficiencies. Unsignalized intersections that meet the peak hour signal warrant are shaded and denoted with an asterisk.

Fifteen intersections are anticipated to have level-of-service and/or queue spillback deficiencies.

4 Locations that are deficient with or without the Project that are not worsened:

- (5) Latrobe Road/Town Center Boulevard: PM;
- (7) Latrobe Road/Golden Foothill Parkway (N): PM;
- (19) White Rock Road/Windfield Way AM and PM; and
- (20) White Rock Road/Post Street: AM and PM.

10 Locations that are deficient with or without the Project that are worsened:

- (1) El Dorado Hills Blvd/Serrano Pkwy AM;
- (2) El Dorado Hills Blvd/Saratoga Way: AM and PM;
- (3) El Dorado Hills Blvd/US 50 WB AM;
- (6) Latrobe Road/White Rock Road PM;
- (8) Latrobe Rd/Suncast Ln AM and PM;
- (9) Latrobe Road/ Golden Foothill Parkway (S): AM and PM;
- (10) Latrobe Road/Investment Boulevard: PM;
- (13) Golden Foothill Parkway (S)/Robert J. Mathews Pkwy PM;
- (18) White Rock Road/Carson Crossing Road PM; and
- (21) White Rock Road/Valley View Parkway: AM and PM.

1 Location where the Project is anticipated to cause new deficiencies:

- (12) Latrobe Road/Royal Oaks Drive AM and PM.

Calculation sheets for delay and level-of-service are provided in **Appendix B**. the remainder of the study intersections, all of the US 50 study segments, and arterial study segments were found to operate acceptably.

6.3 Existing 2023 Plus Project General Plan Deficiency Findings

Level-of-service and queueing impacts are not considered significant under CEQA. Intersections and/or segments where Project traffic creates new or worsens existing exceedances of General Plan policy thresholds are referred to as having a "Project deficiency." There are ten intersections where the Project is anticipated to create new or worsen existing deficiencies under existing 2023 conditions. All study segments are anticipated to operate acceptably with or without the Project.

Throughout this document, segment deficiencies are numbered using the segment number (i through v) and a year code (2023 = "A", 2033 = "B", and 2040 = "C"). Intersection abatement measures are numbered using the intersection number (1-27) and the year code (A, B, or C).

All deficiencies and abatements described below include the deficiency number/abatement number and location as a title, followed by a description of the deficiency, the abatement, findings, responsibility, and timing. For certain abatements (Abatement 10A), a building permit trigger has been analyzed and included to determine the necessary timing for the improvement. For all other abatements, it is assumed the timing would be prior to issuance of the first building permit. If desired, a building permit trigger could also be determined for those abatements.

2023 Intersection Deficiencies and Abatement Measures

1A. El Dorado Hills Blvd/Serrano Pkwy in 2023

Deficiency: Level-of-service is F prior to addition of Project traffic, with northbound left-turn queues spilling out of the turn pocket. Project traffic is anticipated to worsen level-of-service.

Abatement: Adjust signal timing by changing the "vehicle extension" setting for the westbound approach from 4 seconds to 2 seconds.

Finding: With implementation of the abatement measure, the Project is not anticipated to cause new, or worsen existing, General Plan level-of-service policy deficiencies at this location. **Table 18** at the end of this section presents intersection level-of-service results with this abatement.

Project Responsibility: Project is responsible for its fair-share of signal timing adjustment. The CIP includes funding for intersection and safety improvements at "to be determined" locations. The Project may satisfy this requirement through payment of applicable fees under the El Dorado County traffic impact Fee (TIF) program.

Timing: Prior to issuance of 1st building permit.

2A. El Dorado Hills Blvd/Saratoga Way in 2023

Deficiency: Level-of-service is F prior to addition of Project traffic, with northbound left-turn queues spilling out of the turn pocket. Project traffic is anticipated to worsen level-of-service and northbound left-turn queues.

Abatement: Construct a 300-foot southbound right turn pocket and adjust signal timing.

Finding: With implementation of the abatement measure, the Project is not anticipated to cause new, or worsen existing, General Plan level-of-service policy deficiencies at this location. **Table 18** at the end of this section presents intersection level-of-service results with this abatement.

Project Responsibility: This abatement partially implements Project #36105076 in the 10-year Capital Improvement Program (CIP). The Project may satisfy this requirement through payment of applicable fees under the El Dorado County traffic impact Fee (TIF) program.

Timing: Prior to issuance of 1st building permit.

3A. El Dorado Hills Blvd/US 50 WB in 2023

Deficiency: Existing AM peak-hour level-of-service is F prior to addition of Project traffic. Project traffic is anticipated to worsen level-of-service.

Abatement: Adjust signal timing by optimizing splits.

Finding: With implementation of the abatement measure, the Project is not anticipated to cause new, or worsen existing, General Plan level-of-service policy deficiencies at this location. **Table 18** at the end of this section presents intersection level-of-service results with this abatement.

Project responsibility: Project is responsible for its fair-share of signal timing adjustment. The CIP includes funding for intersection and safety improvements at "to be determined" locations. The Project may satisfy this requirement through payment of applicable fees under the El Dorado County traffic impact Fee (TIF) program.

Timing: Prior to issuance of 1st building permit.

Cross reference: See abatement 3B.

6A. Latrobe Road/White Rock Road in 2023

Deficiency: The westbound left-turn queue spills back out of its turn pocket under existing conditions without the Project. Project traffic is anticipated to worsen that queue spillback.

Abatement: Adjust signal timing by optimizing splits.

Finding: With implementation of the abatement measure, the Project is not anticipated to cause new, or worsen existing, General Plan level-of-service policy deficiencies at this location. **Table 18** at the end of this section presents intersection level-of-service results with this abatement.

Project responsibility: This abatement partially implements Project #36105069 in the 20-year Capital Improvement Program (CIP). The Project is responsible for its fair share of modification of signal timing, which may be addressed through payment of fees if the CIP project is moved to the 10-year CIP.

Timing: Prior to issuance of 1st building permit.

Cross reference: See abatement 6B.

9A. Latrobe Road/ Golden Foothill Parkway (south) in 2023

Deficiency: Project traffic is anticipated to worsen existing queue spillback from the eastbound left turn during both the AM and PM peak-hours.

Abatement: Adjust signal timing by optimizing splits.

Finding: With implementation of the abatement measure, the Project is not anticipated to cause new, or worsen existing, General Plan level-of-service policy deficiencies at this location. **Table 18** at the end of this section presents intersection level-of-service results with this abatement.

Project responsibility: The Project is responsible for its fair share of the cost of these off-site improvements which would be addressed by payment of fees after CIP project 36105055 (AKA "72Latrobe") is added to the 10-year CIP.

Timing: Prior to issuance of 1st building permit.

Cross reference: See abatement 9B, which builds on abatement 9a.

10A. Latrobe Road/Investment Boulevard in 2023

Deficiency: Project traffic is anticipated to worsen the existing east bound (Investment Blvd) left turn queue spillback during the PM peak-hour.

Abatement: Stripe eastbound approach as left, shared left-right in 190-foot pocket. Adjust cycle length and splits. Construction of a 300-foot receiving lane is required on northbound Latrobe Road to accommodate the left turn from the shared eastbound left-right turn lane. These improvements are consistent with intersection improvements that would be constructed under CIP project 36105055 (AKA "72Latrobe"). Therefore, addition of CIP project 36105055to the 10-year CIP would address the Project's fair share cost of these improvements as well.

Finding: With implementation of the abatement measure, the Project is not anticipated to cause new, or worsen existing, General Plan level-of-service policy deficiencies at this location. **Table 18** at the end of this section presents intersection level-of-service results with this abatement.

Project responsibility: The Project is responsible for its fair share of the cost of these off-site improvements which would be addressed by payment of fees after CIP project 36105055 (AKA "72Latrobe") is added to the 10-year CIP.

Timing: A phasing analysis determined that 90 traditional dwelling units, or 260 age restricted dwelling units, could be constructed prior to the project deficiency being triggered. Therefore, this abatement is required by the 90th traditional dwelling unit or the 260th age restricted dwelling unit.

Cross reference: See abatement 10B and 10C.

12A. Latrobe Road/Royal Oaks Drive in 2023

Deficiency: Project traffic is anticipated to worsen the intersection to level-of-service F.

Abatement: Signalize the intersection using the "with Project" geometry (north and southbound approaches having a shared through right lane and protected left turns in 320' pockets; east and west bound approaches as shared left-through-right lanes.)

Finding: With implementation of the abatement measure, the Project is not anticipated to cause new, or worsen existing, General Plan level-of-service policy deficiencies at this location. **Table 18** at the end of this section presents intersection level-of-service results with this abatement.

Project responsibility: The Project is responsible for construction of these intersection improvements.

Timing: Prior to issuance of 1st building permit.

Cross reference: See abatement 12B and 12C.

13A. Golden Foothill Pkwy/Robert J. Mathews Pkwy in 2023

Deficiency: Project traffic is anticipated to worsen existing level-of-service F conditions.

Abatement: Reconstruct as a single lane roundabout.

Finding: With implementation of the abatement measure, the Project is not anticipated to cause new, or worsen existing, General Plan level-of-service policy deficiencies at this location. **Table 18** at the end of this section presents intersection level-of-service results with this abatement.

Project responsibility: The Project is responsible for its fair share of the cost of these off-site improvements which would be addressed by payment of fees after the roundabout is added to the 10-year CIP.

Timing: Prior to issuance of 1st building permit.

18A. White Rock Road/Carson Crossing Road in 2023

Deficiency: Project traffic is anticipated to worsen existing level-of-service F.

Abatement: Install all-way-stop-control with existing intersection geometry.

Finding: With implementation of the abatement measure, the Project is not anticipated to cause new, or worsen existing, General Plan level-of-service policy deficiencies at this location. **Table 18** at the end of this section presents intersection level-of-service results with this abatement.

Project responsibility: This off-site improvement partially implements 20-year CIP project 36105041 (White Rock Road Widening 2 to 4 Lanes - Windfield Way to Sacramento County Line) and it should be advanced to the 10-year CIP. The Project is responsible for its fair share of cost, which would be met through payment of the TIF program fee.

Timing: Prior to issuance of 1st building permit.

21A. White Rock Road/Valley View Parkway in 2023

Deficiency: Project traffic is anticipated to worsen level-of-service to F during the AM peak hour and worsen existing westbound left-turn queue spillback on White Rock Rd.

Abatement: Add a 100-foot westbound right-turn pocket and extend the westbound left turn pocket to 350 feet. Note that due to the location of utilities on the northside of White Rock Rd, any required widening will likely be on the south side of White Rock Road, and eastbound lane alignment shall be adjusted to the satisfaction of the County Engineer.

Finding: With implementation of the abatement measure, the Project is not anticipated to cause new, or worsen existing, General Plan level-of-service policy deficiencies at this location. **Table 18** at the end of this section presents intersection level-of-service results with this abatement.

Project responsibility: CIP Project 36105042 (White Rock Road Widening 2 to 4 lanes - Post Street to South of Silva Valley Parkway) includes funding for improvements to this intersection in both the 10-year and 20-year CIPs and all components should be advanced to 10-year CIP. The Project's fair share responsibility for this improvement can be met through payment of TIF program fees.

Timing: Payment of TIF at issuance of each building permit.

Cross reference: See abatement 21B, which builds on abatement 21a.

Table 18. Existing 2023 intersection delay and level-of-service with and without the abated Project

7.0 EPAP 2033 CONDITIONS

The EPAP 2033 conditions analysis started with lane configurations from Existing 2023 conditions, turning movements derived from existing traffic counts, growth factors from the Travel Demand Model, and the NCHRP 255 adjustment procedure[18].

Several volume and network adjustments were then made.

Two Capital Improvement Program (CIP) projects that effect study intersection geometry were accounted for:

- CIP Project 36105076: "El Dorado Hills Saratoga Way Turn Pockets" will construct a southbound right turn pocket and extend the northbound and southbound left turn pockets on El Dorado Hills Blvd. The southbound right pocket was modeled as a 300-foot right turn pocket. The northbound and southbound left turn pockets were modeled as 500-foot left turn pockets.
- CIP Project 36105083 "Robert J Mathews Pkwy/Golden foothill Pkwy Roundabout" will construct a roundabout at Robert J Mathews Pkwy/Golden foothill Pkwy.

Traffic volumes from 2023 without the Project were used as a floor before traffic from the avoided trips (see **Figure 12**, page 48) was shifted from where the TDM loads it directly onto Carson Crossing Drive to Investment Blvd.

Traffic for the approved Carson Creek/Heritage Project was added. Note that because the Creekside Village project also has avoided R&D and industrial vehicle trips, some turning movements are lower in 2033 than they were in 2023.

Figure *14* summarizes the turning movements and lane configurations for the EPAP 2033 conditions scenario.

Delay and level-of-service is presented in **Table 19** through **Table 21**. Intersection control is listed as signal, two-way stop-controlled (TWSC), or all-way stop-control (AWSC). Both the estimated delay and level-of-service (LOS) are provided. At TWSC intersections, the movement with the worst delay is shown in parentheses. Ninety-fifth percentile left turn queues are also listed. Entries shown in **bold black** typeface denote deficient traffic operations, and unsignalized intersections that meet the peak hour signal warrant are denoted with an asterisk and shading.

The results indicate that one study segment (White Rock Rd between Valley View Pkwy to Silva Valley Pkwy) and fifteen study intersections operate deficiency with level-of-service F conditions and/or 95% left turn queues that exceed available storage lengths.

[18] Transportation Research Board (1982) National Cooperative Highway Research Program Report 255, Washington D.C.

- (1) El Dorado Hills Blvd/Serrano Pkwy AM;
- (2) El Dorado Hills Blvd/Saratoga Way: AM and PM;
- (3) El Dorado Hills Blvd/US 50 WB AM and PM;
- (5) Latrobe Road/Town Center Boulevard: AM and PM;
- (6) Latrobe Road/White Rock Road AM and PM;
- (7) Latrobe Road/Golden Foothill Parkway (N): AM and PM;
- (8) Latrobe Road/Suncast Lane AM and PM;
- (9) Latrobe Road/ Golden Foothill Parkway (S): AM and PM;
- (10) Latrobe Road/Investment Boulevard: PM;
- (14) Investment Boulevard/Robert J. Mathews Pkwy AM and PM
- (18) White Rock Road/Carson Crossing Road PM;
- (19) White Rock Road/Windfield Way AM and PM;
- (20) White Rock Road/Post Street: AM and PM;
- (21) White Rock Road/Valley View Parkway: AM and PM; and
- (23) Silva Valley Parkway/US 50 EB ramps PM.

Calculation sheets for delay and level-of-service are provided in **Appendix B**. The remainder of the study intersections, all of the US 50 study segments, and arterial study segments were found to operate acceptably.

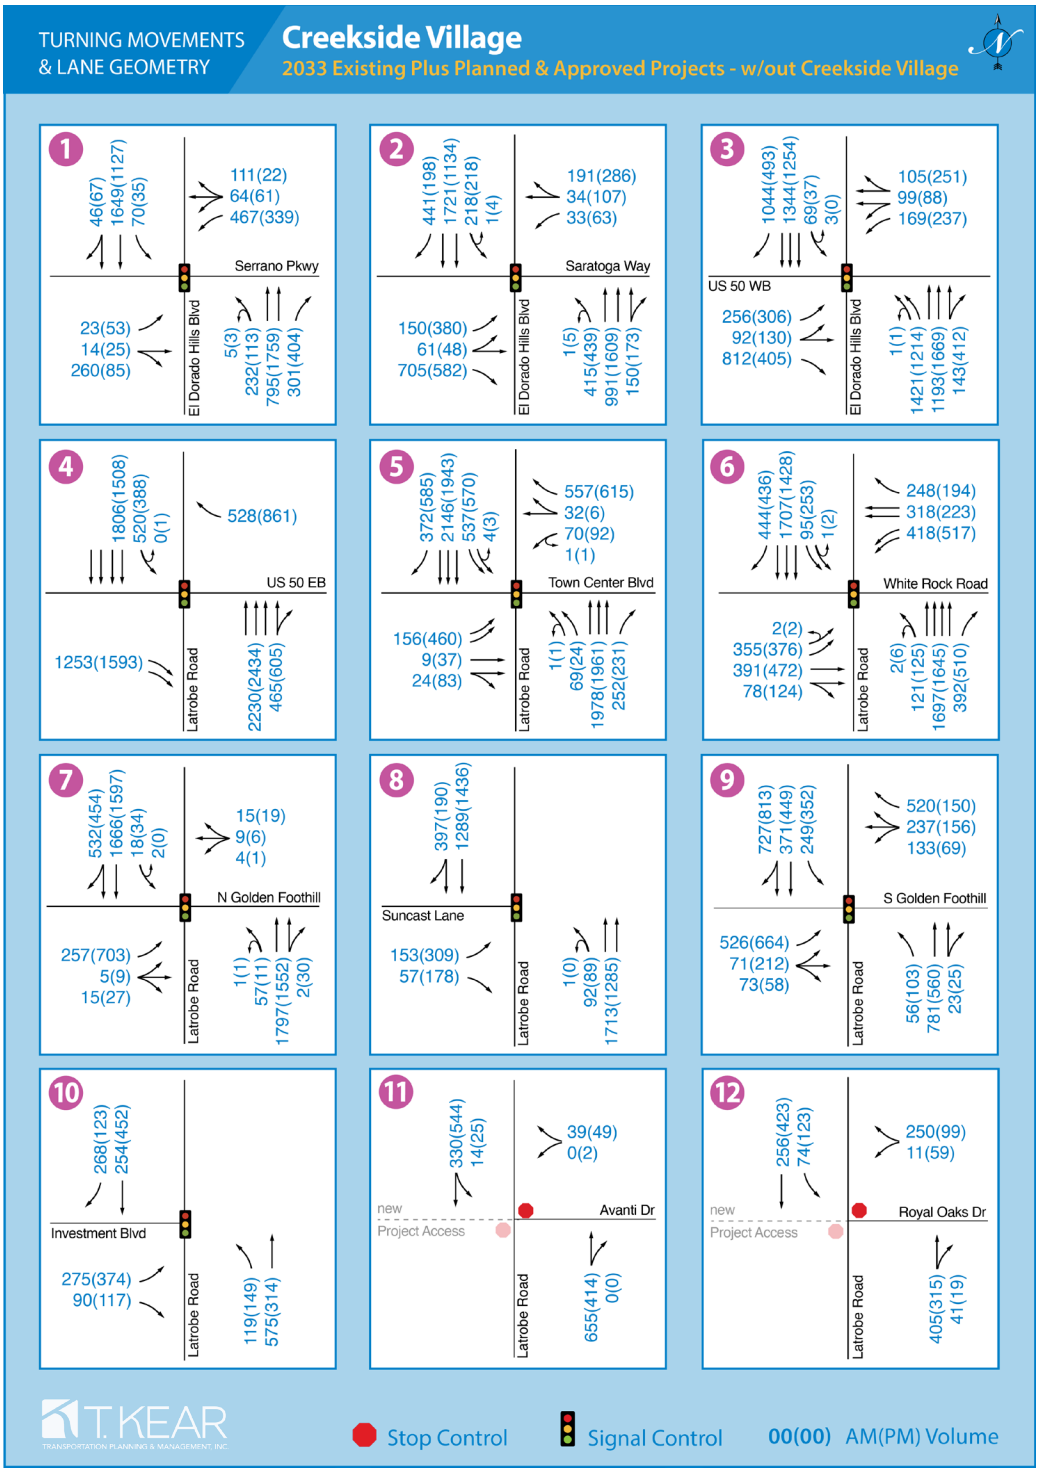

Figure 14. EPAP 2033 conditions lane geometry and turning movements

Notes:
Density in units of passenger cars per mile per lane.
*Prior to the opening of the Saratoga Way extension, Caltrans has reported occasional LOS F conditions during the morning peak for this segment based on planning methods rather than counts.

Table 21. EPAP 2033 arterial level-of-service check without the Project

Arterial Segment	**Description (and level-of-service E threshold)**	**2033 AM No Project** (vehicle trips)	**2033 PM No Project** (vehicle trips)
Latrobe Rd between Royal Oaks Dr and Investment Blvd	2-lane arterial (threshold 1650 vehicle trips)	736 (Better than LOS E)	734 (Better than LOS E)
Latrobe Rd between Investment Blvd and Golden Foothill Pkwy (south)	2-lane arterial (threshold 1650 vehicle trips)	1213 (Better than LOS E)	1035 (Better than LOS E)
Latrobe Rd between Golden Foothill Pkwy (south) and Suncast Ln	4-lane divided arterial (threshold 3290 vehicle trips)	2756 (Better than LOS E)	2549 (Better than LOS E)
Latrobe Rd between White Rock Rd and Town Center Blvd	8-lane divided arterial (threshold 6280 vehicle trips, extrapolated from 6-lane divided arterial)	3327 (Better than LOS E)	3354 (Better than LOS E)
White Rock Rd between Valley View Pkwy to Silva Valley Pkwy	2-lane arterial (threshold 1650 vehicle trips)	**1856 (LOS F)**	**2360 (LOS F)**

(This page intentionally left blank)

8.0 EPAP 2033 PLUS PROPOSED PROJECT CONDITIONS

8.1 Traffic Volumes

Peak hour Project trips (**Figure 9** page 41) and avoided R&D and industrial trips (**Figure 12** page 48) were added to the EPAP 2033 conditions traffic volumes. Delay and level-of-service were determined at the study intersections and segments. **Figure 15** summarizes the turning movements and lane configurations for the EPAP 2033 Plus Proposed Project scenario.

8.2 Level-of-Service

Table 22 through **Table 24** present a summary of the level-of-service results for the study intersections and segments under EPAP 2033 Plus Proposed Project conditions. Intersection control is listed as signal, two-way stop-controlled (TWSC), or all-way stop-control (AWSC). Both the estimated delay and level-of-service (LOS) are provided. At TWSC intersections, the movement with the worst delay is shown in parentheses. Ninety-fifth percentile left turn queues are also listed. Entries shown in **Bold black** text in **Table 22** through **Table 24** denote locations with preexisting deficiencies that the Project is not anticipated to worsen. **Bold red** text denotes locations where the Project is anticipated to create new or worsen preexisting deficiencies. Unsignalized intersections that meet the peak hour signal warrant are shaded and denoted with an asterisk.

One arterial segment has a preexisting deficiency, which is not worsened by Project. sixteen intersections are anticipated to have level-of-service and/or queue spillback deficiencies.

1 Arterial segment has a preexisting deficiency, which is not worsened by Project:

- White Rock Rd between Valley View Pkwy to Silva Valley Pkwy PM;

9 Locations that are deficient with or without the Project that are not worsened:

- (1) El Dorado Hills Blvd/Serrano Pkwy AM;
- (2) El Dorado Hills Blvd/Saratoga Way AM and PM;
- (5) Latrobe Road/Town Center Boulevard AM and PM;
- (8) Latrobe Rd/Suncast Ln AM and PM;
- (14) Investment Boulevard/Robert J. Mathews Pkwy AM;
- (18) White Rock Road/Carson Crossing Road PM;
- (19) White Rock Road/Windfield Way AM and PM;
- (20) White Rock Road/Post Street AM and PM; and
- (23) Silva Valley Parkway/US 50 EB ramps PM.

6 Locations that are deficient with or without the Project that are worsened:

- (3) El Dorado Hills Blvd/US 50 WB AM;
- (6) Latrobe Road/White Rock Road PM;
- (7) Latrobe Road/Golden Foothill Parkway (N) PM;
- (9) Latrobe Road/ Golden Foothill Parkway (S) PM;
- (10) Latrobe Road/Investment Boulevard PM; and

- (21) White Rock Road/Valley View Parkway: PM.

1 Location where the Project is anticipated to cause new deficiencies:

- (12) Latrobe Road/Royal Oaks Drive AM and PM.

Calculation sheets for delay and level-of-service are provided in **Appendix B**. the remainder of the study intersections, all of the US 50 study segments, and arterial study segments were found to operate acceptably.

17	Silva Valley Pkwy to Bass Lake Rd	basic	HCM 7th Ed.	12.4/B	18.3/C	12.8/B	18.2/C

Notes:
Density in units of passenger cars per mile per lane.
*Prior to the opening of the Saratoga Way extension, Caltrans has reported occasional LOS F conditions during the morning peak for this segment based on planning methods rather than counts.

Project plus forgone business park trips will reduce WB US 50 volume between Latrobe Rd and the El Dorado County line during the PM-peak.

Project plus forgone business park trips will reduce EB US 50 volume between EDC line and Latrobe Rd during the AM-peak, and between Silva Valley Pkwy and Bass Lake Rd during the PM peak.

Table 24. EPAP 2033 arterial level-of-service check with and without the Project

Arterial Segment	**Description (and level-of-service E threshold)**	**2033 AM No Project** (vehicle trips)	**2033 PM No Project** (vehicle trips)	**2033 AM Plus Project** (vehicle trips)	**2033 PM Plus Project** (vehicle trips)
Latrobe Rd between Royal Oaks Dr and Investment Blvd	2-lane arterial (threshold 1650 vehicle trips)	736 (Better than LOS E)	734 (Better than LOS E)	1013 (Better than LOS E)	1043 (Better than LOS E)
Latrobe Rd between Investment Blvd and Golden Foothill Pkwy (south)	2-lane arterial (threshold 1650 vehicle trips)	1213 (Better than LOS E)	1035 (Better than LOS E)	1300 (Better than LOS E)	1391 (Better than LOS E)
Latrobe Rd between Golden Foothill Pkwy (south) and Suncast Ln	4-lane divided arterial (threshold 3290 vehicle trips)	2756 (Better than LOS E)	2549 (Better than LOS E)	2214 (Better than LOS E)	2553 (Better than LOS E)
Latrobe Rd between White Rock Rd and Town Center Blvd	8-lane divided arterial (threshold 6280 vehicle trips, extrapolated from 6-lane divided arterial)	3327 (Better than LOS E)	3354 (Better than LOS E)	3102 (Better than LOS E)	3280 (Better than LOS E)
White Rock Rd between Valley View Pkwy to Silva Valley Pkwy	2-lane arterial (threshold 1650 vehicle trips)	**1856** (LOS F)	**2360** (LOS F)	1239 (Better than LOS E)	**2346** (LOS F)

8.3 Existing 2033 Plus Project General Plan Deficiency Findings

Level-of-service and queueing impacts are not considered significant under CEQA. Intersections and/or segments where Project traffic creates new or worsens existing exceedances of General Plan policy thresholds are referred to as having a "project deficiency". There are twelve intersections and two arterial segments where the Project is anticipated to create new or worsen existing deficiencies under EPAP 2033 Plus Project conditions.

Throughout this document, segment deficiencies are numbered using the segment number (i through v) and a year code (2023 = "A", 2033 = "B", and 2040 = "C"). Intersection abatement measures are numbered using the intersection number (1-27) and the year code (A, B, or C).

All deficiencies and abatements described below include the deficiency number/abatement number and location as a title, followed by a description of the deficiency, the abatement, findings, responsibility, and timing. Unless otherwise noted, it is assumed the timing would be prior to issuance of the first building permit

2033 Intersection Deficiencies and Abatement Measures

3B. El Dorado Hills Blvd/US 50 WB in 2033

Deficiency: AM peak-hour level-of-service is F prior to addition of Project traffic. Project traffic is anticipated to worsen level-of-service.

2023-2033 Improvements Assumed: None.

Abatement: Implement as abatement 3A

Finding: With implementation of the abatement measure, the Project is not anticipated to cause new, or worsen existing, General Plan level-of-service policy deficiencies at this location. **Table 25** at the end of this section presents intersection level-of-service results with this abatement.

Project responsibility: None, addressed through abatement 3A.

Timing: Not applicable, addressed through abatement 3A.

Cross reference: See abatement 3A.

6B. Latrobe Road/White Rock Road in 2033

Deficiency: PM peak-hour level-of-service is F prior to addition of Project traffic. Project traffic is anticipated to worsen level-of-service.

2023-2033 Improvements Assumed: None.

2023-2033 Improvements Assumed: None.

Abatement: implement as abatement 6A

Finding: With implementation of the abatement measure, the Project is not anticipated to cause new, or worsen existing, General Plan level-of-service policy deficiencies at this location. **Table 25** at the end of this section presents intersection level-of-service results with this abatement.

Project responsibility: None, addressed through abatement 6A.

Timing: Not applicable, addressed through abatement 6A.

Cross reference: See abatement 6A.

7B. Latrobe Road/Golden Foothill Parkway (N) in 2033

Deficiency: PM peak-hour level-of-service is F prior to addition of Project traffic. Project traffic is anticipated to worsen level-of-service.

2023-2033 Improvements Assumed: None.

Abatement: Construct 170-foot southbound right turn pocket.

Finding: With implementation of the abatement measure, the Project is not anticipated to cause new, or worsen existing, General Plan level-of-service policy deficiencies at this location. **Table 25** at the end of this section presents intersection level-of-service results with this abatement.

Project responsibility: CIP 36105069 will widen this portion of Latrobe Rd to six lanes by 2040 and should be advanced to the 10-year CIP. The Project's fair share cost of this improvement is payment of the TIF program fee.

Timing: Prior to issuance of 1st building permit.

9B. Latrobe Road/ Golden Foothill Parkway (S) in 2033

Deficiency: Project traffic is anticipated to worsen existing queue spillback from the southbound left turn during both the AM and PM peak-hours.

2023-2033 Improvements Assumed: None.

Abatement: Construct a second southbound left turn lane on Latrobe Rd and a second eastbound lane on Clubview Dr between Latrobe Road and Blackstone Pkwy. The second eastbound lane on Clubview Dr is a receiving lane for the second southbound left turn lane from Latrobe Rd.

Finding: With implementation of the abatement measure, the Project is not anticipated to cause new, or worsen existing, General Plan level-of-service policy deficiencies at this location. **Table 25** at the end of this section presents intersection level-of-service results with this abatement.

Project responsibility: The Project is responsible for its fair share of the cost of these off-site improvements which would be addressed by payment of fees after CIP project 36105055 (AKA "72Latrobe") is added to the 10-year CIP.

Timing: Prior to issuance of 1st building permit.

Cross reference: See abatement 9A.

10B. Latrobe Road/Investment Boulevard in 2033

Deficiency: Project traffic is anticipated to cause the eastbound (Investment Blvd) left-turn queue to spill out of its left-turn pocket.

2023-2033 Improvements Assumed: None.

Abatement: Implement as abatement 10A

Finding: With implementation of the abatement measure, the Project is not anticipated to cause new, or worsen existing, General Plan level-of-service policy deficiencies at this location. **Table 25** at the end of this section presents intersection level-of-service results with this abatement.

Project responsibility: None, addressed through abatement 10A.

Timing: Not applicable, addressed through abatement 10A.

Cross reference: See abatement 10A.

12B. Latrobe Road/Royal Oaks Drive in 2033

Deficiency: Project traffic is anticipated to worsen the intersection to level-of-service F.

2023-2033 Improvements Assumed: None.

Abatement: Implement as abatement 12A.

Finding: With implementation of the abatement measure, the Project is not anticipated to cause new, or worsen existing, General Plan level-of-service policy deficiencies at this

location. **Table 25** at the end of this section presents intersection level-of-service results with this abatement.

Project responsibility: None, addressed through abatement 12A.

Timing: Not applicable, addressed through abatement 12A.

Cross reference: See abatement 12A.

21B. White Rock Road/Valley View Parkway in 2033

Deficiency: Project traffic is anticipated to worsen left-turn queue spillback on westbound White Rock Rd.

2023-2033 Improvements Assumed: None.

Abatement:

- Implement abatement 21A.
- Further extend the westbound left turn pocket to 410 feet. (Note: abatement 21A will extend this pocket to 350 feet. Abatement 21B reflects an additional 60 feet of westbound right turn storage.)

Widening should be done to the south of Latrobe Rd to avoid high voltage lines. Eastbound-westbound Lane alignment may require additional space.

Finding: With implementation of the abatement measure, the Project is not anticipated to cause new, or worsen existing, General Plan level-of-service policy deficiencies at this location. **Table 25** at the end of this section presents intersection level-of-service results with this abatement.

Project responsibility: CIP Project 36105042 (White Rock Road Widening 2 to 4 lanes – Post Street to South of Silva Valley Parkway) includes funding for improvements to this intersection in both the 10-year and 20-year CIPs and all components should be advanced to 10-year CIP. The Project's fair share responsibility for this improvement can be met through payment of TIF program fees.

Timing: Prior to issuance of 1st building permit.

Cross reference: See abatement 21A.

Table 25. EPAP 2033 intersection delay and level-of-service with and without the abated Project

ID	Intersection	Control	Left Turn Storage	2033 AM Peak No Project				2033 PM Peak No Project				2033 AM Peak with Project				2033 PM Peak with Project				Abatement Strategy	Left Turn Storage	Abated AM Peak (+ Proj)				Abated PM Peak (+ Proj)				Existing or Anticipated CIP Project

October 9, 2024

9.0 CUMULATIVE 2040 CONDITIONS

The Cumulative 2040 conditions analysis started with lane configurations from Existing 2023 conditions and turning movements derived from existing traffic counts, growth factors from the Travel Demand Model, and the NCHRP 255 adjustment procedure. Several volume and network adjustments were then made.

Seven Capital Improvement Program (CIP) projects that affect study intersection geometry were accounted for:

- CIP Project 36105042: Widening of White Rock Road to four-lanes between Post Street and the US 50 Silva Valley interchange.
- CIP Project 36105007: Country Club Drive Extension to El Dorado Hills Blvd.
- CIP Project 36105035: Saratoga Way Extension Phase 2 (widening to four-lanes and associated intersection improvements).
- CIP Project 36104021: US 50 auxiliary lane westbound - El Dorado Hills Blvd to El Dorado County line.
- CIP Project 36104001: US 50/El Dorado Hills Blvd interchange improvements phase 2B (adds another NB through lane at study intersection #4.)
- CIP Project 36104004: US 50/Silva Valley Parkway interchange Phase 2 – on ramps and auxiliary lanes. (adds eastbound slip onramp and westbound loop onramp).
- CIP Project 36105041: White Rock Road widening to four-lanes between Manchester Drive and the El Dorado County line.

Traffic volumes from 2033 without the Project were used as a floor before traffic from the avoided trips (see **Figure 11**, page 45) was shifted from where the TDM loads it directly onto Carson Crossing Drive to Investment Blvd. Traffic for the approved Carson Creek/Heritage project was added. Note that because the Creekside Village project also has avoided R&D and industrial vehicle trips, some turning movements are lower in 2040 than they were in 2033. For 2040, a peak hour factor of 0.92 was also used as a floor.

Figure *16* summarizes the turning movements and lane configurations for the Cumulative 2040 conditions scenario.

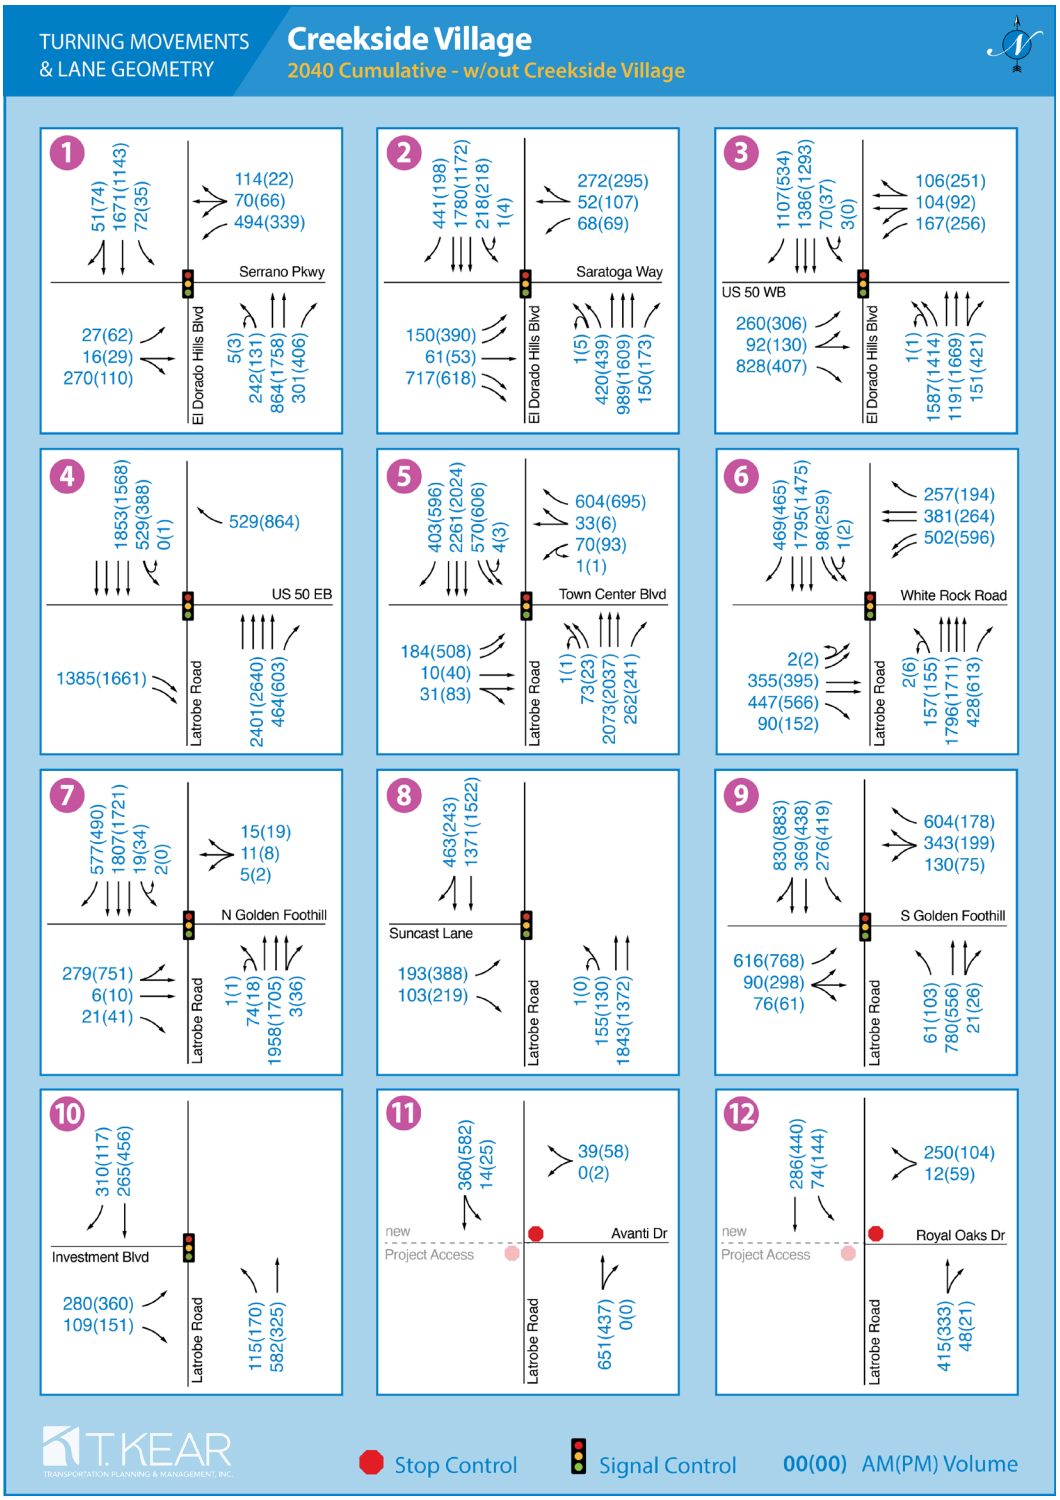

Figure 16. Cumulative 2040 lane geometry and turning movements

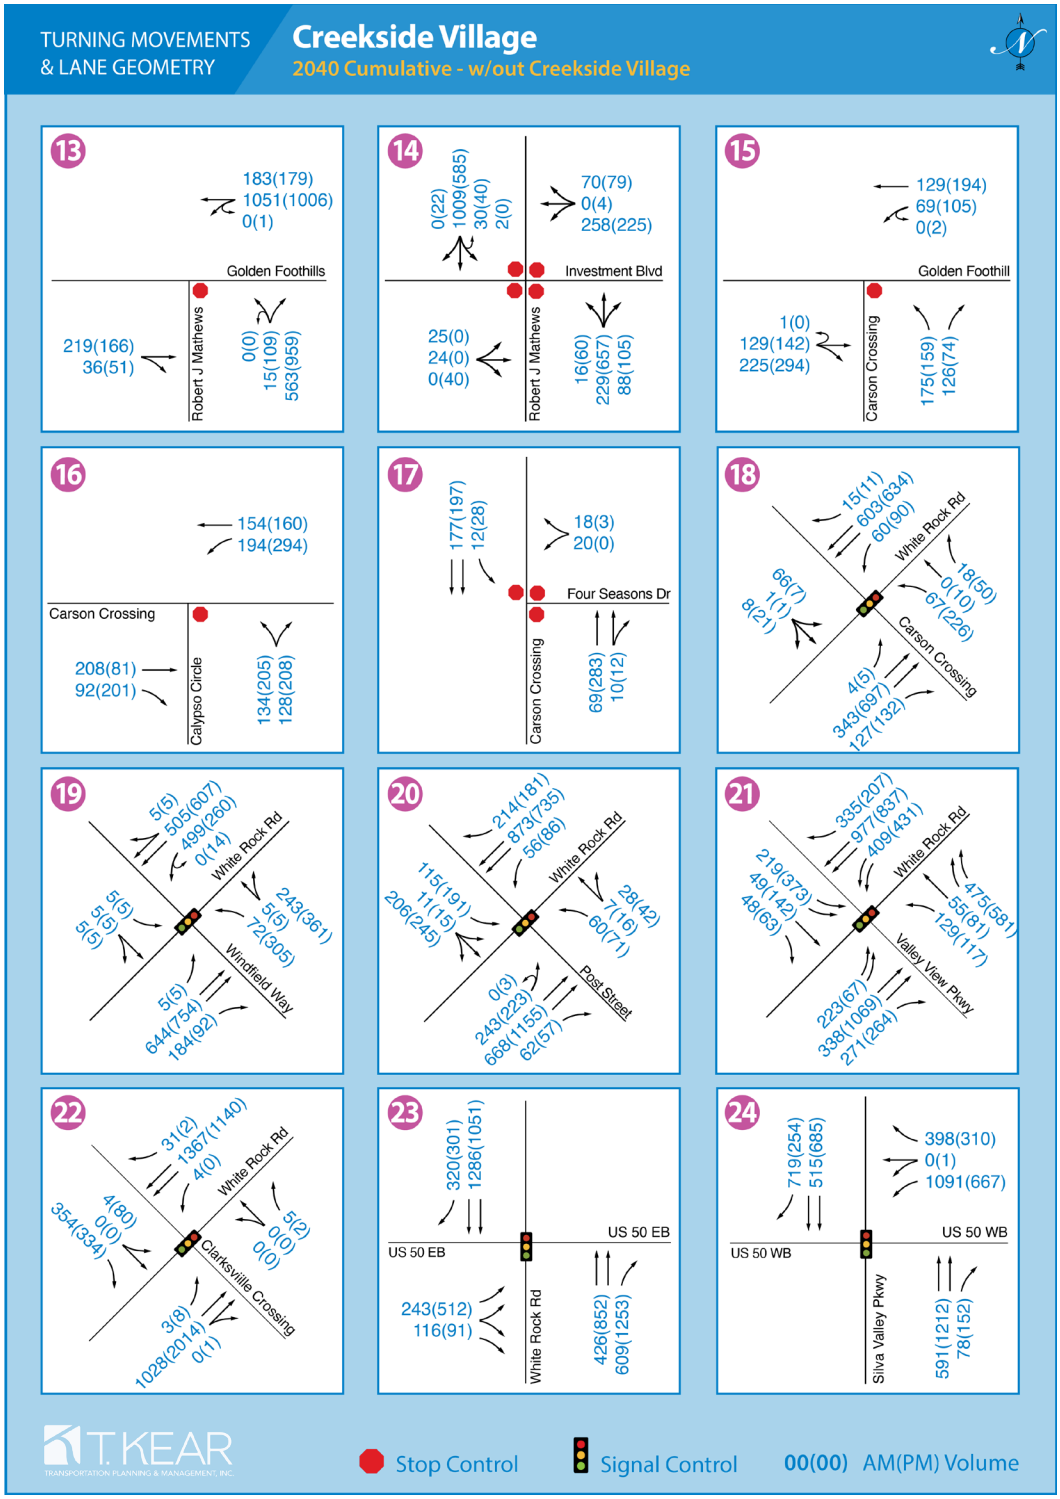

Figure 16. Cumulative 2040 lane geometry and turning movements (continued)

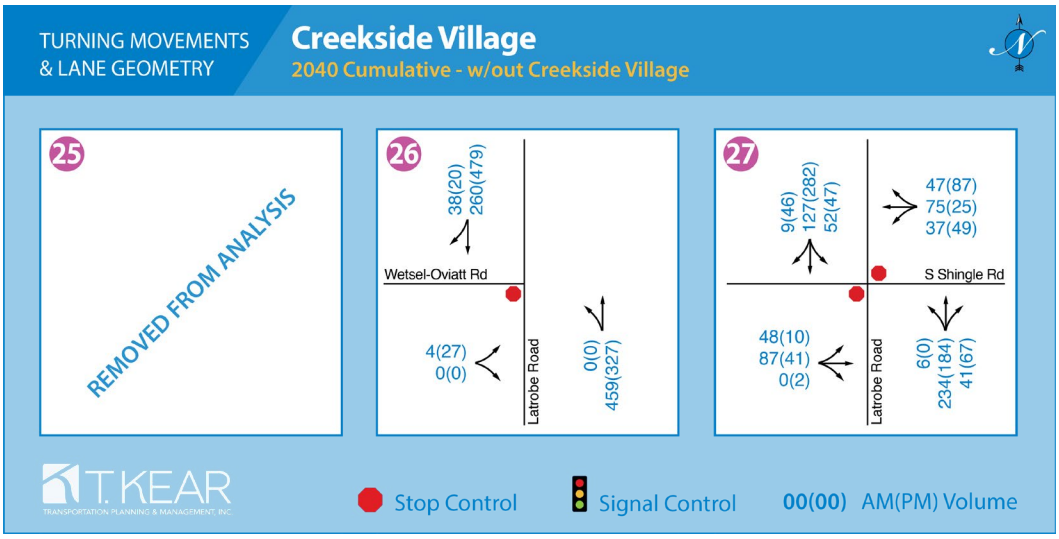

Figure *16*. Cumulative 2040 lane geometry and turning movements (continued)

Delay and level-of-service is presented in **Table 26** through **Table 28**. Intersection control is listed as signal, two-way stop-controlled (TWSC), or all-way stop-control (AWSC). Both the estimated delay and level-of-service (LOS) are provided. At TWSC intersections, the movement with the worst delay is shown in parentheses. Ninety-fifth percentile left turn queues are also listed. Entries shown in **bold black** typeface denote deficient traffic operations, and unsignalized intersections that meet the peak hour signal warrant are denoted with an asterisk and shading.

The results indicate that thirteen study intersections operate deficiency with level-of-service F conditions and/or 95% left turn queues that exceed available storage lengths.

- (1) El Dorado Hills Blvd/Serrano Pkwy AM;
- (2) El Dorado Hills Blvd/Saratoga Way PM;
- (3) El Dorado Hills Blvd/US 50 WB AM and PM;
- (5) Latrobe Road/Town Center Boulevard AM and PM;
- (8) Latrobe Rd/Suncast Ln AM and PM;
- (9) Latrobe Road/ Golden Foothill Parkway (S) AM and PM;
- (10) Latrobe Road/Investment Boulevard PM;
- (13) Golden Foothill Parkway (S)/Robert J. Mathews Pkwy PM;
- (14) Investment Boulevard/Robert J. Mathews Pkwy AM and PM
- (16) Carson Crossing Road/Calypso Circle PM;
- (19) White Rock Road/Windfield Way AM and PM;
- (20) White Rock Road/Post Street AM and PM; and
- (21) White Rock Road/Valley View Parkway PM.

Calculation sheets for delay and level-of-service are provided in **Appendix B**. the remainder of the study intersections, all of the US 50 study segments, and arterial study segments were found to operate acceptably.

Table 28. Cumulative 2040 arterial level-of-service check without the Project

Arterial Segment	**Description (and level-of-service E threshold)**	**2040 AM No Project** (vehicle trips)	**2040 PM No Project** (vehicle trips)
Latrobe Rd between Royal Oaks Dr and Investment Blvd	2-lane arterial (threshold 1650 vehicle trips)	775 (Better than LOS E)	809 (Better than LOS E)
Latrobe Rd between Investment Blvd and Golden Foothill Pkwy (south)	2-lane arterial (threshold 1650 vehicle trips)	1303 (Better than LOS E)	1073 (Better than LOS E)
Latrobe Rd between Golden Foothill Pkwy (south) and Suncast Ln	4-lane divided arterial (threshold 3290 vehicle trips)	3134 (Better than LOS E)	2776 (Better than LOS E)
Latrobe Rd between White Rock Rd and Town Center Blvd	8-lane divided arterial (threshold 6280 vehicle trips, extrapolated from 6-lane divided arterial)	3598 (Better than LOS E)	3580 (Better than LOS E)
White Rock Rd between Valley View Pkwy to Silva Valley Pkwy	4-lane divided arterial (threshold 3290 vehicle trips)	2303 (Better than LOS E)	2934 (Better than LOS E)

(This page intentionally left blank)

10.0 CUMULATIVE 2040 PLUS PROPOSED PROJECT CONDITIONS

10.1 Traffic Volumes

Peak hour Project trips (**Figure 9** page 41) and avoided R&D and industrial trips (**Figure 11** page 45) were added to the EPAP 2040 conditions traffic volumes. Delay and level-of-service were determined at the study intersections and segments. **Figure 17** summarizes the turning movements and lane configurations for the Cumulative 2040 Plus Proposed Project scenario.

10.2 Level-of-Service

Table 29 through **Table 31** present a summary of the level-of-service results for the study intersections and segments under Cumulative 2040 Plus Proposed Project conditions. Intersection control is listed as signal, two-way stop-controlled (TWSC), or all-way stop-control (AWSC). Both the estimated delay and level-of-service (LOS) are provided. At TWSC intersections, the movement with the worst delay is shown in parentheses. Ninety-fifth percentile left turn queues are also listed. Entries shown in **Bold black** text in **Table 29** through **Table 31** denote locations with preexisting deficiencies that the Project is not anticipated to worsen. **Bold red** text denotes locations where the Project is anticipated to create new or worsen preexisting deficiencies. Unsignalized intersections that meet the peak hour signal warrant are shaded and denoted with an asterisk.

Thirteen intersections are anticipated to have level-of-service and/or queue spillback deficiencies.

<u>11 Locations that are deficient with or without the Project that are not worsened:</u>

- (1) El Dorado Hills Blvd/Serrano Pkwy AM;
- (2) El Dorado Hills Blvd/Saratoga Way PM;
- (3) El Dorado Hills Blvd/US 50 WB AM and PM;
- (5) Latrobe Road/Town Center Boulevard AM and PM;
- (8) Latrobe Rd/Suncast Ln AM and PM;
- (9) Latrobe Road/ Golden Foothill Parkway (S) AM and PM;
- (14) Investment Boulevard/Robert J. Mathews Pkwy AM;
- (16) Carson Crossing Road/Calypso Circle PM;
- (19) White Rock Road/Windfield Way AM and PM;
- (20) White Rock Road/Post Street AM and PM; and
- (21) White Rock Road/Valley View Parkway PM.

<u>1 Locations that are deficient with or without the Project that are worsened:</u>

- (10) Latrobe Road/Investment Boulevard PM;

<u>1 Locations where the Project is anticipated to cause new deficiencies:</u>

- (12) Latrobe Road/Royal Oaks Drive AM and PM.

Calculation sheets for delay and level-of-service are provided in **Appendix B**. The remainder of the study intersections, all of the US 50 study segments, and arterial study segments, were found to operate acceptably.

Density in units of passenger cars per mile per lane.

*Prior to the opening of the Saratoga Way extension, Caltrans has reported occasional LOS F conditions during the morning peak for this segment based on planning methods rather than counts.

Project plus forgone business park trips will reduce WB US 50 volume between Bass Lake Rd and Latrobe Rd in the morning, and between Latrobe Rd and the El Dorado County Line during the afternoon.

Project plus forgone business park trips will reduce EB US 50 volume between EDC line and Latrobe Rd during the AM-peak, and between Silva Valley Pkwy and Bass Lake Rd during the PM peak.

Table 31. Cumulative 2040 arterial level-of-service check with and without the Project

Arterial Segment	**Description (and level-of-service E threshold)**	**2040 AM No Project** (vehicle trips)	**2040 PM No Project** (vehicle trips)	**2040 AM Plus Project** (vehicle trips)	**2040 PM Plus Project** (vehicle trip)s
Latrobe Rd between Royal Oaks Dr and Investment Blvd	2-lane arterial (threshold 1650 vehicle trips)	775 (Better than LOS E)	809 (Better than LOS E)	1053 (Better than LOS E)	1101 (Better than LOS E)
Latrobe Rd between Investment Blvd and Golden Foothill Pkwy (south)	2-lane arterial (threshold 1650 vehicle trips)	1303 (Better than LOS E)	1073 (Better than LOS E)	1454 (Better than LOS E)	1369 (Better than LOS E)
Latrobe Rd between Golden Foothill Pkwy (south) and Suncast Ln	4-lane divided arterial (threshold 3290 vehicle trips)	3134 (Better than LOS E)	2776 (Better than LOS E)	3036 (Better than LOS E)	2663 (Better than LOS E)
Latrobe Rd between White Rock Rd and Town Center Blvd	8-lane divided arterial (threshold 6280 vehicle trips, extrapolated from 6-lane divided arterial)	3598 (Better than LOS E)	3580 (Better than LOS E)	3400 (Better than LOS E)	3361 (Better than LOS E)
White Rock Rd between Valley View Pkwy to Silva Valley Pkwy	4-lane divided arterial (threshold 3290 vehicle trips)	2303 (Better than LOS E)	2934 (Better than LOS E)	2253 (Better than LOS E)	2883 (Better than LOS E)

10.3 Findings of Project General Plan Level-of-Service and Queueing Deficiencies

Level-of-service and queueing impacts are not considered significant under CEQA. Intersections and/or segments where Project traffic creates new or worsens existing exceedances of General Plan policy thresholds are referred to as having a "Project deficiency". There are two intersections where the Project is anticipated to create new or worsen existing deficiencies under Cumulative 2040 Plus Project conditions.

Throughout this document, segment deficiencies are numbered using the segment number (i through v) and a year code (2023 = "A", 2033 = "B", and 2040 = "C"). Intersection abatement measures are numbered using the intersection number (1-27) and the year code (A, B, or C).

All deficiencies and abatements described below include the deficiency number/abatement number and location as a title, followed by a description of the deficiency, the abatement, findings, responsibility, and timing.

2040 Intersection Deficiencies and Abatement Measures

10C. Latrobe Road/Investment Boulevard in 2040

Deficiency: Project traffic is anticipated to cause the eastbound (Investment Blvd) left-turn queue to spill out of its left-turn pocket.

2023-2040 Improvements Assumed: None.

Abatement: Implement as abatement 10A

Finding: With implementation of the abatement measure, the Project is not anticipated to cause new, or worsen existing, General Plan level-of-service policy deficiencies at this location. **Table 32** at the end of this section presents intersection level-of-service results with this abatement.

Project responsibility: None, addressed through abatement 10A.

Timing: Not applicable, addressed through abatement 10A.

Cross reference: See abatement 9A and 9B.

12C. Latrobe Road/Royal Oaks Drive in 2040

Deficiency: Project traffic is anticipated to worsen the intersection to level-of-service F.

2023-2040 Improvements Assumed: None.

Abatement: Implement as abatement 12A.

Finding: With implementation of the abatement measure, the Project is not anticipated to cause new, or worsen existing, General Plan level-of-service policy deficiencies at this location. **Table 32** at the end of this section presents intersection level-of-service results with this abatement.

Project responsibility: None, addressed through abatement 12A.

Timing: Not applicable, addressed through abatement 12A.

Cross reference: See abatement 12A and 12B.

Table 32. EPAP 2040 intersection delay and level-of-service with and without the abated Project

ID	Intersection	Control	Left Turn Storage		2040 AM Peak No Project				2040 PM Peak No Project				2040 AM Peak with Project				2040 PM Peak with Project				Abatement Strategy	Left Turn Storage		2040 Abated AM Peak (+ Proj)				2040 Abated PM Peak (+ Proj)				Existing or Anticipated CIP Project

* Denotes intersections where the peak-hour signal warrant is met.

October 9, 2024

11.0 CEQA VMT ANALYSIS

The Residential components of the Project are addressed below based on the methods and thresholds specified in Section 3.4.

11.1 Residential Use

The unincorporated countywide VMT per capita for determining the significance threshold for residential projects, and the Project analysis itself were estimated using the same tools and methodology. For this analysis 2018 baseline travel demand model results and 2040 cumulative travel demand model results were used to estimate the baseline VMT, 2040 VMT, the 15% VMT reduction threshold, and Project VMT (per El dorado County Resolution 141-2020). Those data are summarized in **Table 33**. Travel demand model scripts used are shown in **Appendix E**. The significance threshold determined by this calculation is 17.3 VMT per capita. The residential use of the Project is anticipated to generate 13.6 VMT per capita based on 2018 land use and drop to 13.1 VMT per capita by 2040. CEQA Finding: The residential Project is anticipated to have a **less-than-significant** impact on VMT.

Table 33. Creekside Village residential VMT analysis

	El Dorado County		Project (Based on TAZ 167)	
	2018	**2040**	**2018**	**2040**
Home based VMT	2,813,221	3,158,464	39,441	45,417
Population	137,989	162,164	2,904	3,478
Trips	616,395	746,555	10,217	12,453
VMT per capita	20.4	19.5	13.6	13.1
VMT threshold with 15% reduction	17.3	n/a	n/a	n/a
Avg. trip length (miles)	4.6	4.2	3.9	3.6

11.2 Traditional vs Age Restricted Housing

The travel demand model does not include an age-restricted land use. There is limited information published on how the travel characteristics of age-restricted housing and traditional housing differ. The best available data comes from the published ITE trip generation rates for traditional and age-restricted housing and the 2017 National Household Travel Survey.

ITE Trip Generation Rates

Age-restricted households generate fewer trips than traditional households. Published Institute of Traffic Engineers (ITE) trip generation rates[19] anticipate that traditional housing has a daily trip generation rate of 9.43 trips per household, while age-restricted housing generates less than half

[19] ITE (2021) Trip Generation Manual 11th Edition, Institute of Transportation Engineers, Washington DC

of that at 4.31 trips per household. This supports the suspected result of lower VMT per capita from age-restricted housing but is not proof as changes in household size are not addressed.

National Household Travel Survey Person Miles of Travel (PMT)

The 2017 National Household Travel Survey[20] estimated PMT and person trips for both the population (as a whole) and for several subgroups, including those 65[21] and older. Those data show that the older drivers had 19% less PMT and took 5% fewer trips than the population as a whole. PMT being reduced at a greater rate than person trips indicates that the older population is taking fewer and shorter trips, leading to the 19% reduction in PMT.

11.3 Discussion and findings

This analysis found that 763 traditional housing units were anticipated to have a less-than-significant impact on VMT per capita under CEQA. The implementation of the age-restricted housing is anticipated to produce fewer trips per household, fewer trips per capita, and less VMT per capita than traditional households. Therefore, the mixed traditional housing and age-restricted housing project is also anticipated to have a less-than-significant impact on VMT under CEQA.

[20] FHWA (2018) Summary of Travel Trends: 2017 National Household Travel Survey (Tables 11 and 31), Federal Highway Administration, report FHWA-PL-18_019, https://nhts.ornl.gov/assets/2017_nhts_summary_travel_trends.pdf.

[21] Note that active adult/age-restricted housing is defined as 55 and older rather than 65 and older.

12.0 BICYCLE, PEDESTRIAN AND TRANSIT IMPACTS

The Project does not interfere with existing or proposed transit service and has a **less-than-significant** impact on transit.

The Project enhances bicycle and pedestrian access to the El Dorado Hills Business Park (**Figure 18**) and does not interfere with existing or planned bicycle and pedestrian facilities. The Project includes a variety of bike and pedestrian amenities providing connections both within the planned community and externally to the existing bike and pedestrian facilities along Latrobe Road and Royal Oaks Dr:

- The Creekside Village entry road will feature class II bike lanes from its intersection with Latrobe Road.
- The Project features a complete system of paved and unpaved trails located in the open space buffer areas and landscape corridors. The trails will be destination-oriented and link the various residential neighborhoods, parks, and the business park.
- The majority of Creekside Village streets will include attached or separated sidewalks on both sides of the street. Sidewalks will comply with ADA standards and be a minimum of 4-feet in width.

The Project has a **less-than-significant** impact on bicycle and pedestrian facilities.

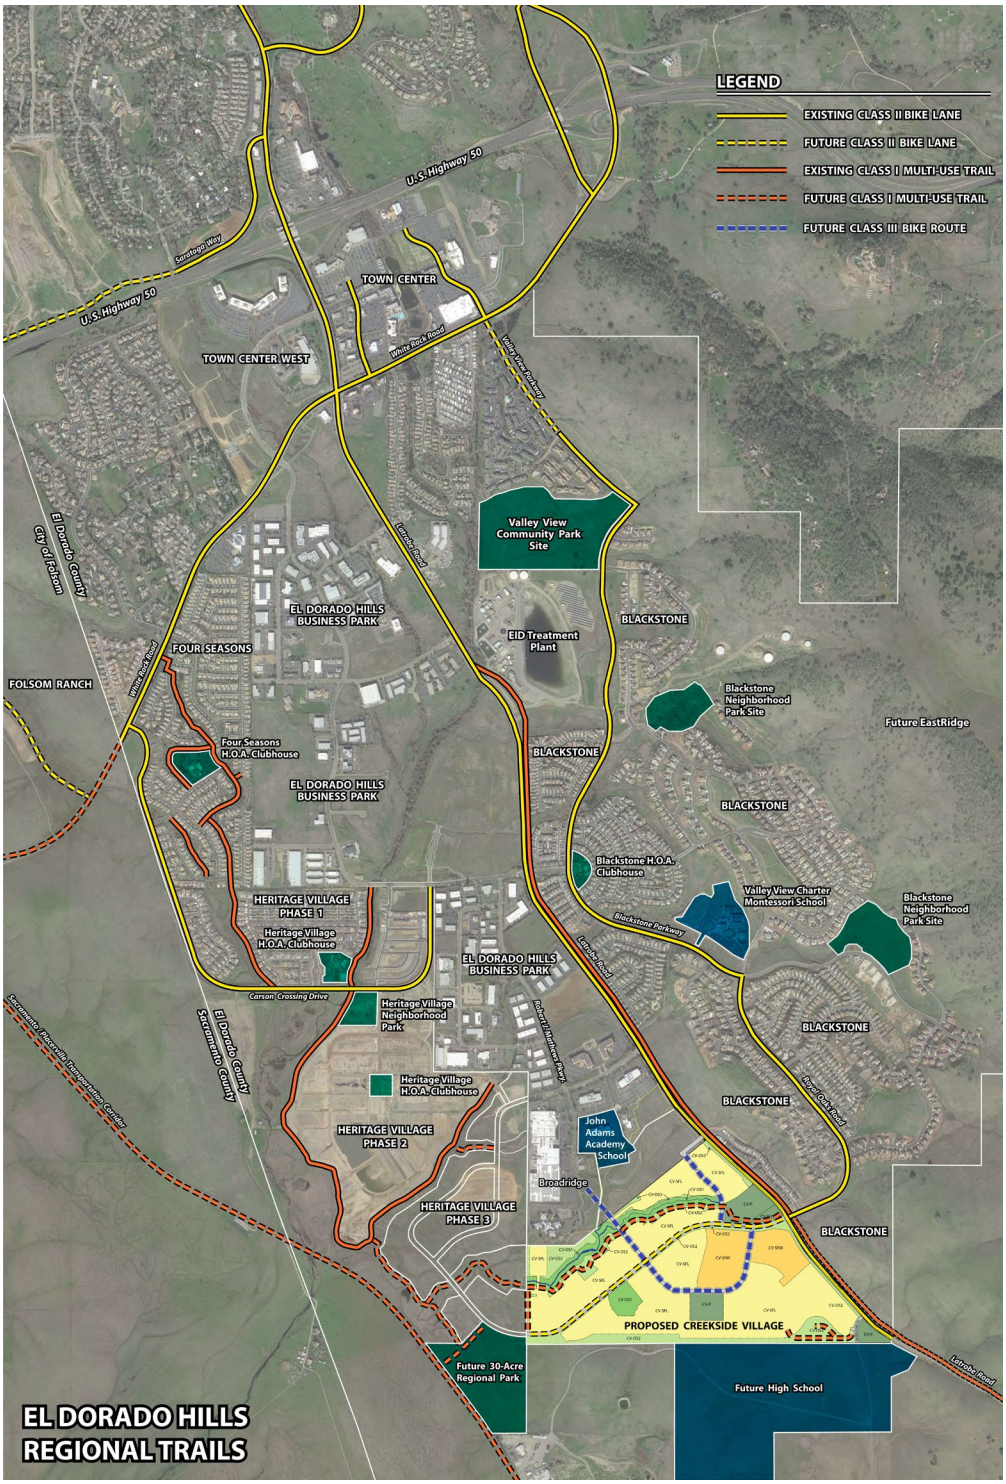

Figure 18. Bike and pedestrian facilities map (Project would construct on-site facilities)

13.0 ON-SITE TRANSPORTATION REVIEW

Per the County's guidelines, on-site transportation review including site review, internal circulation, sight distance review, driveway spacing, minimum required throat depth review, parking supply review, etc. should be addressed for every project.

On Site Transportation review shall be performed with each Final Map. This approach is appropriate as the specific plan allows for "minor administrative modifications" to the specific plan as follows:

> *"Minor administrative modifications (MAM) to the CVSP that are consistent with and do not substantially change its overall intent, such as minor adjustments to the land use locations and parcel boundaries shown in Figure 3.2 – Specific Plan Land Use Designations and Figure 3.4 – Plan Area Parcels and the land use acreages shown in Table 3.1 – Land Use Summary may be approved administratively by the El Dorado County Planning Services Department, provided the following criteria are met:*
>
> - *The proposed modification is within the Plan Area.*
> - *The general land use pattern remains consistent with the intent and spirit of the CVSP*
> - *The proposed changes do not substantially alter the backbone infrastructure network.*
> - *The proposed modification offers equal or superior improvements to development capacity or standards.*
> - *The increase or decrease of lots by 15% within villages so long as the overall unit count stays at or below 763.*
> - *The proposed modification does not increase environmental impacts beyond those identified in the EIR.*
> - *Reduction and relocation of park acreage so long as parkland dedication requirements are satisfied at Final Map approval including dedication of land, payment of in-lieu fees, or some combination thereof as required by the conditions of approval.*
> - *Relocated park parcels continue to meet the standards for the type of park proposed.*
> - *Relocated park parcels remain within walking distance of the residents they serve.*
>
> *Minor administrative modifications to the CVSP may be reviewed and approved at the discretion of the El Dorado County Planning and Building Department and no County Planning Commission or Board of Supervisors review is required unless the modification approval is appealed. However, if a minor administrative modification is appealed, it shall be reviewed by the Planning Commission who shall have authority to approve or deny the minor administrative modification.*

The Planning Commission decision may be appealed to the El Dorado County Board of Supervisors."

Because each of the villages may see the number of dwelling units increase or decrease by as much as 15% (so long as the overall total number of dwelling units is not increased), and because roadways apart from the "backbone infrastructure" can be modified, on-site transportation review does not make sense at the Specific Plan level. For this Project the on-site review should be addressed for each Final Map.

14.0 FINDINGS

14.1 Trip Generation Findings

The 763 dwelling unit Project is anticipated to generate 316 AM peak hour trips, 382 PM peak hour trips, and 4147 daily trips. Those Project trips are offset under both the EPAP 2033 and Cumulative 2040 scenarios through forgone commercial development on the 207.9 ac project site which the travel demand model anticipated would have generated 733 AM peak hour trips, 829 PM peak hour trips, and 9,415 daily trips. Trip Generation is discussed in more detail in **Section 5.1**.

14.2 CEQA Findings

VMT: The 763 dwelling unit Project is anticipated to have home based VMT per capita of 13.6 in 2023 and 13.1 in 2040, compared to a significance threshold (calculated using the same methodology and data as the Project impacts) of 17.3. Therefore, the Project has a **less-than significant** impact on VMT. The VMT analysis is discussed in **Section 3.4** and **Section 11**.

Transit: The Project does not interfere with existing or proposed transit service and has a **less-than-significant** impact on transit. Transit impacts are briefly discussed in **Section 12**.

Bicycles and Pedestrians: The Project enhances bicycle and pedestrian access to the El Dorado Hills Business Park and does not interfere with existing or planned bicycle and pedestrian facilities. The Project includes a variety of bike and pedestrian amenities providing connections both within the planned community and externally to the existing bike and pedestrian facilities along Latrobe Road and Royal Oaks Dr. Therefore, the Project has a **less-than-significant** impact on bicycle and pedestrian facilities. Bicycles and pedestrian impacts are briefly discussed in **Section 12**.

14.3 General Plan Level-of-Service and Queue Length Findings

This section consolidates abatement measures identified in Sections 6.3, 8.3, and 10.3 which are necessary to ensure that the Project does not in level-of-service deficiencies relative to General Plan policies. Deficiencies that are caused or worsened by the Project, and abatement measures to address those deficiencies, are identified below for existing 2023 plus Project, EPAP 2033 plus Project, and cumulative 2040 plus Project conditions.

Throughout this document, segment deficiencies are numbered using the segment number (i through v) and a year code (2023 = “A”, 2033 = “B”, and 2040 = “C”). Intersection abatement measures are numbered using the intersection number (1-27) and the year code (A, B, or C).

Existing 2023 Plus Project Conditions

Existing 2023 plus Project conditions are discussed in **Section 6.** The Project is anticipated to cause new or worsen existing level-of-service/queuing deficiencies at eleven intersections (deficiencies may be caused by anticipated level-of-service and/or queue spillback):

10 Locations that are deficient with or without the Project that are worsened:

- (1) El Dorado Hills Blvd/Serrano Pkwy AM;
- (2) El Dorado Hills Blvd/Saratoga Way: AM and PM;
- (3) El Dorado Hills Blvd/US 50 WB AM;
- (6) Latrobe Road/White Rock Road PM;
- (8) Latrobe Rd/Suncast Ln AM and PM;
- (9) Latrobe Road/ Golden Foothill Parkway (S): AM and PM;
- (10) Latrobe Road/Investment Boulevard: PM;
- (13) Golden Foothill Parkway (S)/Robert J. Mathews Pkwy PM;
- (18) White Rock Road/Carson Crossing Road PM; and
- (21) White Rock Road/Valley View Parkway: AM and PM.

1 Location where the Project is anticipated to cause new deficiencies:

- (12) Latrobe Road/Royal Oaks Drive AM and PM.

Deficiency/Abatement 1A. El Dorado Hills Blvd/Serrano Pkwy in 2023

Deficiency: Level-of-service is F prior to addition of Project traffic, with northbound left-turn queues spilling out of the turn pocket. Project traffic is anticipated to worsen level-of-service.

Abatement: Adjust signal timing by changing the "vehicle extension" setting for the westbound approach from 4 seconds to 2 seconds.

Finding: With implementation of the abatement measure, the Project is not anticipated to cause new, or worsen existing, General Plan level-of-service policy deficiencies at this location. **Table 18** in **Section 6.3** presents intersection level-of-service results with this abatement.

Project Responsibility: Project is responsible for its fair-share of signal timing adjustment. The CIP includes funding for intersection and safety improvements at "to be determined" locations. The Project may satisfy this requirement through payment of applicable fees under the El Dorado County traffic impact Fee (TIF) program.

Timing: Prior to issuance of 1st building permit.

Deficiency/Abatement 2A. El Dorado Hills Blvd/Saratoga Way in 2023

Deficiency: Level-of-service is F prior to addition of Project traffic, with northbound left-turn queues spilling out of the turn pocket. Project traffic is anticipated to worsen level-of-service and northbound left-turn queues.

Abatement: Construct a 300-foot southbound right turn pocket and adjust signal timing.

Finding: With implementation of the abatement measure, the Project is not anticipated to cause new, or worsen existing, General Plan level-of-service policy deficiencies at this location. **Table 18** in **Section 6.3** presents intersection level-of-service results with this abatement.

Project Responsibility: This abatement partially implements Project #36105076 in the 10-year Capital Improvement Program (CIP). The Project may satisfy this requirement through payment of applicable fees under the El Dorado County traffic impact Fee (TIF) program.

Timing: Prior to issuance of 1st building permit.

Deficiency/Abatement 3A. El Dorado Hills Blvd/US 50 WB in 2023

Deficiency: Existing AM peak-hour level-of-service is F prior to addition of Project traffic. Project traffic is anticipated to worsen level-of-service.

Abatement: Adjust signal timing by optimizing splits.

Finding: With implementation of the abatement measure, the Project is not anticipated to cause new, or worsen existing, General Plan level-of-service policy deficiencies at this location. **Table 18** in **Section 6.3** presents intersection level-of-service results with this abatement.

Project responsibility: Project is responsible for its fair-share of signal timing adjustment. The CIP includes funding for intersection and safety improvements at “to be determined” locations. The Project may satisfy this requirement through payment of applicable fees under the El Dorado County traffic impact Fee (TIF) program.

Timing: Prior to issuance of 1st building permit.

Cross reference: See abatement 3B.

Deficiency/Abatement 6A. Latrobe Road/White Rock Road in 2023

Deficiency: The westbound left-turn queue spills back out of its turn pocket under existing conditions without the Project. Project traffic is anticipated to worsen that queue spillback.

Abatement: Adjust signal timing by optimizing splits.

Finding: With implementation of the abatement measure, the Project is not anticipated to cause new, or worsen existing, General Plan level-of-service policy deficiencies at this location. **Table 18** in **Section 6.3** presents intersection level-of-service results with this abatement.

Project responsibility: This abatement partially implements Project #36105069 in the 20-year Capital Improvement Program (CIP). The Project is responsible for its fair share of modification of signal timing, which may be addressed through payment of fees if the CIP project is moved to the 10-year CIP.

Timing: Prior to issuance of 1st building permit.

Cross reference: See abatement 6B.

Deficiency/Abatement 9A. Latrobe Road/ Golden Foothill Parkway (south) in 2023

Deficiency: Project traffic is anticipated to worsen existing queue spillback from the eastbound left turn during both the AM and PM peak-hours.

Abatement: Adjust signal timing by optimizing splits.

Finding: With implementation of the abatement measure, the Project is not anticipated to cause new, or worsen existing, General Plan level-of-service policy deficiencies at this location. **Table 18** in **Section 6.3** presents intersection level-of-service results with this abatement.

Project responsibility: The Project is responsible for its fair share of the cost of these off-site improvements which would be addressed by payment of fees after CIP project 36105055 (AKA “72Latrobe”) is added to the 10-year CIP.

Timing: Prior to issuance of 1st building permit.

Cross reference: See abatement 9B, which builds on abatement 9a.

Deficiency/Abatement 10A. Latrobe Road/Investment Boulevard in 2023

Deficiency: Project traffic is anticipated to worsen the existing east bound (Investment Blvd) left turn queue spillback during the PM peak-hour.

Abatement: Stripe eastbound approach as left, shared left-right in 190-foot pocket. Adjust cycle length and splits. Construction of a 300-foot receiving lane is required on northbound Latrobe Road to accommodate the left turn from the shared eastbound left-right turn lane. These improvements are consistent with intersection improvements that would be constructed under CIP project 36105055 (AKA "72Latrobe"). Therefore, addition of CIP project 36105055 to the 10-year CIP would address the Project's fair share cost of these improvements as well.

Finding: With implementation of the abatement measure, the Project is not anticipated to cause new, or worsen existing, General Plan level-of-service policy deficiencies at this location. **Table 18** in **Section 6.3** presents intersection level-of-service results with this abatement.

Project responsibility: The Project is responsible for its fair share of the cost of these off-site improvements which would be addressed by payment of fees after CIP project 36105055 (AKA "72Latrobe") is added to the 10-year CIP.

Timing: A phasing analysis determined that 90 traditional dwelling units, or 260 age restricted dwelling units, could be constructed prior to the project deficiency being triggered. Therefor this abatement is required by the 90th traditional dwelling unit or the 260th age restricted dwelling unit.

Cross reference: See abatement 10B and 10C.

Deficiency/Abatement 12A. Latrobe Road/Royal Oaks Drive in 2023

Deficiency: Project traffic is anticipated to worsen the intersection to level-of-service F.

Abatement: Signalize the intersection using the "with Project" geometry (north and southbound approaches having a shared through right lane and protected left turns in 320' pockets; east and west bound approaches as shared left-through-right lanes.)

Finding: With implementation of the abatement measure, the Project is not anticipated to cause new, or worsen existing, General Plan level-of-service policy deficiencies at this location. **Table 18** in **Section 6.3** presents intersection level-of-service results with this abatement.

Project responsibility: The Project is responsible for construction of these intersection improvements.

Timing: Prior to issuance of 1st building permit.

Cross reference: See abatement 12B and 12C.

Deficiency/Abatement 13A. Golden Foothill Pkwy/Robert J. Mathews Pkwy in 2023

Deficiency: Project traffic is anticipated to worsen existing level-of-service F conditions.

Abatement: Reconstruct as a single lane roundabout.

Finding: With implementation of the abatement measure, the Project is not anticipated to cause new, or worsen existing, General Plan level-of-service policy deficiencies at this location. **Table 18** in **Section 6.3** presents intersection level-of-service results with this abatement.

Project responsibility: The Project is responsible for its fair share of the cost of these off-site improvements which would be addressed by payment of fees after the roundabout is added to the 10-year CIP.

Timing: Prior to issuance of 1st building permit.

Deficiency/Abatement 18A. White Rock Road/Carson Crossing Road in 2023

Deficiency: Project traffic is anticipated to worsen existing level-of-service F.

Abatement: Install all-way-stop-control with existing intersection geometry.

Finding: With implementation of the abatement measure, the Project is not anticipated to cause new, or worsen existing, General Plan level-of-service policy deficiencies at this location. **Table 18** in **Section 6.3** presents intersection level-of-service results with this abatement.

Project responsibility: This off-site improvement partially implements 20-year CIP project 36105041 (White Rock Road Widening 2 to 4 Lanes - Windfield Way to Sacramento County Line) and it should be advanced to the 10-year CIP. The Project is responsible for its fair share of cost, which would be met through payment of the TIF program fee.

Timing: Prior to issuance of 1st building permit.

Deficiency/Abatement 21A. White Rock Road/Valley View Parkway in 2023

Deficiency: Project traffic is anticipated to worsen level-of-service to F during the AM peak hour and worsen existing westbound left-turn queue spillback on White Rock Rd.

Abatement: Add a 100-foot westbound right-turn pocket and extend the westbound left turn pocket to 350 feet. Note that due to the location of utilities on the northside of White

Rock Rd, any required widening will likely be on the south side of White Rock Road, and eastbound lane alignment shall be adjusted to the satisfaction of the County Engineer.

Finding: With implementation of the abatement measure, the Project is not anticipated to cause new, or worsen existing, General Plan level-of-service policy deficiencies at this location. **Table 18** in **Section 6.3** presents intersection level-of-service results with this abatement.

Project responsibility: CIP Project 36105042 (White Rock Road Widening 2 to 4 lanes - Post Street to South of Silva Valley Parkway) includes funding for improvements to this intersection in both the 10-year and 20-year CIPs and all components should be advanced to 10-year CIP. The Project's fair share responsibility for this improvement can be met through payment of TIF program fees.

Timing: Payment of TIF at issuance of each building permit.

Cross reference: See abatement 21B, which builds on abatement 21a.

EPAP 2033 Plus Project Conditions

EPAP 2033 plus Project conditions are discussed in **Section 8.** The Project is anticipated to cause new or worsen existing level-of-service/queuing deficiencies at seven intersections (deficiencies may be caused by anticipated level-of-service and/or queue spillback):

6 Locations that are deficient with or without the Project that are worsened:

- (3) El Dorado Hills Blvd/US 50 WB AM;
- (6) Latrobe Road/White Rock Road PM;
- (7) Latrobe Road/Golden Foothill Parkway (N) PM;
- (9) Latrobe Road/ Golden Foothill Parkway (S) PM;
- (10) Latrobe Road/Investment Boulevard PM; and
- (21) White Rock Road/Valley View Parkway: PM.

1 Locations where the Project is anticipated to cause new deficiencies:

- (12) Latrobe Road/Royal Oaks Drive AM and PM.

Deficiency/Abatement 3B. El Dorado Hills Blvd/US 50 WB in 2033

Deficiency: AM peak-hour level-of-service is F prior to addition of Project traffic. Project traffic is anticipated to worsen level-of-service.

2023-2033 Improvements Assumed: None.

Abatement: Implement as abatement 3A

Finding: With implementation of the abatement measure, the Project is not anticipated to cause new, or worsen existing, General Plan level-of-service policy deficiencies at this location. **Table 25** in **Section 8.3** presents intersection level-of-service results with this abatement.

Project responsibility: None, addressed through abatement 3A.

Timing: Not applicable, addressed through abatement 3A.

Cross reference: See abatement 3A.

Deficiency/Abatement 6B. Latrobe Road/White Rock Road in 2033

Deficiency: PM peak-hour level-of-service is F prior to addition of Project traffic. Project traffic is anticipated to worsen level-of-service.

2023-2033 Improvements Assumed: None.

2023-2033 Improvements Assumed: None.

Abatement: implement as abatement 6A

Finding: With implementation of the abatement measure, the Project is not anticipated to cause new, or worsen existing, General Plan level-of-service policy deficiencies at this location. **Table 25** in **Section 8.3** presents intersection level-of-service results with this abatement.

Project responsibility: None, addressed through abatement 6A.

Timing: Not applicable, addressed through abatement 6A.

Cross reference: See abatement 6A.

Deficiency/Abatement 7B. Latrobe Road/Golden Foothill Parkway (N) in 2033

Deficiency: PM peak-hour level-of-service is F prior to addition of Project traffic. Project traffic is anticipated to worsen level-of-service.

2023-2033 Improvements Assumed: None.

Abatement: Construct 170-foot southbound right turn pocket.

Finding: With implementation of the abatement measure, the Project is not anticipated to cause new, or worsen existing, General Plan level-of-service policy deficiencies at this location. **Table 25** in **Section 8.3** presents intersection level-of-service results with this abatement.

Project responsibility: CIP 36105069 will widen this portion of Latrobe Rd to six lanes by 2040 and should be advanced to the 10-year CIP. The Project's fair share cost of this improvement is payment of the TIF program fee.

Timing: Prior to issuance of 1st building permit.

Deficiency/Abatement 9B. Latrobe Road/ Golden Foothill Parkway (S) in 2033

Deficiency: Project traffic is anticipated to worsen existing queue spillback from the southbound left turn during both the AM and PM peak-hours.

2023-2033 Improvements Assumed: None.

Abatement: Construct a second southbound left turn lane on Latrobe Rd and a second eastbound lane on Clubview Dr between Latrobe Road and Blackstone Pkwy. The second eastbound lane on Clubview Dr is a receiving lane for the second southbound left turn lane from Latrobe Rd.

Finding: With implementation of the abatement measure, the Project is not anticipated to cause new, or worsen existing, General Plan level-of-service policy deficiencies at this location. **Table 25** in **Section 8.3** presents intersection level-of-service results with this abatement.

Project responsibility: The Project is responsible for its fair share of the cost of these off-site improvements which would be addressed by payment of fees after CIP project 36105055 (AKA "72Latrobe") is added to the 10-year CIP.

Timing: Prior to issuance of 1st building permit.

Cross reference: See abatement 9A.

Deficiency/Abatement 10B. Latrobe Road/Investment Boulevard in 2033

Deficiency: Project traffic is anticipated to cause the eastbound (Investment Blvd) left-turn queue to spill out of its left-turn pocket.

2023-2033 Improvements Assumed: None.

Abatement: Implement as abatement 10A

Finding: With implementation of the abatement measure, the Project is not anticipated to cause new, or worsen existing, General Plan level-of-service policy deficiencies at this location. **Table 25** in **Section 8.3** presents intersection level-of-service results with this abatement.

Project responsibility: None, addressed through abatement 10A.

Timing: Not applicable, addressed through abatement 10A.

Cross reference: See abatement 10A.

Deficiency/Abatement 12B. Latrobe Road/Royal Oaks Drive in 2033

Deficiency: Project traffic is anticipated to worsen the intersection to level-of-service F.

2023-2033 Improvements Assumed: None.

Abatement: Implement as abatement 12A.

Finding: With implementation of the abatement measure, the Project is not anticipated to cause new, or worsen existing, General Plan level-of-service policy deficiencies at this location. **Table 25** in **Section 8.3** presents intersection level-of-service results with this abatement.

Project responsibility: None, addressed through abatement 12A.

Timing: Not applicable, addressed through abatement 12A.

Cross reference: See abatement 12A.

Deficiency/Abatement 21B. White Rock Road/Valley View Parkway in 2033

Deficiency: Project traffic is anticipated to worsen left-turn queue spillback on westbound White Rock Rd.

2023-2033 Improvements Assumed: None.

Abatement:

- Implement abatement 21 A.
- Further extend the westbound left turn pocket to 410 feet. (Note: abatement 21A will extend this pocket to 350 feet. Abatement 21B reflects an additional 60 feet of westbound right turn storage.)

Widening should be done to the south of Latrobe Rd to avoid high voltage lines. Eastbound-westbound Lane alignment may require additional space.

Finding: With implementation of the abatement measure, the Project is not anticipated to cause new, or worsen existing, General Plan level-of-service policy deficiencies at this location. **Table 25** in **Section 8.3** presents intersection level-of-service results with this abatement.

Project responsibility: CIP Project 36105042 (White Rock Road Widening 2 to 4 lanes – Post Street to South of Silva Valley Parkway) includes funding for improvements to this intersection in both the 10-year and 20-year CIPs and all components should be advanced to 10-year CIP. The Project's fair share responsibility for this improvement can be met through payment of TIF program fees.

Timing: Prior to issuance of 1st building permit.

Cross reference: See abatement 21A.

Cumulative 2040 Plus Project Conditions

Existing 2040 plus Project conditions are discussed in **Section 10.** The Project is anticipated to cause new or worsen existing level-of-service/queuing deficiencies at two intersections (deficiencies may be caused by anticipated level-of-service and/or queue spillback):

1 Locations that are deficient with or without the Project that are worsened:

- (10) Latrobe Road/Investment Boulevard PM;

1 Locations where the Project is anticipated to cause new deficiencies:

- (12) Latrobe Road/Royal Oaks Drive AM and PM.

Deficiency/Abatement 10C. Latrobe Road/Investment Boulevard in 2040

Deficiency: Project traffic is anticipated to cause the eastbound (Investment Blvd) left-turn queue to spill out of its left-turn pocket.

2023-2040 Improvements Assumed: None.

Abatement: Implement as abatement 10A

Finding: With implementation of the abatement measure, the Project is not anticipated to cause new, or worsen existing, General Plan level-of-service policy deficiencies at this location. **Table 32** in **Section 10.3** presents intersection level-of-service results with this abatement.

Project responsibility: None, addressed through abatement 10A.

Timing: Not applicable, addressed through abatement 10A.

Cross reference: See abatement 9A and 9B.

Deficiency/Abatement 12C. Latrobe Road/Royal Oaks Drive in 2040

Deficiency: Project traffic is anticipated to worsen the intersection to level-of-service F.

2023-2040 Improvements Assumed: None.

Abatement: Implement as abatement 12A.

Finding: With implementation of the abatement measure, the Project is not anticipated to cause new, or worsen existing, General Plan level-of-service policy deficiencies at this location. **Table 32** in **Section 10.3** presents intersection level-of-service results with this abatement.

Project responsibility: None, addressed through abatement 12A.

Timing: Not applicable, addressed through abatement 12A.

Cross reference: See abatement 12A and 12B.

Timing: Not applicable, addressed through abatement 12A.

On-Site Transportation Review

As discussed in Section 13 above. On-site transportation review is better done with each Final Map as minor changes to the specific lotting and internal roadways may be approved by El dorado County staff via a minor administrative modification.

A condition of approval should be added to the specific plan specifying that on-site transportation review be performed with each Final Map.

Condition: On-Site Transportation Review shall be conducted with each Final Map to the satisfaction of the County Engineer.

Analysis ID: 1472965
Analysis: Creekside #1 4/18-27/2023
Created by: tkear@tkearinc.com
Created on: 2023-07-13
Organization: T. Kear/Creekside Village Intersection Studies

Analysis Setup Details:
Analysis Type: Turning Movement Analysis
Unit of Measurement: Miles
Mode of Travel: All Vehicles CVD+
Output Type: StL All Vehicles Volume

Analysis Options:
Data Periods: Apr 18, 2023 - Apr 27, 2023

Day Type:
0: All Days (M-Su)
1: Tues-Thurs (Tu-Th)

Day Part:
00: 6:00am-6:15am
01: 6:15am-6:30am
02: 6:30am-6:45am
03: 6:45am-7:00am
04: 7:00am-7:15am
05: 7:15am-7:30am
06: 7:30am-7:45am
07: 7:45am-8:00am
08: 8:00am-8:15am
09: 8:15am-8:30am
10: 8:30am-8:45am
11: 8:45am-9:00am
12: 9:00am-9:15am
13: 9:15am-9:30am
14: 9:30am-9:45am
15: 9:45am-10:00am
16: 3:00pm-3:15pm
17: 3:15pm-3:30pm
18: 3:30pm-3:45pm
19: 3:45pm-4:00pm
20: 4:00pm-4:15pm
21: 4:15pm-4:30pm
22: 4:30pm-4:45pm
23: 4:45pm-5:00pm
24: 5:00pm-5:15pm
25: 5:15pm-5:30pm

27: 5:45pm-6:00pm
28: 6:00pm-6:15pm
29: 6:15pm-6:30pm
30: 6:30pm-6:45pm
31: 6:45pm-7:00pm

Country: USA
Metrics Version: R125-M127

Metric results for this analysis include rows generated using an upsampling technique that uses data from adjacent day parts and analogous day parts outside of the original data period to synthesize a representative metric in cases where sample size would have been otherwise too low to provide a high-quality result. Please contact support@streetlightdata.com with any questions.

Analysis ID: 1472961
Analysis: Creekside #2 4/18-27/2023
Created by: tkear@tkearinc.com
Created on: 2023-07-13
Organization: T. Kear/Creekside Village Intersection Studies

Analysis Setup Details:
Analysis Type: Turning Movement Analysis
Unit of Measurement: Miles
Mode of Travel: All Vehicles CVD+
Output Type: StL All Vehicles Volume

Analysis Options:
Data Periods: Apr 18, 2023 - Apr 27, 2023

Day Type:
0: All Days (M-Su)
1: Tues-Thurs (Tu-Th)

Day Part:
00: 6:00am-6:15am
01: 6:15am-6:30am
02: 6:30am-6:45am
03: 6:45am-7:00am
04: 7:00am-7:15am
05: 7:15am-7:30am
06: 7:30am-7:45am
07: 7:45am-8:00am
08: 8:00am-8:15am
09: 8:15am-8:30am
10: 8:30am-8:45am
11: 8:45am-9:00am
12: 9:00am-9:15am
13: 9:15am-9:30am
14: 9:30am-9:45am
15: 9:45am-10:00am
16: 3:00pm-3:15pm
17: 3:15pm-3:30pm
18: 3:30pm-3:45pm
19: 3:45pm-4:00pm
20: 4:00pm-4:15pm
21: 4:15pm-4:30pm
22: 4:30pm-4:45pm
23: 4:45pm-5:00pm
24: 5:00pm-5:15pm
25: 5:15pm-5:30pm
26: 5:30pm-5:45pm
27: 5:45pm-6:00pm
28: 6:00pm-6:15pm
29: 6:15pm-6:30pm
30: 6:30pm-6:45pm
31: 6:45pm-7:00pm

Country: USA
Metrics Version: R125-M127

Metric results for this analysis include rows generated using an upsampling technique that uses data from adjacent day parts and analogous day parts outside of the original data period to synthesize a representative metric in cases where sample size would have been otherwise too low to provide a high-quality result. Please contact support@streetlightdata.com with any questions.

Analysis ID: 1472999
Analysis: Creekside #6 4/18-27/2023
Created by: tkear@tkearinc.com
Created on: 2023-07-13
Organization: T. Kear/Creekside Village Intersection Studies

Analysis Setup Details:
Analysis Type: Turning Movement Analysis
Unit of Measurement: Miles
Mode of Travel: All Vehicles CVD+
Output Type: StL All Vehicles Volume

Analysis Options:
Data Periods: Apr 18, 2023 - Apr 27, 2023

Day Type:
0: All Days (M-Su)
1: Tues-Thurs (Tu-Th)

Day Part:
00: 6:00am-6:15am
01: 6:15am-6:30am
02: 6:30am-6:45am
03: 6:45am-7:00am
04: 7:00am-7:15am
05: 7:15am-7:30am
06: 7:30am-7:45am
07: 7:45am-8:00am
08: 8:00am-8:15am
09: 8:15am-8:30am
10: 8:30am-8:45am
11: 8:45am-9:00am
12: 9:00am-9:15am
13: 9:15am-9:30am
14: 9:30am-9:45am
15: 9:45am-10:00am
16: 3:00pm-3:15pm
17: 3:15pm-3:30pm
18: 3:30pm-3:45pm
19: 3:45pm-4:00pm
20: 4:00pm-4:15pm
21: 4:15pm-4:30pm
22: 4:30pm-4:45pm
23: 4:45pm-5:00pm
24: 5:00pm-5:15pm
25: 5:15pm-5:30pm
26: 5:30pm-5:45pm
27: 5:45pm-6:00pm
28: 6:00pm-6:15pm
29: 6:15pm-6:30pm
30: 6:30pm-6:45pm
31: 6:45pm-7:00pm

Country: USA
Metrics Version: R125-M127

Metric results for this analysis include rows generated using an upsampling technique that uses data from adjacent day parts and analogous day parts outside of the original data period to synthesize a representative metric in cases where sample size would have been otherwise too low to provide a high-quality result. Please contact support@streetlightdata.com with any questions.

Analysis ID: 1473000
Analysis: Creekside #7 4/18-27/2023
Created by: tkear@tkearinc.com
Created on: 2023-07-13
Organization: T. Kear/Creekside Village Intersection Studies

Analysis Setup Details:
Analysis Type: Turning Movement Analysis
Unit of Measurement: Miles
Mode of Travel: All Vehicles CVD+
Output Type: StL All Vehicles Volume

Analysis Options:
Data Periods: Apr 18, 2023 - Apr 27, 2023

Day Type:
0: All Days (M-Su)
1: Tues-Thurs (Tu-Th)

Day Part:
00: 6:00am-6:15am
01: 6:15am-6:30am
02: 6:30am-6:45am
03: 6:45am-7:00am
04: 7:00am-7:15am
05: 7:15am-7:30am
06: 7:30am-7:45am
07: 7:45am-8:00am
08: 8:00am-8:15am
09: 8:15am-8:30am
10: 8:30am-8:45am
11: 8:45am-9:00am
12: 9:00am-9:15am
13: 9:15am-9:30am
14: 9:30am-9:45am
15: 9:45am-10:00am
16: 3:00pm-3:15pm
17: 3:15pm-3:30pm
18: 3:30pm-3:45pm
19: 3:45pm-4:00pm
20: 4:00pm-4:15pm
21: 4:15pm-4:30pm
22: 4:30pm-4:45pm
23: 4:45pm-5:00pm
24: 5:00pm-5:15pm
25: 5:15pm-5:30pm
26: 5:30pm-5:45pm
27: 5:45pm-6:00pm
28: 6:00pm-6:15pm
29: 6:15pm-6:30pm
30: 6:30pm-6:45pm
31: 6:45pm-7:00pm

Country: USA
Metrics Version: R125-M127

Metric results for this analysis include rows generated using an upsampling technique that uses data from adjacent day parts and analogous day parts outside of the original data period to synthesize a representative metric in cases where sample size would have been otherwise too low to provide a high-quality result. Please contact support@streetlightdata.com with any questions.

Analysis ID: 1473003
Analysis: Creekside #8 4/18-27/2023
Created by: tkear@tkearinc.com
Created on: 2023-07-13
Organization: T. Kear/Creekside Village Intersection Studies

Analysis Setup Details:
Analysis Type: Turning Movement Analysis
Unit of Measurement: Miles
Mode of Travel: All Vehicles CVD+
Output Type: StL All Vehicles Volume

Analysis Options:
Data Periods: Apr 18, 2023 - Apr 27, 2023

Day Type:
0: All Days (M-Su)
1: Tues-Thurs (Tu-Th)

Day Part:
00: 6:00am-6:15am
01: 6:15am-6:30am
02: 6:30am-6:45am
03: 6:45am-7:00am
04: 7:00am-7:15am
05: 7:15am-7:30am
06: 7:30am-7:45am
07: 7:45am-8:00am
08: 8:00am-8:15am
09: 8:15am-8:30am
10: 8:30am-8:45am
11: 8:45am-9:00am
12: 9:00am-9:15am
13: 9:15am-9:30am
14: 9:30am-9:45am
15: 9:45am-10:00am
16: 3:00pm-3:15pm
17: 3:15pm-3:30pm
18: 3:30pm-3:45pm
19: 3:45pm-4:00pm
20: 4:00pm-4:15pm
21: 4:15pm-4:30pm
22: 4:30pm-4:45pm
23: 4:45pm-5:00pm
24: 5:00pm-5:15pm
25: 5:15pm-5:30pm
26: 5:30pm-5:45pm
27: 5:45pm-6:00pm
28: 6:00pm-6:15pm
29: 6:15pm-6:30pm
30: 6:30pm-6:45pm
31: 6:45pm-7:00pm

Country: USA
Metrics Version: R125-M127

Metric results for this analysis include rows generated using an upsampling technique that uses data from adjacent day parts and analogous day parts outside of the original data period to synthesize a representative metric in cases where sample size would have been otherwise too low to provide a high-quality result. Please contact support@streetlightdata.com with any questions.

31: 6:45pm-7:00pm

Country: USA
Metrics Version: R125-M127

Metric results for this analysis include rows generated using an upsampling technique that uses data from adjacent day parts and analogous day parts outside of the original data period to synthesize a representative metric in cases where sample size would have been otherwise too low to provide a high-quality result. Please contact support@streetlightdata.com with any questions.

Analysis ID: 1473014
Analysis: #13 4/18-27/2023
Created by: tkear@tkearinc.com
Created on: 2023-07-13
Organization: T. Kear/Creekside Village Intersection Studies

Analysis Setup Details:
Analysis Type: Turning Movement Analysis
Unit of Measurement: Miles
Mode of Travel: All Vehicles CVD+
Output Type: StL All Vehicles Volume

Analysis Options:
Data Periods: Apr 18, 2023 - Apr 27, 2023

Day Type:
0: All Days (M-Su)
1: Tues-Thurs (Tu-Th)

Day Part:
00: 6:00am-6:15am
01: 6:15am-6:30am
02: 6:30am-6:45am
03: 6:45am-7:00am
04: 7:00am-7:15am
05: 7:15am-7:30am
06: 7:30am-7:45am
07: 7:45am-8:00am
08: 8:00am-8:15am
09: 8:15am-8:30am
10: 8:30am-8:45am
11: 8:45am-9:00am
12: 9:00am-9:15am
13: 9:15am-9:30am
14: 9:30am-9:45am
15: 9:45am-10:00am
16: 3:00pm-3:15pm
17: 3:15pm-3:30pm
18: 3:30pm-3:45pm
19: 3:45pm-4:00pm
20: 4:00pm-4:15pm
21: 4:15pm-4:30pm
22: 4:30pm-4:45pm
23: 4:45pm-5:00pm
24: 5:00pm-5:15pm
25: 5:15pm-5:30pm
26: 5:30pm-5:45pm
27: 5:45pm-6:00pm
28: 6:00pm-6:15pm
29: 6:15pm-6:30pm
30: 6:30pm-6:45pm
31: 6:45pm-7:00pm

Country: USA
Metrics Version: R125-M127

Metric results for this analysis include rows generated using an upsampling technique that uses data from adjacent day parts and analogous day parts outside of the original data period to synthesize a representative metric in cases where sample size would have been otherwise too low to provide a high-quality result. Please contact support@streetlightdata.com with any questions.

30: 6:30pm-6:45pm
31: 6:45pm-7:00pm

Country: USA
Metrics Version: R125-M127

Metric results for this analysis include rows generated using an upsampling technique that uses data from adjacent day parts and analogous day parts outside of the original data period to synthesize a representative metric in cases where sample size would have been otherwise too low to provide a high-quality result. Please contact support@streetlightdata.com with any questions.

Analysis ID: 1473494
Analysis: Creekside #19 4/18-27/2023
Created by: tkear@tkearinc.com
Created on: 2023-07-17
Organization: T. Kear/Creekside Village Intersection Studies

Analysis Setup Details:
Analysis Type: Turning Movement Analysis
Unit of Measurement: Miles
Mode of Travel: All Vehicles CVD+
Output Type: StL All Vehicles Volume

Analysis Options:
Data Periods: Apr 18, 2023 - Apr 27, 2023

Day Type:
0: All Days (M-Su)
1: Tues-Thurs (Tu-Th)

Day Part:
00: 6:00am-6:15am
01: 6:15am-6:30am
02: 6:30am-6:45am
03: 6:45am-7:00am
04: 7:00am-7:15am
05: 7:15am-7:30am
06: 7:30am-7:45am
07: 7:45am-8:00am
08: 8:00am-8:15am
09: 8:15am-8:30am
10: 8:30am-8:45am
11: 8:45am-9:00am
12: 9:00am-9:15am
13: 9:15am-9:30am
14: 9:30am-9:45am
15: 9:45am-10:00am
16: 3:00pm-3:15pm
17: 3:15pm-3:30pm
18: 3:30pm-3:45pm
19: 3:45pm-4:00pm
20: 4:00pm-4:15pm
21: 4:15pm-4:30pm
22: 4:30pm-4:45pm
23: 4:45pm-5:00pm
24: 5:00pm-5:15pm
25: 5:15pm-5:30pm
26: 5:30pm-5:45pm
27: 5:45pm-6:00pm
28: 6:00pm-6:15pm
29: 6:15pm-6:30pm
30: 6:30pm-6:45pm
31: 6:45pm-7:00pm

Country: USA
Metrics Version: R125-M127

Metric results for this analysis include rows generated using an upsampling technique that uses data from adjacent day parts and analogous day parts outside of the original data period to synthesize a representative metric in cases where sample size would have been otherwise too low to provide a high-quality result. Please contact support@streetlightdata.com with any questions.

26: 5:30pm-5:45pm
27: 5:45pm-6:00pm
28: 6:00pm-6:15pm
29: 6:15pm-6:30pm
30: 6:30pm-6:45pm
31: 6:45pm-7:00pm

Country: USA
Metrics Version: R125-M127

Metric results for this analysis include rows generated using an upsampling technique that uses data from adjacent day parts and analogous day parts outside of the original data period to synthesize a representative metric in cases where sample size would have been otherwise too low to provide a high-quality result. Please contact support@streetlightdata.com with any questions.
